At this point, war is inevitable, and the PCs are put in command of an entire army. For the remainder of this extended storyline, the PCs have to lead their men in combat against enemy forces, defending their own nation or penetrating into the enemy territory; meanwhile, they'll be doing their own adventures and investigations, trying to come up with proof that the two rulers were assassinated by a third party, not by the heroes of the two nations.

Once the two armies are getting seriously tired and hurt, the PCs should be able to come up with the proof they need. They convince the new rulers of both nations of the identity of their true enemy. At this point, it's time for the two armies to join forces (and swallowing down their many years of mutual distrust, especially after the last several months of fighting, will be particularly hard, leading to even more plot opportunities). Now, the two battered armies march into the third nation, the PCs still in charge of their own army (or perhaps each PC is now a general in his own right), and the final battle with the fresh forces of the evil enemy ruler is still to come...

In such a way, you can sustain an all-military campaign for many months of game-time, and resolve important conflicts and storylines in your campaign world.

## Campaign vs. Mini-Series

Though you can take any of the above campaign ideas and make it into a formal campaign, one which is supposed to continue episode after episode until the DM and players grow tired of it, you can also run any of them as a *mini-series*, a campaign which is deliberately run only for enough episodes to complete one full-length story. In a sense, the regular campaign is like a TV series, while the mini-series is like a novel or movie.

### Campaigns

The campaign goes on over a long period of time and encompasses many smaller stories and goals; it sometimes goes through cast changes as the principal heroes die, leave, or retire.

The bright promise of the campaign is that, so long as the DM and players remain

together and interested, it can go on for a long, long time; the characters can participate in adventure after adventure, story after story. The campaign can chronicle generations of the adventurers' families, as the original adventurers sire children who themselves grow up to be the player-characters.

In a campaign, PCs are designed to be played practically forever. You figure on the character growing and developing slowly, over time, and so PCs are almost always created at low level, usually 1st level.

As the PCs develop, their players sometimes become very attached to them, so much so that when a character dies (in such a fashion that he cannot be *raised*, it is very upsetting to the player.

## Mini-Series

The mini-series, on the other hand, typically covers one extended story—the acquisition of one treasure, the defeat of one specific master villain, the exploration of a newly-discovered island, the resolution of a war between nations. It may be played in a single session or go on for a dozen, but the DM and players know that it's supposed to be limited in scope.

Its characters are rolled up and can be played quite differently. Since they are "temporary" characters, they can be created at a level best suited to the plot of the story. If the scenario is supposed to involve a crack squad of cavalrymen on a special mission, everyone could be created at 5th level. If it's to be powerful, experienced knights on a quest, everyone could be created at 9th level. If it's to be legendary heroes transported from the past at the peak of their powers, they could be created at 20th level or higher.

In some regular campaigns, PCs die regularly. If the DM of such a campaign runs a mini-series, the players can expect the same, but probably won't mind so much because the characters were "temporary" anyway.

In some regular campaigns, the DM tends to protect the PCs a little bit, covering over for little errors which could be fatal, especially when they take place in incidents which are not important to the campaign or current storyline. In a mini-series, on the other hand, the DM is likely to be more deadly (because no one is quite so involved with his character), meaning that the setting and situation are more dangerous; the players will have a greater sense of the danger to their characters in this type of setting.

One last option with the mini-series: Though it is a very limited campaign, deliberately created so that it will soon end, the DM can always run mini-series "sequels." In the sequel, the survivors of the original mini-series can band together again to meet a new challenge, joined by new heroes (replacements for those who fell in the last story). The DM can fiddle with experience levels as he chooses, running one mini-series (for example) at fifth level, the sequel at ninth level, the *second* sequel at 13th, and so on.

## Switching Between Them

Because campaigns and mini-series are very different but equally compelling, DMs should think about switching between them from time to time.

For most people, the campaign is the most satisfying format. But, also for most people, the campaign gets a bit tiresome after a while, and the group breaks from it for a

time. In that time, it's very appropriate to run a short-term mini-series (or several), allowing the DM and players to explore new settings and characters until they're ready to pick up the regular campaign again.

This is the ideal forum for you to try out some of the more unusual or outrageous campaign ideas described earlier in this chapter.

# Combat Rules

The Warrior is a character whose primary function is combat, and combat is what this chapter is all about. Though the *AD&D*® game combat system is sufficient to most of your combat needs, this chapter will give you optional rules and advice which can add flavor to your game.

It's important to remember that everything in this chapter is an *optional rule*; nothing recommended here can be implemented in your campaign without the DM's permission.

## New Combat Rules

Here are some optional rules you can add to combat in your campaign.

### Off-Hand Weapons Use

All characters are presumed to be better with one hand than the other—in real life, most people are right-handed, quite a few are left-handed, and only a very few are truly ambidextrous.

When a character is first created, the player should specify his handedness (right or left). If he does not specify one, the DM should assume the character is right-handed.

If a character, for whatever reason, fights with his off-hand instead of his good hand, he suffers a –2 penalty to attack rolls with all attacks. For example, should a character find himself with his right hand chained to a wall, and yet he needs to draw and throw a dagger and must use his off-hand, he'll then suffer the –2 penalty to attack rolls.

If you wish a character to be ambidextrous, consult "Ambidexterity," below, under "Weapon Proficiency Slots."

### Kneeling and Sitting

A character who is kneeling or sitting (for example, because he's been knocked down or injured) is at a disadvantage in combat. He can't move around as effectively and so cannot dodge incoming attacks. For that reason, whenever someone attacks a victim who is kneeling, the attacker gets a +1 to attack rolls; when someone attacks a victim who is sitting, the attacker gets a +2 to attack rolls; and when someone attacks a victim who is flat on his back (but aware of the attack and trying to avoid it), the attacker gets a +4 to attack rolls.

Attacking a character who is *held* (by magic) or asleep is automatically successful, causing normal damage.

When a character is kneeling, sitting, or on his back, he can get to his feet one of two ways. If he still has an attack left to perform this round, he can give it up, not make an attack, and stand up instead. Or, he can wait until after initiative is rolled for the next round: When it comes time for him to describe his action, he can stand up then, without losing any of his attacks for that round.

## Range and Initiative

Here's a rule to give some advantage to those characters and parties (and monsters) which always have ranged attacks ready.

When two groups first come within sight of one another at distances of 20 feet or less (here a "group" can consist of only one person or creature, or can have more), and *only one group has missile capability already in hand*, that group gets a "free shot" with its ranged weapons.

This isn't a full combat round, not a bonus round from surprise: It's a split second of instinctive reaction on the part of the missile throwers in the group. While they're firing, mages and priests can't cast spells, other characters can't ready weapons. A knife expert can't draw a knife and throw it in this split second; he can only throw it if he already has it in hand. In this split-second, characters can take no action other than, perhaps, to talk or shout something brief to one another.

Once that free shot is taken, on the first full combat round of the fight, roll initiative normally. The party that was fired upon gets a +2 modifier for being slightly disadvantaged by the enemy's missile superiority.

Remember that this option can only be taken when one side, and not the other, has ready missile weapons (i.e., bows or crossbows in hand with arrows and quarrels already nocked, or throwing weapons such as spears, javelins, axes and knives already in hand). Also, the party which *can* take this option doesn't have to; the group does not have to fire upon another person, group or monster the instant it sees its target. If the group chooses not to, the opportunity is lost and the characters have the usual options to talk to the other group; if they choose to fight, initiative is rolled normally. The side without the missile weapons doesn't get the +2 modifier this time.

If the party is wandering around in conditions of poor visibility (such as a dungeon), the DM can rule that the target is barely visible and that the party cannot recognize many details about the target: "Ahead of you in the corridor, about 60 feet up, you see a group of human size silhouettes moving your way. As you spot them, they spot you, too, and slow down. You can't tell what they are . . ." At this point, if the PCs have missile weapons and the NPCs don't, the PCs can take this free shot, but are faced with the prospect of attacking an unknown quantity. They *could* be firing upon the High King and his adventuring retinue, for all they know.

When two groups both have ready missile weapons, neither gets this option. Roll initiative normally. (If two groups both have ready missile weapons, and one group spots the other without the other group realizing it, that group wins initiative, but doesn't get the "free shot." Picture it this way: When the first group looses its volley, the missilers of the second group immediately turn around and loose theirs. So we're put in a position of normal combat.)

Finally, for this option, remember that spell-type missile abilities don't count, but

"natural" ones do. A dragon's breath acts as a ready missile weapon, as do a manticore's tail-spikes. However, a gold dragon's spells don't count, nor does a vampire's *charming*, for example.

## Weapon Proficiency Slots

You know about Weapon Proficiencies from pages 51-52 of the *Player's Handbook*. Here, we'll talk about some additional, special things you can do in a campaign with Weapon Proficiencies.

### Intelligence and Proficiencies

We're going to be showing you a lot of interesting things you can do with the Weapon Proficiencies rules. Therefore, you need to use the rule for extra Proficiencies given on page 51 of the *Player's Handbook*. There, it says that you may, with the DM's permission, take extra proficiencies when first created equal to the number of extra languages the character gets from high Intelligence (see Table 4, page 19, *Player's Handbook*). These extra proficiencies may be divided as the player chooses between Weapon Proficiencies and Nonweapon Proficiencies.

### Single-Weapon Proficiency, Weapon Specialization

In the *Player's Handbook*, the only things you can do with Weapon Proficiencies are take single-weapon proficiencies and specialize in particular weapons.

To briefly review the information from that section:

A character must have a Proficiency with a weapon to use it normally. To become proficient, the character "spends" one of the Weapon Proficiency Slots he has on that weapon. Each slot can buy proficiency with one weapon. If he uses a weapon he's not proficient in, he suffers an attack penalty: –2 for weapons which are completely unfamiliar, or –1 for weapons similar to those with which he already has proficiency. (That penalty is worse for non-Warriors.)

To specialize in a particular weapon, the character must devote an extra weapon proficiency slot to it. (In the case of bows or crossbows, it takes two extra slots.) When using his special weapon, the character gets a +1 to attack rolls and +2 to damage. (With bows and crossbows, he instead gets a new range category, *point-blank*: 6–30 feet for crossbows, 6–60 feet for bows. Within that range, he gains a +2 to attack rolls. Also, if his weapon is ready and there's a target in sight, he can fire in the combat round before initiative is rolled.)

Only Fighters (but not paladins or rangers) can take weapon specialties. Such a character can only take one when he is first created, but may specialize in more weapons as he gains new slots.

With that in mind, let's elaborate on the use of weapon proficiencies . . .

### Weapon-Group Proficiency

Moreover, let's look realistically at weapon proficiency. Currently, if a character has

Weapon Proficiency with Dagger/Dirk, he doesn't have it with Knife. He certainly doesn't have it with Short Sword. Of course, the DM can always decide that such weapons are related to one another. If he does, then the warrior would suffer a –1 to attack rolls with the unknown weapon instead of the –2. (See page 52 of the *Players Handbook*.)

Still, to be proficient in all sorts of blades, from the *Player's Handbook* and additional blades from this rulebook, you'd have to spend around 14 weapon proficiency slots, and that's too many.

So, we're making it possible to take weapon proficiencies with whole weapon *groups*.

For our purposes, there are two types of groups: Tight Groups and Broad Groups.

## Tight Groups

A Tight Weapons Group consists of a set of weapons that are very similar in the way they are wielded.

It costs two Weapon Proficiency Slots to become proficient in an entire tight group. After paying those two slots, the character will know how to use every weapon in that group without the usual –2 penalty for unfamiliarity (that –2 is for Warriors; with other classes, the penalty is more severe, as described on page 52 in the *Player's Handbook*).

Following are several examples of Tight Groups. Any weapon marked with an asterisk (*) is a weapon described in *The Complete Fighter's Handbook*, in the *Equipment* chapter.

**Axes:**
Battle axe,
Hand/throwing axe.

**Bows:**
Composite long bow,
Composite short bow,
Daikyu*,
Long bow,
Short bow.

**Clubbing Weapons:**
Belaying pin*,
Club,
Footman's mace,
Horseman's mace,
Morning star,
Warhammer.

**Crossbows:**
Hand crossbow,
Heavy crossbow,
Light crossbow.

**Fencing Blades:**
Dagger/Dirk,
Knife/Stiletto*,
Main-gauche*,

Rapier*,
Sabre*.

**Flails:**

Footman's flail,
Horseman's flail.

**Lances:**

Heavy horse lance,
Light horse lance,
Jousting lance,
Medium horse lance.

**Long Blades:**

Bastard sword,
Katana*,
Long sword,
Scimitar,
Two-handed sword.

**Medium Blades:**

Cutlass*,
Khopesh,
Wakizashi*.

**Picks:**

Footman's pick,
Horseman's pick.

**Polearms:**

Awl pike,
Bardiche,
Bec de corbin,
Bill-guisarme,
Fauchard,
Fauchard-fork,
Glaive,
Glaive-guisarme,
Guisarme,
Guisarme-voulge,
Halberd,
Hook fauchard,
Lucern hammer,
Mancatcher,
Military fork,
Naginata*,
Partisan,
Ranseur,
Spetum,
Tetsubo*,
Voulge.

**Short Blades:**

Dagger/Dirk,
Knife/Stiletto*,
Main-gauche*,
Short sword/Drusus*.

**Slings:**
Sling,
Staff Sling.

**Spears:**
Harpoon,
Javelin,
Long Spear*,
Spear,
Trident.

**Whips:**
Scourge,
Whip.

You'll notice there's a little overlap between the Fencing Blades and Short Blades group; some weapons are common to both groups.

You'll also notice that some groups don't look like they save you any weapon proficiency slots. The Axes, Flails, Picks, Sickles, Slings, and Whips group all have two weapons each in them. Since a tight group costs two proficiency slots, it appears that there's no savings. Which is true . . . unless, in your campaign, other weapons related to those groups are developed or introduced. If they are—if, for instance, a medium-sized war-axe appears in the campaign—then the character with the group proficiency will be able to use it at no penalty, while the character with proficiency in just the two existing axes will suffer the attack penalty.

These categories are very close to the related weapon groups described from page 52 of the *Player's Handbook*, and your DM can, if he wishes, use these categories as related groups. This helps determine whether or not a warrior gets the full attack penalty when he uses a weapon unfamiliar to him, or whether he receives only half the penalty for using one similar to a weapon with which he has proficiency.

## Broad Groups

A Broad Weapon Group consists of a set of weapons that are somewhat similar in the way they are wielded.

It costs three Weapon Proficiency Slots to become proficient in an entire broad group. After paying those three slots, the character will know how to use every weapon in that group without the usual penalty for unfamiliarity.

Following are several examples of Broad Groups. As before, any weapon marked with an asterisk (*) is a weapon described in *The Complete Fighter's Handbook*, in the *Equipment* chapter.

**Blades:**
Bastard sword,

Cutlass*,
Dagger/Dirk,
Katana*,
Khopesh,
Knife/Stiletto*,
Long sword,
Main-gauche*,
Rapier*,
Sabre*,
Scimitar,
Short sword/Drusus*,
Two-handed sword,
Wakizashi*.

**Cleaving/Crushing Weapons:**

Battle axe,
Belaying Pin*,
Club,
Footman's mace,
Footman's pick,
Hand/throwing axe,
Horseman's mace,
Horseman's pick,
Morning star,
Warhammer.

**Pole Weapons:**

Awl pike,
Bardiche,
Bec de corbin,
Bill-guisarme,
Fauchard,
Fauchard-fork,
Glaive,
Glaive-guisarme,
Guisarme,
Guisarme-voulge,
Halberd,
Harpoon,
Hook fauchard,
Javelin,
Lucern hammer,
Long Spear*,
Mancatcher,
Military fork,
Naginata*,
Partisan,
Ranseur,

Spear,
Spetum,
Tetsubo*,
Trident,
Voulge.

**Small Throwing Weapons:**
Dagger/Dirk,
Dart,
Hand/throwing axe,
Knife/stiletto*,
Shuriken*.

Again, you'll see some overlap between the Small Throwing Weapons group and other groups.

These groups may not be used to calculate weapon similarity for determining whether a character receives the full or partial attack penalty for using an unfamiliar weapon.

## Non-Groups

Finally, the following weapons do not belong in any sort of group whatsoever. To learn any of these weapons, the character must spend a weapon proficiency slot on it, and none of these is similar in use to any other weapon. When a character picks one up and uses it without being proficient in it already, he suffers the full penalty.

**Weapons Not Belonging To Any Group:**
Arquebus,
Blowgun,
Bola*,
Chain*,
Gaff/hook*,
Lasso,
Net,
Quarterstaff/Bo stick*,
Nunchaku*,
Sai*.

**Special Note:** The Cestus* doesn't require any Proficiency. It enhances punching damage, and everyone knows how to punch.

## Weapon Specialization and Weapon Groups

Although it is possible to become proficient in an entire group of weapons, this doesn't mean a character can *specialize* in an entire group of weapons.

As before, each weapon specialization costs one Weapon Proficiency Slot in a weapon the character is already proficient in. A character *can't* pay two points to be proficient in the Fencing Blades group and then another two to specialize in the same

group: He'd have to take one-slot Specializations *individually* for Dagger/Dirk, Knife/Stiletto, Main-gauche, Rapier, and Sabre.

Let's say a character wants to know how to use every type of blade ever made . . . but he wants to be especially good with the Long Sword. As a first-level Warrior, he receives four Weapon Proficiency Slots to start with. He spends three to take Proficiency with the entire Blades broad group, and spends his fourth to specialize in Long Sword. He has his wish: He can pick up and use any blade weapon without penalty, but is particularly adept with the Long Sword.

Similarly, a character might wish to be proficient with all bows, and especially good with the Composite Long Bow. He spends two weapon proficiency slots to be proficient with the entire Bows tight group, and spends two more slots (because it is more difficult to specialize in bows; see the *Player's Handbook*, page 52) to specialize in Composite Long Bow. This character is at a disadvantage with any sort of weapon other than bows, but can use all bows, and is especially good with the Composite Long Bow.

### Note

That's all you need to know now about the use of Weapon Proficiencies . . . as they're used to buy proficiency and specialization with weapons. But there are more things to use these proficiencies on, as you'll see as you proceed through the chapter.

### Ambidexterity

If a player wants his character to be ambidextrous, as described above under "Off-Hand Weapons Use," he must devote one weapon proficiency to Ambidexterity.

If he does so, he'll be able to fight normally with both hands, and will be equally adept at non-combat tasks with both hands.

This doesn't give him two attacks per round. It just means that if he loses the use of one hand, or drops the weapon in that hand, he'll be equally adept with the other.

### Style Specialization

You can use Weapon Proficiencies to specialize in certain *styles* of fighting, such as two swords, two-handed weapon, and so on. We describe how to do this below, under "Fighting Styles."

### Punching and Wrestling Specialization

As you can specialize in certain weapons, you can also specialize in Punching and Wrestling. You already know about Punching and Wrestling from the *Player's Handbook*, pages 97-98; here, you'll learn how to improve a character's Punching and Wrestling abilities. You'll find this information below, under "Punching, Wrestling, and Martial Arts."

### Martial Arts

Additionally, you'll learn how make your character proficient (or even a specialist) in eastern-style martial arts. These rules work like the existing Punching and Wrestling rules, but constitute a whole new set of maneuvers and tactics a skilled fighter character can use in combat. These rules, too, you'll find below under "Punching, Wrestling, and Martial Arts."

## Fighting Styles

It gives a campaign more color when the warriors fight with different styles. A huge warrior-knight wielding a greatsword looks and fights a lot differently from a slender fencer carrying a rapier and main-gauche.

Below, we'll describe several common combat styles . . . and the interesting things you can do with them by taking a Style Specialization.

All these Fighting Styles refer to fighting with *melee weapons only*. None of them applies to missile weapons.

### The Four Fighting Styles

There are four common Fighting Styles employed by anyone using a melee weapon. They are:

**Single-Weapon Style:** The character wields a weapon in one hand and carries nothing in the other hand. The weapon can be as short as a Dagger or as long as a Bastard Sword or Long Spear.

**Two-Hander Style:** The character wields a weapon which requires (or at least accommodates) the use of two hands. Such weapons include those which require two hands (Two-Handed Sword, Polearms, and Quarterstaff, for instance) and those which can be used one-and two-handed (Bastard Sword and Spear, for example).

**Weapon and Shield Style:** The character wields a weapon in his good hand and carries a shield on his off-hand. This combination can vary from a street-bravo's choice of dagger and small buckler to the classic knight's choice of long sword and body shield.

**Two-Weapon Style:** The character wields one weapon in each hand. Unless both weapons are Small (S on the Size column on the Weapons chart), the weapon in the character's off-hand must be lighter in weight than his primary weapon. This character can vary from a street-thief wielding two identical daggers, to a fencer using a rapier in one hand and a main-gauche in another, to a heavily-armored warrior with a long sword in one hand and a short sword in the other. Note: Read the *Player's Handbook*, page 96, for the rules on Attacking with Two Weapons.

All Warriors start play knowing how to use all four styles. Priests start play knowing how to use Single-Weapon, Two-Hander, and Weapon and Shield styles. Rogues start play knowing how to use Single-Weapon, Two-Hander, and Two-Weapon styles. Wizards start play knowing how to use Single-Weapon and Two-Hander styles. Characters cannot learn new styles after they're created; these are the styles they are limited to by their choice of character class.

A character can use a weapon style he knows with a weapon he does not know how to use. For example, wizards know Two-Hander style . . . so they can learn to use a quarterstaff. If a wizard who doesn't have Proficiency with a quarterstaff picks one up, he

can still use the weapon in two hands. However, he suffers the –5 attack penalty required by his unfamiliarity and his character class.

Each style confers some basic advantages and disadvantages when used. These are described in the descriptions of each individual style, below. Additionally, characters can *specialize* in these styles. Single-class warriors can eventually specialize in all of them; other classes can only specialize in one style.

## Specializing In the Styles

You take a Style Specialization by devoting one weapon proficiency slot to a *fighting style*.

## Guidelines

To use a Style Specialization with a specific weapon, you must have weapon proficiency with that weapon. For example, a character might have bought Style Specialization with Two-Hander Style. If he has Weapon Proficiencies with polearms, he can use the benefits of Style Specialization whenever he uses polearms. But if he doesn't also have proficiency with Two-handed Sword, and picks one up to use it, he *doesn't* get the benefits of Two-Hander Style Specialization with that weapon.

You can have both a Weapon Specialization and a Style Specialization in the same weapon, but neither is dependent on the other; you can have one without the other. For example, a character could have Proficiency with Sabre, Specialization with Sabre, and then Style Specialization in Single-Weapon style; he'd be a master fencer with the sabre. Or, he could have just Proficiency and Specialization in Sabre, or just Proficiency in Sabre and Style Specialization in Single-Weapon style.

## Multiple Style Specializations

A single-class Warrior can take more than one Style Specialization. Weapons such as Bastard Sword, Javelin, and Spear, which can be used one-handed or two-handed, with or without a shield, can have up to four different Style Specializations taken for them.

*Example: A single-class Warrior has Proficiency with Bastard Sword. He could theoretically take Single-Weapon Style Specialization, Two-Hander Style Specialization, Weapon and Shield Style Specialization, and Two-Weapon Style Specialization with it. Between fights, or even in the course of the fight, he could change the way he uses his weapon in order to gain different advantages in the course of a combat.*

## Limitations on Style Specialization

A character may begin play with only one Style Specialization. If he is a single-class Warrior, may learn others as he gains new Weapon Proficiencies through experience.

Only Warriors, Rogues and Priests can buy Style Specializations. Only Warriors and Rogues can buy the Two-Weapon Style Specialization. Only single-class Warriors can ever learn *more than one* Style Specialization.

Below are descriptions of the four Fighting Styles.

## Single-Weapon Style

Single-Weapon style means that the character wields a one-handed weapon in one hand and nothing in the other. Though in real life this type of weapon use is often at a disadvantage compared to many of the others, it's very popular in film and fiction . . . and so it has some virtue in the game.

### Advantages

The advantage of single-weapon style in the *AD&D*® game is that the character keeps a hand free for grappling, for switching weapons, for surprise maneuvers, for whatever comes along in the course of combat.

For instance, two fighters are going at it, and one pins the other's weapon (see Pin, below, under "Melee Maneuvers"), the single-weapon fighter can use his free hand to perform punching maneuvers; and he can try to perform barehanded maneuvers (below, under "Punching, Wrestling, and Martial Arts").

### Disadvantages

The main disadvantage to this style is that the character does not gain the benefit of a shield's AC bonus.

### Style Specialization

If the character devotes a weapon proficiency to Style Specialization with Single-Weapon Style, he gets a +1 AC bonus when using any one-handed weapon (for which he has proficiency) in Single-Weapon Style. He doesn't get the bonus if he carries a shield or weapon in his off-hand.

Additionally, he can devote an *extra* proficiency to Single-Weapon Style and have a total +2 AC when fighting in this style. That's the limit, though: He cannot devote more than two proficiencies (for a total of +2 AC) with Single-Weapon Style.

## Two-Hander Style

Two-Hander Style involves carrying and wielding a weapon with both hands. Naturally, many weapons (including polearms, the great axe, the two-handed sword, and others) require two-handed technique. Other weapons (such as bastard sword, javelin, and spear) have it as a listed option. (Two-handed options for Harpoon, Javelin, Long Spear, Spear, and Trident are given in the *Equipment* section of this rulebook, not in the *Player's Handbook*.)

### Advantages

The main advantage of two-handed weapon technique is that it allows the character to wield large two-handed weapons which can do substantial amounts of damage.

A second advantage is that, if you are using a two-handed weapon, the Disarm maneuver (see "Melee Maneuvers," below) is only of partial use against you.

A single successful Disarm against a two-handed weapon user won't knock the weapon out of the wielder's hands; it will merely knock his weapon askew and make him take some time to recover, so he automatically loses initiative on his next round.

However, two Disarm maneuvers successfully made against the character in the same round *will* knock the weapon loose.

### Disadvantages

As with single-weapon use, two-handed weapon technique has the drawback that the user cannot wear or use a shield, or gain the shield's AC bonus.

### Style Specialization

You can, by devoting a weapon proficiency to it, take a Style Specialization with Two-Hander Style.

Style Specialization with Two-Hander Style gives you a very specific benefit: When you're using a weapon two-handed, that weapon's Speed Factor is reduced by 3.

For example, a fighter with Two-Hander Style Specialization and wielding a Bastard Sword can wield his weapon faster in two-handed style than in one-handed style. Used in one hand, the Bastard Sword has a Speed Factor of 6. In two hands (normally), it has a Speed Factor of 8. But used in two hands by someone with Two-Hander Style Specialization, it has a Speed Factor of (8–3) 5.

This is because when a fighter wields such a weapon with both hands on the hilt, he has more leverage on the blade and can move it faster. That's what Style Specialization in Two-Hander Style will do for the character: It teaches him how to use the weapon much faster and more aggressively than someone with less specialized training in the weapon.

### One-Handed Weapons Used Two-Handed

Some players don't realize that many other one-handed weapons can also be used two-handed. Since these weapons don't do any more damage two-handed, there usually isn't much reason to use them this way; however, with Style Specialization in Two-Hander Style, now there's a reason.

If you specialize in Two-Hander Style and then use a one-handed weapon in two hands, you also get a bonus of +1 to damage. Thus, if you take a Two-Hander Style Specialization, when using a long sword two-handed, you do 1d8+1 damage instead of the base 1d8 (or 1d12+1 vs. large targets, instead of the base 1d12).

The one-handed weapons which can be used two-handed in this fashion include: Battle axe, Club, Footman's flail, Footman's pick, Horseman's flail, Horseman's mace, Horseman's pick, Morning star, Long sword, Warhammer.

## Weapon and Shield Style

This is the classic technique of using a one-handed weapon and carrying a shield on the other arm.

### Advantages

The principal advantage of Weapon and Shield Style is that you get the AC bonus of a shield; this is especially good when you can find a magical shield which confers a better AC bonus.

A second advantage is that the character can use the Shield-Rush maneuver (below, under "Melee Maneuvers").

### Disadvantages

The disadvantage to Weapon and Shield Style is that the left arm (right arm, for left-handed characters) is dedicated to the shield and is not much use for anything else. If the character is disarmed, all he has to wield offensively is his shield, until he can get back to his weapon. If he is pinned in combat, he can't use his shield hand for grappling.

### Style Specialization

If you devote a weapon proficiency slot to specialization in Weapon and Shield Style, you receive one extra attack per round . . . only when using a shield on the shield-hand, that is. You can use that extra attack *only* for the Shield-Punch and Parry maneuvers (see under "Melee Maneuvers," below).

As with the normal "Attacking with Two Weapons" rules (see the *Player's Handbook*, page 96), when striking with both hands in a single combat round, the character suffers a –2 to attack rolls with his weapon and a –4 to attack rolls with the Shield-Punch or Parry. (If you're ambidextrous, as described above under "Off-Hand Weapons Use," that's a –2 with weapon and –2 with shield.) If you devote a *second* weapon proficiency slot to Weapon and Shield Style Specialization, that penalty drops to with the weapon and –2 with the shield. (If you're ambidextrous, that penalty is 0 with weapon and 0 with shield.)

On any round when you perform two maneuvers, you do not get the AC bonus for the shield for the rest of the round. If you swing your sword and perform a Shield-Punch in the same round, you do *not* get your shield's AC bonus if anyone attacks you later in the round.

## Two-Weapon Style

With this popular style, the fighter has a weapon in each hand—usually a longer weapon in his good hand and a shorter one in his off-hand. Unless the character has Style Specialization in this style, the second (off-hand) weapon must be shorter than the primary weapon.

### Advantages

One great advantage to this style is that you always have another weapon in hand if

you drop or lose one. A single Disarm maneuver cannot rid you of your weapons.

### Disadvantages

The principal disadvantage to this style, as with some other styles, is that you don't gain the AC benefit of a shield.

### Style Specialization

Please read the "Attacking with Two Weapons" section from the *Player's Handbook*, page 96, before continuing.

If you devote a weapon proficiency slot to style specialization with Two-Weapon Style, you get two important benefits. First, your attack penalty drops; before, it was a –2 with your primary weapon and –4 with your secondary, but with Specialization in Two-Weapon Style it becomes 0 with your primary weapon and a –2 with your secondary weapon. (If you're already ambidextrous, as per "Off-Hand Weapons Use," above, that penalty is 0 with primary weapon and 0 with secondary weapon.) Second, you're allowed to use weapons of the same length in each hand, so you *can*, for example, wield two long swords.

When fighting with two-weapon technique, you can choose for both weapons to try the same maneuver (for example, two strikes, or two disarms), or can have each try a different maneuver (one strike and one parry, one pin and one strike). If the two maneuvers are to be different, each receives a –1 attack penalty.

Though rangers don't suffer the off-hand penalties for two-weapons use, they do not get a bonus to attack rolls if they devote a weapon proficiency slot to Two-Weapon Style. They do get the other benefit, of being able to use weapons of equal length.

## Sample Style Specialization

Here's an example of how a character can use the weapon proficiencies, weapon specialization, and style specialization rules to become very dangerous and very versatile indeed.

*Berris is a 1st level fighter, but he's already very accomplished with his weapon of choice, the Bastard Sword. He has taken Weapon Specialization with the Bastard Sword (two slots), Two-Hander Style Specialization with the Bastard Sword (one slot), and Single-Weapon Style Specialization with the Bastard Sword (one slot).*

*From his weapon specialization, he receives a +1 to attack rolls and +2 to damage whenever using a Bastard Sword, regardless of the technique he uses.*

*When using the weapon in Single-Weapon Style, one-handed, he gets a +1 to AC.*

*When using the weapon in Two-Hander Style, his weapon's speed factor drops from an 8 (normal two-handed speed factor for the Bastard Sword) to a 5, making it a very quick weapon in his hands.*

### Style Specialization and the Character Sheet

Since style specializations give the character certain benefits in combat, these benefits

need to be written down on your character sheet.

The character sheet has blanks for all pertinent notes. For example, with the Berris character mentioned just above, the character sheet would include blanks with the following information:

**Special Abilities and Restrictions:**

+1 to hit
+2 damage Bastard Sword,
+1 AC used Single-Hand,
Speed Factor 5 used Two-Handed

**Weapon Proficiency Slots Available:** 4

Prof w/Bastard Swd: 1
Spec w/Bastard Swd: 1
Single-Weapon Style: 1
Two-Hander Style: 1

## Melee Maneuvers

Strike and counter-strike, strike and counter-strike: That's the formula for dull, mechanical combat, and it's no way to run the sort of swashbuckling, action-packed combat which should be the backbone of your *AD&D*® game adventures.

So here, we'll be describing all sorts of different combat maneuvers which your characters can perform in combat.

These maneuvers aren't limited to warrior-classes alone. *Anyone can perform any of these maneuvers*, provided he has the right weapon or equipment. Any priest with a shield can perform a Shield-Punch or Shield-Rush; any rogue or mage with a good attack can Disarm a foe. But warriors will be performing these maneuvers most often.

Each of these maneuvers, when used in combat, constitutes one Attack. Characters with multiple attacks per round can mix and match their maneuvers. A character with two attacks per round could perform one Strike and one Parry, for example, one Called Shot and one Disarm, one Pin and one Grab, two Strikes, two Parries, or whatever combination he wanted.

### Called Shots

Take a look at Chapter Nine of the *Dungeon Master's Guide*, page 58.

As you'll see in those rules, when you wish to make a Called Shot, you announce this before initiative is rolled, and you receive a +1 penalty to your initiative. Then, when your turn comes up in combat, you suffer a –4 penalty to your attack roll. Naturally, you can take Called Shots with melee, thrown, and missile weapons, and even with weapon-like spells such as *magic missile*.

Called Shots can be used for a variety of purposes. The most important of these are: Disarming a weapon; striking a specific body part; smashing something being held;

bypassing armor; and special results.

Disarming a weapon warrants its own maneuver, so you'll find "Disarm" below.

### Striking A Specific Body Part

As it mentions in the *DMG*, again under "Hitting a Specific Target," the normal *AD&D*® game is not geared toward a hit-location system which chronicles where every blow lands and which body parts get injured. We'll be presenting some options for that sort of thing later in this chapter, but this section concerns something slightly different.

Monsters often have body parts or features with extraordinary or magical effects; examples include the eyes of the beholder, tentacles of the carrion crawler, individual heads of the chimera, and so on. Many animated statues are motivated by a medallion, inscription, or imbedded gem.

A hero can take a called shot to attack those very specialized locations; this is a very heroic thing to do. It's up to the DM to determine how much damage such body parts can take; some will take as little as 1 point of damage before being destroyed, while others may be expressed in fractions of the creature's normal hit point total.

### Smashing Something Being Held

Often, an enemy will be holding something and a hero will not wish him to hold on to it. If the attacking character wishes to knock it out of his hand, that's the Disarm maneuver; if he wishes to destroy it in the opponent's hand, that's Smashing Something Being Held.

If an alchemist is holding a bottle of flammable liquid to hurl at the party, it's very heroic to swing a sword or throw a knife and smash it while he holds it up to throw: With one blow, you've protected your friends and immolated an evil enemy. If a demonic foe has finally gotten his hands on the Cursed Wand of Anti-Life, it's more than appropriate to fire an arrow or quarrel and smash it in the demon's hands.

Again, the DM decides how many points it takes to smash such things. In the case of a vial of liquid, it's not much—one or two at most.

### Bypassing Armor

This option is not present to let heroes bypass or ignore the AC value of normal armor. If that were allowed, all PCs and all monsters would be using the Called Shots maneuver almost exclusively, which would be very annoying.

No, the Bypassing Armor option is used when the DM has introduced a monster or enemy which can't be beaten any way except through the discovery and exploitation of its "weak spot." Like Talos, the invulnerable bronze man of Greek myth, these monsters are impossible to damage (this is usually expressed as a monstrous AC and an invulnerability to any but the most powerful of magical weapons—+4 or better); however, each one has a weak spot.

These weak spots are always visible to the eye, if the hero thinks to look for it and can see the body part where it is. (For example, a dragon might not want to fly; this is so that it can keep its wings folded down over its unarmored spots.) A clever warrior will

realize that it's covering up for something and try to trick it into moving its wings.

If a hero is bright enough to look for the weak spot, and perhaps trick a monster into showing the weak spot, the warrior can then take a Called Shot and hit it. He'll do the monster great damage (or perhaps kill it outright; that's for the DM to determine).

*Examples: A dragon which has invulnerable hide (but which, suspiciously, never opens its mouth to breathe flame . . . because its inner mouth is not armored); a mechanical man with a small, nearly-invisible slot used by the inventor to open it up (but which a hero with a knife can use to damage its internal machinery); a warrior with armored skin but an unarmored ankle; a mummy which keeps one arm crossed over its chest to protect its otherwise undefended heart; a 9' high golem whose weak spot is the unseen top of its head.*

Again, this only works when the DM has created a monster which can (or must) be defeated in this very way. If a fight isn't going the characters' way but the characters are gradually doing damage to the monster, then the monster probably isn't one of these invulnerable-beasts-with-weak-spots, and it's pointless to take lots of called shots at random body parts "just in case."

## Special Results

Finally, the Called Shot can be used for a variety of special results, especially neat and interesting results such as the ones you see in movies and fiction. Examples:

**Carving Initials Into Someone.** Each successful Called Shot will enable a character with a sharp blade to slice one letter or initial into a tabletop, a wall—or the flesh of an opponent. This does only one point of damage, and has one of two results: Against an enemy of equal or lower level or influence, it can cause the enemy to lose morale or surrender (DM choice); against an enemy of equal or higher level or influence, it will be considered such an insult that this enemy will not rest until you are dead. Thus, it is best performed against enemy minions to impress and scare them, to persuade them to run away or help you. Performed against enemies who are your equal in ability or status, this maneuver merely earns you a foe for life.

**Cutting Buttons Off.** Each successful Called Shot will enable a character to snip off one button, brooch, gem or other sartorial element from an enemy's outfit. It can also be used to flip a necklace off someone's head, spring the catch on a bracelet, etc. This has the same good effects as carving initials into someone, but will not earn you the enmity of an opponent who is your equal.

**Stapling.** This classic maneuver is best performed with a thrown knife or with an arrow or quarrel, though it can be performed with sharp melee weapons. The target must be near some piece of furniture or wall, and that furniture or wall should be wood, plaster, or any other material that such a weapon will penetrate. With a successful Called Shot, you staple some item of the target's clothing (your choice) to that nearby surface. The target must spend a combat round getting himself free. (This does not require any sort of roll; it just takes a few moments to pull the knife free, tear the cloth of his garment, whatever it takes.) If someone attacks him while he is pinned, he suffers a –2 penalty to AC (i.e., a 3 becomes a 5) and attacks. If the target is stapled and must defend himself while trying to tear himself free, he suffers those AC and attack penalties but will be able to tear himself free after a total of three rounds.

**Hostage-Taking.** If a character successfully grabs a victim during one round (see the Grab maneuver, below), he may use a Called Shot on his next round to put his dagger to the hostage's throat. This does no damage to the hostage, but the attacker can then, at any time, drive the knife home for twice normal damage (which he will probably do if the hostage does not surrender, or if someone else he is threatening does not surrender.)

## Disarm

The Disarm is a specific variation on Called Shots. With the Disarm, the attacker takes a Called Shot at the weapon his target is currently using.

## Disarm vs. Single-Handed Weapons

With the basic Disarm maneuver, the attacker follows the normal rules for Called Shots (announcing his intention before initiative and receiving a +1 modifier to initiative, and then suffering a –4 attack penalty); if his attack is successful, he will (normally) cause his enemy's weapon to go flying from his enemy's hand.

Roll 2d6. The number rolled is the number of feet the weapon flies. Roll 1d6. The number rolled determines which direction the weapon goes. (This is described in terms of the attacker's facing. Straight Ahead means straight ahead from the attacker; Behind means behind the attacker.

1 = Straight Ahead
2 = Ahead, Right
3 = Behind, Right
4 = Straight Behind
5 = Behind, Left
6 = Ahead, Left

This Disarm can also be used on magic wands, crystal balls, and any other sort of magical apparatus which is held in one hand. If the item is worn (like jewelry), it cannot be Disarmed. (Note: Weapons, when used, cannot be worn like jewelry.)

## Disarm vs. Two-Handed Weapons

Disarm does not work nearly so well against two-handed weapons. If you perform a Disarm against a wielder of a two-handed weapon (including magical staves), it merely knocks the weapon out of alignment briefly; the weapon's wielder automatically loses initiative on the next round. However, two Disarms made against the wielder *in the same round* will knock the weapon free; roll only 1d6 to see how many feet it flies, and 1d6 to see which direction it goes.

Naturally, the two Disarm maneuvers don't have to come from the same character. Two characters can work together to disarm the two-handed wielder; or, one character with multiple attacks in a round can do the job himself.

If a character finds his two-handed weapon partially disarmed, and he still has at least

one attack to perform this round, he can elect to forget about his next attack and may use that attack to recover his weapon instead.

*Example: Torreth and Amstard are fighting, Torreth with long sword and shield, Amstard with two-handed sword. Both characters have two attacks per round. Torreth has initiative. He successfully Disarms Amstard, drawing his weapon out of line. Amstard now has his first attack of the round. He can either punch Torreth with his gauntleted fist, in which case his sword will still be out of line, or he can recover from the Disarm. He chooses to recover. He swings the weapon back into line and is ready for the next exchange. He suffers no initiative penalty on the next turn.*

### Disarm vs. Shields

Disarm is only of partial usefulness when struck against a shield. It won't tear the shield loose from the wielder's arm. However, it will draw it out (knock it out of alignment, so that the wielder is not protected by it). For the rest of the round, the shield-wielder loses the AC bonus of the shield (and any magical benefits, too). At the start of the next combat round, even before initiative is rolled, the character regains his shield's AC bonus.

If a shield has other properties, those stay in effect, even when the shield is Disarmed out of alignment. For example, let's say a shield radiates a *protection from evil* spell. If it's Disarmed, and drawn out of alignment, its wielder still gets the benefits of that *protection from evil* spell. Only when he drops the shield or has it forcibly wrested away from him does he lose that benefit.

As with the Disarming of two-handed weapons, if a character finds his shield disarmed, and he still has at least one attack to perform this round, he can elect to forget about his next attack and may use that attack to recover his weapon instead.

*Example: At the start of the next round, Amstard's ally Jeter, carrying a halberd, joins the fight. Torreth wins initiative again. He takes an ordinary strike at Amstard and misses. Jeter chooses to Disarm Torreth's shield +4. He successfully Disarms it. Now, Amstard takes his shot, his chances greatly improved because Torreth's shield bonus to AC doesn't come into play. He smites Torreth with a mighty blow. Torreth has another attack this round: Realizing that he's going to get hurt if he doesn't have his shield up, he forgets about a second attack and uses that time to bring his shield back up.*

### Thrown-Weapon and Missile Disarms

You can perform the Disarm maneuver with thrown weapons and missile weapons.

When throwing small (S) weapons, you suffer an additional –2 attack penalty because these weapons don't have a lot of weight; it's harder for them to knock the weapon out of someone's hands. Medium (M) or larger weapons don't suffer this penalty, nor do arrows, quarrels, or sling stones.

Thrown-weapon and missile Disarms may only be performed against single-hand weapons. They automatically fail vs. two-hand weapons and shields.

### Expert Disarms

If you're a very experienced fighter, and are willing to suffer a serious penalty in order to impress your enemy, you can perform an "expert disarm" against single-hand weapons only. This suffers the penalty of *two* Called Shots: Announce intent before initiative, then suffer a +2 to initiative and a –8 to attack rolls.

But if it does hit, when you Disarm the weapon, you can send it pretty much where you want it to, within 12 feet of the target. If, for instance, one of your allies has lost his sword, and your enemy is wielding a comparable sword, you might wish to Expertly Disarm your enemy's sword to land right in front of your friend. Or, if you're fighting with a dagger and your enemy has a sword you want, you might Expertly Disarm his blade to fly up into the air; you drop your knife and the sword drops right into your hand.

This is an almost preposterously heroic sort of thing to do (it only happens in the most swashbuckling fiction and movies, after all) so the DM may not wish to allow this option in a more gritty or realistic campaign. On the other hand, he may grant bonus XP to characters with the temerity to try it . . . and succeed!

## Grab

The Grab is another type of Called Shot. To perform it, you must have at least one hand free; two hands are better if you're grabbing and trying to hold a person.

When performing the Grab, begin as with a Called Shot (announce before initiative, +1 to initiative, –4 to attack rolls).

If you hit, you've gotten your hand on whatever it was you were trying to grab: It could be an enemy's weapon, an important item you're trying to retrieve, or any such thing.

However, just because you've grabbed hold of the object doesn't mean that you're in control of it. If some other person already has hold of the object, he's going to struggle with you for control.

In the same round that you performed the grab, roll 1d20. Your opponent will do the same.

Compare the number you rolled to your Strength ability score. Whichever one of you rolled better against his score won the tug-of-war contest.

For purposes of the Grab, all 18 scores (01–50, 51–75, etc.) are just 18. However, in case of a tie, a higher-percentile 18 beats a lower-percentile 18. (For instance, an 18/40 beats an 18/30, an 18/00 beats an 18/99, etc.)

*Example: Rathnar the Barbarian tries to grab the Ruby Orb of Blassendom from the hands of his enemy. He successfully rolls to attack rolls and gets his free hand on the Orb.*

*Rathnar is Strength 17. His enemy is Strength 15. Both roll 1d20.*

*Rathnar rolls a 10. He's made his roll by 7. His enemy rolls a 9. He's made his roll by 6. Rathnar snatches the Orb away.*

If you grab something and then fail your Strength ability roll, then you've lost: Your enemy has snatched the object back out of your hand.

A tie (for instance, if both of you made your roll by 5, or both missed it by 2, or came up with any other identical answer) means that you re-roll, during the same round. Treat this second roll as if it were a second attack in the same round for determining when in the round it takes place (in other words, it will take place *after* all other characters have

performed their first maneuvers for the round).

However, all these Strength rolls resulting from a single Grab maneuver are counted as one "attack;" if a character can make two attacks in a round, and his first attack is a Grab, and the grab leads to two or three Strength rolls due to struggling, that's all still only one attack. The character still gets his second attack later in the round.

## Grabbing A Person

If you're Grabbing someone to hold him against his will, you need to consult the Wrestling rules from the *Player's Handbook*, pages 97-98. Also, see below under ``Punching, Wrestling, and Martial Arts."

If you're Grabbing someone and you use only one hand, you have two strikes against you. First, the attack is treated as a Called Shot, with the usual penalties; second, you're treated as if your Strength ability score were 3 less. If you have a Strength of 15 and grab someone one-handed, you make your Strength roll as if you had a Strength of 12.

(Strengths of 18 aren't automatically dropped to a 15; it depends on the 18 Strength's percentile bonus. An 18/00 drops to an 18/51. An 18/91–18/99 drops to an 18/01. An 18/76–18/90 drops to a plain 18. An 18/51–18/75 drops to a 17. An 18/01 drops to a 16. And the plain 18 drops to a 15.)

If you use both hands, you don't have to use the Called Shot rules; you can make a Wrestling attack without announcing it far in advance, and don't suffer the +1 initiative or –4 to attack penalty. Also, you get to use your full Strength score. Determine the results of your attack as a Wrestling attack.

If your opponent has any attacks left this combat round, he can respond with a Wrestling, Punching, or other attack (such as stabbing you with a short weapon, for instance). If your Wrestling attack roll resulted in a hold of some sort (any result on the ``Punching and Wrestling Results" chart with a "*" beside it), he has a –4 penalty to attack rolls with any attack but another Wrestling attack. However, he can use his attack to try to break your hold (using the Strength roll tactic described above, under the description for Grab).

## Grabbing a Monster

The same rules apply to grabbing monsters . . . but there are a couple of other things to consider.

**No Strength Ability Score.** Most monsters aren't listed with a Strength ability score. This makes comparisons a little difficult. In general, if the situation ever comes up, the DM should decide for himself what Strength a specific monster has.

Here's one rough rule of thumb to approximate a Strength score: Determine how much damage the monster can do with its single largest attack. That's your starting number. (In other words, if it does 1–8 damage with its worst attack, you start with the number 8.)

If the monster has multiple attacks, add 1 to the starting number per extra attack the monster has.

Add 8 to the number if the monster is an animal known for its ability to carry weight (horses, pegasi, camels) or contains parts of such a monster (as the hippogriff does).

The DM may further adjust this number as he desires.

The result is a rough measure of the monster's Strength.

(Yes, there will be many examples which don't adhere well to that rule of thumb. But it's someplace to start.)

*Example: The Nightmare has attacks of 2–8/4–10/4–10. Its largest possible attack is 10 (our starting number); it has two extra attacks per round (for a +2 to that starting number); it's a horse-like animal (for a +8). Final Strength score: 20.*

**Size Difference.** Also, the relative size of the two combatants is important. Humans are medium-sized (M) ``monsters." They have an advantage when grabbing small monsters (such as goblins, imps, and children, for instance) and a disadvantage when grabbing large ones (dragons, golems and hippopotami, for example).

Treat a character's Strength as 3 higher when he is grabbing and struggling with a smaller monster, and 6 lower when grabbing and struggling with a larger one. (This bonus or penalty is *halved* with player-character races and demihuman NPCs. Thus, halflings, goblins, kobolds and gnomes are at a –3 when wrestling with Medium-sized opponents such as humans; Dwarves, because they are so close to human-sized, are not. Humans are at a mere +1 bonus to Strength when wrestling with halflings, goblins, kobolds and gnomes.)

Grabbing is performed with hands only. The character may be wearing gloves or even the Cestus described in the *Equipment* chapter of this book, but may not be holding any other weapon in his Grabbing hand.

## Hold Attack

This is a sort of non-attack maneuver.

The Hold Attack maneuver is a way for a character to delay making his attack until later in the combat round. It's usually performed when the character is hoping that battle circumstances will change so that he can get a shot in somewhere that is currently too well-defended. Archers use this maneuver a lot, so that they can snipe more effectively.

To perform the Hold Maneuver, the character, when it's time for him to announce his intention, says "I'm holding my maneuver." Combat proceeds to the next character.

Then, once everyone has gone in the round, as secondary attacks are being determined, the DM again asks the character what he's going to do; he can take his action then. If he does not, he forfeits that attack.

## Characters With Multiple Attacks

If a character already has multiple attacks in a round, he can still perform the Hold Attack maneuver with any or all of his attacks. This can make things a little complicated, but it's not a lot of trouble.

*Example: In this fight, Rathnar the Barbarian (who has one attack per round), Drusilla the Spear-Maiden (who has two per round), and Lacksley the Archer (who has three per two, and has two this round) are fighting a jungle warrior (two attacks per round) and his monstrous jaguar ally (three attacks per round).*

*This round, Lacksley wants to shoot the jaguar; but he's still caught in a spring-loaded animal trap, and Drusilla is between him and the jaguar.*

*The player-characters win initiative. Drusilla uses her first attack to spear the jungle warrior. Rathnar uses his sole attack to swing his axe at the jaguar monster. Lacksley announces that he's holding his maneuver. Now it's time for the monsters to respond; the jungle warrior attacks Drusilla with his own spear, and the jaguar-monster jumps on Rathnar and uses one of its two paw hits.*

*It's time for secondary maneuvers. Drusilla misses her second strike. Rathnar has no second strike. It's time for Lacksley to act. He asks the DM if Drusilla has moved out of position yet, and the DM rules that she has. He fires, scoring a hit on the jaguar monster. The jungle warrior stabs Drusilla again with his second strike, and the jaguar latches hold of Rathnar with his second paw strike.*

*It's time for tertiary maneuvers. Lacksley, because of his Hold Attack maneuver, now takes what would have been his secondary maneuver. He shoots the jaguar again, killing it; it rolls off Rathnar before it can inflict its third attack, a deadly bite or an even more deadly rake.*

## Parry

Take a look at Chapter Nine of the *Dungeon Master's Guide*, page 61, at the Parrying optional rule.

That's one way to simulate a fighter going on the defensive; the optional Parry maneuver presented here is done a different way.

To perform this Parry, you must announce before initiative is rolled that you're going to Parry. (If you have more than one attack per round, you must announce how many of them are going to be Parries.)

Then, during the round, the first time an attacker strikes at you (even if it's before your turn to strike), you roll your Parry. Roll to attack rolls your attacker, and roll vs. his AC (including all bonuses for shield, magical items, etc.). You can use your weapon at its normal chance to attack rolls, or your shield at a +2 to your chance to attack rolls (plus any magical bonus the shield confers). If you hit, his attack is parried and does you no damage.

You can Parry thrown weapons, but not missile attacks (quarrels, arrows, sling stones, *magic missiles*, etc.).

## Choice of Parries

You don't necessarily have to Parry the very first attack made against you . . . though that is the simplest way to do things. If you prefer, you can choose which attacker you're going to Parry.

*Example: Amstard is fighting an ogre and its idiotic goblin jester. Before initiative is rolled, he announces that he'll be using one of his two attacks to Parry.*

*The NPCs win initiative and attack. The jester attacks first. Amstard announces that he's not Parrying this attack. The jester hits him, doing minuscule damage. Then the ogre attacks. Amstard announces that he is Parrying this attack. The ogre rolls an attack, and succeeds; Amstard rolls to attack, and succeeds in Parrying the attack.*

*Then, it's the player-characters' turn. Amstard still has an attack left, and so swings at the ogre.*

If a character Holds his Parry, anticipating that some other attacker will swing at him, but that attack never materializes (for example, because that specific opponent went somewhere else), and he's still suffering attacks this round, he can use that Parry against one of these other attacks. He may not, however, apply it against an attack that has already taken place.

### Polearm Parries

If you're wielding a polearm, you can parry an attack from another character wielding a polearm, even if that character is attacking someone else. To do this, you must be within range either of that attacker or his intended victim.

*Example: Amstard is wielding a halberd from behind the shield-wall his friends are holding. Amstard announces, before initiative, that he'll use one of his attacks for a Parry and the other for an attack. After initiative, an NPC with a glaive takes a swing at Drusilla. Though the glaive-wielder is out of Amstard's range, Drusilla is right in front of Amstard, easily within his range. Amstard rolls his Parry, rolling against the glaive-wielder's AC, and hits; he parries the attack. When it's time for the PCs to attack, Drusilla puts the glaive-wielder down and Amstard swings his halberd against another enemy.*

### Missile Weapon Parries

In desperate situations, a character can parry with a missile weapon he is holding (bow, crossbow, or staff sling, but not sling). If he is successful with his parry, though, his weapon is ruined; the enemy's attack has destroyed it. He may continue parrying with it until it is completely destroyed (rules for destroying weapons and armor appear in the *Equipment* chapter of this book), but it may never again be used for its original purpose.

### Parrying from the DMG

Even if you use this Parry maneuver, you can still use the Parrying option from the *Dungeon Master's Guide*, page 61.

Incidentally, since the *DMG's* Parrying counts against all attacks coming in on the fighter that round, the fighter needs to announce, before initiative is rolled, that he is performing the Parrying maneuver for the AC bonus.

### Pin

With the Pin maneuver, you move close to your enemy (right up in his face) and use either a weapon or your shield to pin, or trap, his weapon—usually by pressing it against him so that he can't move.

This is like a Called Shot, except that you *don't have to announce it before initiative* and you don't suffer a +1 to initiative. You do still suffer the –4 attack penalty.

If you successfully hit, the victim can't use his pinned weapon until the pin is broken,

and you can't use your pinning weapon or shield until the pin is broken.

When the pin is first performed, the victim gets one chance to struggle, using a Strength roll exactly as described for the Grab maneuver, above. If he succeeds, he yanks the weapon free; if he has attacks left this round, he can use all of them. If he fails, the weapon remains pinned for the rest of the round; the victim loses one of his attacks for the round (if he only had one, he's out of luck until next round); but next round and in succeeding rounds, his first struggle attempt each round does not count against his available attacks. (Subsequent ones in the same round do count as attacks.)

It is possible to Pin someone with the missile weapon you are carrying (except for the ordinary Sling). While it's being used to Pin, it may not be used as a missile weapon. If it was armed (an arrow was nocked, a quarrel was in place, or a stone was in the staff-sling's pouch), it loses that missile in the struggle; the character must reload it later.

### Pull/Trip

This maneuver is designed to knock opponents down.

When using the Pull/Trip maneuver, the attacker announces his intention when it's his turn to attack. He describes how he's performing the maneuver to the DM, who may rule that it's impossible.

If it is possible, though, the attacker rolls vs. the target's AC as with any normal attack.

The target then rolls 1d20 against his Dexterity. If he succeeds, he stays on his feet. If he fails, he falls down. Modifiers to his Dexterity include:

+6 Target Was Not Moving
–3 Target Was Unaware of Attack

The Pull/Trip maneuver is best performed on someone who is moving and unaware of you. A target who is standing still (not walking or running) and is aware of his attacker is very hard to knock down.

### Use of Polearms

Polearms (and any other weapons with long staff-like elements—quarterstaves, lances, spears, etc.) are good weapons to have when you're trying the Pull/Trip maneuver.

You can Pull/Trip someone at the maximum range of your weapon, for instance, with no additional penalty to attack rolls.

You can Pull/Trip moving animals with a polearm; this is at a –6 penalty to attack rolls if the animal is Large (but you can't even try it on a Large animal *without* a pole of some sort).

And, finally, they are very useful for knocking riders off their mounts. With a mancatcher or polearm (though not with a quarterstaff, lance or spear), you can attack a mounted rider and have a good chance of pulling him from his horse. The Dexterity modifiers listed above also apply to the rider's chance to stay mounted.

### Sap

Sapping someone—i.e., hitting him over the head in order to knock him out—is a maneuver you undertake when you wish to capture an enemy alive (or just incapacitate him without killing him).

To do this, the attacking character makes a Called Shot at an additional –4 to attack rolls (so it's –8 total, plus the usual Called Shot penalties of having to announce your maneuver before initiative and suffering a +1 to initiative).

If the attack hits, the character rolls ordinary damage for the weapon. He gets a 5% chance of knockout (as per the Punching and Wrestling rules) for every point of damage he does, up to a maximum of 40%.

*Example: Sir Amstard wants to knock out a noble opponent rather than kill him. He attacks to Sap the opponent. Luckily, even with the –8 to attack rolls, he successfully hits his foe. With his sword, he rolls 6 points of damage. This gives him a (6x5%) 30% chance of an instant knockout. On his percentile dice, he rolls 42; he has failed this time. He'll try again.*

The damage done by Sap attacks is the same as that done by Punching; in other words, only 25% is normal, or "permanent," damage. The other 75% is temporary, and wears off after a short while, as we'll discuss later in this chapter.

When using a special or magical weapon to perform the Sap, *you do not count the weapon's attack or damage bonus.* You're not using the weapon the way it is meant to be used; you're hitting your target with the flat of the blade, with the hilt or pommel of the weapon, etc. Therefore, those bonuses don't count for anything.

When performed on a character who is asleep or magically held, the Sap maneuver automatically hits. The chance for knockout goes up to 10% per point of damage done, up to 80%. However, if the subsequent percentile die-roll is 81 or higher, the victim is not knocked out—he's been awakened by the attack. (Why try a Sap maneuver on an already-asleep target? Because you may want to kidnap him or smuggling him out of a cell and can't risk him waking up and alerting the guards.)

The Sap maneuver can only be performed with melee weapons or bare hands; it cannot be performed with missile weapons.

The Sap maneuver is usable only on Small (S) or Medium (M) monsters; it will not work on Large (L) or bigger monsters such as dragons. They just can't be knocked out with this maneuver.

### Shield-Punch

The shield-punch is a very basic maneuver. If you are using a buckler, small shield, or medium shield, you can use it to attack with as well as defend, by slamming it into your target's body.

When your turn to attack comes, simply announce that you're shield-punching and make your attack roll. You get no attack bonus from the shield, regardless of its size or magical enchantment.

A shield-punch does 1–3 damage, plus your Strength bonus. Once you have performed a shield-punch, you lose the AC bonus of the shield for the rest of the combat round from now until your next attack. (If you have an attack later in the round, you regain the AC bonus then; if you don't have an attack until next round, you regain the AC

bonus at the very start of the next round.)

This is a good maneuver to perform when you've dropped your weapon, as it will do somewhat more damage than a barehanded attack.

### Shield-Rush

This maneuver is like a combination of the Pull/Trip and Shield-Punch maneuvers.

The attacker must start at least 10 feet away from the victim, and must have either a medium or body shield. Basically, he runs at full speed up to his victim, slamming full-tilt into him, hoping to injure him or knock him down.

As with the Shield-Punch, the attacker gets no bonus to attack rolls from the shield, nor does he get the AC bonus of his shield from the time he starts the maneuver until his next attack.

If he hits, he does damage equal to the Shield-Punch, and the target must make a 1d20 roll against Dexterity to stay on his feet. The target applies these modifiers to his Dexterity:

+3 Target Was Moving Toward Attacker
+3 Target Was Not Moving
–3 Target Hit From Behind
–3 Target Was Unaware of Attack

As you can see, it's more reliable a knockdown than the Pull/Trip.

However, the attacker also has a chance to be knocked down.

If he misses his roll to attack, he slams into the target anyway, and does no damage to his target. He must make his Dexterity ability check at a –6 penalty; if he makes it, he is still standing, but if he fails it, he is knocked down. Either way, his target remains standing.

Even if he succeeds in his attack roll, he still has a chance to fall down. The attacker rolls 1d20 against his own, unadjusted Dexterity. If he fails it, he falls down, too.

### Strike/Thrust

This is the basic combat maneuver, and is included here just for completeness.

With the Strike/Thrust maneuver, the attacker uses the weapon he has in hand and strikes, swings, or thrusts it at the intended victim. If it hits, the attack does the damage appropriate to the weapon and the attacker's Strength bonus.

"Striking" with a Missile Weapon or Thrown Weapon constitutes firing it/throwing it at your target. Usually, you just say "Shoot" instead of "Strike" when announcing your maneuver.

### Surprise and Flash Maneuvers

All of these maneuvers, and the many possibilities they provide for characters to customize their fighting styles, should give you the idea that the DM should be encouraging wild, extravagant, interesting maneuvers and styles in combat. This is a lot

more entertaining than ordinary, plodding swing vs. swing combat.

Therefore, the DM should reward intelligent, creative efforts in combat by granting them bonuses to attack rolls and damage.

Examples:

*A lightly-armored hero with the Acrobatics nonweapon proficiency could charge a foe, then use his Acrobatics to flip over him and strike him from the rear; the DM might give him a bonus to attack rolls in addition to striking at a part of the target's body that is unprotected by a shield.*

*A crossbowman could use a Called Shot against the rope holding the chandelier, causing the chandelier to come crashing down onto the villain's head; instead of suffering a massive attack penalty for such a preposterous shot, the DM might give the player an attack bonus for the surprise value of the attack, plus a percentage change for knockout, as per the Attacking Without Killing section of the Player's Handbook.*

*A swashbuckler running up a flight of stairs with guardsmen in hot pursuit could tumble a stack of casks down the stairs behind him; the DM could give him a Pull/Trip maneuver against each one of those guardsmen, and even an improved chance to attack rolls, for attempting this classic move.*

On the other hand, a player might come up with a plan or maneuver that is merely foolish or abusive to the campaign. The DM can assign such a maneuver minuses to attack rolls and damage.

*Examples:*

*Rathnar's player decides that if Rathnar makes faces at an orc he is fighting, then the orc will become spooked and run away. When Rathnar attempts this, the orc proceeds to make faces right back at him, then begins the process of cutting Rathnar to ribbons.*

*Later, after some time at the healer's guild, Rathnar is in better armor and is in dire combat with another orc. Rathnar decides that he'll tuck and roll between the orc's legs, stand up behind him, and cleave him in twain from behind. However, his player has failed to consider that Rathnar is in bulky plate mail and knows nothing about acrobatics. The DM assigns Rathnar a stiff penalty to his Dexterity roll when Rathnar tries the maneuver. Rathnar ends up flat on his back, banging against the orc's legs with the orc looming over him, and the DM assigns the orc a bonus to attack rolls Rathnar because of the hero's clumsy position.*

## Don't Say No; Determine Difficulty

A good rule of thumb to use, when a player-character tries something strange or daring in combat, is this: Don't say no to his proposal; just determine the difficulty of the maneuver in your head, give him a general idea of that difficulty, and let him try it.

An easy way to do that is arbitrarily to assign a "difficulty number" of 1 to 10 to any special maneuver. Then, have the character roll against whichever of his abilities (Strength, Dexterity, etc.) that seems most closely to pertain to the task . . . and subtract that difficulty number from his ability. If he succeeds in rolling equal to or less than his modified ability, he has succeeded in his task.

*Example: Drusilla wants to try the same maneuver Rathnar was going to pull. She, too, has no acrobatic training, but is in light leather armor. The DM thinks that this will be pretty difficult for her (though not as difficult as it was for Rathnar), and assigns the*

*maneuver a difficulty factor of 5 if she leaves her spear behind. It'll be an 8, if she tries to take her spear along on the maneuver. He tells Drusilla's player that it is difficult but possible, though it will be nearly impossible if she uses her spear. Reluctantly, she drops the spear and pulls out a short sword before attempting the maneuver.*

*Her Dexterity score is 13; with the –5 penalty, it's modified to an 8. On her combat action, she attempts the maneuver, and rolls 1d20 against her modified Dex. She rolls an 8, and achieves it exactly; Drusilla rolls between the orc's legs, stands up behind him, and drives the short sword home before he knows what hit him. The DM gives her an arbitrary +4 to attack rolls for the surprise value of the maneuver.*

*Someone with Acrobatics nonweapon proficiency might be able to perform that same tuck-and-roll with no penalty, or with a penalty dictated only by the type of armor he is wearing. See the "Armor Modifiers for Wrestling Table" on page 97 of the* Player's Handbook*; those modifiers would work equally well in this situation.*

Another thing to do when a maneuver will probably work automatically if the intended target doesn't see it coming, is to assign a difficulty number to the target's chance of seeing it. This difficulty could be a penalty or a bonus, depending on how obvious the maneuver is, and so could be from 1 to 10 in either direction. The DM would have the intended target roll 1d20 against his modified Intelligence, and if he rolled equal to or less than that number, he'd see the maneuver coming and be able to avoid it. If he failed, the DM could give the attacker ordinary chances of success, or even make the attack an automatic success.

*Example: Amstard is in a street brawl with a big brute of a warrior; they've been punching the daylights out of one another, and Amstard has just been knocked down. His player announces that he's trying a classic trick: He'll inconspicuously pick up a handful of sand and, as he's rising to return to the fight, he'll dash the sand into his opponent's face, blinding him.*

*That's a reasonable trick to try. The DM decides that the brute's chance to figure out Amstard's maneuver is directly proportional to Amstard's finesse in scooping up the sand. He tells Amstard to roll against his Dexterity, unmodified, when picking up the sand—and the number he makes his roll by will be the brute's difficulty number in seeing it coming.*

*Amstard's Dexterity is 13. He rolls a 10 on 1d20, making it by 3. The brute's Intelligence is 10; with the difficulty of 3, his modified Intelligence is 7. Secretly, the DM rolls 1d20 for the brute, achieving an 8; the brute doesn't see the maneuver coming. But Amstard's player can't be told that until Amstard is committed to his maneuver.*

*Amstard now throws the sand; this counts as an attack. The DM gives him an ordinary attack roll to succeed. Amstard successfully hits vs. the brute's AC, and now the brute is temporarily blinded . . .*

That's how the thought process works, anyway. The players should have the opportunity to try just about any maneuver or approach they can imagine, and the DM should figure out how likely each try is of success. *Nothing should be impossible to try just because it isn't specifically covered in the rules.*

## Maneuvers In the Campaign

All of the above maneuvers and approaches can be used in any *AD&D*® game

campaign. There are a couple of things you should realize about them.

First, they'll add a lot of richness of detail to your combat. Using them, you can do just about everything in combat that you can imagine your character doing. However, the flip-side of that benefit is that it adds a level of complexity to your combat; the players and DM have to do more thinking about individual maneuvers and combat situations. Therefore, we don't recommend you use these maneuvers until you already have a firm grasp on the combat system, and can run basic combats with little or no difficulty.

Second, they'll allow the player-characters to be more colorful and efficient in combat. But the flip-side of this benefit is that the NPCs and monsters can be equally colorful and efficient. It will be a rude awakening for the player-characters when they run across a band of evil fighters as diverse and accomplished as they are.

## Punching, Wrestling, and Martial Arts

Punching and wrestling are described in the *Player's Handbook*, page 97-98. We'll elaborate a little on those rules here, and introduce rules for basic Oriental-style martial arts maneuvers.

### Specializing With Punching and Wrestling

Though everyone has a certain knowledge of punching and wrestling, so that everyone can be considered to have a "weapon proficiency" you can now Specialize in either of the two techniques.

To Specialize, you must devote a weapon proficiency slot to the technique. Any character of any class can Specialize in Punching or Wrestling (or Martial Arts, described later) . . . but except for the Fighting-Monk (described in *The Complete Priest's Handbook*, no character other than a single-class Warrior can ever specialize in more than one of these techniques. A single-class Warrior can end up specializing in both, but may begin play specializing in only one of them.

Specialization does not count as a Weapon Specialization. A first-level fighter could specialize in both Long Sword and Punching if he wished to. A Rogue, who cannot take any Weapon Specialization, can still take *one* unarmed fighting style specialization.

Fighting style specializations (i.e., Single-Weapon, Two-Hander, etc.) do not grant any bonuses to Punching, Wrestling, or Martial Arts combat. They're of use only to combat with melee weapons.

### Normal Punching Attacks

Review the Punch rules from the *Player's Handbook*, page 98. Remember that a normal punch does 1–2 damage (plus Strength bonus), and a punch with a metal gauntlet does 1–3 (plus Strength bonus), and that 75% of all punching damage is *temporary*, and wears off within minutes after the combat is included.

A character can pull his punch, so that he does no damage, or only his punch damage (without his Strength bonus).

### Punching Specialization

If a character spends one Weapon Proficiency on Punching, thus taking specialization with Punching, he gains the following benefits:

He gains a +1 bonus to all his attack rolls when punching;

He gains a +1 bonus to all damage when punching;

He gains a +1 *chart bonus* with all punching attacks;

He gains one additional punching attack per combat round (both hands must be free, holding nothing, for the character to gain this benefit); and

If the character wishes, when he pulls his punch, he can also refuse to do the +2 damage that specialization gives him.

The chart bonus is a reflection of the character's superior accuracy with punching. As you already know, when the character successfully hits, the roll itself determines which maneuver was made; you use the chart on page 97 in the *Player's Handbook*, and the attack roll also determines the maneuver used.

But on a successful hit, the punching specialist can modify that result. If he has a *chart bonus* of +1, he can choose the maneuver one higher or one lower on the chart.

*Example: Sir Amstard punches a troll. (He's recklessly brave, after all.) He rolls a 12 to attack rolls, and this turns out to be a successful hit. On the "Punching and Wrestling Results" chart, we see that this is a Kidney Punch, doing 1 point of damage, with a 5% chance for knockout. But Amstard is a Punching Specialist with a chart bonus of +1. He can choose instead for the result to be an 11-Hook (doing 2 points of damage and with a 9% chance for knockout), or a 13-Hook (doing 2 points of damage and with a 10% chance for a knockout). He changes the maneuver from a Kidney Punch to a 13-Hook.*

Only if a character specializes in punching and thus has a chart bonus can he affect his punch results in this manner.

A character using a Cestus does get to add the bonuses to attack rolls and damage from Punching Specialization to his Cestus damage. If he has specialized in Cestus too, he can decide from round to round which of his bonuses he will apply this round. Additionally, you may use the Cestus attack's attack roll to determine which Punching maneuver was used with the attack; you still use the damage for the Cestus instead of the maneuver, but now also have the possibility of a knockout. This can make combats with cesti a little more complicated, so the DM may disallow this rule if he chooses.

It is possible for a Warrior to continue to improve his Punching abilities: See "Continuing Specialization," below.

## Normal Wrestling Attacks

Review the Wrestling rules from the *Player's Handbook*, page 98. Each successful wrestling move does 1 point of damage (plus Strength bonus, if the attacker desires); a continued hold causes cumulatively 1 more point of damage each round than the round before.

In Wrestling combat, when two characters are wrestling, each rolls to attack rolls the other—using normal attack rolls against the opponent's AC, and utilizing the "Armor Modifiers For Wrestling" table on page 97 of the *Player's Handbook* for modifiers to attack rolls.

In a single combat round, a character can perform Wrestling on the other character, with the normal results from the Punching and Wrestling Results table from that same page. On Wrestle results from that table which are marked with an asterisk (*), the attacker, if successful, can maintain that hold until it's broken; use the Strength-roll rules described above for the "Grab" maneuver to determine when holds are broken.

A character can pull wrestling damage; he can do no damage, or the 1 point associated with each successful maneuver, or the 1 point plus Strength bonus allowed to him, whichever he chooses.

As with punching damage, wrestling damage is also temporary.

## Wrestling Specialization

If a character spends one Weapon Proficiency Slot on Wrestling, and thus specializes with Wrestling, he gains the following benefits:

He gains a +1 bonus to all his attack rolls with Wrestling;

He gains a +1 bonus to all damage with Wrestling (that is, all his maneuvers will do 2 points of damage plus his Strength bonus, and continued holds cause cumulatively 1 more point of damage for each round they are held);

He gains a +1 chart bonus with all Wrestling attacks;

He gains a +2 to Strength, only for maintaining a wrestling hold (i.e., a Strength 15 character rolls against Strength 17 when maintaining a wrestling hold, but only for that purpose); and

When he chooses to pull wrestling damage, the character may also pull the +2 to damage granted by specialization.

So if, for instance, he has a +1 chart bonus, and rolls a 16 on his attack (Elbow Smash), he can instead choose a Trip or an Arm Lock. He'll decide based on his current situation: If it's in his best interest to put his opponent on the ground, he'll choose a Trip, and if it's better for him to have a maneuver that allows him to hold onto his opponent from round to round, he'll choose an Arm Lock.

It is possible for a Warrior to continue to improve his Wrestling abilities: See "Continuing Specialization," below.

## Martial Arts

As you saw in the *Player's Handbook*, everybody knows how to punch and wrestle.

Martial Arts, however, are another matter. Not every character in a normal medieval-style campaign will know how to utilize oriental-style Martial Arts.

The Martial Arts described in this section aren't any real-world fighting style; they're a combination of "generic" martial-arts maneuvers in the tradition of martial-arts movies.

These Martial Arts are only available in a campaign if the DM decides that the art is available for characters to learn. He must first decide if he wants characters to be able to use these maneuvers in his campaign, which will tend to give the campaign a more oriental flavor; then, if he wishes to use them, he needs to establish a history for these combat abilities. Customarily, they've been developed by some distant civilization, and recent trade with that culture has brought some practitioners and teachers of the art to the player-characters' society.

To learn Martial Arts at its basic level, the character spends one Weapon Proficiency slot on Martial Arts. Once he has spent that slot, he can use Martial Arts in the same way that other people use Punching and Wrestling, as we'll describe immediately below.

## Martial Arts Results

At its basic level, Martial Arts skill is used just like Punching and Wrestling. Martial Arts combat occurs when a character attacks with his bare hands, feet, and even head. No weapons are used. (A character can hold a weapon in one hand and nothing in the other, attacking with his weapon one round and with his Martial Arts skill in the next.)

As with Punching, damage from Martial Arts is handled in a slightly different fashion. The damage from any bare-handed Martial Arts attack is broken into two parts: 25% of the damage from the attack is normal damage, while the remaining 75% is "temporary" damage. The *Player's Handbook* page 98, discusses this temporary damage, as does this chapter, in the section on "Recovery," below.

When attacking with Martial Arts skill, the character makes a normal attack roll against the normal Armor Class of the target. (If the attacking character has armor on, he does suffer the modifiers for wrestling from the "Armor Modifiers for Wrestling" from Table 57 on page 97 in the *Player's Handbook*.) If he hits, he does the damage listed from the maneuver plus any bonus from his Strength score.

If the attack roll is successful, the attacker consults the table below for the result of the attack. If, for instance, the character rolls a 13 on his attack roll, the result is a Body-Punch, doing 1 point of damage (plus the attacker's Strength bonus for damage).

**Martial Arts Results Table**

| Attack Roll | Martial Arts Maneuver | Dmg | % KO |
|---|---|---|---|
| 20+ | Head Punch | 3 | 15 |
| 19 | High Kick | 2 | 10 |
| 18 | Vitals-Kick | 2 | 8 |
| 17 | Vitals-Punch | 2 | 5 |
| 16 | Head Bash | 2 | 5 |
| 15 | Side Kick | 1 | 3 |
| 14 | Elbow Shot | 1 | 1 |
| 13 | Body-Punch | 1 | 2 |
| 12 | Low Kick | 1 | 1 |
| 11 | Graze | 0 | 1 |
| 10 | Body-Punch | 1 | 2 |
| 9 | Low Kick | 1 | 1 |
| 8 | Body-Punch | 1 | 2 |
| 7 | Knee-Shot | 1 | 3 |
| 6 | Side Kick | 1 | 5 |
| 5 | Head Bash | 2 | 10 |
| 4 | Vitals-Punch | 2 | 10 |
| 3 | Vitals-Kick | 2 | 15 |
| 2 | High Kick | 2 | 20 |

| | | | |
|---|---|---|---|
| 1* | Head Punch | 3 | 30 |

* Or less

## Descriptions of the Maneuvers

**Body-Punch:** This is a straightforward punch into the target's stomach or chest.

**Elbow Shot:** With this maneuver, the attacker plants his elbow into the target's chest, side, or stomach.

**Graze:** This could have started out as any sort of maneuver, but it merely grazed the target; it wasn't landed firmly.

**Low Kick:** The attacker kicks the target in the leg or thigh.

**Head Bash:** The attacker slams his forehead into the target's face, which is a stout maneuver.

**Head Punch:** This is a good, strong blow with the fist to the enemy's head, particularly his jaw.

**High Kick:** The attacker kicks the target in the upper body somewhere: Stomach, chest, back, or shoulder.

**Knee-Shot:** The attacker brings his knee up into the target's stomach or thigh.

**Side Kick:** With this maneuver, the attacker has time to prepare and launch a very powerful sideways kick (which may be at the end of a cinematic leap).

**Vitals-Kick:** The attacker kicks his target at some vulnerable point: Groin, kidney, neck, solar plexus, etc.

**Vitals-Punch:** The attacker puts his fist into one of the vulnerable points mentioned immediately above.

## Specializing in Martial Arts

The same Specializing rules apply to Martial Arts: Once the character has Proficiency in Martial Arts (by spending one Weapon Proficiency slot), he can Specialize in it (by spending another).

When the character becomes a Martial Arts Specialist, he gains the following benefits:

He gains a +1 bonus to all his attack rolls with Martial Arts;

He gains a +1 bonus to all damage with Martial Arts;

He gains a +1 chart bonus with all Martial Arts attacks;

He gains one additional Martial Arts attack per combat round (both hands must be free, holding nothing, for the character to gain this benefit); and

He may pull his attack just as Punching and Wrestling characters do, and when he pulls his attack, he can also refuse to do the +1 damage that Specialization gives him.

So if he rolls a 15 to attack, and the attack hits, he has performed a Side Kick. If he uses his +1 chart bonus, he can change that into an Elbow Shot or a Head Bash. He'll probably choose to change it to a Head Bash for the improved damage and improved chance of knockout.

It is possible for a Warrior to continue to improve his Martial Arts abilities: See "Continuing Specialization," below.

## More Than One Style

Any character can specialize in one of the three types of unarmed combat (Punching, Wrestling, and Martial Arts).

A single-class Warrior can only specialize in one of the three unarmed combat styles when he is first created. After first level, however, he may specialize in the other two. He can take specialization in only one style each time he receives a new Weapon Proficiency, so he could not possibly be a specialist in all three until he reaches sixth experience level . . . and ninth level is more likely.

Usually, the character, if he wants to specialize in more than one style, will take either Martial Arts or Punching, not both, because their usefulness overlaps a great deal; and then he'll take Wrestling, because Wrestling is useful when the character is being grappled.

## Continuing Specialization

This is an option that is only available to single-class Warriors (and to Fighting-Monks from *The Complete Priest's Handbook*).

If the warrior continues to devote Weapon Proficiency slots to an unarmed combat style *after he is already specializing in it*, he gets the following benefits. Note: The character may not take more than basic Specialization in any of the arts at first experience level; thus, at first level, he may devote one slot to Punching, or one slot to Wrestling, or two slots to Martial Arts, but not more than that to any of them. At third level, when he receives another slot, he may devote it then to improve his Specialization.

For each additional slot devoted to his art:

He gains a +1 bonus to all his attack rolls with his combat style;

He gains a +1 bonus to all damage with his combat style; and

He gains a +1 chart bonus with all attacks in that combat style. With chart bonuses of +2 or more, the character can choose any maneuver within the range of maneuvers covered by his chart bonus (see the example below).

*Example: Cassius the Gladiator is a Punching Specialist. He Specialized in Punching at first level, put another Weapon Proficiency slot into it at third level, another at sixth, and still another at ninth.*

*At ninth level, he has a +3 bonus to attack rolls with Punching, a +3 to damage rolls with Punching, and a +3 chart bonus.*

*Let's say he rolls a 16 to hit someone, and that the attack does hit. This would normally be a Glancing Blow. But he has a +3 chart bonus. He can choose for the maneuver, instead of just being a rolled result of 16, to be anywhere from 19 to 13. He can choose for the maneuver to be a Wild Swing, a Rabbit Punch, a Kidney Punch, a Glancing Blow (as rolled), a Jab, an Uppercut, or a Hook.*

*Of these seven maneuvers, Jab and Hook do the most damage, and Hook has a slightly higher chance of knockout success, so he chooses it. With his punch, he will do a basic 2 points for the maneuver, +3 points from the damage bonus he gets for specializing, and any bonus his Strength gives him.*

## The Complete Martial Artist

If you wish to create a character who is principally a Martial Artist, you ought to take other Weapon and Nonweapon Proficiencies which are appropriate to the classic martial-arts hero.

Almost all Weapon Proficiencies are appropriate for the character, including all swords, bows, and polearms, and especially proficiencies with the Samurai weapons from the *Equipment* chapter of this book.

Nonweapon Proficiencies which are especially appropriate include: (General) Dancing, Direction Sense, (Warrior) Blind-fighting, Endurance, Running, (Rogue, double slots) Jumping, Tightrope Walking, and Tumbling.

In campaigns with more classical and oriental elements to the martial artists, Nonweapon Proficiencies such as (General) Artistic Ability, (Priest, double slots unless Paladin) Ancient History, Astrology, Healing, Herbalism, Local History, Musical Instrument, Reading/Writing, Religion, (Wizard, double slots unless Ranger) Ancient History, Astrology, Herbalism, Reading/Writing, Religion.

Fighting Style Specializations, from this chapter, are also very appropriate for the character.

Naturally, you won't be able to afford all these things for your Martial Artist character, even if your DM does allow you the Intelligence bonus for extra Proficiencies mentioned earlier in this chapter. Think not about having all these abilities, but about taking specific abilities to make the character unique, different from all the other PCs—even if they, too, are principally Martial Artists.

For instance, one character could be a Paladin/Swashbuckler who takes Weapon Proficiency with all Fencing Blades (two slots), Specialization with the Sabre (one slot), and Specialization with Punching (one slot). Another character could be a Ranger/Beast-Rider who takes Weapon Proficiency with all Bows (two slots) and Proficiency and Specialization with Martial Arts (two slots). This way, no two Martial Artists are likely to be even *remotely* alike.

## In Oriental Campaigns

If your campaign is based in an oriental setting, you need to make an easy change. Instead of normal proficiency with Punching and Wrestling being free, and proficiency with Martial Arts costing one slot, normal proficiency with Martial Arts is free, while proficiency with Punching and Wrestling cost one slot each.

## Barehanded Maneuvers

It's possible to use most of the maneuvers described above under ``Melee Maneuvers'' when fighting barehanded, either Punching, Wrestling, or Martial Arts.

When a character wishes to perform a maneuver that's not one of the standard maneuvers for the barehanded fighting style in question, he makes that announcement at the appropriate time in the combat sequence (that is, if it's a Called Shot of some sort, he announces before initiative; otherwise, he makes the announcement when he's called on for the description of his action for the round).

When his turn comes up, he rolls an attack roll. If he's specialized in a barehanded fighting style, he still gets the attack bonus for his Specialization. If he hits, he *doesn't* do one of the maneuvers from his fighting style; he performs the specific maneuver he elected. However, if he's a Specialist, he does get the damage bonus from his fighting style.

Here are examples of how this works with the specific Melee Maneuvers:

### Called Shots: Punching and Martial Arts

A Puncher or Martial Artist can perform Called Shots, but none will do any extra damage. They can be very effective in combat in very specific situations if the character is trying to perform one of the standard Called Shots: Striking a Specific Body Part (as mentioned earlier, to damage a beholder's special eye, for example), Smashing Something Being Held (though the attacker risks having the contents of whatever he's smashing spilled on him), and Bypassing Armor (again, this only works on monsters where the DM has designed a specific weakness into the monster).

A Puncher or Martial Artist can also perform a Called Shot to attack a specific Hit Location. See the text on "Hit Locations," below. This is the sort of attack the character wants to use if he's trying to hit an enemy in the jaw to knock him out, pound him in the solar plexus to double him over, and so on; all normal rules for Hit Locations are used.

### Called Shots: Wrestling

A Wrestler can take a Called Shot in order to choose the specific Wrestle maneuver result he wants. If he succeeds, he does not randomly roll the wrestle maneuver which takes place; he chooses it. This is of special usefulness when he's trying to achieve a hold result.

*Example: A wrestler decides to take a Called Shot. Before initiative is rolled, he announces that he's taking a Called Shot to achieve the result of Arm Lock. He suffers the usual +1 to initiative; when his turn comes up, he suffers a –4 to attack rolls. If he hits, the maneuver result is Arm Lock, regardless of the roll.*

Also, when a fighter is wrestling another character, he might find it to his advantage to make a Called Shot to pull the enemy's helmet down over his enemy's eyes, blinding him for a combat round or two.

But, obviously, such successes depend heavily on the good-will of the DM. If he thinks such maneuvers are more bother than color, don't try to perform them.

### Disarm

It's possible for a barehanded fighter to disarm an armed opponent, but it's dangerous. When so trying, the barehanded fighter's AC suffers a penalty of 2 (for example, a 5 becomes a 7; he's having to expose himself to attack briefly), and his Disarm attempt is at an additional –4 to attack rolls. But if it hits, it's just as successful as any other Disarm.

### Grab

As described above, the Grab is designed for barehanded use, and so suffers no penalty when the attacker is barehanded.

### Hold Attack

A barehanded fighter can hold his attack with no penalty.

### Parry

A barehanded fighter trying to parry a barehanded attack does so at normal odds.

As with Disarm, it's possible, but dangerous, for a barehanded fighter to parry an attack from a melee weapon. The Parrying character must suffer an AC penalty of 2 (for the same reasons described under Disarm, immediately above), and his AC stays disadvantaged until his next attack comes up. Then, when performing the Parry (which usually consists of getting so close to the enemy that the Parrying character can get his own hand under the descending weapon-hand), the Parrying character suffers an additional –2 to attack rolls.

### Pin

A barehanded character can't use the Pin maneuver to pin someone else's bare hand. Use the Wrestling rules for such an attempt.

A barehanded character can try to use Pin to pin someone's weapon; use the modifiers described immediately above for Parry.

### Pull/Trip

A barehanded character can try to Pull/Trip another character with no additional penalty. Barehanded, the character can only Trip characters who are adjacent to him, and cannot Trip *any* Large creature or monster.

### Sap

A barehanded Sapping attack (basically, a punch to the jaw) is a classic combat maneuver. It can be performed with Punching and Martial Arts, but not with Wrestling. As with the regular Sap, the barehanded fighter makes his Called Shot at an additional –4; if he hits, he does normal damage for his attack, and has the normal Knockout chance of 5% per point of damage done.

Between the Sap maneuver and the Called Shot for the Head Hit Location, the character has two attacks that can hit an enemy's head. They are very different, however, and so they are not redundant.

The Sap provides a chance for knockout; the Called Shot to the Head doesn't.

The Called Shot to the Head has several unusual possible results (Blindness, Knockdown, etc.); the Sap doesn't.

And the Called Shot to the Head can only be used if the DM allows Hit Locations in his campaign. If he doesn't, the Sap is all you're left with.

### Shield-Punch

Since a Shield-Punch requires the use of a shield, a barehanded character obviously cannot perform this maneuver.

### Shield-Rush

Since a Shield-Rush also requires the use of a shield, a barehanded character cannot perform this maneuver.

### Strike/Thrust

When a barehanded character tries the Strike/Thrust maneuver, we call it a "Punch" and use the normal Punching rules.

## Hit Locations

We've said before that this whole book consists of optional systems for your campaign; well, this Hit Locations system can be considered very optional.

The *AD&D*® game doesn't encourage a hit locations system, for the reasons given in the *Dungeon Master Guide*, page 72 ("Injury and Death"). Some of you still want one, however, so in this section we're presenting a Hit Locations system that allows you to determine individual injuries . . . but stays true to the game's philosophy.

### The "Numbed" and "Useless" Numbers

When using this system, the first thing to do is to calculate your character's "Numbed" and "Useless" Numbers.

Calculate 25% (one-fourth) of your character's hit point total (don't count current injuries; this is his starting hit point total). Round up if the fraction is .5 or higher. On your character sheet, near the hit point listing, write down "Numbed" and that number. (You can also use the Combat Sheet included at the end of this book.) If the result was 0, write down 1 instead.

Then, calculate 50% (one-half) of your character's hit point total. Round up if the fraction is .5 or higher. On your character sheet, also near the hit point listing (or on this chapter's Combat Sheet), write down "Useless" and that number. If the result was 1, write down 2 instead.

Whenever you go up a level and gain new hit points, recalculate those numbers.

*Example: Zaross has 27 hit points. His Numbed number is 6.75 (rounds up to 7), and his Useless number is 13.5 (rounds up to 14).*

### Body Locations

Now, whenever you conduct combat, do so normally. And every normal blow struck is deducted from the character's hit points normally.

Every normal blow struck (that is, every blow not declared as aimed at a specific Body Location) hits the character's torso (i.e., any point from his shoulders to his hips).

However, if you take a Called Shot, you can make your strike at any one of six other Body Locations (head, two arms, two legs, and stun-points).

## The Locations

These are the character's Body Locations:

**Torso:** As described above. The Torso is hit with any non-Called Shot.

**Head:** Must be hit with a Called Shot at an additional –4 to attack rolls.

**Arms (2):** One right, one left. Must be hit with a Called Shot.

**Legs (2):** One right, one left. Must be hit with a Called Shot.

**Stun-Points:** This rather broad category includes the solar plexus and other nerve centers which, when struck, tend to cause the victim a lot of pain. Stun-Points must be hit with a Called Shot at an additional –4 to attack rolls.

## General Effects of Called Shots

Now, when you take a Called Shot against one of those special locations, interesting things can happen:

If the attack's damage equalled or exceeded the victim's "Numbed" number in a single blow, then that location is Numbed. It is useless for the rest of this combat round. At the start of the next round, before initiative is rolled, the character recovers full use of that body part.

If the attack's damage equalled or exceeded the victim's "Useless" number in a single blow, then that location is injured, and is Useless for the rest of the fight. Once the fight is over (i.e., one side or the other is defeated, surrendered, or departed, or the two sides are now at peace), the character recovers use of the injured body part in 2d6 minutes—or immediately upon its being magically healed up to the "Numbed" number or better.

For these effects to take place, remember that the attack must have done the required amount of damage in a *single blow*; multiple blows don't add together for this purpose.

Damage from Punching, Wrestling, and Martial Arts can also cause body parts to become Numbed and Useless.

A Sap attack (described above under "Melee Maneuvers"), regardless of how much damage it does, does not achieve the Numbed or Useless results. That maneuver attempts an instant knockout; if the knockout fails, the victim takes only the damage done by the attack and none of the special body locations results described here.

## Specific Effects of Called Shots

You may be asking yourself, "Figuring out what a useless arm is all about is pretty easy; but what do they mean when your head is useless?"

Avoiding the normal wisecracks that would result from such a straight line, let's talk about the actual effects of this "uselessness" for each of the hit locations.

**Torso:** The torso doesn't become useless; the "Numbed" and "Useless" numbers have no bearing on it.

**Head:** When a character takes a Numbed or Useless result to his head, one of the following effects can take place. The DM, not the player, chooses which one. He can random-roll on 1d6, or just choose the one that he fancies most.

*(1) Blindness:* The character is blinded (from the pain, not injury to his eyes) until the Numbness or Uselessness ends. When a character is blind but still trying to defend himself, anyone attacking him gets a bonus of +4 to attack rolls. (If, for some reason, he is also kneeling, sitting or flat on his back, the bonuses to attack rolls are cumulative).

*(2) Deafness:* The character hears ringing in his ears until the Numbness or Uselessness ends. The character suffers no combat penalty, but cannot hear orders or warnings shouted at him.

*(3) Dizziness:* The character is concussed and dizzy. He performs any Dexterity ability rolls with a penalty of –4 until the Numbness or Uselessness ends. Anytime he is hit in combat for more than 2 points of damage, he must make a Dexterity ability check to avoid falling down.

*(4) Knockdown:* The character is knocked flat on his backside by the blow, but does not suffer any additional ill effect. His head is not really Numbed or Useless; as soon as he stands up again, the disadvantage for the Knockdown goes away.

(5) Blindness *and* Deafness.

(6) Dizziness *and* Knockdown.

**Arms (2):** A Numbed or Useless arm cannot hold a weapon; the character immediately drops the weapon. The character will not drop a shield strapped to the arm, but does not get the AC benefit of the shield until his arm recovers.

**Legs (2):** When a character's leg is Numbed or Useless, he must immediately make a 1d20 roll against his Dexterity. If he rolls his Dexterity or less, he remains standing (on one foot); otherwise, he flops to the ground (and is considered sitting for purposes of striking at him). His movement drops to a fourth of what it should be until he recovers. Every time he is hit for more than 2 points of damage, he has to make that same 1d20 roll against Dexterity, and will fall down if he fails it. A Shield-Rush attack will *automatically* knock this character to the ground.

**Stun-Points:** When a character has taken a "Numbed" or "Useless" attack result to a stun-point, he has the wind knocked out of him and has a hard time defending himself. His movement drops to half of what it should be until he recovers; and his attackers are at a +2 to attack rolls him until he recovers. (This bonus *is* cumulative with other attacker bonuses for blindness or bad position.)

## Recording These Injuries

It's simple to record these injuries.

You don't record the damage separately. All the hit-point losses are applied against the character's normal pool of hit points, just as before.

On the Combat Sheet provided at the end of this chapter, or on a scratch-sheet, you'll want to record any special combat results and how long they're in effect. For example: "Right arm useless until combat over."

## Individual Injuries and Healing Magic

When a character who has taken a Useless result is healed before the area recovers naturally, then the healing magic is presumed to heal the injured region first. If the magic heals one-fourth of the character's hit points, the Useless body part is working fine again.

## Permanent and Crippling Effects

This system does not support any permanent damage or crippling effects, in accordance with the general *AD&D*® game philosophies.

## Monsters and Hit Locations

These rules can be used for monsters, too, even those with extra limbs and body parts (extra heads, wings, tails, etc.). As with humans, it takes a "Numbed" shot (one-fourth the monster's hit points in a single blow) to numb an area for one round, and a "Useless" shot (one-half the monster's hit points in a single blow) to incapacitate the body part for an entire fight.

Remember that the "Useless" number does *not* mean that the monster (or character) has 50% of its hit points invested in that body part; if it did, a creature might have more than 300% of its own hit points! The "Numbed" and "Useless" numbers are just ways to determine how much damage it takes to incapacitate a certain body part, and the hit point damage is always applied to the victim's normal hit point score.

## This System and Low-Level Characters

Low-level characters, with their small store of hit points, are comparatively easy to hurt in this system. A character with 10 hit points has a Numbing number of 3 and an Injuring number of 5. However, since these special damage results are all temporary, and add a certain amount of flavor to combats, you should have no difficulty using them with characters of any level.

However, don't forget that all these special shots must be Called Shots. They don't come about because of random die-rolls.

## Recovery

You already know how fast characters recover the use of damaged Hit Locations when those locations are Useless: It takes only 2d6 minutes.

But there are a couple of other types of recovery which need some elaboration.

## Recovery Of Temporary Damage

As you know, damage from Punching, Martial Arts, and the Sap maneuver is 25% normal and 75% temporary.

This means, whenever a character is sustaining damage from one of these attacks, he must calculate which portion of it is normal, "permanent" damage, which must be healed by magic or by medicine, and which portion is temporary, which will wear off after a while.

## Recording Temporary Damage

Usually, it's too much trouble to calculate proportions on every attack you sustain. Instead, keep a separate track of all damage you receive in a single combat from Punching, Martial Arts, and Sap attacks. When the combat is over, divide them up into Normal and Temporary damage. When you have a fraction of .5 (or less) on the Normal Damage result, round down; all the rest of the damage is Temporary damage.

*Example: Sir Amstard is in a boxing match with the devastating Cassius, and is getting the worst of it. He takes one shot for 5 points of damage, another for 6, and another for 3, and on this third shot Cassius successfully rolls his Knockout percentage. Amstard is knocked out.*

*Amstard has sustained a total of 14 points of damage. One-fourth, or 25%, of that is Normal Damage. That's 3.5, which we round down to 3. He's taken 3 points of Normal Damage. The remaining 11 points are Temporary damage.*

## Recovering From Temporary Damage

A character recovers from Temporary Damage at a rate of 1 hit point every five minutes. If Temporary Damage has caused a character to go unconscious, he'll recover consciousness when he returns to 1 hit point or more.

*Example: Amstard, above, took 11 points of damage before he was knocked out. He'll recover one point of damage every 5 minutes. After 55 minutes, he'll be as healthy as he can be until his Normal Damage is also healed up. However, since it wasn't the Temporary Damage he took that knocked him out, but a Knockout result from a Punching attack, he won't wake up from recovery of Temporary Damage; recovery from Knockout is handled differently.*

## Magical Healing and Temporary Damage

When a character who has sustained both Normal and Temporary damage receives magical healing, the healing spell *first* heals the Normal (real) Damage. If it heals all the Normal Damage, it then goes to work on the Temporary Damage.

*Example: Let us say Amstard receives a cure light wounds spell immediately after being knocked out. The priest rolls a 6 on 1d8. The first three points of healing cure his three points of Normal Damage. The remaining three are applied to his Temporary Damage. When that's all done, Amstard is down 0 points of Normal Damage and 8 points of Temporary Damage.*

## Recovery From Knockout

A Knockout result can be reached from Punching and Martial Arts attacks and from the Sap maneuver.

When a character is knocked out, he must immediately make a System Shock percentile roll (see "Table 3: Constitution," in the *Player's Handbook*. Page 15.) If he

makes the roll, he will awaken in 2d6 minutes. If he fails the roll, he will awaken in 2d6 hours.

### Temporary Damage and Knockout

If a character sustained enough Temporary Damage to render him unconscious *in the same blow* as he suffered a Knockout, he doesn't wake up until conditions for recovery of both the Temporary Damage *and* the Knockout are met.

*Example: In a rematch, Amstard pounds Cassius silly until his last blow knocks him out. That last blow reduced him to –3 hit points, rendering him unconscious, and Amstard also successfully rolled for Knockout on percentile dice. So, when does Cassius wake up?*

*It will take Cassius 20 minutes to recover 4 points of Temporary Damage, which will put him at 1 hp and let him wake up. Cassius rolls his System Shock roll and is successful, meaning that he will wake up from Knockout after 2d6 minutes. He rolls a 7, so he would wake up in 7 minutes.*

*But both recoveries have to finish for him to wake up. After 7 minutes, he's still unconscious, and will stay that way until 20 minutes are up.*

### Magical Healing and Knockout

If a character who has been Knocked Out receives healing magic (a *cure light wounds* spell or any more powerful healing spell, excluding irrelevant spells such as *cure disease* or *neutralize poison*), and he successfully made his System Shock roll, he'll wake up immediately (provided, as usual, that he's above 0 hit points).

If he receives healing magic but *failed* his System Shock Roll, the magic still helps him: He may now calculate his recovery as though he successfully made his System Shock roll.

## Combat Conditions

Not all fights take place in wide-open spaces with level ground and in conditions of adequate light. Here, we'll talk about what effects bad conditions can have on combat.

### Darkness and Blindness

When things are really dark, characters have a hard time finding and attacking their foes . . . and defending against their enemies' attacks.

Characters and monsters don't start suffering penalties in darkness until it's very dark indeed. When it becomes very dark, they suffer penalties to hit their enemies. And if their enemies can see better than they can, their enemies get bonuses to attack rolls.

On page 117 of the *Player's Handbook* is a chart of Visibility Ranges.

Let's add one line to that chart: Total Blackness. In Total Blackness, all Visibility Ranges are 0.

**Combat Modifiers for**

**Darkness and Blindness**

| Condition | Mel. | Mis. | Infr. Bonus |
|---|---|---|---|
| Clear sky (daytime) | –0 | –0 | +0 |
| Fog, dense or blizzard | –3 | –4 | +0 |
| Fog, light or snow | –1 | –2 | +0 |
| Fog, moderate | –2 | –3 | +0 |
| Mist or light rain | –0 | –1 | +0 |
| Night, full moon | –2 | –4 | +2 |
| Night, no moon | –3 | –6 | +3 |
| Total darkness | –4 | –6 | +3 |
| Twilight | –1 | –2 | +1 |

On the chart above, you'll see all those same Visibility Ranges in the first column.

The second column indicates the character's attack penalty when he's attacking someone in melee combat in that sort of visibility.

The third column lists the penalties for shooting at someone in ranged combat in those visibility conditions. This penalty is taken once at Short Range, again at Medium Range, and once more at Long Range (see Table 45 on page 69 of the *Player's Handbook*).

The fourth column is the Infravision Bonus. If a character has Infravision, his bonus is applied against his attack penalty for Melee, and against his attack penalty for Missile attacks suffered at each range step.

## How This Works

When a character is in a situation where he suffers a penalty to attack rolls in melee combat, he's obviously in some dark area. He, and everyone else with similar vision, suffers the penalties to attack rolls in melee and missile combat.

*Example: Rathnar is in a fight in pea-soup fog. He can barely see his hand in front of his face. An enemy looms up in the fog. Rathnar strikes at it—but suffers a –3 to attack rolls. The fog is so thick that it's difficult to strike exactly the right place. He rolls an attack that would barely have hit his foe in ordinary circumstances; in these circumstances, his blow is a clean miss.*

The missile penalty gets worse and worse the further away the attacker is from his target.

*Example: Sir Amstard, at the head of an army, is firing at the oncoming army of orcs, which is half-way across the plain. The orcs are at 200 yards, barely in range of the heroes' long bows. The weather, however, is drizzly and rainy, considered to be Mist on the chart above.*

*The chart says that Amstard and allies take a –1 to attack rolls—at each range step. That's –1 at short range, another –1 at medium, and a last –1 at long range. Amstard and friends take a –3 to attack rolls when firing at the orcs.*

*Suddenly, the cloud breaks and a heavy rain falls on everyone. The DM rules that it's the equivalent of light fog or snow. The orcs haven't yet gotten within 140 yards, so they're still at long range. Amstard and friends fire again. Now, they're at –2 to attack rolls per range step, or –6 total to attack rolls their enemies.*

## How Infravision Works (The Simple Way)

The simplest way to use Infravision in these circumstances is to ignore that fourth column on the chart above and just say that Infravision cancels out all darkness penalties. This is simple, easy to remember, and doesn't cause any combat hassles.

## How Infravision Works (The Complex Way)

If you prefer more realism and complexity, then Infravision is a help, but it's still not quite as good as being in broad daylight.

With these optional rules, Infravision can be a big help in times of darkness. A character with Infravision isn't as disadvantaged by poor lighting conditions.

First, in melee combat, in any condition of darkness where one person has better vision than the other, he gets a bonus to attack rolls. This bonus is equal to the other fellow's attack penalty. (The character with infravision is still subject to the normal penalty—in effect, this bonus cancels the character's own penalty.)

*Example: It's dark and moonless outside, and Rathnar is fighting Aspendale the Elf. Rathnar doesn't have Infravision; Aspendale does. Rathnar, because it's dark and moonless, is taking a –3 penalty to attack rolls Aspendale in melee. Aspendale, therefore, has a +3 when striking at Rathnar. (–3 for bad lighting, +3 for Rathnar's handicap, +3 for infravision bonus).*

Second, in missile combat, in similar conditions, the character with the better vision gets a bonus to hit his target. This, also, is equal to the other fellow's *melee*, not missile, penalty to attack rolls.

*Example: Taking a beating, Rathnar runs off into the darkness and gets to his bow. Aspendale accommodates him. Firing at Medium Range, Rathnar is at a –12 to attack rolls! That's –6 each at Short and Medium ranges, according to the chart above.*

Third, the third column of the chart above gives a bonus for Infravision. This is applied to the character's penalty for melee combat, and to his penalty for missile combat at each range step.

*Example: Aspendale returns fire. He would be at a –6 per each range step, too, but he has Infravision. He gets a –6 at Short and at Medium Range, but that's offset by a +3*

*at Short and a +3 at Medium Range. His penalty: –6. And because he can see better in the dark than Rathnar anyway, he gets a bonus equal to Rathnar's melee penalty: +3. His final penalty: A mere –3. He shoots back at Rathnar, hitting him clean on.*

## Unstable Ground

Characters sometimes have to fight on unstable ground. Earthquakes happen. Giant monsters burrow their way up from the depths of the earth, shaking everything. Characters have naval battles where they fight on the decks of ships.

When such situations come up, the DM decides what the force of the ground-movement is. If it's sufficiently violent, characters will have to make d20 rolls against Dexterity *at the beginning of each combat round* to stay on their feet. Sometimes those Dexterity rolls will have bonuses, sometimes penalties. When they fail those rolls, they fall down.

The chart below shows several such situations and the types of Dexterity ability checks they require:

| Situation | Dexterity Check Required? |
|---|---|
| Big Monster Digging Up | Yes, at Dexterity score |
| Minor Tremor | No |
| Major Tremor | Yes, at Dexterity +3 |
| Minor Earthquake | Yes, at Dexterity score |
| Major Earthquake | Yes, at Dexterity –6 |
| Ship's Deck, Slightly Rolling | No |
| Ship's Deck, Rolling | Yes, at Dexterity +3 |
| Ship's Deck, Storm-Tossed | Yes, at Dexterity –3 |

So, if a character with Dexterity 13 finds himself fighting on the deck of a storm-tossed ship, each turn he'll have to make his Dexterity check at a –3: He'll have to roll a 10 or less on 1d20 or fall down.

# Mounted Combat

You'll find rules for Mounted Combat in the *Dungeon Master's Guide*, pages 76-77. Let's elaborate on them a bit.

## Jousting

Jousting is a type of combat where two mounted warriors, armed with lances ride at one another and try to spit one another with their weapons.

It's the sport of knights and kings, and is very appropriate to campaigns with a medieval setting.

## Initiative

As a special rule, when two riders are jousting, don't bother with initiative rolls. On the first round of a joust, the two jousters ride at one another and roll attack rolls; on the second, both continue their ride, turn around, and start back toward one another.

All attacks are resolved simultaneously. Initiative does not enter the picture.

If jousting is taking place during a larger battle, where other things are going on and initiative must be rolled, try this: When it's time for the jouster who won initiative to take his action, the jouster who lost initiative also gets to make his attack roll, though this takes place during the middle of the enemy's combat sequence. This helps simulate the fact that the lance-strikes take place simultaneously.

## Multiple Attacks

When a character has multiple attacks in a single round, and is jousting, he does not get multiple lance attacks. He can only use that lance once in a combat round (and loses the next round turning his horse, if he's to come back and face the same enemy).

However, that second attack in the same round can still be effective; the best use for it is for the rider to Parry the incoming lance attack with his shield. This can make a joust a lengthier affair—which isn't a bad thing; a classic joust should go on for a few rounds at least.

## Lances and Dismounting

The *DMG*, page 76-77, talks about being dismounted in combat, but doesn't discuss at length the usefulness of the lance in dismounting opponents.

The lance is designed to dismount opponents as well as to inflict damage. Anytime a lance hits a mounted target and does 8 points or more of damage (after doubling), the victim has a chance of being dismounted. He must roll his Riding proficiency; if he fails, he falls for an additional 1–2 damage.

Since both lancers can hit at the same time, and both can conceivably miss their Riding rolls, both can be dismounted simultaneously . . . which tends to be embarrassing, and can be dangerous in large battles.

### Lance Breakage

Lances often break. Any lance that hits and does more than 12 points of damage, and any lance that has been successfully Parried by a shield, may break. The player rolls 1d6; on a 1 or 2, the lance breaks and is useless (except as a club).

### Lance Specialization

If a character takes Weapon Specialization in lance, he gets the usual benefits of attack and damage bonuses. But he also gets the following benefits:

He can perform the Shield-Rush maneuver with his lance-tip. In order for this to do damage like a Shield-Rush instead of a lance strike the character must be mounted, and must strike a character who has metal (or leather-and-metal) armor or a shield. If the character does not have such armor, the attack is automatically a lance strike.

He gets a +2 bonus to AC (thus, an AC 2 would become a 0), only when jousting and only vs. another jouster. (That is, the AC bonus is only against incoming lance attacks, and only works when the defender is himself mounted and carrying a lance.)

### Horseback Archery

Only the Composite Short Bow, Short Bow, Daikyu (from this supplement's *Equipment* chapter), and Crossbows may be used from horseback. The Long Bow and Composite Long Bow may not be.

Firing a bow from the back of a still horse (one which is not running) is done at a –1 penalty to attack rolls.

Firing from the back of a walking or trotting horse is done at a –2 penalty to attack rolls.

Firing from the back of a galloping horse is done at a –4 penalty to attack rolls.

In some barbarian tribes, especially those who inhabit wild-open plains, every warrior knows Riding for the tribe's favorite riding animal and Specializes in Composite Short Bow. This makes them very, very dangerous opponents in a cavalry engagement.

## Tournaments

Tournaments are events where fighters get together to compete . . . for prizes, to show off their abilities, etc.

Fighting isn't all that goes on, and fighters aren't the only ones in attendance. Tournaments are huge social events where everyone gathers to watch, compete, gossip, trade, bet, and sport. But fighters are the center-piece; the event revolves around them and their deeds.

### The Basic Tournament

The basic tournament, in a medieval-type setting, consists of a joust competition. This can take place in an ordinary field, but is more colorful and entertaining when it takes place on a special joust list.

## The Joust List

This field consists of a long strip of ground with a low fence along the middle of it; the jousters ride toward one another, each with the fence to his left, and make jousting passes until one or the other is dismounted.

Along one or both long sides of the list, stands are set up for onlookers. There may be a box or special seating area for the local ruler and his retinue.

At both ends of the list, where the horses turn around, are racks of lances for the riders' use. At one end of the list is an exit to the field where the knights and other participants have their tents set up.

## The Jousting Competition

The most popular event in a tournament, the event which the tournament revolves around, is the jousting competition.

In this competition, all participating fighters announce themselves to the seneschal, knights' marshal, or other minor dignitary who does the actual work of running the tournament. There is no fee for admission, but each entrant must have his own mount, armor, and lances. It's best if he also has a squire, page or friend to wait by his lance-rack to hand him a new lance when one breaks.

In some societies, all entrants must be of the nobility, but that is necessarily left up to each DM.

The jousting competition is single elimination. The field of entrants is broken down into randomly-chosen pairs (sometimes the choosing is not so random, if the organizers want to pit especially interesting fighters against one another—or to rig the tournament results). Each pair makes a number of jousting passes until one is dismounted (or yields the field—i.e., surrenders in order to avoid further damage). If both combatants are dismounted in the same pass, they get up, remount, and start over.

The winner of the pair advances to the next round of matches; the loser is consoled.

When the number of entrants is an odd number, one fighter doesn't have an opponent. He gets to "fight the bye." An opponent is chosen for the jouster: Someone who lost in an earlier match, a warrior not entered in the competition, etc. Regardless of who wins the match, the jouster is advanced to the next round (and thus has a slight benefit over someone who didn't get to fight the bye); but he's just as tired and injured as any other fighter.

No fighter may fight the bye more than once in any tournament; the organizers re-arrange things if the same fighter ends up without an opponent in another match. By the last matches of the competition, the tournament numbers will have evened out and no more byes will be fought.

With each subsequent round, the number of entrants is halved, until at the end only two are left; the winner of that match is the winner of the tournament.

## Blunted Lances

Tournaments may be fought with blunted lances. Blunted lances work just as normal

lances, but they do damage like Punching damage (i.e., 75% of all damage is temporary, and wears off after the end of the match). Blunted lances do not have metal or pointed heads; they weigh as much as regular lances, but cost only half as much.

### Queen of Love and Beauty

Often, the winner of the jousting competition gets to choose the tournament's "Queen of Love and Beauty." The local ruler or tournament organizer gives him a crown or coronet, which the fighter may bestow upon any lady (at the tournament) of his choosing; typically, the crown is placed over the end of the fighter's lance, so that he might ride along the stands and give the crown, at lance-point, to the lady of his choice. The Queen of Love and Beauty sits with the fighter and local ruler at the night's feast, and the award is a sign of status and respect, but confers no lasting benefit.

In a campaign where women also fight, naturally, the female fighter would be given a crown to award to the "King of Grace."

### Prizes

Prizes are often awarded to the winner of the joust. These are not generally cash prizes, or magical prizes; they are usually some jewelled or ornamental sign of favor, and act as trophies for the victor.

### Other Events

Other events taking place at a tournament (at the discretion of the organizers and the DM) include:

### Archery Competitions

An archery competition is usually for long bows or light crossbows; some tournaments have one competition for each.

In the archery competition, the targets are set up at the weapon's long range; all competitors suffer a –5 to attack rolls with each shot. Targets are AC 10.

In each tournament round, each participant fires five arrows or quarrels at his target. A miss counts as 0 points. A normal hit counts as 3 points. If a character rolls 5 over what he needed on his attack roll, it counts as 5 points. If a natural 20 is rolled, it counts as 10 points (a bull's-eye!).

At the end of each round, points are tallied and half the field, the ones with the lowest scores, are eliminated. This continued until there are only two or three competitors left; when that happens, the competition has reached its final round.

In the final round, the same rules are in place, but smaller, harder targets are used; they have AC 4.

Prizes often consist of new bows, quivers, sheaves of arrows, and jewelry. Archery is pretty respectable; it does not command the sort of status or prizes the joust does, but is better-regarded than the lowly foot-list. Nobles and peasants alike may participate.

In some cultures, the crossbow is thought of as a vulgar weapon; in such cultures,

most tournaments won't have a crossbow competition. The few such competitions which take place are not attended by noble competitors.

### Foot-Lists

A foot-list is organized like a joust, except that its entrants fight on foot, and are not restricted to the nobility (even when the joust is).

Since melee weapons are deadlier than blunted lances, some tournament organizers prefer not to have foot-lists; the chances of a fighter dying are pretty high, and organizers are not required or expected to have a high-level priest on hand to raise some peasant warrior who dies in a competition.

Prizes often consist of weapons and minor jewelry, usually not as expensive or fancy as those awarded to the jousters.

### Merchants' Stalls

Also present at larger tournaments are rows upon rows of merchants' stalls; a large tournament is a fascinating place to go shopping, and a good place to find experts in all sorts of craft-making, weapon-making, and armor-making.

### Dancing, Socializing

Finally, the tournament *is* a grand social event. Musicians play, people gossip, dances are conducted; it's a grand place to hear new rumors, or start them, to meet contacts, to stumble across mysteries . . . all of which the DM should keep in mind.

## When to End Combat

Combats in the game don't have to go on until everyone on one side is dead . . . or even defeated.

Don't forget that one side or the other (including the PCs' side) can surrender, or retreat, or even convince the other side to stop fighting and do some talking or negotiating.

When every fight must end in one side achieving total, bloody victory, the game rapidly grows boring. When there's opportunity for a greater number of resolutions, there's more uncertainty to combat, and to the campaign's storyline.

If you have characters who won't stop fighting when it should be done, you have problems. Here are some things to do about them.

### When Characters Don't Accept Surrender

When your characters won't ever accept an enemy's surrender, you have a serious problem, because it also means that those characters won't ever surrender themselves (because they know it always means certain death), and that you can never have two characters (PC and NPC) fight and later end up as allies (unless they're both chaotic evil, for instance).

You can enforce the right of your NPCs to surrender (and expect to live through it) through a couple of means.

First, a surrendering character who is about to be butchered could "turn out" to have some information critical to the characters, and say something like "Kill me and you'll never learn about (fill in the blank)." This stubborn NPC won't reveal the information, even on pain of death, unless the PCs promise to accept his surrender (and those of his friends) and keep the NPCs alive afterwards. (If the PCs promise, and later renege, you can always visit other revenge upon them.)

Second, a local deity, spirit or monster could see the PCs hacking on surrendering NPCs and grow offended. Much tougher than the PCs will ever be, this being snatches up the most offensive of the PCs, tells him what he's doing and why, and then curses or kills the PC as a lesson to the others.

This is a brute-force technique, but such players have already shown that they understand little but brute force anyway.

### When Characters Always Chase Escapees

Some characters chase after every group of enemies who run away from combat, with the avowed intention of running them down and killing them.

The best way to counter this attitude, and persuade the PCs to let the occasional band of inconsequential NPCs and monsters escape, is to have such enemies set up traps along their escape route. If the PCs pursue, they get caught in the traps and suffer damage and embarrassment. That will teach them to be more cautious in future events.

Once the characters see enemies getting away, they may come to the realization that they may themselves occasionally flee and get away.

### When Characters Never Negotiate

Sometimes, when PCs and NPCs are thick in combat, an NPC may try to calm things down, call for the two sides to part and cease fighting—at least for a while. It may be that the NPC has figured out that the two parties should be allied, or that he wants to bribe the PCs, or even conduct surrender negotiations . . . from a position of strength.

If your characters never negotiate, once again your campaign options are limited. You have to brute-force some sense into them. A good way to do this is to have the PCs fight an NPC group who have a hostage or artifact crucial to the PCs. The NPCs say they will kill the hostage or destroy the artifact if the PCs don't stop fighting for a minute. And they're telling the truth . . .

Once the PCs have lost several hostages or artifacts dear to them, they may start reconsidering their reactionary policies. And once they get in the habit of doing a little talking with the enemy, they may figure out that they can also *initiate* such communication in future combats.

## Notes On the Combat Sequence

Here are a couple of tips to give you more options in combat.

### Called Shots

With all the rules and options we've introduced in *The Complete Fighter's Handbook*, we need to remind you to be diligent about asking about Called Shots during the Combat Sequence.

In the game, combat follows this sequence:

(1) The DM decides what the NPCs and monsters will do;

(2) The DM asks the players what they will do;

(3) Initiative is rolled; and

(4) Combat is resolved in initiative order.

In a lot of campaigns, Step 2 is skipped. The DM decides what the NPCs or monsters are doing, has everyone roll initiative, and then asks the player-characters, as their actions come up, what they're doing.

But if you're using Called Shots, you have to be diligent about keeping Step 2 in the sequence, so that the characters' Called Shots can be established before initiative is rolled.

### Waiting on Initiative

There's another good reason not to skip Step 2 of the Combat Sequence:

Though combat is the warrior's profession, some DMs launch the player-characters into combat more often than they necessarily need to.

Why is this? It's because it becomes very easy to narrate an encounter this way: "You round the corner and there, 30 feet ahead, you see a party of six orcs advancing. They see you, too. Roll for initiative."

Once again, Step 2 is skipped; and, merely by saying "Roll for initiative," you presume that the player-characters will attack the orcs, and that the orcs will attack the PCs. Not only do you presume it: You practically guarantee it. The players will follow the DM's call for initiative, and combat is joined before anyone figures out that they had other options.

If this has become your habit when DMing, try substituting some other statement instead: Ask "What do you do?" instead of calling for initiative rolls. This gives the players the opportunity to talk to or challenge the other party. Combat might result anyway; a particularly militant PC, or aggressive NPCs, could bring about a combat immediately. But if that doesn't occur, the PCs and NPCs can talk, argue, choose to fight or agree to cooperate, whatever they choose.

If the two groups decide to fight, roll initiative normally.

## Tactics

All too often, a warrior character simply charges up to the front line in every combat, and in non-combat situations sits back and listens while his wiser mage and priest friends handle all the niggling details of the adventurer's life outside of combat.

Well, neither of these approaches is particularly good.

In combat, the front-line attack is only one of several options the party needs to cover.

And out of combat, the fighter is admirably suited to dealing with several everyday details that concern the adventuring party.

## Combat Tactics

When the characters (not just the warrior-characters) enter combat, these are some things that the warrior should remember and provide for:

### Shield-Walls and Polearms

As has been mentioned before, a character with a polearm (or long spear, or javelin) can stand behind a character with a shorter weapon and attack the same targets that his ally is attacking. That's one of the principal advantages to the polearm, but it's ignored all too often in *AD&D*® game campaigns.

This is the way it works:

The character with the polearm positions himself behind an ally, preferably a fighter with a shield. Because the polearm fighter must work around the friend in front of him, he suffers a –2 to attack rolls anyone on the other side of his friend. However, he isn't limited just to the enemy of the man he's standing behind: If our polearm hero is standing behind a line of three men (who are side-by-side), he can strike at anyone who is close enough to attack any of those three men with a medium-length weapon.

This is useful in a combat because the polearm wielder can attack targets without being right in their faces, or engaged with them. That means he can switch targets without any fancy footwork. When one of his buddies is foundering, or taking a beating, the polearm wielder can begin attacking that buddy's enemy.

And don't forget the polearm vs. polearm Parry, as described above under that maneuver's description.

### Wolf-Pack Tactics

When the adventuring party gets in combat with a single large monster which can be confronted directly (like a troll, for instance, and unlike a dragon, which has a strong mix of melee abilities, ranged combat abilities, and mobility), it's foolish just to line up and hack at the thing. In fact, it's not necessarily clever just to surround the monster and hack at it. Try this instead:

Surround the monster, of course.

On the first round, half of the circle of heroes should perform a Parry, or the Parrying maneuver from the *DMG*. The other half should attack as vigorously as possible.

On the second round, the action switches: The group which attacked last round, now defends, and the group which defended now attacks.

In real life (for example, when practiced by wolf-packs), this often has the effect of confusing the prey and reducing its fighting effectiveness. The prey feels a bite to its rear and turns to attack there; but while it's concentrating on enemies in that direction, the wolves now to its rear make their attack.

In the *AD&D*® game, the wolf-pack tactic can have similar effects . . . if the DM wishes to allow it to. If the DM approves of this tactic, he can cooperate by having the monster, for a few rounds at least, behave in the predictable fashion: Each round, the monster turns and attacks the group that attacked it last, which is now defending. This

will give the party several rounds of combat where it has the advantage and can whittle the monster down.

But be aware: Even if the DM is nice enough to give you this slight tactical advantage, eventually even the stupidest monster will get wise and try to break through the circle of fighters. A good thing doesn't last forever.

It may be that your DM has no interest in letting this tactic work. Ask him if it has a chance of doing some good in your campaign. If he says no, don't even try it. Even if he says yes, he may not remember to grant that little benefit; if, after a few wolf-pack attempts, you haven't seen it work once, give up on the tactic.

## Tactical Mix

It's a good idea for the fighting characters (including rogues and priests) in a party to represent a mix of weapons and combat styles. Several should be front-line fighters, bearing heavy armor and large, damaging weapons. One or two would be behind-the-lines fighters, carrying polearms. And one or two should be missilers, carrying bow, crossbow, or even sling or throwing knives.

This gives the party a certain amount of versatility. The heavy fighters can engage the heavy opposition. The polearm fighters can attack the enemy with reduced risk of being hurt. The missilers should concentrate on eliminating enemy missilers first, and then can turn their attention to doing unreturned damage to the melee-fighting enemies.

It's especially good when characters can mix and match their roles. Any character can have a sling or a throwing axe at his belt and become a missiler in a matter of seconds, for example.

## Rotation

It often happens that a front-line fighter becomes seriously damaged when fighting—and then must continue fighting, because he has no other option until the enemy is defeated. This doesn't have to be the case.

In a large party combat, particularly damaged front-line fighters can be "rotated out," pulled from the front line and replaced by a less hurt warrior . . . or not replaced at all: The shield-wall (i.e., the other front-line fighters) can close ranks and plug up the hole.

See the rules for Retreat (*Player's Handbook*, page 97). During his combat action, the injured man announces that he's retreating; the ally or allies he stood side-by-side with need to announce that they're blocking pursuit (i.e., they're moving so that the enemy can't just wander in through their line). That puts the hurt man behind his own line, where he can keep away from damage or even seek some healing.

If one of the polearm fighters is accommodating, they can take the rest of their combat round to switch weapons. The injured man takes the polearm, and the other fighter takes the front-line weapons. On their next combat round, the uninjured man moves up into the line and the injured man begins whacking enemies with his polearm.

This is a good way to keep people alive.

## Spear-Carriers

In some campaigns, players have the attitude that NPCs are along to get killed so that the PCs won't.

That's patently ridiculous; an adventuring party with that attitude would soon gain a very bad reputation, and would find it increasingly difficult to hire NPCs, would find that inns and taverns always denied them service, would find that sages told them to buzz off, etc.

However, there's a type of spear-carrier NPC that any group of adventurers should consider hiring—and that's the actual spear-carrier.

In many towns and villages, the heroes can find a strong, strapping youth who is willing to come along with them for the promise of some treasure and combat training. This energetic youth shouldn't be slapped in armor and put up front to be killed: Instead, he should be charged with carrying an extra weapon or two and making sure that all his allies have weapons at all times in combat. In a combat, the spear-carrier may act as a behind-the-lines polearm warrior, if his hands aren't full already. He also serves as backup defense for people who stay behind the lines because they can't fight well: Noncombatant NPCs, mages, etc.

Here's how it works:

The spear-carrier is given a single weapon of his own, such as a spear, and also carries a couple of extra weapons, which are party-owned weapons—such as a long sword in a back sheath and a short sword on his belt, for instance.

In combat, he stays behind the line and takes the occasional spear-poke at the enemy over the line. Whenever a PC loses a weapon (to a fumble, or an enemy's Disarm, or when a weapon is shattered by a foe), the spear-carrier uses his next available combat round to move in close and give the PC one of the extra weapons he's carrying.

The spear-carrier is also useful for keeping a more distant eye on what's going on with the combat. He might notice new enemies arriving on the horizon, or notice an enemy skulking to get around the edge of the shield-wall, before a player-character has the opportunity to do so.

Since this character is an NPC, he doesn't have to share the player-characters' frantic desire to make every combat round of every combat count for something. He can afford to keep an eye on things and won't necessarily be desperate to bang on an enemy every round.

A variant of this character is the spear-carrier devoted to a specific PC. A PC who is a spear-thrower, for instance, might have a page or squire devoted to carrying two or three extra spears for him. In such a case, the PC is usually responsible for teaching the page or squire to fight (*without* getting him killed) so that NPC might someday become a knight.

## Directing Traffic

It's very helpful for one fighter in a party to act as tactical coordinator (that is, combat leader). In combat, he keeps his eye on the situation and issues orders to his allies.

The tactical coordinator should be the one to notice that one of his frontline friends is being chopped to pieces, and order that character rotated back behind the line. When one particular enemy is discovered to be more deadly than the rest, the tactical coordinator should order missilers and polearm fighters to concentrate their efforts on that one. When the fight goes against the heroes and can't be turned around, the tactical coordinator

should order the retreat—and make sure, if possible, that it's an orderly one, with no one missing and fighting-ranks still maintained.

If no PC fighter volunteers or naturally evolves into the combat leader role, the DM can help "push things along" by determining, in his best opinion, which PC would be best in that role—and then having NPCs turn to that character for orders when combat situations come up.

## Campaign Tactics

The warrior isn't helpless or useless outside of combat, either.

In situations where the party is preparing for an adventure, planning a mission, or just arriving in a new place (town, castle, whatever), the fighters (especially the combat leader) should make themselves responsible for learning the following things . . . and reporting these facts to the others:

## Combats and Combat Missions:

*What's the lay of the land?* The fighters should get detailed descriptions (and, if possible, maps) of the area where they will be fighting; this will help them plot strategy, ambushes, etc.

*What sort of forces does the opposition muster?* This might be details of the enemy army, or the garrison of a castle the heroes want to invade, or just rumors of what might be found in the dark dungeon the characters intend to explore.

*Is anything strange going on at the site?* If there is, it might be symptomatic of something important to the characters. Do the locals hear grumblings and rumblings deep in the earth that weren't there before? This might indicate that a dragon has moved in . . . or that someone is doing some mining secretly. Are there suddenly a lot of strangers in town? This might mean the enemy has spies in town, or is hiring new warriors, who pass through town on route to their final destination. Whenever there's something strange going on, the heroes will have to face its source eventually, and should be as prepared as possible. When the fighters hear of something strange going on, they really ought to consult with the mages and priests, who might have ideas on the matter based on their own fields of learning.

*Can the heroes count on local help?* If this is a combat assault, can the heroes request, hire or levy local troops to back them up? If they can, and the situation warrants it, they should. But if they never ask, they almost never get help.

*Can the heroes hire local experts?* If their mission is to take them into an area where a local knows more about the situation than they do, it's a good idea for the characters to hire a local expert. Guides who know the local sites, especially, are an invaluable resource.

*What sort of equipment will the party need?* Any sort of special situation (walls to climb, specific monsters to fight, interesting terrain to cross, etc.) is likely to require specialized equipment, and it's the fighters' responsibility to determine what sort of equipment that is . . . and then to get it.

## Just Arriving In Town

*What are the characters' rooms like?* Whether the heroes are being accommodated by friends, by an inn, or by a local ruler or noble, the fighter should check out their rooms in terms of defensibility. If the heroes are attacked in their rooms in the middle of the night in the dark, the fighter should know (because he's prepared himself in advance) how many exits there are from the room, whether they are open, closed, or locked, how defensible the room is, what story it is on and how far it is to the ground, etc. He might wish to consult with the Rogue, who might be inclined to check for secret doors or traps, or on the feasibility of going up to the roof when the heroes go out the window.

*What are the local laws?* The fighter should find out what the local ordinances are concerning the carrying of weapons and the wearing of armor. If it turns out that either is illegal or restricted, he ought to let his friends know about it. Contrary to what some campaigning groups think, local communities have the right to make such laws and enforce them . . . and when player-characters defy the local authorities, refuse to take off armor or abandon weapons, and even attack and kill local peace officers, the PCs are for the moment *villains*, not heroes.

The other character classes have their own subjects to explore in the same situations. By comparison:

**Mages can take responsibility for:** Learning the history of the current situation, how it came to be; perhaps there's a clue to getting things fixed in the history of the matter. Getting details of the magic of the situation; only a mage can properly evaluate these details; perhaps the mage can arrange or research a counter-spell useful in the situation.

**Priests can take responsibility for:** Learning what the local priests think of the situation. Communing with their deities to see if the deity has any prophecy, advice or admonition to offer. Provisioning the party; the priest is best suited to arranging for ordinary provisions (food, clothing, etc.).

**Rogues can take responsibility for:** Putting an ear to the street (that is, the people of the street) and seeing what's afoot; it's always a clue to the resolution of a problem if the rulers say one thing and the common people say something different about a situation. Evaluating infiltration and break-in opportunities; the rogue is best suited to determining how possible and useful it would be to getting a spy in the enemy camp, breaking in to a specific site, etc.

Naturally, all these descriptions are generalizations. Any specific character might be particularly talented at one of these roles, even if he belongs to a "wrong" character class. But someone should undertake each of these tasks; otherwise, the characters are going into a situation knowing less than they could know about it.

## The Combat Sheet

On page 122 is a Combat Sheet. One side contains information for PCs, the other is for the DM to record vital combat statistics about the characters.

# Equipment

Warriors do not live by raw combat talent alone (though they've been known to die by it). No, they also need equipment, the tools of their trade: weapons, armor, and

miscellaneous gear appropriate to the warrior-class.

In this chapter, we'll talk about that equipment, and elaborate on the weapons and armor presented in the *Player's Handbook*.

## Old Weapons

We need to clarify some details about weapons which appeared in the *Player's Handbook*.

### One-Hand, Two-Hand

Weapons, for purposes of how they're held and wielded, fall into four categories: one-handed only, one-handed but can be wielded two-handed, one-handed or two-handed, or two-handed only.

**One-Handed Only** means the weapon can only be wielded one-handed, in one hand or the other.

**One-Handed But Can Be Wielded Two-Handed** refers to a weapon principally designed for one-handed use but which can be used two-handed. These weapons have enough haft or hilt on them that the wielder can wield the weapon in both hands, which confers no benefit . . . unless the character has taken a Style Specialization in Two-Hander Fighting Style (see the description of Two-Hander technique in the Combat chapter).

**One-Handed Or Two-Handed** weapons are designed specifically to be used with one or both hands, and have separate damage listings for the two different fighting styles.

**Two-Handed Only** weapons can only be wielded in two hands.

### Examples

Each of the weapons from the *Player's Handbook* falls into one of those four categories, as follows:

#### One-Handed Only

Dagger/dirk, Dart, Footman's mace, Hand/throwing axe, Knife, Lances (all), Scourge, Sickle, Sword/Khopesh, Sword/Scimitar, Sword/Short, Whip.

#### One-Handed But Can Be Wielded Two-Handed

Battle axe, Club, Footman's flail, Footman's pick, Horseman's flail, Horseman's mace, Horseman's pick, Morning star, Sword/Long, and Warhammer.

#### One-Handed Or Two-Handed

Harpoon, Javelin, Spear, Sword/Bastard, Trident.

#### Two-Handed Only

Arquebus, Blowgun, Bows (all), Crossbows (all), Mancatcher, Polearms (all), Quarterstaff, Sling (one hand to load, one hand to throw), Staff sling, Sword/Two-handed.

## More On One-Handed or Two-Handed

As you can see, five weapons fall into the One-Handed Or Two-Handed category: The Bastard Sword, and four spear-like weapons (Harpoon, Javelin, Spear, Trident).

In the *Player's Handbook*, it's presumed that you're fighting with Spear one-handed, and with Harpoon, Javelin, and Trident two-handed. (This is because Spear is a Medium weapon and the others are Large.) However, in *The Complete Fighter's Handbook*, any of these weapons can be used either in one hand or in both.

But they can also be wielded two-handed, and do even more damage when they are. The table shows both the one-handed and two-handed damage for each of the four weapons.

Also, to this list we're adding the Long Spear. This is like the ordinary spear, but mounted on a much longer (12'–18') shaft. It's not especially suited to one-handed use, but inflicts a lot of damage when used two-handed.

The Harpoon, Javelin, Spear, and Trident can all be thrown, but the thrown weapon damage is always the one-handed damage, never the two-handed damage. The Long Spear is not built for throwing.

These five spear-like weapons are as fast and maneuverable when used two-handed; therefore, unlike the Bastard Sword, their speed factor does not worsen when they are used two-handed.

| Item | Cost | Weight (lbs.) | Size | Type† | Speed Factor | Damage S-M | Damage L |
|---|---|---|---|---|---|---|---|
| Harpoon% | | | | | | | |
| One-handed | 20 gp | 6 | L | P | 7 | 1d4+1 | 1d6+1 |
| Two-handed | 20 gp | 6 | L | P | 7 | 2d4 | 2d6 |
| Javelin% | | | | | | | |
| One-handed | 5 sp | 2 | M | P | 4 | 1d4 | 1d4 |
| Two-handed# | 5 sp | 2 | M | P | 4 | 1d6 | 1d6 |
| Spear% | | | | | | | |
| One-handed | 8 sp | 5 | M | P | 6 | 1d6 | 1d8 |
| Two-handed# | 8 sp | 5 | M | P | 6 | 1d8+1 | 2d6 |
| Spear, Long% | | | | | | | |
| One-handed | 5 gp | 8 | L | P | 8 | 1d8 | 1d8+1 |
| Two-handed# | 5 gp | 8 | L | P | 8 | 2d6 | 3d6 |
| Trident% | | | | | | | |
| One-handed | 15 gp | 5 | L | P | 7 | 1d6+1 | 3d4 |
| Two-handed | 15 gp | 5 | L | P | 7 | 1d8+1 | 3d4 |

% This weapon is intended for one-handed or two-handed use.
# This weapon inflicts double damage when firmly set to receive a charge.

## New Weapons

Several of the warrior-kits described in the *Advanced Warrior Types* chapter mentioned new weapons appropriate to those warrior types. On the next page is a chart of all those new weapons; a little further on we'll discuss what they are and how they're used.

Many of these weapons have special abilities, bonuses and combat functions not reflected on the chart; these abilities help account for the high costs listed for some of the weapons.

Other weapons, particularly the bone and stone ones, seem to be of very limited usefulness. There's a reason for that, discussed a little further on in this section.

### Missile Weapon Ranges

| Weapon | ROF | S | M | L |
|---|---|---|---|---|
| Bolas | 1 | 3 | 6 | 9 |
| Chain | * | 1/2 | 1 | 2 |
| Dagger, bone | 2/1 | 1 | 2 | 3 |
| Dagger, stone | 2/1 | 1 | 2 | 3 |
| Daikyu | 2/1 | 7 | 14 | 21 |
| Javelin, stone | 1 | 2 | 4 | 6 |
| Knife, bone | 2/1 | 1 | 2 | 3 |
| Knife, stone | 2/1 | 1 | 2 | 3 |
| Lasso | * | 1 | 2 | 3 |
| Net | * | 1 | 2 | 3 |
| Shuriken | 2/1 | 2 | 4 | 6 |
| Spear, stone | 1 | 1 | 2 | 3 |
| Stiletto | 2/1 | 1 | 2 | 3 |
| Trident | 1 | 0 | 1 | 2 |

The chain, lasso and net are included in the table above because their use, in combat, is much like a missile weapon. They have ranges related to the length of the chain, the lasso or the net's trailing rope.

The "*" means the weapon doesn't precisely have a rate of fire; it may be used as often as the character's level (and perhaps specialization) dictates for a melee weapon.

### Use of These Tables

The fact that these weapons appear on tables in an *AD&D*® game product doesn't

mean that players may immediately buy these weapons for their characters. These weapons are not commonly available, and may only be taken with DM permission . . . and that permission should depend on the character's origin.

You see, each of these weapons is appropriate to a certain culture (and to the Warrior Kits belonging to that culture); and each of these weapons is further described below, under the heading that corresponds to that culture or Warrior Kit.

If, for instance, your character isn't a Gladiator, he can't start play with a drusus. In fact, if he doesn't belong to a culture which has gladiators, never travels to such a culture, and doesn't even find a market with contacts with such a culture, he can never even *get* a drusus.

So the DM, and DM alone, decides how accessible each of these weapons is based on how many ties the campaign culture has with the culture that creates these weapons. Even if he says that there is contact, it may not be possible or easy for PCs to acquire these weapons; just because samurai visit the court of your king doesn't mean that they'd be willing to sell their treasured katanas, after all.

In short, acquisition of this type of equipment is left as an exercise in role-playing and adventure, in played-out game sessions, not as something as simple as dropping some gold pieces off your character sheet.

### Gladiator Weapons

Gladiators are trained in a variety of weapons. In addition to the new weapons on the chart above, gladiators can be trained in the following, more commonly-available, weapons: Long bow (any type), Short bow (any type), Dagger, Footman's flail, Knife, Halberd, Scourge, Scimitar, Short sword, Spear, Trident, and Whip.

The short sword used by gladiators, incidentally, is a short, straight-bladed weapon sharpened on both edges; it is called the *gladius*, and gladiators take their name from it. The gladius has the characteristics of an ordinary short sword.

## New Weapons List

| Item | Cost | Weight (lbs.) | Size | Type[6] | Speed Factor | Damage S-M | Damage L |
|---|---|---|---|---|---|---|---|
| Arrows, Stone | | | | | | | |
| Flight[4] | 3 cp/1 | 1/10 | M | P | — | 1d4 | 1d4 |
| Belaying pin[1] | 2 cp | 2 | S | B | 4 | 1d3 | 1d3 |
| Bo stick[4] | 2 cp | 4 | L | B | 4 | 1d6 | 1d4 |

| Sword | | | | | | | |
| Cutlass[1] | 12 gp | 4 | M | S | 5 | 1d6 | 1d8 |
| Drusus[1] | 50 gp | 3 | M | S | 3 | 1d6+1 | 1d8+1 |
| Katana[3] | | | | | | | |
| One-handed | 100 gp | 6 | M | S/P | 4 | 1d10 | 1d12 |
| Two-handed | 100 gp | 6 | M | S/P | 4 | 2d6 | 2d6 |
| Rapier[1] | 15 gp | 4 | M | P | 4 | 1d6+1 | 1d8+1 |
| Sabre[1] | 17 gp | 5 | M | S | 4 | 1d6+1 | 1d8+1 |
| Wakizashi[2] | 50 gp | 3 | M | S/P | 3 | 1d8 | 1d8 |

[1] This weapon is intended for one-handed use, and may not be used two-handed.

[2] This weapon is intended for one-handed use, but may be used two-handed.

[3] This weapon is intended for one-handed or two-handed use.

[4] This weapon is intended for two-handed use only.

[5] This weapon inflicts double damage when firmly set to receive a charge.

[6] The "Type" category is divided into Bludgeoning (B), Piercing (P), and

Slashing (S). This indicates the type of attack made, which may alter the weapon's effectiveness against different types of armor. See the optional rule in the Player's Handbook, page 90.

## Bolas

The bolas are three balls attached to ropes or cords about a yard in length; the other ends of the cords are tied together in a knot. The wielder of the bolas whirls them by the knot and throws them at a target; if they hit, they wrap around the target, with the balls smashing painfully into the target as they connect. Once they have wrapped themselves around a target, it takes the victim one full round and a successful ability check vs. Strength to get them free. (If the character fails his Strength check, he does not get the bolas free this round.)

This weapon does only a little damage, but it is especially useful if you are using the Hit Locations rules from the *Combat Rules* chapter.

If the attacker makes a Called Shot to the target's Legs (he doesn't have to specify which; if the attack hits, it hits both), and successfully attacks, the bolas wrap themselves tightly around his legs. He can no longer run or walk until he gets them free. He must make a Dexterity check just to avoid falling down. In fact, if he was moving when the attack was made, he suffers a –3 penalty to his Dexterity check to avoid falling down.

If the attacker makes a Called Shot to the target's Arms (again, he doesn't have to specify; both will be hit) and successfully attacks, the bolas wrap themselves tightly around his arms and torso. He cannot wield his weapon and does not get the AC bonus of his shield until he gets himself free. His roll to free himself is at a –2 penalty to his Strength ability score because he has no leverage.

If the attacker makes a Called Shot to the target's Head, the bolas wrap themselves around the target's neck and begin strangling him. (This does not work if the character was wearing a Close-Faced Helm or a Great Helm, described later this chapter.) The bolas do the listed damage on the round they hit. Thereafter, on each successive round where they begin the round still on the victim's throat, they do 1d3 hp of damage from strangulation. The damage stops when they are removed or when the target is dead.

Weapon proficiency with the Bolas is not related to any other weapon proficiency. Specialization grants the usual benefits. In case of a Called Shot to the target's head, the damage bonus only applies to the initial hit; it is not added to the subsequent rounds of strangulation.

Any leatherworker or weaponsmith can make a set of bolas . . . but he must have exact measurements for the cords and exact weights for the balls to do it right. Simply hearing such a weapon described, the craftsman can make something like it . . . but unless he makes his craftsman ability check by 3 or better, the weapon he makes will be proportioned wrong and will be at a –4 to attack rolls.

## Cestus

The cestus is a glovelike weapon, studded with sharp spikes and edges on the back of the glove and across the knuckles. Gladiators fighting with the cestus usually wear two, one on each hand (the plural is cesti); here, it pays for a gladiator to have Cestus Weapon

Specialization, Two-Weapon Style Specialization, and/or Punching Specialization.

Cestus combat is very popular with arena crowds because it is extremely bloody and up-close. Also, because the weapons do comparatively little damage, the fighters tend to last a long time in combat.

When wearing a cestus or two cesti, a character may still make a Grab maneuver with the hand the cestus is on. This attack will be at a –2 to attack rolls for clumsiness, and a –2 to the attacker's Strength (for purposes of holding on) likewise.

Cestus, because it is simply a bonus to punching-type attacks, does not require weapon proficiency; anyone can use cesti with no proficiency penalty. Therefore, Specialization with Cestus costs only weapon proficiency slot.

In a culture where there is gladiatorial combat, cesti are readily available from weaponsmiths, but they are not exported, as they're such a basic weapon the market is not very good. Any foreign weaponsmith who has cesti described to him can make perfectly functional cesti; the first two cesti he makes will be at twice the listed cost, and subsequent ones will be at the listed cost.

## Drusus

The Drusus is a Gladius (short sword) of Exceptional quality (as per the types of weapon quality described in the *Character Creation* chapter of this rule book). It looks just like an ordinary gladius; only by testing the sharpness of the blade can someone tell the difference. The Drusus has been forged so that the metal is better-tempered and holds an edge better, and then sharpened until it has a razor-like edge.

Because of this, it does +1 damage and confers a non-magical +1 to attack rolls over the normal gladius. (This means the wielding character gets a +1 to attack rolls when using the weapon, but the weapon does not give him the ability to hit monsters which require magical weapons to affect.)

The Drusus also has a disadvantage. In order to keep its keen edge, it must be regularly sharpened with a lot more attention and time than an ordinary weapon requires. After any day in which the Drusus has been fought with (even one attack!), someone with either the Armorer or Weaponsmith secondary skill, or the Blacksmithing, Armorer, or Weaponsmithing nonweapon proficiency, must sharpen the blade for half an hour . . . or, on the next day, it will act as an ordinary short sword (losing its to-hit and damage bonus) until it is so sharpened.

Exposure to high heat (a smith's forge, dragon's breath, lava, etc.) will ruin the temper on a Drusus, turning it into an ordinary short sword and forever destroying its bonus on attack and damage rolls.

The Drusus uses the same weapon proficiency as the short sword. If a character can use a short sword, he can use a Drusus with equal proficiency. Weapon specialization with one does transfer to the other.

In cultures where there are gladiators, any weaponsmith with a weaponsmithing ability check of 14 or better can make a Drusus for the cost shown. These weapons are seldom exported, as local demand is high for the few made. A foreign weaponsmith could not make one merely if it were described to him; he would have to study with a local weaponsmith. Having done so, he could make the weapon.

## Lasso

The lasso, or lariat, is a length of rope with a loop at the end; the wielder holds the slack in his off-hand, twirls the lasso in his other hand, and hurls the loop at his target. On a successful hit, the lariat settles over the target, giving the wielder the chance to dismount him, pull him to the ground, trip him, etc.

In other words, when you attack someone with a lasso, you must declare what you're trying to accomplish with the attack.

If you're trying to trip him, you're trying to make the loop settle about his legs. This requires a Called Shot at the legs as per the Hit Locations section of the *Combat Rules* chapter.

If you hit, he must make a Dexterity ability roll, with the usual modifiers for the Pull/Trip maneuver; if he fails, he falls, and if he succeeds, he's able to jump out of your loop before it closes.

If you're trying to pin his arms to his sides, you're trying to make the loop settle about his torso and arms. This requires a Called Shot at the arms as per the Hit Locations section of the *Combat Rules* chapter.

If you hit, he must make a Strength ability roll, again with the usual modifiers for Pull/Trip. If he succeeds, he shrugs the loop off before you can pull it taut. If he fails, you pull the loop taut. Both of his arms are pinned, as in the Pin maneuver. The target gets to struggle each round, also as per the Pin maneuver rules. Each additional lasso that hits the target to pin him gives him a –4 to his Strength ability for purposes of his struggling. When his Strength reaches 0, he has no chance of escaping.

If you're trying to dismount a rider, you're trying to make the loop settle about his torso—and then brace yourself for the impact (when his mount's movement reaches the end of your rope, both you and he are going to be jarred). This doesn't require a Called Shot: You must merely hit your target normally.

If you hit, both you and the unfortunate rider must now make Strength ability rolls. If he rolls his better than you roll yours, the lasso is torn from your hands and you take 1d2 damage. If you roll yours better than he rolls his, you yank him from his saddle and he takes 1d3 from impact with the lasso and the earth. If you both make your roll by the same amount, then both results occur; the lasso is yanked from your hands, doing 1d2 to you, and he's yanked from his horse, taking 1d3. (Incidentally, if you've had time to tie your rope to an absolutely stationary object, like a boulder, you don't have to roll against your Strength ability; you win this contest unless your target rolls a 1, in which case the rope breaks and he can ride off laughing.)

If you're trying to lasso a target's head (for example, when you're up in a tree and your target is an unsuspecting guard walking below), this is a Called Shot to his Head as per the usual rules.

If, after the modifiers, you still hit, you can yank for 1d3 damage (plus your Strength bonus). On subsequent rounds, you can yank for 1 point of damage each (plus your Strength bonus). But if you're in a position to hoist your target up in the air (for instance, if you're up on a tree-branch, lasso your victim, and then drop off the branch on the other side, holding onto the rope to hoist your victim up), you do your victim 1d4 points of strangulation damage per round (Strength bonus does not apply to this). If he can get his knife free and cut himself loose, that's good for him; if not, it's good for you. While

strangling, a victim cannot shout or raise the alarm.

If you're trying to drop your loop around the head of a mounted rider . . . well, it's difficult, but possible. Make it as a standard Called Shot to the head.

If you hit, you must again make your Strength ability check. If he wins it, he takes 1d4 damage from the impact of the lasso around his neck going taut—but the lasso is still yanked from your hand, doing 1d2 to you, and he can ride off. If you win it, he takes 2d6 damage from the impact, another 1d3 from hitting the ground, and he's dismounted. If you both make it by an equal amount, he takes 1d4, is dismounted and takes an additional 1d3, and you take 1d2 from the lasso being yanked out of your hands. (If, in this example, you've had time to tie the other end of your lasso to an absolutely stationary object, your target still gets his roll. On a 1, the rope breaks and he takes 1d4 damage. Otherwise, he's automatically dismounted and takes 3d6 damage.

Such a maneuver, hard as it is to set up, could easily break someone's neck, killing him instantly.)

In the chart above, the lasso was listed as a large weapon because of the amount of space it takes to twirl and wield it.

You cannot perform a Parry or Disarm with the lasso, or use it as a melee weapon for Pin—only at range.

Lasso requires its own weapon proficiency, which is not related to any other weapon proficiency. Weapon specialization gives you the normal +1 to attack rolls with the lasso and +2 damage on all damaging effects of the lasso (strangulation after the initial hit is still only 1d4, not 1d4+2).

Cultures with gladiators are not the only ones which come up with the lasso. Civilizations which depend heavily on herd-beasts often have the lasso as a weapon. In some cultures, the lasso is a favorite weapon of assassins. It's up to the DM to determine if the lasso is a weapon of the player-characters' culture.

If it is not, a PC need only train with someone who has proficiency with the weapon (and the PC must have a free weapon proficiency slot) in order to learn how to make and use the lasso.

## Net

The gladiators' net consists of a small (8' to 12' diameter) circular net with weights around the edge and a trailing rope used for control. Customarily, it is folded in such a manner that it will twirl open when thrown; the gladiator throws it with one hand, keeping a grip on the trailing rope with the other.

If the gladiator makes his attack roll, he has a Pin maneuver on his target (see the rules for Pin maneuver from the *Combat Rules* chapter). All the notes on Pin apply here, except one: the netted character may not make any sort of attack on the netter until he's won a Strength ability check and thrown that net off.

On the round after the gladiator has netted his opponent, he has a choice of what he wants to do.

He can hold onto the trailing rope with his off-hand (in order to maintain the Pin), pull out another weapon with his free hand, and attack his prey with that weapon. Eventually, his prey will probably win a Strength ability check and shrug that net off; in the meantime, the gladiator may get several rounds of unreturned attack on him.

Alternatively, he can try to improve his hold on the target. By continuing to loop the trailing rope around his victim, he can improve the capture until the victim has no chance of escape. To do this, he must make an ordinary roll to-hit against his victim's AC each round. On each successful hit, the victim loses 4 points of effective Strength for purposes of breaking free of the net. If the victim wins a Strength ability check against his captor before his Strength drops to 0, he breaks free (and his Strength is normal for all other purposes). If he fails, and his Strength is brought down to 0, he is hopelessly enmeshed in the net and cannot get out until his captor lets him.

When a gladiator throws a net and misses, it is open and unfolded. That doesn't mean he can no longer fight with it . . . but it is not as accurate, because it's not folded right. Each subsequent attack roll with the unfolded net is at a –3 to attack rolls.

With a properly-folded net, an attacker can perform Disarm, Parry and Pin maneuvers. Once a net is unfolded, such attacks are at a –3 to attack rolls.

Weapon proficiency with the net also give you the ability to fold the net properly, and to make fighting-nets. Weapon Specialization gives you the normal +1 to attack rolls; since it cannot give you a +2 to damage (the net doing no damage), you get that +2 as a bonus to your Strength when you're making Strength ability checks against netted prey.

Cultures with gladiatorial combat do export such weapons, and the knowledge of their use (gladiators do demonstrations and exhibitions in foreign capitals all the time). Also, cultures with no knowledge of gladiatorial combat independently develop the net weapon skill; at the DM's discretion, any character with the Savage warrior kit, the Hunter secondary skill or Hunting nonweapon proficiency, or any good rationale could spend a weapon proficiency slot to learn the use of the net.

## Pirate Weapons

The world of piracy doesn't demand that pirates use any specific weapons . . . but for reasons of tradition and convenience, some specific weapons are very common to pirate crews.

In addition to the new weapons on the chart above, pirates are readily familiar with: Battle axe, Bow (all types), Club, Crossbow (all normally-available types), Dagger/Dirk, Hand/throwing axe, Harpoon, Javelin, Knife, Polearm/Awl pike, Polearm/Partisan, Scourge (mostly for disciplinary purposes), Sling, Spear, Sword (all but Khopesh), Trident, and Whip (also mostly for disciplinary purposes).

Additionally, the world of the Pirate overlapped that of the Swashbuckler to a considerable degree. With the DM's permission (and there's usually little reason to deny it), Pirates may have access to all the weapons listed on the chart above and descriptions below for Swashbucklers.

The new weapons for Pirates include:

## Cutlass

The cutlass is a short, heavy sword, sharp along only one edge, with a heavy basket hilt (a protective cup) around the hilt to protect the hand.

The cutlass' basket hilt provides the following benefits: it gives the wielder a +1 to attack rolls with the Parry maneuver; and it works just the same as an iron gauntlet if the

wielder wishes to punch someone with the hilt rather than slash with the blade. (See the *Player's Handbook,* pages 97-98. Bare-hand attacks do 1d2 damage, plus strength bonus, and the other effects of punching from the chart on page 97; metal gauntlets and other metal hand-protection makes that 1d3 plus strength bonus and punching effects. Note: An enchanted cutlass, say a *cutlass +1*, does not confer the +1 to attack rolls and damage with these basket-hilt punches . . . only with blade attacks.)

Proficiency with Cutlass is related to proficiency with short sword, dagger/dirk, knife/stiletto, and main-gauche. Weapon Specialization with Cutlass is normal, except that you also get the +1 to attack rolls and +2 damage with those basket-hilt punches.

In a campaign with pirates, cutlasses are common and readily available in any port community; they are much less common inland.

### Belaying Pin

The belaying pin is a short rod of wood or metal. It's inserted in a hole bored through the ship's rail, and ship's ropes are made fast (tied) to it. It can also be yanked free and brought in violent contact with enemies; in a pirate fight, anyone who loses a weapon or starts out without one ends up with a belaying pin in his hand.

Weapon proficiency with Belaying Pin is related to clubs and maces; if you have proficiency with club or mace, you take only a –1 when using a belaying pin you don't have proficiency for. Weapon specialization with belaying pin gives the usual benefits.

Belaying pins are very available on any ship; you can get any number of them at a seaside town or city, especially at a shipbuilder's, a warehouse, or a business that supplies ships.

### Gaff/Hook

The gaff is a metal hook with a wooden or metal crossbar at the base; it's held in one hand, the hook protruding between the middle and ring fingers, and normally used to hook and land fish.

However, like the belaying pin, it's in ready supply onboard a ship. Also, many pirates who lose a hand have a cup with a gaff on it attached to the stump, and so always have a weapon "on hand"—one that can't be dropped or Disarmed.

Proficiency with the gaff is not related to any other proficiency. Specialization grants the usual benefits.

### Samurai Weapons

The exotic, oriental world features many weapons which are strange to western eyes . . . including the eyes of the PCs in most campaigns.

Many of these weapons simply look a little different and bear different names. Old, familiar weapons with slightly changed forms and names include: the Battle axe, Hand axe, Dagger (tanto), Halberd, Javelin, Light lance, Mace, Pike, Spear, Long sword, Short sword, Two-handed sword (no-daichi), and Trident. These weapons have game characteristics identical to the normal versions, and proficiency with the common weapon works just as well with the more exotic version.

The new samurai-society weapons listed in the chart above include:

## Bo Stick

The bo stick is an ordinary hardwood staff, the height of a man or slightly taller.

Bo stick shares a proficiency with Quarterstaff. If you can use one, you can use the other. (This doesn't mean that the two styles are identical; an oriental bo stick fighter looks very different in combat than a western quarterstaff combatant. But if they traded weapons, they'd be just as good with the other guy's weapon . . . each in his own style.) Weapon specialization in bo stick gives you the usual advantages.

Bo sticks are common everywhere; any 6' or 7' hardwood walking staff is a bo staff. To use it as such, however, you have to have the bo stick/quarterstaff weapon proficiency. The primary difference between the weapons, and the reason the quarterstaff does more damage against Large monsters, is that the combat quarterstaff has iron-shod, even lead-weighted ends. (A quarterstaff which does not have these features should do damage identical to the bo stick.)

## Chain

This weapon is a 6' or 10' length of chain with weights at both ends. In combat, it's whirled very fast, the weighted end inflicting the damage on the target.

The chain combines some of the useful traits of melee weapons and the lasso. You can attack with it for normal Called Shots, Disarm, Parry, and Strike/Thrust maneuvers. Additionally, you can perform three of the lasso's five special functions: Pull/Trip by striking at a target's legs, Dismount a Rider, and Snag a Rider's Head.

The chain is easy to conceal, and (at least in western lands) is not usually recognized as a weapon until wielded as one.

The chain requires its own weapons proficiency, which is not related to any other weapon. Weapon specialization confers the usual bonuses.

Chains are to be found in any civilization with the technological skill to make them (this includes most *AD&D*® campaign settings), but the technique of fighting with them is mostly an eastern-culture development. A character would have to study with a practitioner of the technique, and be able to spend a weapon proficiency slot, in order to learn how to use the weapon.

## Daikyu

The daikyu is the great samurai longbow. It's 7' long (hence its size designation of L). Its hand-grip is not in the center of the weapon; it's located closer to the bottom, so the daikyu can be fired from horseback and from kneeling positions.

As with other bows, the daikyu can be used to perform the Called Shot, Disarm, Hold Attack, and Strike/Thrust (i.e., shoot) maneuvers.

The daikyu and katana are the two principal weapons of the samurai.

The daikyu requires its own weapons proficiency. It is related to, but not identical to, other bow proficiencies. Weapon specialization confers the usual benefits.

The daikyu is not exported from eastern nations. However, it is a simple task, if you

are in such a nation, to commission the making of one. A western bowyer would have to have studied in the east to make one.

### Katana

The katana is the samurai's sword. It's a medium-length, slightly curved blade with no quillions (only a small, circular guard) and a hilt suitable for one-handed and two-handed use. The blade is sharpened only along one edge and at the tip, but it is sharpened to a razor's edge. It is forged with a special technique known only in the east, where layers of steel and iron are sandwiched, heated, folded, stretched, re-folded, stretched, re-folded, on and on until the blade consists of microscopically thin layers of alternating metals, providing strength, resilience, and the ability to hold a remarkable edge. This is why the katana has the excellent speed and damage listed for the weapon.

The katana requires its own weapon proficiency, which is related to the bastard sword/long blades group. Weapon specialization confers the usual benefits.

Katanas are very personal; a samurai is dishonored if he loses his, and so very few are lost. This means that it is very hard to get one in the west, other than by taking it from its owner—a difficult task. In the east, a character might be willing to commission one from a weaponsmith, for the listed price . . . if he gets a good reaction roll from the NPC. (An ordinary weaponsmith could not make one. The blade-making technique requires study in the east and the learning of a specialized individual weaponsmithing nonweapon proficiency.)

Also, a hero who does a favor or performs a mission for an eastern lord might be awarded a matched set of katana and wakizashi, if he's very lucky; this would be a high honor.

### Naginata

This is a polearm, a 6' to 8' shaft with a curved, sword-like blade at the end. It's the favored weapon of the female fighters of the orient, but they are not limited to it, nor is it limited to them.

Naginata proficiency is related to all other polearms. Weapon specialization confers the usual benefits.

Naginatas are readily available in oriental ports, and such weapons are readily exported, if the DM says there is a market for them.

### Nunchaku

The nunchaku consists of two lengths of hard wood connected by a short length of chain or rope.

The weapon can be used to perform Called Shots, Disarm, Parry, and Strike/Thrust maneuvers.

Nunchaku requires its own proficiency, which is not related to any other weapons proficiency (including flails). Weapon specialization confers the usual benefits. Masters of the weapon often have weapon specialization in nunchaku and Style Specialization in Two-Weapons Style, giving them the ability to fight effectively with nunchaku in either

hand. The only way to acquire this proficiency is to study with someone who already has the proficiency, and to have a proficiency slot available to spend on nunchaku.

Nunchaku are readily available in oriental ports, and such weapons are exported; western collectors are quite enthusiastic about them, even if these collectors usually cannot use them.

### Sai

This is a short, defensive weapon, consisting of a metal bar with a hilt, and oversized upward-curving quillions. When used by someone with proficiency in the weapon, sai confer a +1 to attack rolls bonus when using the Pin and Disarm maneuvers.

In the chart at the start of this chapter, the Sai is listed as having two types of damage: P (piercing) and B (bludgeoning). That's not quite right; the normal sai is only a Bludgeoning-damage weapon. However, certain warriors prefer for it to be a sharp stabbing weapon, so the damage may be Piercing instead. A sai may only have one type of damage, not both.

Sai requires its own proficiency, which is not related to any other. Weapon specialization confers the usual benefits. To learn the proficiency, one must study with someone who has it, and the character must have a weapon proficiency slot to spend.

Many warriors proficient in the sai take Style Specialization in Two-Weapon technique and utilize twin sai in combat.

Sai are readily available in oriental ports, and are exported.

### Shuriken

Shuriken, often called throwing stars, are small thrown weapons. They do as much damage as a thrown dagger, and are considerably more concealable. Ornamental shuriken can often be worn as jewelry and not recognized as weapons, and a pocketful of shuriken weigh no more than many other single weapons.

However, shuriken require their own weapon proficiency, which is not related to any other. Weapon specialization confers the usual benefits. To learn shuriken proficiency, one must study with someone who has it, and must have a weapon proficiency slot to spend.

Shuriken are available in oriental ports, but most occidental collectors don't know how to use them.

### Tetsubo

The tetsubo is a long walking-staff, its upper end shod with studded iron strips.

Its weapon proficiency is related to other polearms; specialization confers the usual benefits.

Tetsubos can be had in oriental markets, but none are exported because it is a relatively simple weapon to make.

### Wakizashi

The wakizashi is the short-sword companion of the katana. Its blade is forged the same way, and the weapon looks like a shorter version of the katana. It is often part of a matched set with the katana, and is of almost equal importance as the katana to the samurai. Only samurai can wear both katana and wakizashi.

Wakizashi proficiency is related to short sword. Specialization confers the usual benefits. Many samurai fight with the katana in one hand and wakizashi in the other, in two-weapon technique, and some learn the two-weapon style specialization to further improve their ability with this style.

Wakizashis are as hard to come by as katanas.

## Note

The *AD&D*® game supplement *Oriental Adventures* describes many, many other weapons and provides a lot of resource material for oriental characters and campaigns. A certain amount of conversion is required, as the supplement was written for the first-edition game.

## Savage Weapons

The lump term "savages" is being used here to refer to any number of different types of people. They have in common these traits: They're not as technologically advanced as the normal peoples of the campaign, though some do make weapons of bronze or iron; and they're probably hunter-gatherers who have not yet embraced the agricultural revolution. And that's really all they have to have in common. "Savages" might be highly cultured, artistic, peaceful peoples, but if they have dirt floors or flint-tipped weapons, the rest of the world calls them savage. For our purposes, "savages" encompasses Neanderthal man, Old Stone Age Cromagnon, and New Stone Age modern men.

Stereotypical savages know the following weapons: Blowgun (mostly jungle tribes), Long and Short bow (no composite bows), Club, Dagger, Hand/Throwing Axe, Javelin, Knife, Sling, and Spear.

Depending on their level of technological development, they may make their weapons (including arrowheads, spear-heads, etc.) out of iron, bronze, stone or even bone.

For our purposes, iron and bronze weapons have the same characteristics as steel weapons; it's not worth generating all-new weapon stats for the slight game-mechanic differences.

Stone and bone weapons, on the other hand, require their own statistics, which is why they're represented on the weapon chart at the top of the chapter.

## Stone Weapons

Stone weapons are used just like their modern counterparts, but are worth less money, do less damage, and are more prone to shattering.

The damages and costs (should some ever be sold on the market) for these weapons are given on the chart above.

Stone weapons have a chance of breaking every time they hit and do damage. Every time a stone weapon successfully hits a target, the player must roll 1d6. Regardless of the

roll, this attack does its full damage, but on a roll of 1 on the 1d6, the weapon or weapon-head shatters and is useless.

### Bone Weapons

Bone weapons are likewise used like their modern counterparts, but are worth even less money, can only be used with smaller stabbing weapons (knives and daggers), and shatter even more readily—on a roll of 1 or 2 on 1d6.

### Other Uses for Stone and Bone Weapons

Generally, no one in his right mind is going to trade in nice, modern steel weapons for bone or stone counterparts. But characters don't always have the choice.

Characters with the Savage warrior kit start out with the level of weapons the DM decides for him: "Modern," stone or bone. In a campaign where most savages are simply hunter-gatherers who live at a certain distance from the PCs' culture, but who trade and interact with them, modern weapons are fine. When the savage culture is far away and more technologically primitive, stone weapons are more appropriate. If the savages are supposed to be very primitive indeed, bone weapons are the proper choice. In all likelihood, these savage characters, reaching more advanced lands and seeing how much more damage more modern weapons will do, will make the switch. . . though they're likely to stick to the *types* of weapons they know best (spears, bows, daggers, etc.).

Remember, though, that the *club* is the same weapon regardless of technological advancement; the surliest caveman can make a club that has the weapon stats of the most modern baseball bat.

Also, player-characters might find themselves stripped of weapons and cast adrift in the wilderness. If they want weapons, they'll have to make them, possibly of stone or bone. For these purposes, too, the weapon stats above can be useful.

### Swashbuckler Weapons

Swashbuckler weapons are light, fast weapons used by lightly-armored opponents, usually in an environment (a culture, nation or even just a city) where heavier arms and armor are illegal or outdated. They're also appropriate for shipboard campaigns and situations; the light armor is easier to get out of so you don't drown if you fall overboard. So, usually, swashbucklers emerge in an area where the days of the plate-armored, broadsword-wielding knight are past . . . or at least numbered. Swashbuckler characters might bolt on the plate mail and pick up the lance for genuine warfare, but in their cosmopolitan big-city adventures they stick to the lighter stuff . . . and can be sure that most of the opponents they face will be likewise armed and armored.

Weapons from the *Player's Handbook* which can be considered swashbuckler weapons include: Bows (all types), Crossbows (all available types), Dagger/Dirk, Knife, Polearms (all types), and Short Swords. The only sorts of shields they use regularly are bucklers and small shields, and they tend to wear only leather, padded, and hide armor.

The new weapons listed on the chart above include:

## Stiletto

The stiletto is a type of narrow-bladed knife, sharp only at the point. Its most unusual trait is that it confers a +2 (non-magical) bonus to attack rolls against certain armor types: Plate mail (bronze and normal), ring mail, and chain mail. (This is because its narrow point and blade slip in more readily through any sort of armor that is not solid metal or overlapping plates of metal.)

It otherwise behaves like any other knife, and Knife weapon proficiency is exactly the same as Stiletto weapon proficiency: If you know one, you know the other equally well, at no additional cost in proficiency slots.

## Main-gauche

The main-gauche is a large-bladed dagger with a basket hilt (see the description of Cutlass, above) and large quillions. Though it is a stabbing weapon, it's primarily a defensive weapon wielded in the left-hand in two-weapon technique (or two-weapon style specialization).

When used by someone with Main-gauche weapon proficiency, the weapon confers a +1 bonus to attack rolls with the Disarm and Parry maneuvers. Because of its cutlass-like basket hilt, the main-gauche, too, works like an iron gauntlet if the wielder wishes to punch someone with the hilt rather than slash with the blade.

Main-gauche proficiency is related to, but not identical to, dagger proficiency. Specialization confers the usual benefits.

## Rapier

The rapier is a long-bladed, one-handed sword, normally sharp only at the point. It's a thrusting weapon, wielded with lightning-like thrusts and lunges. Swashbucklers often learn Two-Weapon Style Specialization and use rapier with rapier, with main-gauche, with short sword, or with dagger, stiletto, or knife. It's also occasionally used with buckler.

Rapier requires its own proficiency, which is related to sabre proficiency—not long sword and its related weapons. Weapon specialization confers the usual benefits.

You can have a rapier made with a basket hilt. This adds 2 gp to the cost, +1 lb. to the weight, and confers the normal basket-hilt benefits: +1 to attack rolls with Parry maneuver, and the iron-gauntlet benefit for Punching.

## Sabre

The sabre is a light slashing weapon. Its practitioners commonly use only sabre, and often take Single-Weapon Style Specialization *and* Sabre Weapon Specialization. They are very deadly with their blades and may be inordinately proud of the facial scars they accumulate (and deal out).

Sabre requires its own proficiency, which is related to rapier proficiency.

Sabres, like cutlasses and main-gauches, are made with a basket hilt. This confers the normal basket-hilt benefits: +1 to attack rolls with Parry maneuver, and the iron-gauntlet

benefit for Punching.

## New Armor

Some of the new warrior types represented by the warrior kits also have their own special forms of armor: the Gladiator and Samurai both introduce new forms of armor to the campaign.

### Gladiator Armor

There are three normal types of gladiator armor: Thracian, Gallic, and Samnite.

| Armor Type | Class |
|---|---|
| Thracian | 9 |
| Gallic | 7 |
| Samnite | 5 |

They're all made up from several smaller pieces of armor, which include:

| Armor Piece | Cost | Wgt (lbs) |
|---|---|---|
| Belt: | | |
| Protective metal belt at waist | 2 gp | 5 |
| Cuirass: | | |
| Leather or metal chest plate | 50 gp | 20 |
| Fasciae: | | |
| Leather bands on legs | 10 gp | 5 |
| Galea: | | |
| Visored Helm | 10 gp | 5 |
| Galerus: | | |
| Shoulder piece on weapon shoulder | 5 gp | 3 |
| Manicae: | | |
| Leather sleeve | 10 gp | 5 |
| Myrmillo: | | |
| Visored helm resembling sea fish | 10 gp | 5 |

Also used by the gladiators are the *parma* (a small shield, either square or round) and *scutum* (an oblong medium shield).

These armor types are named for real-world sites (Thrace, Gaul, and Samnos); if you have gladiators in your campaign, you may want to rename these types according to

place-names more appropriate to your setting.

### Thracian

The Thracian gladiator wears only fasciae on his legs. This gives him AC 9, or 8 with a shield—and he carries a shield, a parma. In gladiatorial combat, the Thracian gladiator fights only with a dagger. In the field, adventuring, he could use anything he wants.

### Gallic

The Gallic gladiator wears the galea, the belt, manica on his weapon arm, and fasciae. This confers an AC of 7. He also carries a scutum, to bring it to a 6. The Gallic gladiator fights with any number of weapons.

### Samnite

The most heavily-armored type of gladiator, the Samnite, wears a cuirass, fasciae on his legs, manica on his weapon arm, and the galea helmet. His basic AC is 5, or 4 with the scutum he carries.

Should someone just wear the cuirass, his base AC would be 7.

### Samurai Armor

The main difference between oriental and occidental armor, from a game-mechanics point of view, is descriptive. Oriental armor is colorful and elaborately constructed, often brightly enamelled or decorated with paint or painted leathers, silk cords, precious-metal plating, etc.

But from a game-mechanic point of view, leather armor is leather armor, plate is plate. Samurai wear armor that is the equivalent of padded leather, studded leather, scale mail, and brigandine; basic costs, weights, and AC values are identical to the western armor styles. However, a samurai may wish to spend more than the minimum amount on his armor; the extra money goes into making it a remarkable example of eastern art.

### Kote

The samurai also have one sort of armor unknown to the west: The *kote*. This is a pair of armored sleeves which may be worn concealed under the samurai's tunic.

Mechanically, the kote costs twice as much as and acts almost the same as a buckler. There are a couple of differences between buckler and kote, though. Kote cannot be Disarmed, and you can use weapons in the hands of the arms to which kote are attacked. Although the kote consists of a pair of sleeves, you do not get a +2 bonus to AC; only the +1 normally conferred by a buckler.

## Effects of Armor

Here are some optional rules for use with the wearing of armor in your campaign.

You may wish to use some, all, or none of these; we'll try to discuss what effects each will have on your campaign.

A lot of the information we'll be discussing and elaborating upon is contained in the following charts.

| Armor Type | AC | Dex Chks | Wgt (lbs) |
|---|---|---|---|
| Banded mail | 4 | –2 | 35 |
| Brigandine | 6 | –2 | 35 |
| Bronze plate mail | 4 | –3 | 45 |
| Chain mail | 5 | –2 | 40 |
| Field plate | 2 | –3 | 60 |
| Full plate | 1 | –3 | 70 |
| Gladiator | | | |
| Gallic | 7 | –1 | 15 |
| Samnite | 5 | –2 | 30 |
| Thracian | 9 | 0 | 5 |
| Hide | 6 | –3 | 30 |
| Leather | 8 | 0 | 15 |
| Padded | 8 | 0 | 10 |
| Plate mail | 3 | –3 | 50 |
| Ring mail | 7 | –1 | 50 |
| Scale mail | 6 | –2 | 30 |
| Shield | | | |
| Body | * | –3** | 15 |
| Buckler/ Kote | * | –0** | 3 |
| Medium/ Scutum | * | –2** | 10 |
| Small/ Parma | * | –1** | 5 |
| Splint mail | 4 | –2 | 40 |
| Studded leather | 7 | –1 | 25 |

* A shield makes the AC one better: Leather + shield is AC 7.
** This penalty is only counted for certain situations; see below.

The armor a character wears affects his AC, his Encumbrance (if that optional system is used), and also his ability to perform dexterous actions—in other words, heavier armor penalizes a character's Dexterity score for purposes of Dexterity ability checks and Dexterity-based nonweapon proficiencies.

A character's choice of head protection, on the other hand, affects his Encumbrance, his ability to spot things, and the ability of some weapons and attacks to affect him in combat, as we'll discuss further on.

| Helmet Type | Vis. (lbs) | Hrg. | Wgt. |
|---|---|---|---|
| Cap | –0 | –1 | 2 |
| Coif | –0 | –1 | 2 |
| Close–Faced | –2 | –3 | 5 |
| Great helm | –3 | –4 | 10 |
| None | –0 | –0 | 0 |
| Open–Faced | –1 | –2 | 5 |

## Effects On AC

The effects of armor on the characters' AC are already well-documented within the game.

In the campaign, the only feature of the armor/AC system that tends to cause trouble involves the shield. Remember that attacks to the character's rear are made at the character's AC *without* the shield (unless he's wearing it slung across his back, of course); this is something that is easy to forget. DMs, if they don't keep the information written on a helpful record sheet, should ask their players: "What's your AC from the rear?" when such incidents come up, not just "What's your AC?"

## Effects On Speed

There's a misconception that armor, particularly plate-type armor, transforms graceful warriors into lumbering oafs who can be pushed down and sat upon with comparative ease.

Nothing could be further from the truth. Armor is designed to be as accommodating as possible to a fighter's movements, and so the *AD&D*® game doesn't assign an armored warrior any sort of initiative penalty for wearing armor.

Now, armor isn't made for some other types of movement (acrobatics, dancing, etc.) and so will constrict many other Dexterity-based abilities, as we'll discuss below. It is also heavy, which slows down an armored character's running speed, as is already documented in the game.

## Effects On Dexterity Checks

Armor does interfere with a character's gracefulness in many situations. For this reason, we assign the character a penalty to Dexterity checks (and dexterity-based nonweapon proficiencies) when the character is in armor; those penalties are listed on the armor chart above.

These penalties are applied when the character is using all nonweapon proficiencies except Riding (Land-based or Airborne) or Charioteering, which are exempt from the penalty. (Why someone would be performing many of those skills in armor is a mystery . . . but it could happen.)

In addition, the penalty prescribed for the shields is applied when the character is using the nonweapon proficiencies Juggling, Tightrope Walking and Tumbling. (The DM

may choose to disallow the shield penalty for certain examples of these skills' use. For example, a character who is juggling a one-handed technique won't be put off by having a shield on the other hand. But these exceptions will be rare.)

### In the Campaign . . .

These dexterity-roll penalties are provided only for those gamers to whom the matter means something. If you don't care about such things, don't use these rules: they'd merely be an annoyance and extra complication for you.

But if you prefer for a character to be a little less graceful when in full plate or hide than in soft leather or no armor at all, these rules are for your campaign.

### Effects On Vision and Hearing

Helms and helmets restrict vision and hearing. They frame the face, obscure his vision, muffle his hearing, and generally give the character less ability to observe what's going on around him. (They also sometimes keep maces from caving in his skull, which is why fighters like helms and helmets.)

With these optional rules, we'll talk about different kinds of helms and helmets, how they're used, and what other effects they have in combat.

### Other Helms and Helmets

The types of armor listed in the equipment section of the *Player's Handbook*, page 69, include only two types of helmet (great helm and basinet) and then don't really describe what the differences are between them . . . other than price and weight.

*In The Complete Fighter's Handbook*, we'll talk about six different types of head protection. Each one has different effects on the character's ability to see things and to protect himself from different types of damage.

### What Head Protection Doesn't Do

The one thing your choice of head protection *doesn't* do is change your Armor Class. A warrior can have on full plate and a great helm, or full plate and no helmet at all, and he'll have the same AC. So when making your choice of head protection for your character, don't worry about the character's AC, for it won't be affected.

### Vision and Hearing Checks

In a combat or any other loud situation (such as a raucous tavern, a charging mob, an earthquake, a hurricane, or a singing contest at a dwarven boiler-making plant), the DM may want his PCs to make Vision and Hearing Checks in order to see and hear certain things.

Certainly, when a fighter is pointed in a certain direction, there's nothing distracting him, and an ogre is lumbering at him from that direction, the fighter is going to see the ogre. No roll is necessary.

But when there's a chance that the character could fail to notice such a thing (as defined by the DM), the character gets to make a Vision Check or a Hearing Check (whichever the situation calls for).

A Vision or Hearing Check is a 1d20 roll against the character's Intelligence or Wisdom, whichever is *higher*. If the PC rolls his ability or less, he's successfully made his check and can see or hear whatever it is he's supposed to. If he fails, he doesn't.

Protective headgear, however, provides penalties to the character's Vision and Hearing Checks, as well as providing other benefits and hindrances.

## No Head Protection

If a character chooses to wear no head protection at all, he suffers no Vision or Hearing check penalties.

However, the character has one hindrance, if you're using the optional hit location rules from the *Combat Rules* chapter.

If a character is wearing no head protection, an attacker can make a Called Shot against his head and thereby ignore the character's AC benefits from armor. (All bonuses from shields, high Dexterity scores, and magical items still count, however.) Since this is a very difficult shot (a total –8 to attack rolls, remember), this doesn't do the attacker much good, unless the victim is otherwise heavily armored.

*Example: Halway the archer has two possible targets, Territor and Bosque, two brutal guards. Territor is wearing leather armor and no headgear; this puts him at AC 8, and with his Dexterity bonus he's AC 6. Bosque is wearing full plate +2, no headgear, and body shield; this puts him at AC –2.*

*Halway, after all modifiers for range, his Dexterity, and other factors, is THAC0 16. (He's a 6th-level warrior, with a Dexterity of 16, and is firing at Medium Range.)*

*If he shoots at Territor, AC 6, he needs only a (16–6) 10 or better to hit him. If he shoots at Territor's unprotected head, the shot becomes much harder; he's shooting at AC 8 (AC 10, –2 for Territor's Dexterity), and so would normlly need a (16–8) 8; but with the –8 to attack rolls for a head shot, he's back to a roll of 16 or better. It's easier for him to hit Territor with a normal, non-specific shot.*

*If he shoots at Bosque, AC –2, he needs to roll an (16–{–2}) 18 or better to hit him. If he shoots at Bosque's unprotected head, the shot becomes somewhat easier; he's shooting at AC 9 (AC 10, modified by Bosque's shield), and so would normally need a (16–9) 7; with the –8 to attack rolls for a head shot, he's up to a roll of 15 or better. This makes it slightly easier to hit Bosque, and may give him the special effects of the head location shot if he succeeds, so that's the shot he attempts.*

The lower (better) a target's AC is, the better an option it is to try a head shot, *if his head is unprotected and the rest of his body is armored*. Characters interested in this option should calculate the math of both shots and compare the results, if they know all the relative ACs and modifiers; if they don't, they should ask the DM, in general terms, if it's even worth their time to try such a shot.

## The Cap

The Cap is a padded, leather or even steel skullcap which is about the size of and

worn much like a close-fitting cap, beret or hat. It gives the wearer no penalty for Vision Checks, and a –1 penalty with Hearing Checks (as it partially covers the ears). It's often worn in conjunction with padded, leather, hide, studded leather, and other lightweight armors.

### The Coif

The Coif is a padded chain mail hood; it fits fairly snugly around the neck and over all the head except the face from chin to forehead. Like the Cap, it gives the wearer no penalty for Vision Checks and only a –1 penalty with Hearing Checks. It's usually worn with chain mail.

Often, a heavily-armored knight will wear a chain mail coif and wear a Great Helm *over* it. The only benefit this confers is that such a knight can remove his Great Helm, the better to see and hear around him, and still have some head protection. As a disadvantage, it adds a little weight to the knight's equipment, but it does not decrease his Vision and Hearing checks any further than just wearing the Great Helm.

### The Open-Face Helmet

The Open-Faced Helmet, made of reinforced leather, or of metal, covers the back, sides and top of the face, leaving most of the face open. It gives the wearer a –1 penalty with Vision Checks, and a –2 penalty with Hearing Checks (it completely covers the ears, usually with small holes or grating over the ears so that the wearer can hear at all).

Examples include the Corinthian helmets of ancient Greece. In a medieval campaign, open-faced helmets are often worn by military officers and soldiers who can afford the protection.

### The Closed-Face Helmet

The Closed-Face Helmet is made of metal and is much like the Open-Faced Helmet . . . except that there is armor plate, often in the form of a visor which may be opened, in front of the face. It gives the wearer a –2 penalty with Vision Checks, and a –3 penalty with Hearing Checks.

Examples include the basinet mentioned in the *Player's Handbook*, the galea and myrrmillo mentioned for the gladiators (above), and many other combat helmets. Many knights and other mounted warriors wear helmets of this type.

If the wearer of a Closed-Face Helmet is also wearing plate mail or field plate armor, he gets a +1 to saving throws vs. dragon breath, and to spells such as *burning hands, pyrotechnics, fire ball, flaming sphere, wall of fire, delayed blast fireball, incendiary cloud*, and *meteor swarm*, and other fire-based spells and magical effects (as determined by the DM).

If someone uses a Lasso, Chain, or Bolas in an effort to snare a rider's head, and that rider is wearing a Closed-Face Helmet, the victim gets to roll 1d6. On a 4–6, the attack is handled normally, but on a 1–3, the attack is treated just as a normal lasso or chain dismount; the attacker doesn't do the extra damage that the head-lasso attack normally allows.

## The Great Helm

The Great Helm is a massive helm which covers the entire head, from the top of the head to the top of the shoulders, leaving slits open for the eyes and holes open for breathing; it has no removable visor. It gives the wearer a –3 penalty with Vision Checks, and a –4 penalty with Hearing Checks.

The Great Helm provides the following other benefits:

The wearer of a Great Helm gets a +2 saving throw vs. wizard spells such as *hypnotism, light* cast on his eyes, *blindness, hypnotic pattern, suggestion, fire charm, rainbow pattern,* and some other mind-controlling spells . . . but not *charm person, charm monster,* or *domination.*

If the wearer of a Great Helm is also wearing plate mail or field plate armor, he gets a +2 to saving throws vs. dragon breath, and to spells such as *burning hands, pyrotechnics, fire ball, flaming sphere, wall of fire, delayed blast fireball, incendiary cloud,* and *meteor swarm,* and other fire-based spells and magical effects (as determined by the DM). If, instead of plate mail or field plate, he is wearing full plate, the bonus is a +3 to saving throws.

If someone uses a Lasso, Chain, or Bolas in an effort to snare a rider's head, and that rider is wearing a Great Helm, the attack is automatically treated just as a normal attack. With lasso or chain, it's a normal lasso or chain dismount, and the attacker doesn't do the extra damage that the head-lasso attack normally allows. With Bolas, the attack does normal damage, but no strangulation damage.

## In the Campaign . . .

If you use these rules in a campaign, you add some color and distinction between the types of armor that your PCs will be wearing. On the other hand, once again, it's an added level of complexity which the game doesn't have to have. Use these rules only if the added complexity doesn't bother you, and if the special functions of the different types of helmets appeal to you.

## Variant Armor

The types of armor given in the *Player's Handbook* are all you need to play the game. However, you can use other types of armor in your campaign; here, we'll talk about two different types of alternative armor.

## Racial Armor

It's asking a lot to suppose that elves will make their armor just as humans make theirs, that it will look the same and function identically. Here are some ways to make the armors of different races more individual.

## Armor Fitting

Armor made for one race rarely fits another; it may be too big, too small, or proportioned too strangely.

Below is a chart. The column to the left shows the type of demihuman trying to wear the armor. The rows along the top show what species the armor was made for. The percentage chances shown are the chances that the person can wear the armor, and the "+" and "–" symbols show whether the armor is more likely to be too big or too small for the wearer. (If there is no such symbol, it means that odds are even, 50% that it will be too big, 50% that it will be too small.) "Too large" could mean that it is so baggy or empty that it hinders the wearer and does not protect him well enough, or that it is so long on him that it interferes with his walking. "Too small" could mean that it is not broad enough to accommodate the wearer's chest, or that it is so short that it looks ridiculous and does not sufficiently protect the wearer.

Now, at the DM's discretion, many things can affect these percentage chances.

If a character of one sex is trying to put on armor built for another sex, chances go down that it will fit. The chance is reduced 10% (but never goes below 5%). If a fit fails because of that modifier, it's because the woman found the man's armor too big, or the man found the woman's too small.

| **Race Trying To Wear Armor** | **Race For Which Armor Was Built:** | | | | | |
|---|---|---|---|---|---|---|
| Armor: | Dwf | Elf | Gnm | 1/2 Elf | 1/2–lg | Hum |
| Dwarf | 80% | 0% – | 10% – | 10% – | 35% – | 40% + |
| Elf | 10% + | 90% | 50% – | 70% + | 35% + | 50% + |
| Gnome | 40% + | 40% + | 75% | 25% + | 60% + | 20% + |
| Half-Elf | 20% + | 45% | 10% + | 70% | 35% + | 50% |
| Halfling | 75% + | 30% – | 35% – | 35% + | 70% | 20% + |
| Human | 50% – | 20% – | 5% – | 30% – | 10% – | 65% |

However, the DM may allow the difference in sex to *help* sometimes—in cases where the armor is not likely to fit a male human because it is too small in the shoulders and chest. A human woman trying to put on a male half-elf's armor might be at no modifier, and find herself at a +10% modifier to wear a male elf's armor.

Remember that full plate has its own modifiers for chances to fit; it has only a 20% chance to fit another member of the same race (10% if the new wearer is of the other sex). A character *cannot* wear full plate made for a character of another race, period.

The DM can allow previously role-played determinations of a character's height and build to affect the chances from the chart below. For instance, if one player has always said that his human character was short and stocky, say 5'4" and powerfully built, so that many people joked about him having a dwarvish ancestor, the DM can give him a +15% chance to wear dwarvish armor; this raises his chance from 50% to 65%, as if he were a human trying to wear armor of his own kind. The DM should, however, subtract that same modifier from the character's chance to wear armor built for humans; that chance would go down from 65% to 50%.

*Example: An adventuring party kills a beholder in its lair and finds the armor worn by previous victims. The adventurers include a huge human male barbarian, a slender*

*human female warrior, a dwarf axeman, and a female gnome. The dead victims include an elf male in enchanted chain mail and a halfling male in enchanted leather. The heroes see who can wear the captured armor.*

*The DM decides arbitrarily that the human barbarian cannot even roll. He's always described himself as being massive, with enormous rippling muscles and a bodybuilder's physique. In this campaign, that often helps him with the ladies, but this time it disqualifies him from wearing any of the treasure.*

*The slender human warrioress tries the elf's chain mail. A human trying on elf armor, on the chart above, has a 20% to wear it successfully. The DM raises her chance 10% because she is a female human trying to fit into male elf armor; her build is at an advantage here. He raises it 10% further because in the campaign she has always described herself as of delicate build, very slender. This raises her chance to 40%. She rolls 38 on percentile dice; she can wear the chain. She also tries the enchanted leather. A human woman trying to wear male halfling armor is at 10%, and the DM again assigns her the +20% from the two modifiers mentioned. She has a 30% chance, but rolls a 79; she cannot wear it.*

*The dwarf axeman tries the elvish chain. A dwarf trying to wear elf armor has a 0% chance to wear it. He can't. He has a 35% chance to wear the halfling's armor; the DM lowers that to 25% because this character has always described himself as especially burly for a dwarf. But he rolls 03 on percentile dice; he can wear the enchanted leather.*

*The female gnome tries the elvish chain. She has a base 40% chance to wear it. The DM does not modify it for her sex. She rolls a 51 and fails. She tries the leather; she has a base 60% chance with it, –10% for different gender equals 50%. She rolls a 33 and can wear it.*

*So the human warrioress gets the chain mail, and the dwarf and gnome must choose or gamble to decide who gets the leathers.*

## High-Quality Racial Armor

Armor found as treasure has a chance to be *high-quality* armor. Ordinary armor has a 10% chance on percentile dice; magical armor has a 25% chance.

Each race adds something different to its armor if it is high-quality.

**Dwarves:** High-Quality dwarvish armor is very, very resistant to damage. Whenever High-Quality dwarvish armor must make a saving throw (see the *Dungeon Master Guide*, page 39.), it gets a +6 to save in addition to any bonuses it receives if it is magical. Additionally, if you use the "Damage to Armor" rules described later in this chapter, all High-Quality dwarvish armor has twice the number of damage points of ordinary armor.

**Elves:** High-Quality elvish armor is one- half the weight of ordinary armor; it constitutes "elven steel" (see the chart on page 38 of the *Dungeon Master Guide*).

**Gnomes:** Gnomes make very quiet studded and padded leather armors; these are the only High-Quality armors they make. High-Quality gnome armor does not take any penalties on the "Thieving Skill Armor Adjustment" table (*Player's Handbook*, page 39, last column); thus, a gnome thief or dual-class thief does not suffer a –30% when picking pockets, or a –20% when moving silently, etc.

**Half-Elves:** Half-Elf armorers do not make any High-Quality leather armor, padded armor, studded leather, hide armor, or bronze plate mail. All their other armors can be

made as High-Quality armor. High-Quality half-elf armor is made from fine steel; it is –10% the weight of ordinary armor of the same kind, fine steel, for normal thickness, –10% weight, and gets a +2 to saving throws (on the "Metal" column on page 39 of the *Dungeon Master Guide*).

**Halflings:** Halflings only make leather armor as High-Quality armor. Their High-Quality leather armor counts as "No Armor" on the Thieving Skill Armor Adjustment table (*Player's Handbook*, page 39).

**Humans:** Humans make all types of armor as High-Quality armor. This is especially tough armor; whatever it is made of, it is +2 to saving throws on the appropriate line of the "Item Saving Throws" chart on page 39 of the *Dungeon Master Guide*. Also, plate mail (not including bronze plate), field plate, and full plate made to High-Quality specifications is made of fine steel, but instead of being lighter than usual, it is built thicker in order to make it more resistant to damage. It is +4 to saving throws on that "Item Saving Throws" chart, and is normal weight. Also, it gives the wearer a +2 to saving throws vs. Rod, Staff, or Wand and Breath Weapon attacks. In addition, if you are using the "Damage to Armor" rules found later in this chapter, it has one and a half times the normal damage points for the type of armor it is.

### Other Notes on High-Quality Racial Armor

All the above descriptions were for worn armor, not shields. High-Quality shields do not impart any special bonus unless you're using the "Damage to Armor" rules, in which case they have twice as many damage points as the normal sort of shield.

How much does it cost to buy a set of High-Quality racial armor? First, the DM has to decide whether there is any available to sell. Usually, the answer will be no; there is only a 1% chance that a normal village armorer's will have made *any* piece of high-quality armor to sell, and that will be racial armor of the armorer's race. The chance goes up to 5% in a big city, or 25% if you're looking for racial armor of the race that is most common in the city. Thus, to find high-quality dwarvish armor, go to a big dwarf community . . . and there your chances are still low.

But if you find what you're looking for, or are able to hire an armorer to build you a set, it costs ten times the normal cost of the armor. High-quality dwarf plate mail, then, would cost 6,000 gp. Often, it's not worth the price to the adventurer.

In *no* case will an elvish craftsman custom-make a set of High-Quality elvish armor for someone. Such armor is only made for the elvish royalty, and their kings sometimes bestow a piece on a non-elf hero . . . but only for deeds of exceptional valor which have helped the elves.

Another question adventurers are sure to ask: Can an armorer of one race build his own type of High-Quality armor for another race? For example, can a master gnome armorer build High-Quality gnome armor for a human?

The answer is yes. Instead of costing ten times the normal cost of the armor, the price is 15 times the normal cost. But it can be done. Again, though, an elf armorer will never make High-Quality armorer for anyone but his rulers.

Custom-built High-Quality armor takes four times as long to make as normal, average armor.

## Piecemeal Armor

What happens when a character takes a heavy metal breastplate from a set of field plate and then wears chain mail sleeves and leggings and a leather armor cap? (That is, what happens other than he looks stupid?)

Characters *can* wear armor assembled out of the remnants of other, mismatched sets of armor. It's not as good, and certainly not as good-looking, as wearing a matched suit. But sometimes necessity dictates that characters wear what's on hand.

When you're assembling a full suit of armor out of pieces on hand, the first thing to do is to see what you have. Compare your armor on hand with the chart below.

| | | | Bonus to AC Per Type of Piece: | | | |
|---|---|---|---|---|---|---|
| **Armor Type** | **Full Suit** | **Breast-Plate** | **Two Arms** | **One Arm** | **Two Legs** | **One Leg** |
| Banded Mail | 6 | 3 | 2 | 1 | 1 | 0 |
| Brigandine | 4 | 2 | 1 | 0 | 1 | 0 |
| Bronze plate | 6 | 3 | 2 | 1 | 1 | 0 |
| Chain mail | 5 | 2 | 2 | 1 | 1 | 0 |
| Field Plate | 8 | 4 | 2 | 1 | 2 | 1 |
| Full plate | 9 | 4 | 3 | 1 | 2 | 1 |
| Hide armor | 4 | 2 | 1 | 0 | 1 | 0 |
| Leather armor | 2 | 1 | 1 | 0 | 0 | 0 |
| Padded armor | 2 | 1 | 1 | 0 | 0 | 0 |
| Plate mail | 7 | 3 | 2 | 1 | 2 | 1 |
| Ring mail | 3 | 1 | 1 | 0 | 1 | 0 |
| Scale mail | 4 | 2 | 1 | 0 | 1 | 0 |
| Splint mail | 6 | 3 | 2 | 1 | 1 | 0 |
| Studded leather | 3 | 1 | 1 | 0 | 1 | 0 |

*Example: A character is robbed of all his worldly goods. Later, he finds the aftermath of a battle, with a couple of dead warriors still in their armor. One body wears a badly battered set of field plate (of which the breastplate is intact), while the other wears a full suit of chain mail (of which the chest is riddled with holes and one leg is destroyed).*

*He tries to piece this together into a suit for him. He takes the field-plate's breastplate. Looking at the chart, we see it grants an AC bonus of 4. He also takes the field-plate's two arms. Looking at the chart, we see they grant an AC bonus of 2. He takes the surviving chain mail leg. Looking at the chart, we see that it grants an AC bonus of 0. (He'll also take the surviving helm or helmet from one of these warriors, so that he'll have some armor on his head in case of a Called Shot to the Head.)*

*His AC bonus is 6, so his AC now is 4—not too bad. If there's a shield, he'll have an AC of 3. If someone takes a Called Shot to his unarmored leg, he'll be at AC 10 (or 9 with the shield), as per the Combat Rules chapter, but that attacker will take a –4 penalty to attack rolls for the Called Shot maneuver.*

## Weight of Piecemeal Suits

To calculate the weight of a piecemeal suit of armor, follow these guidelines:
The **breastplate** is 1/2 the weight of the original suit.
Each **arm** and **leg** is 1/8 the weight of the original suit.

### About Magical Armor

If a suit of magical armor is used for one of these piecemeal efforts, it grants none of its magical bonus; once the magical armor is split into little bits, or pieces are merely separated and not worn together, the magical bonus doesn't work.

### Gladiator Armor

These rules for piecemeal armor are, in effect, how the types of Gladiator Armor described in this chapter are built.

**Thracian** armor consists of fasciae, the equivalent of Hide armor worn on two legs—thus an AC bonus of 1, for an AC of 9.

**Gallic** armor consists of fasciae (Hide armor on two legs), one manica (the equivalent of Splint Mail on one arm, thus an AC bonus of 1), and a protective metal belt. The belt is a special piece of gladiator armor; it constitutes half a breastplate of Hide armor in both weight an AC bonus, so it grants an AC bonus of 1. All together, Gallic armor grants an AC bonus of 3, for a final AC of 7. Note: The armor belt *cannot* be worn in addition to a Breastplate, only instead of one.

**Samnite** armor consists of a cuirass (a splint mail equivalent breastplate conferring an AC bonus of 3), and splint-equivalent armor on one arm (AC bonus of 1) and both legs (AC bonus of 1), for a final AC of 5.

The piece of armor called the Galerus, worn on the weapon shoulder, does not add anything to the AC bonus; it is considered part of the sleeve or breastplate.

## Damage to Armor

It's easiest in a campaign just not to worry about the damage that armor and shields are taking. It's presumed that characters go on adventures, get in fights, and during some of their off-hours they repair their armor.

If you want know precisely how much damage a piece of armor can take before being destroyed, and how to repair damaged armor (without the PCs necessarily having to do so themselves), you can use the following rules.

### Damage Points

Every time a character wearing armor is hit and damaged by an attack, his armor takes damage, too. It takes 1 Damage Point per blow that hits. If an attack hits for 1 point of damage, the armor takes 1 DP. If an attack hits for 10 points of damage, the armor takes 1 DP.

Shields only take damage when the character successfully Parries with a Shield. Each time he parries an attack that would have hit him, his shield takes 1 DP.

Helms only take damage when the character is hit with a Called Shot to the Head or a

Sap maneuver. Each time the character wearing a helm is hit with such an attack, the helm takes 1 DP.

When a piece of armor drops to 0 DP, it falls apart and is ruined; it cannot be repaired. So long as it has 1 DP it can be repaired.

Armor has the following DP:

| **Armor Type** | **AC** | **DP** |
|---|---|---|
| Banded Mail | 4 | 30 |
| Barding | | |
| Chain | 5 | 50 |
| Full plate | 2 | 80 |
| Full scale | 6 | 40 |
| Half | | |
| brigandine | 7 | 30 |
| Half padded | 9 | 10 |
| Half scale | 7 | 30 |
| Leather/ | | |
| Padded | 8 | 20 |
| Brigandine | 6 | 20 |
| Bronze plate | 4 | 30 |
| Chain mail | 5 | 25 |
| Field Plate | 2 | 40 |
| Full plate | 1 | 45 |
| Gladiator | | |
| Gallic | 7 | 15 |
| Samnite | 5 | 25 |
| Thracian | 9 | 5 |
| Helms | | |
| Cap | +0 | 5 |
| Coif | +0 | 15 |
| Close-Faced* | +0 | 25 |
| Great | +0 | 35 |
| Open-Faced | +0 | 20 |
| Hide armor | 6 | 20 |
| Leather armor | 8 | 10 |
| Padded armor | 8 | 10 |
| Plate mail | 3 | 35 |
| Ring mail | 7 | 15 |
| Scale mail | 6 | 20 |
| Shields | | |
| Body | +1 | 35 |
| Buckler | +1 | 10 |
| Medium | +1 | 25 |
| Small | +1 | 10 |
| Splint mail | 4 | 30 |
| Studded | | |

| | | |
|---|---|---|
| leather | 7 | 15 |

* Includes basinet, galea, myrmillo

### Piecemeal Armor

If you're using the Piecemeal Armor rules from earlier in this chapter, consider the armor's Breastplate to have the number of DP listed for it in the chart above. Each arm and leg will have a DP amount equivalent to one-tenth of the DP total from the chart. The breastplate will take all DP damage from attacks unless they are Called Shots to other body parts.

### Magical Armor

Magical Armor does not gradually lose its protective enchantment as it is damaged. However, if it reaches 0 DP before being repaired, the armor is destroyed and so is the enchantment.

Being magical does not confer any extra Damage Points on the suit of armor. It can gradually be destroyed by brute force like any unenchanted suit of armor.

### Repairing Armor

Guidelines for repairing damaged armor are presented in the *Character Creation* chapter, under the headlines "Repairing Armor" and "Repairing Magical Armor."

### Effects on the Campaign

These rules for calculating damage to armor add a little complexity to combats in the game. Every time a character is hit in combat, he'll have to add one tally-mark to a separate scratch sheet of paper showing the damage his armor is taking. It's easy to forget; the DM will constantly have to remind his players to do this in the first weeks he is introducing this rule into his campaign. Therefore, we recommend you use this system only if it's important to you. If it isn't, don't bother with it.

### Magical Items

Following are some new types of magical treasures, magic especially suited to fighting characters.

**Bracelet of Charms:** This appears to be a nicely-crafted bracelet of sturdy gold links. It looks like any other bracelet to which small charms and mementos are attached.

But when a warrior (only a warrior, multi-class warrior, or dual-class warrior) slides the bracelet around the blade or haft of a weapon, and speaks the command word engraved on the bracelet's clasp, the weapon *disappears* . . . and a gold charm matching the weapon appears on the bracelet.

Thereafter, when the warrior speaks the command word and the name of the weapon,

the weapon magically appears in the hand on whose wrist the bracelet rested . . . and the bracelet disappears.

The bracelet can hold up to four weapons/charms this way. They can be normal or magical. Shields and miscellaneous equipment cannot be held in this fashion; only weapons built as weapons. Siege weapons cannot be held.

The change from bracelet to weapon takes no time at all, but can be accomplished only once per turn. The bracelet itself can be used only eight times in a day; turning the bracelet into a weapon counts as one use, and turning the weapon back into a bracelet counts as one use.

If the weapon held in the bracelet's enchantment is called on, and wielded, and then disarmed, the character cannot call on another weapon from the bracelet. The *bracelet* itself is within the weapon. The character must retrieve the weapon first, and only then can he use its magic.

A weapon can be taken out of the bracelet's array. When a character wishes to do this, he takes the bracelet off his wrist and speaks the name of the weapon, and *then* says the command word . . . a reversal of the previous procedure.

The *bracelet* does not magically know its owner. Anyone who steals the *bracelet* from its owner and discovers what it is can use it and call the previous owner's weapons forth.

This item is best used when the wielder wants to carry a variety of different weapons, and wants to do so secretly. With a single warrior, the weapons carried might be a long bow and quiver (quivers count as part of the weapon they carry arrows for), a bastard sword, a halberd, and a dagger. This gives the warrior the ability to call forth the weapon best suited to the task at hand.

If a weapon is broken, the bracelet isn't; the user needs to call forth the bracelet, then separate the broken weapon from it.

Quivers are not magically replenished when they're the size of charms. However many arrows are in the quiver when it becomes a charm are still in it when it becomes a quiver again. Likewise, a broken bow-string stays broken.

The *Bracelet of Charms* may not be used on the same weapon as a set of *Rings of Readiness*.

**Cage of Shelter:** This object looks like a large bird-cage that has been neatly folded down into a package about the size of a medium shield.

The user, who can be of any character class, places it upon the ground, steps back from it, and claps his hands loudly either two or three times.

If he claps his hands twice, the cage grows up into a sturdy metal-framed tent which can house eight people—you can substitute one horse for four people. This tent confers no magical blessing on its inhabitants, but by using it and huddling together for warmth a party can survive a snowstorm that would kill an unprotected party; by erecting it in the desert, a party can avoid the danger and discomfort of a sandstorm.

If the user claps his hands three times, the cage grows up into a strong 10' by 10' cell. The door to the cell has the equivalent of a *wizard lock*; the cage's owner can open it any time he wishes, and any magician with the *knock* spell can open it by using that spell. A person in the cell would have to make his Bend Bars/Lift Gates roll successfully (or use a knock) to escape; the door's lock cannot be picked.

To return the cage to its original form, the owner claps again, twice if it is in tent form, three times if it is in cage form. If someone is in it when it is a tent and begins collapsing, it opens up around the person inside; both he and it are unhurt. If someone is in it when it is a cage and begins collapsing, it collapses around him, inflicting 2d6 damage before it breaks open; thereafter, it is ruined forever.

The *cage of shelter* knows its owner. If someone finds it in a treasure, he must carry it in his gear for a month for the cage to attune itself to him. If its true owner sells it to someone else in the cage's presence, the cage will obey the claps of its new owner immediately.

**Charm of Favor:** When deities and other powerful beings are pleased with the deed of a mortal, they sometimes give him a *charm of favor*. This is a small charm or statuette, usually of semiprecious material and two or three inches in size, which represents the god or one of his aspects.

The *charm* is rather like a *limited wish*. It represents a favor which the deity will do for the character at some time in the future. To use it, the owner must throw the item on the ground so hard that it breaks, and then call out his request.

The request must have something to do with the attributes of the god: It's no use asking the Goddess of Love to dry up an oasis into a desert, or to ask the God of Earthquakes for a fog to hide the adventurers.

The god hears it when the favor is requested. And he, in the guise of the DM, evaluates the favor. If the favor is something which pertains to one of his attributes, and if the god does not think that the character is making the request out of mere greed or selfishness, and if bestowing the favor will not conflict with any of the god's other aims or desires, he will grant the favor.

So it would be appropriate to ask the God of Insects to send a cloud of bees to rout one's enemies, or to ask the Goddess of Love to cause some NPC to fall in love with the player-character, or to ask a deity of the Earth to cause fruit-trees to grow and save the characters from death by thirst and starvation.

Because the deity is evaluating the character's request, the asking character cannot expect an outrageous favor to be granted. And most enemies who steal the charm from the PC cannot use it successfully; one might take it, hurl it to the ground and break it with his request, and find the cranky god stomping on him and freeing the faithful PC. (This, however, constitutes using up the favor.) But an NPC friend of the owner of the *charm* might be able to get the item and ask the god to help the charm's true owner . . . particularly if he is ill or kidnapped and cannot do so for himself.

Any character of any class can receive such a charm as a favor. But when they are found in treasure, they are useless; they were not intended for the character who finds them, after all.

The *charm of favors* does not radiate magic.

**Rings of Readiness:** This magical item consists of two plain iron rings, one suitable to be worn on a finger and one larger, some 2" in diameter.

The larger ring is to be placed on some item. It can be sewn into or bolted onto a set of armor; it can be placed upon the pommel of a weapon (in which case it shrinks until it fits snugly); it can be attached to any item of personal gear weighing less than 100 lbs.

When the larger ring is attached to an object, and the smaller ring is worn by a character, the character needs only to utter the magical word inscribed on the inside of the smaller ring. When he does, if the other ring is within 10 miles, it will instantaneously transport that object to the character.

If the item attached to the other ring is a weapon, it will appear in his hand. If the item is a suit of armor, it appears on the character; if he is already wearing a suit of armor, it appears next to him. If the item is something else, it appears in a fashion dictated by the DM; a crown will appear on the character's head, while a sewing machine would appear next to him, for instance.

If the item attached to the larger ring is more than 10 miles away, nothing happens.

The use of the rings must be announced before initiative in the combat turn. Use of the rings takes no time. The character calls out the magic word before initiative; then, later in the turn, when his actions come up, the item in question appears.

If a character finds the smaller ring without the larger one, then he can summon whatever object the larger one is attached to, even if it is not his. These rings recognize no single owner. An interesting quest in a campaign might be for a character to find the smaller of a set of rings and have to wander to find the larger ring and summon it and its object to him; remember, it only works within 10 miles of the summoner.

The magic only works if the item attached to the larger ring is inanimate. Living things are not transported.

Once summoned, these objects may not be sent back. This is a one-way trip.

The rings may be used any number of times; they do not wear out.

Many heroes use this magical item so that they never lose their weapons. If the hero finds his sword disarmed in combat, he can call it to his hand on the next round, without wasting the time to go get it. Some con artists use it to run a scam: They'll secretly attach the larger ring to some great item of treasure, sell it to a dealer, ride out of town with their money and then summon the treasure back. This is a good tactic until the vengeful dealers catch up with them.

This magical item may be used by characters of any class.

*Rings of readiness* cannot be used on the same weapon as a *bracelet of charms.*

**Sheath of Holding:** This item looks like an ordinary sheath for a large knife; the sheath is anywhere from 6" to 10" long, including its belt loop.

But it doesn't hold a knife. It holds a sword—a full-sized sword. With magic rather like that found in the *bag of holding*, this item slides most of the length of the blade into a pocket dimension, so that only the weapon's hilt shows, with the sheath suggesting another 5" or so of blade. (This looks rather strange when it holds a bastard sword, where the hilt will be longer than the apparent blade, but the *sheath of holding* can do it.)

Each *sheath of holding* is designed to hold one type of sword. The DM can decide which sort of sword it's designed to hold, or can roll on the table below. The sheath will not hold a sword it is not built to hold.

| **Roll d100** | **Weapon Held By Sheath** | **Alternate Roll** |
|---|---|---|
| 01–10 | Bastard sword | |

| | | |
|---|---|---|
| | | 01–15 |
| 11–15 | Cutlass | |
| 16–20 | Dagger | 16–25 |
| 21–25 | Dirk | 26–30 |
| 26–30 | Gladius/Drusus | |
| 31–33 | Katana | |
| 34–38 | Khopesh | 31–35 |
| 39–43 | Knife | 36–45 |
| 44–53 | Long sword | 46–65 |
| 54–58 | Main-gauche | |
| 59–68 | Rapier | |
| 69–73 | Sabre | |
| 74–78 | Scimitar | 66–75 |
| 79–88 | Short sword | 76–90 |
| 89–93 | Stiletto | |
| 94–98 | Two–handed sword | 91–00 |
| 99–00 | Wakizashi | |

Ignore any rolls which are not appropriate for your campaign setting; if you have no katanas, you don't need to accept any rolls for sheathes for katanas.

The "Alternate Roll" column is used if you are not using the new weapons introduced in *The Complete Fighter's Handbook.*

This magical item can be used by any character class, but most end up in the hands of warriors and rogues.

**Saddle of the Spirit-Horse:** This is a very strange magical item which may only be used by warriors (either single-, multi-, or dual-class).

To all appearances, it is an ordinary, worn leather saddle of good quality. However, it is a magical item. If worn by a single horse, it attunes itself to that horse when worn for three days. (It doesn't have to be worn continuously for 72 hours—just worn as an ordinary saddle is.)

Once it is attuned to the horse, nothing remarkable happens . . . unless the horse dies while wearing the saddle. If it does, the spirit of the horse stays with the saddle for another 24 hours. Half an hour after the horse died, the spirit of the horse will "awaken," and climb to its unseen feet, and prepare to carry its master wherever he wants to go. The ghost-horse continues to wear the saddle and to carry it around . . . and the horse's master or other favorite riders may ride it during that time.

For the next 24 hours, the horse-ghost will tirelessly carry its rider wherever he wants to go, at the full running speed the horse could manage when it was alive. But it's a spooky sight: The saddle floats in the air, four or five feet up (at the height the living horse carried it); the rider must mount normally, treat the horse as he did normally, and pretend all is as it ever was.

Other than running, the horse-spirit has no unusual abilities. It cannot be seen or touched. It can whinny and neigh, and it *can* buck . . . though only the saddle is seen to buck in the air. It cannot truly fly; when it comes to a ravine, for instance, it must descend

to the bottom and climb the other slope as it would have had to do if it were alive.

This frightens living horses. No normal horse will approach the animated saddle within a hundred feet. For this reason, it is best used when the character is alone and, has his horse killed out from under him,

If a character kills his horse to get this 24 hours of fast, tireless service, the ghost-horse will remember this and be offended by it . . . even if the character did it secretly, by poison or long-distance magic, the horse will know it. It will allow him to mount the floating saddle, and behave normally for a while, but at some catastrophic time it will try to kill the character. It may jump off a cliff, or ride him straight back at the enemy he's trying to elude, or buck him off into a pit of snakes.

These saddles may also be made for donkeys, camels, or any other ground animals. They don't work with pegasi, griffons, or other flying beasts.

**Shield of Medusae:** This magical item may only be used by warriors or priests (including multi-class and dual-class warriors or priests).

It is shaped like and works like a normal medium shield. But the outside (the side that faces the enemy) is mirror-reflective, and the inside (where the warrior's straps are) is crystal clear.

To use the *shield of medusae*, the warrior holds it up before him, in front of his eyes, and looks through its clear surface. While he is doing so, he is immune to the stoning gazes of creatures such as the medusa and basilisk, and to magical items which duplicate their gazes. When the character carrying this shield confronts a stoning creature, he reflects their images back at them, and it is *they* who must make saving throws vs. petrification or be turned to stone.

Unlike ordinary shields, the *shield of medusae* has only two damage points before it shatters. In other words, if it is hit twice, it is destroyed.

## Miscellaneous Equipment

The following pieces of equipment are of some use to warriors and other characters.

**Atl-Atl:** This is a stick with a broad, shallow groove along its length and a knot at the end; it is a few feet long.

The character places a javelin (not a spear, long spear, harpoon, or trident) in it so that the javelin butt rests against the knot and the javelin lies along the groove; the warrior holds it at the other end. Thereafter, when he flings his javelin, he uses the atl-atl as a lever and is able to throw it much farther than before.

When used with an atl-atl, the javelin acquires the following characteristics:

**Javelin/Atl-Atl:** ROF 2/3, S 3, M 6, L 9.

The atl-atl costs 1 silver piece to make, but can be carved out of a stick by anyone with the Weaponsmith proficiency. It weighs one pound.

**Spike, Spring-Out:** This is a nasty weapon used mostly by rogues and chaotic warriors, though any sneaky player-character could acquire one.

It consists of a blade identical in characteristics to the knife, housed in an innocuous rod or handle. When the secret catch is pressed, the blade snaps out instantly and the character is armed.

Usually, the spring-out spike is built into items the character will be carrying a lot . . . and when he doesn't wish it to be known he's armed. Common objects with built-in spikes include royal sceptres, the ends of quarterstaves (this converts a staff into a spear), and sometimes the hilts of swords and daggers. Assassins often carry a dagger with an ordinary blade . . . and a poison-coated spring-out spike.

The spring-out spike weighs one pound and costs 40 gp. When built into an ordinary object, it adds one pound and 40 gp to that object's cost. It cannot customarily be built into an existing weapon; it must be built into the weapon when it is first created.

The spring-out spike is illegal in most civilizations. If the authorities catch a character using one, they'll jail him on assumption of assassination motives.

**Sheath, Secret Spring:** This is another item considered useful by rogues, street-fighters, assassins, and characters wishing to appear unarmed.

It consists of a sheath for one of the following weapons: Dagger, Knife, or Stiletto. A sheath for one of these three weapons will not hold either of the other two. It cannot be built for a weapon other than these three. It is not just a sheath, but is also a mechanical device, and is worn on the character's arm just below the elbow.

Whenever the character straightens his arm out and flexes it in a certain way, the blade in the sheath pops into his hand. The character must make a Dexterity ability check to catch it; he gets a +3 bonus because it's not difficult, but a natural 20 always fails. If he fails to catch it, it pops straight out and drops to the floor. It cannot be "shot out" as an attack like a thrown knife; it will not hurt whomever it hits, and always hits hilt-first when fumbled in this fashion.

This is another way, and a non-magical one, for the unarmed character to be suddenly armed when the need arises. In the combat sequence, he must announce before initiative is rolled that he is going to pop out his blade; when his action comes up for that round, if he is still able to straighten out his arm, his blade pops into his hand and is instantly ready. The character may still attack this round; the action of arming himself doesn't use up an attack.

The Secret Spring Sheath weighs only half a pound and costs 35 gp. It requires someone with both the Set Snares and Weaponsmithing proficiencies to create. Like the Spring-Out Spike, it is illegal in most places, but is a lesser crime, punishable by a fine (10d6 gold pieces) and a few days (1d6) in jail.

* * *

That's the end of *The Complete Fighter's Handbook*.

Now that you've read it, the thing to remember is this: Use whatever appeals to you, as the DM, and nothing more. If any rule or recommendation worries you, if you feel that it will unbalance your campaign or skew your players toward bad habits, then don't allow it in your campaign. As for all the other rules, recommendations, and guidelines: Try them. You may like them.

## New Weapons List

| Item | Cost | Weight (lbs.) | Size | Type[6] | Speed Factor | Damage S-M | Damage L |
|---|---|---|---|---|---|---|---|

| Wakizashi[2] | 50 gp | 3 | M | S/P | 3 | 1d8 | 1d8 |

[1] This weapon is intended for one-handed use, and may not be used two-handed.

[2] This weapon is intended for one-handed use, but may be used two-handed.

[3] This weapon is intended for one-handed or two-handed use.

[4] This weapon is intended for two-handed use only.

[5] This weapon inflicts double damage when firmly set to receive a charge.

[6] The "Type" category is divided into Bludgeoning (B), Piercing (P), and Slashing (S). This indicates the type of attack made, which may alter the weapon's effectiveness against different types of armor. See the optional rule in the Player's Handbook, page 90.

# Introduction

The ranger is one of the most popular character classes in the AD&D® game. A woodsman and tracker, as well as a dangerous fighter, he combines good combat skills with a few extra abilities that give him many options and decisions during play. He boasts the courage and strength of a warrior and the stealth and self-reliance of a thief. He combines the druid's affinity for the outdoors with the devotion and magical aptitude of a priest. He's a hunter, a tracker, and a survivalist. By temperament and by choice, he's a loner, often preferring the company of animals to people. Without question, he's one with nature, sworn to protect the inhabitants of the wilderness and preserve the integrity of the land.

The ranger's origins can be traced to the time when isolated human settlements were first founded in areas of unclaimed wilderness, or in areas occupied only by savage humanoid tribes. Those who were at first hunters, trappers, and guides were turned by the necessities of survival into canny wilderness warriors; and ultimately into the principle protectors of the scattered settlements of humans and demihumans, which had to fend off countless humanoid raids.

Few in number, but effective far beyond the power of local militias or the occasional military patrol of a ruling lord, the rangers have kept a protective watch on the forward frontier of human expansion. There are seldom more than one or two to be found in any place, but somehow, as a group, they manage to cover huge areas of the frontier. Where the tide of expansion has been turned back, they are the last to fight a desperate rear guard action against encroaching hordes of evil humanoids.

In more civilized areas, it is common for kings and wealthy nobles to annex large tracts of forests for personal use. Some are maintained as private game preserves, others are harvested for the valuable timber. As a king's wilderness holdings grow, so does the need to protect them. But suitable candidates are hard to come by. Often, from among local woodsmen and hunters, able-bodied and trustworthy retainers are recruited as forest justices or wardens. Skilled in the management of land, wilderness survival, and natural lore, the forest justices are charged with guarding the king's holdings, preserving his game from poachers and his subjects from outlaws and brigands.

In other places, the local authorities have either lost control or become tyrannical. Perhaps the local order has broken down and the land is overrun by bandits or robbers. Perhaps a bad ruler has taken over and driven the peasantry beyond all possible tolerance. At such time a hero may arise, striding out of the wilderness, setting right the wrongs, returning a just overlord to power, and then disappearing back into wild and unknown lands. Such is the stuff of legends. Such is the legacy of the ranger.

## Overview

The ADVANCED DUNGEONS & DRAGONS® 2nd Edition *Player's Handbook* and *DUNGEON MASTER® Guide* contain all the basic information you need to create and play ranger characters. But for players wanting to go a bit deeper, *The Complete Ranger's Handbook* provides a wealth of detail that expands on that basic information, adding more options and rules to make your rangers come alive like never before.

For instance, we'll examine the ranger's talents for tracking, animal empathy, and nature lore, suggesting methods for using these abilities in ways you might not have considered. If you've wondered what a ranger does with his followers or exactly how he acquires them, you'll find the answers here. If you're tired of playing ordinary rangers, there's more than a dozen new character kits for your perusal, including the Giant Killer, the Pathfinder, and the Stalker. There are also plenty of new spells, proficiencies, and equipment to expand your ranger's horizons. Use what you like and ignore what you don't.

Though much of this material will be of interest to the Dungeon Master, particularly the clarification of old concepts and the introduction of new rules, *The Complete Ranger's Handbook* is a supplement to the *Player's Handbook*. Every word is intended for the players. Note, however, that all of material is optional, and none may be incorporated into a campaign without the express permission of the DM. These caveats aside, feel free to turn the page and enjoy.

## How to Use This Handbook

If you're a casual player, or have only a passing interest in the ranger character, begin by looking over the table of contents and noting any topics that catch your eye. Read the most appealing sections, skim over the rest, and consult with your DM about any new ideas you'd like to try. Later, you can read the entire book at your leisure, or keep it on the shelf as a reference, along with the previous handbooks in this series (including *The Complete Fighter's Handbook, The Complete Priest's Handbook, The Complete Wizard's Handbook, The Complete Thief's Handbook, The Complete Psionics Handbook*, and *The Complete Bard's Handbook*).

Players who take their rangers seriously are advised to read the entire book. You'll discover a host of new ideas and character options, expanded tables, and tips for fine-tuning your role-playing techniques. As mentioned, all of the rules in this book must be cleared with the DM before you can use them in a game.

Players of all persuasions should take a look at the new ranger character sheets located in the back of the book. The sheets have been custom-designed to record virtually every detail about a ranger character, and also feature a number of helpful notes to minimize the amount of time spent referring to the rulebooks. And speaking of the rulebooks, we've also compiled all of the key rules from the *DUNGEON MASTER Guide* and Player's Handbook relevant to rangers; you'll find most of them in the first three chapters. We've also made every effort to elaborate on the most interesting concepts from the *DMG* and *PH*.

## Before We Get Started . . .

. . . here are a few more points to keep in mind:

### First Edition Rules

The ranger has undergone several changes since the publication of the 1st Edition AD&D® rules. For that reason, those using the 1st Edition rules may find the ranger character described in these pages all but unrecognizable. Our suggestions: (1) take the plunge into the 2nd Edition rules, and become familiar with the 2nd Edition *DUNGEON MASTER Guide* and *Player's Handbook* before considering the ideas in this handbook, or (2) ignore the chapter references in this book, as they all refer to the 2nd Edition rulebooks. Find the relevant material by consulting the indexes or contents pages of the original books, then carefully adapt the handbook rules of your choice to the style of your campaign. For reference, a summary of the 1st Edition ranger rules can be found in the Appendix of this book on page 122.

### Proficiencies

The ideas in this book lean heavily on the concepts of weapon and nonweapon proficiencies introduced in Chapter 5 of the 2nd Edition *Player's Handbook*. If you haven't been using proficiencies in your campaign, we suggest you review the rules before proceeding with this book. (And if you're not using the proficiency rules, you ought to reconsider—they're not that hard, and they make the game a lot more fun!).

### A Note About Pronouns

For convenience and clarity, masculine pronouns are used throughout this book. This in no way implies favoritism towards the male gender; in fact, males and females are equally represented in the ranger population. In all cases, read *he* as *he* or *she*, and *his* as *his* and *her*.

## Chapter 1: Character Creation

Let's begin our examination of the ranger with a look at the numbers--the statistics, adjustments, and level progressions that define the ranger class. This is the raw data common to all rangers, regardless of their backgrounds or personalities.

This chapter compiles the basic information in the *Player's Handbook* regarding the ranger class, as well as the relevant material from the warrior section. In addition, some concepts, such as armor adjustments and level improvements, are clarified and expanded. A new concept, *primary terrain*, is also introduced.

In later chapters, we'll be discussing the ranger's special abilities in more detail, along with role-playing tips and options for refining his personality. But for now, we'll concentrate on the fundamentals, beginning with the most basic consideration of all--the ranger's class requirements.

## Ranger Requirements

It's tough being a ranger. The requirements are high, among the most demanding of any character class.

### Table 1: Class Qualifications

**Ability Requirements**

| | |
|---|---|
| Strength | 13 |
| Dexterity | 13 |
| Constitution | 14 |
| Wisdom | 14 |

**Prime Requisites**

Strength
Dexterity
Wisdom

**Races Allowed**

Human
Elf
Half-elf

**Alignments Allowed**

Lawful good
Neutral good
Chaotic good

As any player knows who's tried to roll up a ranger using the standard method (Method I, that is, described in Chapter 1 of the *Player's Handbook*), the dice seldom cooperate. In fact, it's just about impossible to generate the high die-rolls required for a ranger by this method. Method II isn't much better, and though Methods III and IV improve the chances somewhat, the odds are hardly favorable. Only by using Methods V and VI do you have a fighting chance of rolling up a ranger from scratch.

Not all Dungeon Masters allow these alternative methods, effectively restricting the number of rangers in their campaigns to a tiny minority. Players wanting ranger characters may find such restrictions frustrating, but remember that good DMs usually have their reasons for imposing these limitations. Perhaps rangers aren't prevalent in the campaign world, or he may feel that rangers will introduce problems of balance; rangers are, after all, a most formidable character class.

However, if your DM is agreeable to having rangers in his campaign, Table 2 is a quick way to generate ranger ability scores. Roll 1d12 and use the statistics indicated.

### Table 2: Pregenerated Ability Scores

| D12 Roll | Str | Dex | Con | Int | Wis | Cha |
|---|---|---|---|---|---|---|
| 1 | 15 | 14 | 17 | 14 | 15 | 10 |
| 2 | 15 | 15 | 18 | 13 | 14 | 6 |
| 3 | 14 | 16 | 15 | 14 | 17 | 12 |
| 4 | 15 | 14 | 15 | 14 | 16 | 9 |
| 5 | 15 | 15 | 14 | 13 | 15 | 13 |
| 6 | 16 | 13 | 15 | 13 | 14 | 8 |
| 7 | 18* | 13 | 14 | 15 | 14 | 7 |
| 8 | 13 | 15 | 15 | 13 | 16 | 10 |
| 9 | 16 | 13 | 14 | 14 | 17 | 14 |
| 10 | 13 | 14 | 15 | 16 | 15 | 14 |
| 11 | 14 | 17 | 14 | 13 | 14 | 15 |
| 12 | 16 | 13 | 16 | 13 | 14 | 13 |

*Make a percentile roll with d100 to find the ranger's exceptional Strength Score.

## Level Advancement

As rangers earn experience, they advance in level at a different rate than normal fighters. They acquire 1d10 hit points for each level up to 9th, and thereafter gain 3 hit points per level. The rates of advancement and hit point acquisition, along with the ranger's THAC0 scores (the number rolled on 1d20 to hit armor class 0), are listed in Table 3.

Two adjustments to these figures also apply:

- Rangers with Strength, Dexterity, and Wisdom scores of 16 or more receive a 10% bonus to their awarded experienced points. A ranger must have 16 or more in all three of these abilities to qualify for this bonus.
- Rangers with exceptionally high Constitution scores are entitled to a special hit point adjustment. A score of 17 give the ranger a +3 bonus per hit die, while a score of 18 results in a +4 bonus.

### Table 3: Experience Levels

| Level | XP Needed | Hit Dice (d10) | THAC0 |
|---|---|---|---|
| 1 | 0 | 1 | 20 |
| 2 | 2,250 | 2 | 19 |
| 3 | 4,500 | 3 | 18 |
| 4 | 9,000 | 4 | 17 |
| 5 | 18,000 | 5 | 16 |
| 6 | 36,000 | 6 | 15 |
| 7 | 75,000 | 7 | 14 |
| 8 | 150,000 | 8 | 13 |
| 9 | 300,000 | 9 | 12 |
| 10 | 600,000 | 9+3 | 11 |
| 11 | 900,000 | 9+6 | 10 |

| | | | |
|---|---|---|---|
| 12 | 1,200,000 | 9+9 | 9 |
| 13 | 1,500,000 | 9+12 | 8 |
| 14 | 1,800,000 | 9+15 | 7 |
| 15 | 2,100,000 | 9+18 | 6 |
| 16 | 2,400,000 | 9+21 | 5 |
| 17 | 2,700,000 | 9+24 | 4 |
| 18 | 3,000,000 | 9+27 | 3 |
| 19 | 3,300,000 | 9+30 | 2 |
| 20 | 3,600,000 | 9+33 | 1 |

Table 4 summarizes the proficiency slot allowances and saving throws applicable to the ranger as he advances in level. Note that, like a fighter, if a ranger uses a weapon with which he isn't proficient, he incurs a -2 penalty.

### Table 4: Level Improvements

| | Prof. | | Saving Throws | | | | |
|---|---|---|---|---|---|---|---|
| **Level** | **W** | **N/W** | **PPDM** | **RSW** | **PP** | **BW** | **S** |
| 1 | 4 | 3 | 14 | 16 | 15 | 17 | 17 |
| 2 | 4 | 3 | 14 | 16 | 15 | 17 | 17 |
| 3 | 5 | 4 | 13 | 15 | 14 | 16 | 16 |
| 4 | 5 | 4 | 13 | 15 | 14 | 16 | 16 |
| 5 | 5 | 4 | 11 | 13 | 12 | 13 | 14 |
| 6 | 6 | 5 | 11 | 13 | 12 | 13 | 14 |
| 7 | 6 | 5 | 10 | 12 | 11 | 12 | 13 |
| 8 | 6 | 5 | 10 | 12 | 11 | 12 | 13 |
| 9 | 7 | 6 | 8 | 10 | 9 | 9 | 11 |
| 10 | 7 | 6 | 8 | 10 | 9 | 9 | 11 |
| 11 | 7 | 6 | 7 | 9 | 8 | 8 | 10 |
| 12 | 8 | 7 | 7 | 9 | 8 | 8 | 10 |
| 13 | 8 | 7 | 5 | 7 | 6 | 5 | 8 |
| 14 | 8 | 7 | 5 | 7 | 6 | 5 | 8 |
| 15 | 9 | 8 | 4 | 6 | 5 | 4 | 7 |
| 16 | 9 | 8 | 4 | 6 | 5 | 4 | 7 |
| 17 | 9 | 8 | 3 | 5 | 4 | 4 | 6 |
| 18 | 10 | 9 | 3 | 5 | 4 | 4 | 6 |
| 19 | 10 | 9 | 3 | 5 | 4 | 4 | 6 |
| 20 | 10 | 9 | 3 | 5 | 4 | 4 | 6 |

Proficiency Abbreviations

**W** = Weapon proficiency slots
**N/W** = Nonweapon proficiency slots

Saving Throw Abbreviations

**PPDM** = Paralyzation, Poison, or Death Magic
**RSW** = Rod, Staff, or Wand

**PP** = Petrification or Polymorph
**BW** = Breath Weapon
**S** = Spell

## Spell Use

When a ranger reaches 8th level, he can learn priest spells of the animal and plant spheres. He acquires and employs spells the same way as a priest. Chapter 6 lists the spells available to a ranger. Chapter 9 explains the special relationships between rangers and priests.

Table 5 shows the number of spells a ranger may have memorized at each level. The "Casting Level" indicates the level at which spells are cast. For instance, the 1st level *invisibility to animals* spell cast by a 12th-level ranger has duration of 1 turn + 5 rounds (the spell lasts for 1 turn + 1 round/level, and the 12th-level ranger casts the spell at 5th level). The 2nd level *warp wood* spell cast by a 16th-level ranger has a range of 90 yards (the range is 10 yards/level, and the 16th-level ranger casts the spell at 9th level).

Regardless of his actual character level, a ranger's spells are never cast beyond 9th level.

The following restrictions also apply:

- Unlike priests, rangers don't get bonus spells for high Wisdom scores.
- Rangers may only use magical items specifically allowed to the warrior group. In no case may a ranger use clerical scrolls.

### Table 5: Spell Progression

| Ranger | Casting | Priest Spell Levels | | |
|---|---|---|---|---|
| **Level** | **Level** | **1** | **2** | **3** |
| 1-7 | - | - | - | - |
| 8 | 1 | 1 | - | - |
| 9 | 2 | 2 | - | - |
| 10 | 3 | 2 | 1 | - |
| 11 | 4 | 2 | 2 | - |
| 12 | 5 | 2 | 2 | 1 |
| 13 | 6 | 3 | 2 | 1 |
| 14 | 7 | 3 | 2 | 2 |
| 15 | 8 | 3 | 3 | 2 |
| 16+ | 9 | 3 | 3 | 3 |

## Armor and Weapons

Like all warriors, the ranger is allowed to wear any type of armor. However, lighter armor provides him with special benefits, while heavier armor imposes a few restrictions.

A ranger may use two weapons simultaneously without the standard penalties (which are -2 for his main weapon, -4 for the second weapon) when wearing studded or lighter armor (armor with an Armor Class of 7 or more). The following restrictions also apply:

- The ranger must be able to wield his main weapon with one hand.

- The second weapon must be smaller in size and must weigh less than the main weapon.
- The ranger can't use a shield when using two weapons.

The ranger's choice of armor also determines whether he can hide in shadows and move silently. Armor with an AC of 6 or less--scale mail armor or heavier--is too inflexible and too noisy to enable him to take advantage of these special abilities.

Table 6 summarizes the AC, costs, and weight of the armor available to the ranger. The table also notes whether the armor allows the ranger to fight with two weapons without penalty, and to use his abilities to hide in shadows and move silently.

### Table 6: The Ranger's Armor

| Armor | AC | Cost (gp) | Weight (lb.) | T-W | HS/MS |
|---|---|---|---|---|---|
| Leather | 8 | 5 | 15 | Yes | Yes |
| Padded | 8 | 4 | 10 | Yes | Yes |
| Studded Leather | 7 | 20 | 25 | Yes | Yes |
| Ring Mail | 7 | 100 | 30 | Yes | Yes |
| Hide | 6 | 15 | 30 | No | B |
| Brigandine | 6 | 120 | 35 | No | B |
| Scale Mail | 6 | 120 | 40 | No | B |
| Chain Mail | 5 | 75 | 40 | No | B |
| Splint Mail | 4 | 80 | 40 | No | B |
| Banded | 4 | 200 | 35 | No | B |
| Bronze Plate | 4 | 400 | 45 | No | B |
| Plate Mail | 3 | 600 | 50 | No | B |
| Field Plate | 2 | 2,000 | 60 | No | B |
| Full Plate | 1 | 4,000+ | 70 | No | B |

**Abbreviations**

**T-W** = Two-weapon fighting penalty. ("Yes" means the standard penalties for two-weapon fighting are ignored while wearing this armor.)

**HS/MS** = Hide in shadows/move silently. ("Yes" means these abilities can be used while wearing this armor. "B" means these abilities can be used if the DM uses the Optional Armor Adjustments; see Table 13.)

Rangers can use any weapons listed in Chapter 6 of the *Player's Handbook*. As they rise in level, they're able to make more than one attack per round, as shown in Table 7.

### Table 7: Ranger Attacks Per Round

| Level | Attacks/Round |
|---|---|
| 1-6 | 1/round |
| 7-12 | 3/2 rounds |
| 13-20 | 2/round |

As explained in Chapter 9 of the *Player's Handbook*, a character fighting with two weapons is allowed to make an extra attack each combat round with his second weapon. This is added to any multiple attack routine the ranger receives at higher level. For instance, a 13th-level ranger normally makes two attacks per round (see Table 7). However, when fighting with two weapons, he's allowed *three* attacks per round, two with the primary weapon and one with the secondary weapon.

## Thief Abilities

A master of stalking and tracking, the ranger shares the thief's talents for hiding in shadows and moving silently when he is in a natural outdoor setting. As a ranger's level increases, so do his abilities, as shown in Table 8.

### Table 8: Base Thief Abilities

| Level | Hide in Shadows | Move Silently |
|---|---|---|
| 1 | 10% | 15% |
| 2 | 15% | 21% |
| 3 | 20% | 27% |
| 4 | 25% | 33% |
| 5 | 31% | 40% |
| 6 | 37% | 47% |
| 7 | 43% | 55% |
| 8 | 49% | 62% |
| 9 | 56% | 70% |
| 10 | 63% | 78% |
| 11 | 70% | 86% |
| 12 | 77% | 94% |
| 13 | 85% | 99% |
| 14 | 93% | 99% |
| 15+ | 99% | 99% |

The base percentages in Table 8 are modified by the ranger's race, Dexterity score, and armor. Tables 9-11 list these adjustments. Table 12 shows adjustments for the character kits described in Chapter 4. These adjustments reflect the predispositions of various character types for hiding in shadows and moving silently.

When attempting to hide in shadows, the ranger armor is assumed to cover his armor. Except for leather armor and elven chain mail, which can be concealed by normal clothing, a cloak or equivalent is needed to cover armor.

If a ranger attempts to move silently or hide in shadows in an indoor or underground setting, his cumulative chance of success is halved. Further considerations and restrictions of a ranger's thief abilities are discussed in Chapter 2.

Regardless of modifiers, the ranger's chance to hide in shadows or move silently can never be more than 99% or less than zero.

### Table 9: Racial Adjustments

| Race | Hide in Shadows | Move Silently |
|---|---|---|
| Human | -- | -- |
| Elf | +10% | +5% |
| Half-elf | +5% | -- |

### Table 10: Dexterity Adjustments

| Dexterity | Hide in Shadows | Move Silently |
|---|---|---|
| 13-16 | - | - |
| 17 | +5% | +5% |
| 18 | +10% | +10% |
| 19 | +15% | +15% |

### Table 11: Armor Adjustments

| Armor | Hide in Shadows | Move Silently |
|---|---|---|
| None* | +5% | +10% |
| Leather | --- | --- |
| Padded | -20% | -20% |
| Studded Leather | -20% | -20% |
| Ring Mail | -30% | -40% |

*This includes magical apparel such as cloaks and bracers, but not large or bulky garments.

### Table 12: Kit Adjustments

| Kit | Hide in Shadows | Move Silently |
|---|---|---|
| Beastmaster | +5% | --- |
| Explorer | --- | --- |
| Falconer | --- | --- |
| Feralan | +10% | +10% |
| Forest Runner | +5% | +5% |
| Giant Killer | --- | --- |
| Greenwood Ranger | --- | -5% |
| Guardian | --- | --- |
| Justifier | +5% | +5% |
| Mountain Man | -5% | -5% |
| Pathfinder | --- | --- |

| | | |
|---|---|---|
| Sea Ranger | N/A | N/A |
| Seeker | --- | --- |
| Stalker | +10% | +10% |
| Warden | --- | --- |

**Optional Rule:** Normally, thief abilities are denied to rangers wearing armor heavier than studded leather. However, the DM may decide to override this rule in his campaign, allowing rangers to wear any armor they like and still be able to hide in shadows and move silently. (Also, certain character kits described in Chapter 4 allow rangers to hide in shadows and move silently when wearing armor of AC 6 or less). Table 13 lists adjustments for optional armor.

### Table 13: Optional Armor Adjustments

| Armor | Hide in Shadows | Move Silently |
|---|---|---|
| Hide | -20% | -30% |
| Brigandine | -30% | -40% |
| Scale Mail | -50% | -60% |
| Chain Mail | -30% | -40% |
| Elven Chain | -10% | -10% |
| Splint Mail | -30% | -40% |
| Banded | -50% | -60% |
| Bronze Plate | -75% | -80% |
| Plate Mail | -75% | -80% |
| Field Plate | -95% | -95% |
| Full Plate | -95% | -95% |

## Primary Terrain

Though rangers work well in all types of outdoor settings, most of them have one particular environment with which they are exceptionally familiar and feel especially comfortable. This environment, called the *primary terrain*, may be similar to the area where the ranger grew up, received his training, or currently calls home. A ranger operates best in his primary terrain, thanks to his intimate knowledge of this type of setting.

A ranger's primary terrain has no particular function in and of itself. Rather, it's used to generate special benefits and other variables described elsewhere in this book. For instance, certain character kits in Chapter 4 grant bonuses to rangers when they occupy their primary terrain. A ranger's primary terrain also helps determine his species enemy (Chapter 2) and followers (Chapter 3).

### Types of Primary Terrain

The concept of primary terrain presumes that similar survival techniques, modes of transportation, flora and fauna, and physical features prevail in similar environments,

regardless of where in the world they're located. Therefore, primary terrain doesn't refer to a particular area, such as the High Moor of the FORGOTTEN REALMS® setting, but to a general category of terrain, such as swamp or mountains. Conceivably, any combination of geographical features and climate could serve as a primary terrain, but for convenience, we'll confine the possibilities to nine general types:

**Aquatic.** This terrain type includes all areas consisting primarily of water, such as lakes, oceans, and rivers. At the DM's discretion, this category may also include islands and coastal regions.

**Arctic.** This includes any region covered with ice and snow where temperatures rarely rise above zero degrees. The North Pole is good example of arctic terrain.

**Desert.** This includes any barren, flat areas covered with sand or hard-packed earth. Desert climates are extremely dry and hot, with daytime temperatures commonly in excess of 100 degrees, followed by much colder nights. Vegetation is usually sparse, with special adaptations. Much of a desert may be unsettled or unexplored.

**Forest.** This category comprises any woodland areas in temperate climates. At the DM's option, subarctic and subtropical climates may also be included. Forests abound with a variety of animal species, and vegetation flourishes. Not surprisingly, Forest is the primary terrain of choice for the majority of rangers.

**Hill.** These are highlands, often wild and rough, which may or may not be forested. They usually form an intermediate zone between lowlands, such as Plains or Desert, and the highest lands, which are Mountain terrain.

**Jungle.** These are tropical lands (including rain forests) overgrown with dense vegetation and trees, and teeming with animal life. Such regions are often hot, humid, and hostile to civilization.

**Mountain.** This category includes terrain consisting of high rocky peaks, typically 4,000 feet or more above sea level, with sparse vegetation, severe slopes, and jagged cliffs. Subtropical to subarctic climates are typical, though a wide range of temperatures is possible.

**Plains.** These are flat areas with stretches of low rolling land, including pastures, meadows, fields, and farmlands. Grazing animals are common here. Such regions are usually covered with grasses or scrub vegetation and are usually temperate in climate.

**Swamp.** This includes bogs, marshes, and other low elevation areas with standing water or waterlogged soil. Many species of reptiles, birds, and insects live in these regions. Vegetation grows in abundance. The climate may be oppressively hot and humid or cold and misty.

An ambitious DM may wish to define these primary terrain categories more precisely. Instead of a general Aquatic primary terrain category, he may include both Freshwater Aquatic and Saltwater Aquatic, or distinguish them further by designating Temperate Freshwater Aquatic, Tropical Freshwater Aquatic, and so on. In such cases, the DM will need to adjust the primary terrain references elsewhere in this book; for instance, creating his own Freshwater Aquatic Species Enemy Table like the tables in Chapter 2.

For most campaigns, however, the nine categories listed above should suffice. Though obvious differences exist, say, between saltwater and freshwater settings, a ranger's associated skills--the ability to swim, an understanding of aquatic ecology, a familiarity with water-breathing creatures--are applicable to both. Hence, a ranger whose

primary terrain is Aquatic is presumably comfortable in a variety of watery environments.

## Choosing a Primary Terrain

The player chooses his ranger's primary terrain as part of the character creation procedure, subject to the DM's approval. Each ranger has only one primary terrain. Because the primary terrain reflects many years, perhaps a lifetime, of exposure to a particular environment, the primary terrain never changes. In exceptional campaign circumstances, however, the DM may allow a ranger to discard an old primary terrain and choose a new one; for instance, if a ranger whose primary terrain is Forest spends a few decades exploring the Great Glacier, his primary terrain may become Arctic. But as a rule, the primary terrain remains constant throughout a ranger's career.

In most cases, the choice of the primary terrain will be obvious, as it usually derives from the ranger's background. It will be similar to the area where the ranger was raised, or the region where he's spent most of his life. The primary terrain of a ranger who grew up in the barren wastelands of the WORLD OF GREYHAWK® Sea of Dust would probably be Desert. A ranger trained to oversee a private hunting reserve in the Wendle Wood of the DRAGONLANCE® setting would probably have Forest as his primary terrain.

A ranger's primary terrain can be randomly rolled on Table 14. The results are subject to the approval of the DM.

Once the ranger has a primary terrain, it can be used as a basis for developing the character's personal history. If the primary terrain is Arctic, for example, consider how the ranger might have become familiar with such an extreme environment. Was he hired by a king to oversee a seal refuge? Abandoned in the Great Glacier as a youth when his explorer parents were killed by a polar bear? Accepted as an apprentice by a famous white dragon hunter? Let your imagination soar!

## Table 14: Random Primary Terrain

| D100 Roll | Primary Terrain |
|---|---|
| 01-04 | Aquatic |
| 05-06 | Arctic |
| 07-10 | Desert |
| 11-50 | Forest |
| 51-65 | Hill |
| 66-75 | Jungle |
| 76-85 | Mountain |
| 86-95 | Plain |
| 96-00 | Swamp |

### Optional Rule: Primary Terrain Specialization

As an option, a ranger may be allowed to specialize in his primary terrain. This confers a +2 bonus when tracking in that terrain, a +2 bonus when training animals from that terrain, general a +2 bonus on any proficiency check associated with that terrain, and

an additional -2 penalty to anyone trying to track the ranger through his primary terrain. On the other hand, the terrain-specialized ranger has a -2 penalty in all terrains except the one in which he is specialized. This specialization in terrain does not cost any proficiency slots. The ranger cannot specialize in more than one type of terrain.

# Chapter 2: Ranger Abilities

Regardless of whether they're wardens of private game reserves, arctic explorers, or freelance monster hunters, all rangers share a set of special abilities that distinguish them from other character classes. Just as wizards have an innate aptitude for casting spells and thieves have a natural talent for picking pockets, rangers have the inborn ability to track other creatures, hide in shadows and move silently in outdoor settings, react to specific enemies, empathize with animals, understand the complexities of nature, survive in extreme conditions, build strongholds, and acquire followers. Quite a list--but that's what makes the ranger such an exceptional character.

We'll spend this chapter examining each of the ranger's abilities in detail, looking at their applications and special rules. The ranger's ability to attract followers--a topic complex enough to merit special attention--will be saved for the next chapter.

## Tracking

Thanks to his keen senses and thorough understanding of animal behavior, the ranger is an expert tracker. He reads an impression in the mud or a bend in a twig like words on a printed page. He can determine the identity of his quarry and how fast it was traveling by the depth of a footprint. He can tell the size of a slug from the trail of slime it left behind. He can track an orc in the darkest forest, a rabbit though the thickest jungle, an escaped convict across the most desolate mountain range.

A ranger's tracking skills apply to characters as well as creatures, and to underground and interior settings as well as all types of outdoor environments. His tracking skills are inherent; that is, he receives the Tracking nonweapon proficiency automatically at the outset of his career, expending no proficiency slots.

### Pre-Conditions

A ranger can't just track anything, any time he likes. In order to track a particular quarry, the following conditions must be met:

**1. The quarry must be capable of leaving a physical trail.** Elements of a trail may include footprints, bent twigs, waste matter, or any other physical signs that a ranger can follow. Certain categories of creatures--including swimming and flying creatures, small insects, and ghosts and other non-corporeal creatures--seldom leave physical evidence of their passage. In most cases, such creatures can't be tracked. However, since tracking involves all the senses, not just sight, it's possible that the aroma of burning metal might linger after the passage of a particular spectre, or a ghost might reveal itself by its eerie voice, heard faintly in the distance. Still, only the most skilled rangers are capable of following trails devoid of physical evidence, and the DM should allow such tracking in only the rarest of circumstances.

**2. The ranger must be able to find the trail.** If the trail is outdoors, the ranger must actually see the creature (he spots a fox darting into the brush), notice obvious signs of his quarry (such as footprints or droppings), or hear reliable reports of the quarry's whereabouts ("Looking for that old silver dragon? She likes to drink from the pond by the twin palm trees."). If the trail is indoors, the ranger himself must have seen the quarry within the last 30 minutes, and begin tracking from the location where the quarry was last seen. As always, the DM is the final arbiter as to whether the ranger has enough evidence to enable him to track the quarry.

## Tracking Check

If the above conditions are met, the ranger can attempt to trail the quarry by making a Tracking check, using his Tracking score. The base Tracking score is equivalent to the ranger's Wisdom. Consult Tables 15-17 for other relevant modifiers; these tables may be used in place of Table 39 in Chapter 5 of the *Player's Handbook*. In non-natural surroundings, the Tracking chances are halved.

### Table 15: Terrain Tracking Modifiers

| Terrain (use only one) | Modifier |
|---|---|
| Fresh snow (clearly outlined footprints) | +6 |
| Soft or muddy ground, loose dirt floor (good impressions of prints, but not as defined as fresh snow) | +4 |
| Thick brush, dense jungle (broken branches, crushed weeds) | +3 |
| Forests, fields, dusty indoor area (occasional marks of passage) | +2 |
| Normal ground, wood floor, plains with sparse vegetation (infrequent marks of passage) | 0 |
| Desert, dry sand | -2 |
| Swamp (spongy surface but little mud for prints, much vegetation) | -5 |
| Rocky terrain, solid ice, stone floors, shallow water (prohibits all but the most minute signs of passage) | -10 |

### Table 16: Illumination Modifiers

| Illumination (use only one) | Modifier |
|---|---|
| Good illumination, sunny day; continual light or equivalent indoors | 0 |
| Twilight, light fog, snow, single torch in dark interior of building | -3 |
| Night with full moon, day with moderate fog | -6 |
| Overcast night with no moon, dense fog, blizzard, blowing sand | -10 |

### Table 17: Special Tracking Modifiers

| Situation (use all applicable) | Modifier |
|---|---|
| Every two creatures in group being tracked | +1 |
| Every three experience levels (round down) of the ranger | +1 |
| Each additional tracker assisting ranger (use the score of the best tracker)* | +1 |
| Animal follower assists in tracking** | +1 |
| Trail is in specialized ranger's primary terrain | +2 |
| Every 12 hours since trail was made | -1 |
| Every hour of rain, snow, or sleet since trail was made | -5 |
| Creature being tracked attempts to hide trail (covering footprints, detouring into stream, passing through secret door) | -5 |
| Specialized ranger being tracked in his primary terrain attempts to hide trail | -2 |

* Total bonus for assistance is limited to ranger level bonus; i.e. +1 per 3 levels.
** See Chapter 3. The animal follower does not count as an additional tracker for purposes of the previous bonus.

If the modified Tracking score is zero or less, the ranger is unable to track the quarry in question.

If the modified Tracking score is greater than zero, the ranger makes a Tracking check by rolling 1d20. If the roll exceeds the ranger's tracking score, or if the roll is 20, the check fails and no trail has been found, If the roll less than or equal to the ranger's Tracking score, the ranger has found the quarry's trail and may begin to follow it.

## Interrupted Tracking

Once a ranger has found the trail, he may track the quarry indefinitely until any of the following situations occur:

**The ranger moves too fast.** The ranger must move slower than his normal movement rate in order to stay alert for signs of the trail. His movement rate limit depends on his modified Tracking score, as shown in Table 18.

### Table 18: Movement While Tracking

| Modified Tracking Score | Movement Rate Limit |
|---|---|
| 1-6 | 1/4 normal |
| 7-14 | 1/2 normal |
| 15+ | 3/4 normal |

Should the ranger exceed the movement rate in Table 18--for instance, if a monster abruptly ambushes him and he's forced to run--he loses the trail.

**The modifiers change.** If the trail leads to a new terrain type, night falls, or any other change occurs that requires a new Tracking modifier (as described in Tables 15-17), the ranger loses the trail. The new conditions may dictate the use of modifiers reflecting a

trail that is easier to follow, not more difficult, and DMs should consider applying a bonus in such conditions. Nevertheless, the new roll must still be made.

**A second track crosses the first.** Crossed trails mingle the physical signs of each, making tracking difficult. The DM determines if such a situation exists. If so, the ranger's efforts fail. (If the ranger wishes to continue tracking, as described below, he must decide which of the crossed trails to follow.)

**The ranger becomes distracted.** An attack from a monster may interrupt the ranger's progress. Further, the ranger may intentionally choose to stop if he needs to rest, eat, or hold a discussion with his companions. Any of these interruptions qualifies as a distraction.

When any of these conditions occur, the ranger loses the trail. To continue tracking the quarry, he must spend at least an hour exploring the immediate area for new signs of the trail. After an hour of searching, he makes a new Tracking check, based on a Tracking score calculated from the new conditions (if the illumination has changed from daylight to twilight, he must now modify his Tracking score by -3). If other trackers assist the ranger, modify the tracking check by +1 per assistant; add the bonus to the Tracking score of the most adept tracker. This bonus is limited to +1 per 3 levels of the ranger (round up). If the check succeeds, the ranger may continue following the trail as before. If he fails the check, he has lost the trail for good.

### Identification Check

By noticing details that other characters might overlook--the depth of a footprint, the thickness of a snapped branch, a hair caught in barbed bush--the ranger can deduce a sizeable amount of information about his quarry. The more skilled the ranger, the more information he deduces.

Whenever a ranger makes a successful Tracking check, he may then attempt an Identification check. The Identification check uses the same score and modifiers as the Tracking check; essentially, the Identification check is a second Tracking check.

If the Identification check is successful, the DM provides the ranger with some information about the quarry based on the guidelines in Table 19. The ranger's experience level determines the type of information he receives. The information is cumulative; that is, a 6th-level ranger who makes a successful Identification check receives all types of information available to rangers of level 6 and below.

The DM provides only general information, not exact details. At his discretion, the DM may give more precise or less specific information than suggested in Table 19. The information may be ambiguous ("The tracks resemble those of a large bird, though they could have been made by some sort of reptilian creature.") but the DM shouldn't intentionally mislead the ranger (for instance, by telling him the tracks were definitely made by a bird when in fact they were made by a reptile). The parenthetical comments in Table 19 indicate how a DM might respond to a ranger studying tracks that were made by a pair of juvenile red dragons, each with a human rider.

### Table 19: Identification Check Results

**Ranger**

| Level | Information Received |
|---|---|
| 1-2 | General type of creature<br>*("A dragon or other large reptilian creature.")* |
| 3-4 | Specific type of creature and where it was heading<br>*("Some kind of dragon, probably red. It appears to have been headed to the mountains to the north.")* |
| 5-6 | Probable number of creatures<br>*("Looks like two of them.")* |
| 7 | Approximate size and/or age<br>*("From the length of the prints, the dragons were probably juveniles.")* |
| 8 | Pace of creatures<br>*("There's no indication of haste; they were probably taking their time.")* |
| 9 | How recently the trail was made<br>*("The tracks were made within the last three or four hours.")* |
| 10+ | Special conditions of creatures: wounded or healthy, mounts, etc.<br>*("The unusual depth of the prints and the space between steps indicates the dragons had riders. A tiny scrap of cloth is similar to the material worn by soldiers in this area. The riders were probably human.")* |

### Covering Movement

Not only is the ranger able to track the movement of others, he's also adept at concealing his own trail. If a ranger moves at half his normal movement rate, he may cover his footprints, avoid snapping twigs, and execute similar actions necessary to conceal his trail. When other characters, rangers included, attempt to track a ranger who has concealed his trail, they do so at a -5 penalty to their Tracking scores. (If a terrain-specialized ranger concealed his trail while moving through his primary terrain, others suffer a -7 penalty to their Tracking scores.)

## Hide in Shadows

By flattening his body or crouching in such as way as to blend into dark areas, and remaining perfectly still while doing so, the ranger can render himself nearly invisible in natural surroundings. This ability to hide in shadows works equally well in fields of tall grass, clumps of bushes, rocky hills, or any other wilderness area with dark or shaded terrain.

When hiding, the ranger can conceal himself from attackers and eavesdrop on his enemies. He can hide near a well-traveled road and secretly observe passersby, or conceal himself near an enemy campsite, waiting for an opportune moment to steal their treasure or supplies.

Table 8 in Chapter 1 gives the base chance for a ranger to hide in shadows, subject to the modifiers for race, Dexterity and armor (Tables 9-11). The following restrictions also apply:

- If attempting to hide in shadows on city streets, inside a building, or in any other non-wilderness setting, the ranger's chance is halved. Apply this reduction after

all the other modifiers have been taken into account.

- The ranger must be unobserved while attempting to conceal himself. If an NPC or creature is watching him, the ranger can't hide successfully. If the NPC or creature becomes distracted, even momentarily, the ranger can slip into the area of concealment and attempt to hide.
- While hiding, the ranger must remain immobile, except for slow and careful movements, such as readying a weapon or sipping from a flask.
- If the area is completely dark--for instance, if there's an overcast sky in the dead of night--the ranger gains no special advantages from hiding in shadows, and can't use this ability.

If all these conditions are met, the DM rolls percentile dice as soon as the ranger has concealed himself. The DM doesn't tell the ranger the result of the roll; rather, the ranger learns if the attempt is successful from the reactions of those in the area.

If the check is less than or equal to the ranger's adjusted hide in shadows score, the ranger has successfully concealed himself. He's essentially invisible to all others in the area, including his companions. He has hidden successfully until he changes locations; an attempt to hide in shadows in a different area requires a new die roll. Characters using spells or magical items that reveal hidden or invisible objects can detect him. Likewise, creatures who use their sense of smell to locate prey or other exceptionally keen senses have their normal chance of sniffing out a ranger hiding in shadows.

If the check is greater than the ranger's hide in shadows score, he's failed to conceal himself and is as exposed as any normal character would be in the same area. This doesn't necessarily mean that others will notice him, especially if the area of concealment provides a lot of natural cover, such as a cluster of bushes or the long shadow from a tall tree. However, the ranger may not know if he's succeeded or failed until it's too late--for instance, if an NPC suddenly turns and charges.

## Move Silently

Moving silently enables the ranger to move with a minimum of sound, almost as if he's walking on air. Even creatures with the sharpest ears are no more likely to detect his presence than they are to hear a feather drop. The ability works equally well in icy mountains, heavily wooded forests, or any other type of wilderness terrain.

Getting from place to place without being heard is only the most obvious application of this ability. Other uses include:

- Sneaking up on one or more opponents in order to surprise them.
- Examining the contents of a cart or a cabinet by removing the objects one by one, then replacing them in silence. (However, silent movement applies to the character's actions only; therefore, this ability would not negate the sound of a squeaking cabinet door or rusty hinge of a trunk.)
- Change armor or clothes.
- Other actions the DM allows, such as restringing a bow, or cutting a slit in the back of a tent.

Table 8 in Chapter 1 provides the base chance for moving silently, modified by the variables in Tables 9-11. If the ranger attempts to move silently inside a building or in any other non-wilderness area, his modified score is halved. Other restrictions:

- He can move no faster than 1/3 his normal movement rate when moving silently.
- He can't be observed when attempting to use this ability (moving silently isn't of much use to a ranger who's being watched).
- If he draws attention to himself either intentionally (speaking) or inadvertently (sneezing), the effects of moving silently are immediately negated.

The DM rolls percentile dice as soon as the ranger makes an attempt to move silently. If the roll exceeds the ranger's move silently score, he is as likely to be heard as any other character moving in the same terrain; snapping a twig or kicking a pebble may draw the attention of NPCs or creatures.

If the roll is less than or equal to the ranger's move silently score, he is able to move without sound. He continues to move silently until the terrain changes (for instance, if he enters an area of pebbles, shallow water, or dried leaves), or he attempts a new action that affects his ease of movement (such as carrying an unconscious companion or a large jug of sloshing water). Any such change requires a new roll.

## Species Enemy

Every ranger has a particular creature for which he harbors a deep loathing. Even an otherwise pacifistic ranger has no reservations about harming this creature. In fact, he may actively seek it out for the express purpose of destroying it.

The creature that a ranger opposes above all others is called his *species enemy*. A ranger gains special combat modifiers when encountering his species enemy, reflecting both his knowledge of the creature and his intense emotions.

The player must choose his ranger's species enemy before the character advances to 2nd level. The DM has final approval of the choice. Once the species enemy is determined, it never changes; the ranger retains the same species enemy for the duration of his career.

Though it's not required, the DM may wish to suggest or assign a species enemy based on the ranger's personal history. Conversely, the player may use a DM's choice of a species enemy to fill in some details about the character's early life. Here are a few ways a species enemy might reflect a ranger's background:

- The species enemy was responsible for a personal tragedy in the ranger's youth. The enemy may have killed a ranger's friend or sibling, or may have destroyed the ranger's village and everyone in it. The ranger has vowed to avenge himself against the hated creature.
- The ranger had an intense phobic reaction against a particular creature, perhaps as a result of a childhood trauma. When the ranger was an infant, for example, a snake may have slithered into his crib and tried to swallow him. After years of struggle, the ranger eventually overcame his phobia. In the process, the creature became his species enemy.
- A lord or king hired the ranger as a young man to rid the region of a particular creature. What began as a job became a personal vendetta, and the ranger has come to regard the creature as his species enemy.

**Optional Rule:** To determine a ranger's species enemy, consult Tables 20-29, rolling on the table corresponding to the ranger's primary terrain. The DM isn't confined to the

creatures on the tables, and the tables can be expanded at will. At the DM's discretion, a skeleton or a wight may be an appropriate species enemy for a ranger whose primary terrain is Swamp or Mountains, and an ogre may be as appropriate in the Jungle as the Forest. The DM may also override any illogical selections; a shark, for instance, is a poor choice for an Aquatic ranger who's spent his life at a freshwater lake.

A table is given for Underdark (deep subterranean) enemies, even though no ranger has the Underdark as a primary terrain.

A ranger receives the following modifiers in regard to his species enemy:

**Attack Bonus.** Because of his special understanding of the species enemy's vulnerabilities and combat strategies, the ranger receives a +4 bonus to his attack rolls when fighting the creature. This bonus is in addition to any other bonuses the ranger normally receives.

**Reaction Penalty.** So intense is the ranger's emotional response to the species enemy that it's nearly impossible for him to conceal it. For this reason, the ranger suffers a -4 penalty to all encounter reactions with the species enemy.

**Combat Preference.** In most combat situations, the ranger will actively seek out his species enemy as the object of his attacks to the exclusion of all other potential opponents. If the party encounters three orcs and a troll, and the troll is the ranger's species enemy, the ranger will attack the troll and leave the orcs to his companions. If the ranger spots a troll in the wilderness, he may feel compelled to attack the troll unless his companions convince him otherwise or forcibly restrain him.

This compulsion doesn't automatically override the ranger's good judgment or sense of duty. If a species enemy accidentally falls into a bottomless pit, the ranger won't jump in after it. If he hears rumors that a species enemy was sighted in a distant village, he won't abandon his party to investigate, although he may argue strongly for the party to check it out. If a companion cries for help, he will abandon his fight against a species enemy to come to the companion's aid, resuming his attacks against the species enemy when the companion is safe.

The modifiers apply wherever the ranger encounters his species enemy, not just in the ranger's primary terrain. A ranger whose primary terrain is Desert and whose species enemy is the blue dragon will receive a +4 combat bonus regardless of whether he meets a blue dragon in the desert, mountains, or anywhere else.

Further, the modifiers apply only to the specific creature (or creatures) designated as the species enemy, including any leaders, nobles, shamans, etc. If the species enemy is a blue dragon, the modifiers don't apply to black dragons, red dragons, or dragons of any other color. However, the modifiers affect blue dragons of all ages, from hatchlings to great wyrms. The ogre species enemy includes ogre leaders, shamans, and chieftains, but not ogre mages or merrows. (As a rule of thumb, if a variant creature has a separate listing in its *Monstrous Compendium*® entry, it's not included as a species enemy). The DM is free to make exceptions to the lists in Tables 20-28 based on local conditions within the campaign. For instance, he may decide to include merrows as part of the ogre species enemy, or he may exclude advanced lizard men from the lizard man species enemy if campaign logic dictates.

### Table 20: Arctic Species Enemy

| D8 Roll | Enemy |
|---|---|
| 1-3 | Frost giant |
| 4-5 | White dragon |
| 6 | Cryohydra |
| 7 | Ice Toad |
| 8 | Verbeeg |
| 9 | Winter wolf |
| 10 | Yeti |

## Table 21: Aquatic Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Dragon turtle |
| 2 | Koalinth |
| 3 | Kraken (may include giant squid) |
| 4 | Kuo-toa |
| 5 | Lacedon |
| 6 | Merrow |
| 7 | Pirate/buccaneer, human |
| 6 | Seawolf, lyc. (includes greater) |
| 9 | Sahuagin |
| 10 | Scrag |

## Table 22: Desert Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Blue dragon |
| 2 | Desert brigand, human |
| 3 | Fire giant |
| 4 | Hieracosphinx |
| 5 | Jackalwere |
| 6 | Jann, evil |
| 7 | Lamia |
| 8 | Manscorpion |
| 9 | Naga, evil (may include desert snakes) |
| 10 | Sandling |

## Table 23: Forest Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Green dragon |
| 2 | Bugbear |
| 3 | Ettercap (may include forest spiders) |
| 4 | Ghoul/ghast |
| 5 | Goblin |
| 6 | Hobgoblin |

| | |
|---|---|
| 7 | Kobold |
| 8 | Ogre |
| 9 | Orc (may include orog) |
| 10 | Troll (may include other types) |

### Table 24: Jungle Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Black dragon |
| 2 | Carnivorous ape |
| 3 | Bullywug |
| 4 | Lizard man (includes advanced lizard men and lizard king) |
| 5 | Naga, evil (may include jungle snakes) |
| 6 | Slaver, human |
| 7 | Tasloi |
| 8 | Wyvern |
| 9-10 | Yuan-ti |

### Table 25: Hill Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Red dragon |
| 2 | Brigand, human |
| 3 | Bugbear |
| 4 | Hill giant |
| 5 | Gnoll/flind |
| 6 | Hobgoblin |
| 7 | Leucrotta |
| 8 | Ogre |
| 9 | Ogre mage |
| 10 | Werewolf, lyc. |

### Table 26: Mountain Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Red dragon |
| 2 | Cyclopskin (may include cyclops) |
| 3 | Ettin |
| 4 | Hill giant |
| 5 | Fomorian giant |
| 6 | Gnoll/flind |
| 7 | Manticore |
| 8 | Ogre |
| 9 | Orc (may include orog) |
| 10 | Troll (may include other types) |

### Table 27: Plains Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Hill giant |
| 2 | Brigand, human |
| 3 | Gnoll/flind |
| 4 | Goblin |
| 5 | Harpy |
| 6 | Hobgoblin |
| 7 | Ogre |
| 8-9 | Orc (may include orog) |
| 10 | Troll (may include others) |

### Table 28: Swamp Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Black dragon |
| 2 | Behir |
| 3 | Bullywug |
| 4 | Ghoul (may include ghast) |
| 5 | Goblin |
| 6 | Hydra (may include lernaean hydra and/or pyrohydra) |
| 7 | Lizard man (includes advanced lizard men and lizard king) |
| 8 | Muckdweller |
| 9 | Su-monster |
| 10 | Troll (may include other types) |

### Table 29: Underdark Species Enemy

| D10 Roll | Enemy |
|---|---|
| 1 | Bugbear |
| 2 | Derro |
| 3 | Drow (includes drider) |
| 4 | Duergar |
| 5 | Gibberling |
| 6 | Illithid |
| 7 | Kuo-toa |
| 8 | Troglodyte |
| 9 | Troll (may include other types) |
| 10 | Umber hulk |

## Animal Empathy

Many characters regard animals as non-thinking beasts that react purely on instinct, incapable of responding to reason. The ranger, on the other hand, sees animals as emotionally complex creatures whose fears and desires may be less sophisticated than those of humans, but are no less real. This innate understanding of animal behavior gives

the ranger a limited ability to influence their emotions and manipulate their behavior.

The ranger knows the meaning of a twitching tail, a cocked head, a low growl. He knows that a snarling wolf positioned in a crouch may be more frightened than hostile. If approached correctly, a hissing snake may slither away rather than strike. By calling on his animal empathy, a ranger can use soothing words and gestures to turn hostility to indifference, and indifference to friendship.

## Conditions

A ranger can't influence an animal's reactions at will. The following limitations apply:

**The animal must be native to the real world; natural animals.** Rangers can't modify the reactions of supernatural creatures (skeletons and ghouls), magical creatures (basilisks and golems), or creatures of extra-planar origin (aerial servants and elementals). The ranger can affect giant animals.

**The animal must be intelligent, but not exceptionally so.** To respond to a ranger's words and gestures, the animal must be able to comprehend them. In practice, this means that a ranger can't use this ability to influence the behavior of non-intelligent animals (those with Intelligence scores of zero) such as centipedes or barracudas. Conversely, creatures of higher intelligence, such as leprechauns, ogres, and a paladin's warhorse, resist the ranger's *animal empathy*. As a rule of thumb, rangers can only use this ability on natural animals whose intelligence ranges from Animal to Low (Intelligence score of 1 to 7).

**The animal can't be the ranger's species enemy.** A ranger who confronts the species enemy is too overwhelmed by intense emotions to establish the proper empathy. Therefore, a ranger can never modify the reaction of his species enemy using this ability.

**The ranger must remain calm.** The ranger must move towards the animal quietly, slowly, and confidently, all the while speaking soothing words and making calming gestures. Fear cannot be shown, nor a weapon wielded, nor any action taken that might frighten or enrage the animal.

**The ranger must be distanced from the rest of the party.** If the ranger approaches with companions, the animal will react to the presence of all the characters, not just the ranger. The ranger's efforts to soothe the animal will go unnoticed. Ideally, the rest of the party will be out of the animal's sight when the ranger approaches. If this is impractical, the ranger's companions should be at least 10 feet behind him, remaining quiet and taking no actions that the animal might interpret as hostile.

**The animal must be able to hear and see the ranger.** The ranger must be in plain sight for the animal to size up; the ranger may not be concealed in the brush, hidden in shadows, or have erected any type of physical barrier between himself and the animal. The animal must also be able to hear the ranger, meaning that the area must be relatively quiet, free of distracting or disturbing sounds. In most cases, the ranger must be within a few feet of the animal, or close enough for the animal to see the ranger's eyes. The DM may make exceptions in special circumstances. For instance, if the ranger approaches an animal in total darkness, the DM may rule that soothing words are sufficient to calm the animal. In situations where silence is imperative, gestures alone may suffice. However, in all cases, the ranger must still be relatively close to the animal to modify its reaction.

**The ranger must soothe the animal for an uninterrupted period.** A ranger can't

attempt to soothe an animal that's charging or attacking; the animal must be stationary or moving only slightly (a pacing wolf, a weaving serpent). Once the ranger moves close to the animal, the creature must be soothed for 5-10 (1d6+4) uninterrupted rounds; the DM may increase this time if the animal is unusually anxious or exceptionally hostile. (This time can be lapsed by the DM if nothing else is going on.)

A ranger who meets these conditions can use animal empathy in an attempt to modify the animal's reactions. Though the game result is the same, technique differs depending whether the animal is wild or domestic.

### Wild Animals

This group includes animals not normally domesticated, such as lions, snakes, and rats. It also includes domesticated animals that have been trained to attack, such as dogs.

Before the ranger attempts to soothe a wild animal, the DM must determine the animal's current attitude, taking into account its natural temperament (Is it naturally aggressive, or inclined to flee rather than fight?), immediate conditions (Did it just wake up? Is it sick or wounded? Hungry?) and pre-existing circumstances (Has it recently been harassed or befriended by characters similar in appearance to the ranger? Is it guarding its nest or lair?) The DM should then select the animal's current attitude from Table 30. The attitude should not be announced ("The wolf is Cautious."). Instead, clearly describe the animal's appearance and behavior and let the ranger come to his own conclusions ("The wolf paces back and forth, eyes darting. It begins to snarl as you approach.").

### Table 30: Animal Attitudes

| Attitude | Description |
|---|---|
| Frightened | Filled with panic and terror. Will flee at earliest opportunity. |
| Friendly | Feels warm or conciliatory toward stranger. Will not attack. May nuzzle or lick stranger to express affection. |
| Indifferent | Bored or unimpressed. Oblivious to stranger. |
| Cautious | Suspicious, guarded, nervous. Ready to defend itself if attacked. |
| Threatening | Openly belligerent. Growling, snapping, crouched to spring. Likely to attack if stranger doesn't withdraw. |
| Hostile | Aggressive, violent, enraged. Will definitely attack if stranger doesn't withdraw; may pursue even if he does. |

To determine if the ranger is able to modify the reaction of a wild animal, the animal must make a saving throw vs. rods (even though the ranger's animal empathy ability isn't magical). As shown on Table 31, the ranger's experience level imposes a penalty to the creature's roll.

### Table 31: Animal Empathy Modifier

| Ranger Level | Modifier |
|---|---|
| 1-3 | -1 |
| 4-6 | -2 |

| | |
|---|---|
| 7-9 | -3 |
| 10-12 | -4 |
| 13-15 | -5 |
| 16+ | -6 |

If the animal fails its saving throw, the ranger has successfully modified its behavior. The attitude of the animal shifts one category, up or down, on Table 30 as decided by the ranger. If the animal was Indifferent, it now becomes either Cautious or Friendly, and behaves accordingly. This new reaction applies only to the ranger. An animal that the ranger changed from Threatening to Cautious may still behave in a Threatening manner to other members of the party, particularly if another character decides to interfere with the ranger's efforts or otherwise draws attention to himself. However, as long as the ranger stays near the animal and continues to soothe it, the animal's attention will remain focused on the ranger, and it will remain Cautious. After the ranger leaves the area, the animal's attitude remains altered for a short time (from a few minutes to an hour, as decided by the DM) before it reverts to its original disposition.

If the animal succeeds in its saving throw, it resists the ranger's efforts and its attitude remains unchanged. The ranger notices no significant difference in the animal's behavior. An Indifferent animal continues to ignore the ranger, a Hostile animal may suddenly charge him. The ranger can't make a second attempt to modify its behavior.

### Domestic Animals

This group includes animals that have non-hostile dispositions and are routinely domesticated, such as horses and dogs. It also includes formerly wild animals, such as bears and monkeys, that have been tamed and now are comfortable around people.

Such animals are presumed to be Frightened, Friendly, Indifferent, or Cautious. Regardless of their initial disposition, when a ranger approaches and soothes them, they become Friendly. No saving throws are necessary; this change is automatic. It's also permanent, so long as the ranger stays in sight of the animal. If the ranger leaves the area, the animal reverts to its original disposition a short time later (within a few minutes to an hour).

The attitude change applies to the ranger only; an Indifferent dog feels Friendly to the ranger but remains oblivious to the ranger's companions. A Cautious horse is Friendly to the ranger and will carry him on its back, but bucks furiously if anyone else attempts to mount it.

Additionally, the ranger can ascertain the general qualities of any domestic animal he befriends. By observation alone, he could determine:

- Which puppy in a litter will become the best hunter and most loyal companion.
- Which horse at a sale is the healthiest, strongest, and fastest mount.
- Which sheep in a flock will produce the highest quality wool.
- Which sow in a sty will give birth to the largest broods.

The DM should provide any information of this type that the ranger wants to know, though he should refrain from answering specific questions. For instance, the ranger can determine which horse in a corral is the fastest, but he can't tell the horse's exact speed

just by observing it.

A special case occurs if an animal has been attack-trained. This is most usual in the case of dogs, horses, and hunting birds such as falcons, but might apply to other animals, such as bears or leopards. These are treated as wild animals, and receive the saving throw vs. rods to resist the ranger's empathy as described above.

## Nature Lore

Though the experiences of a ranger living in an arctic wasteland may differ dramatically from one who makes his home in a jungle, both have spent many years observing the patterns of nature, and both have arrived at similar conclusions about the relationship between living things and their environment.

All rangers, then, have an inherent understanding of natural lore, encompassing a broad set of principles involving conservation, ecology, and natural order. Though not every ranger knows specific details about particular situations, all of them understand the general concepts at work. Some examples:

- The plant and animal life in any given habitat tend to be interdependent. The butterfly pollinates the flower, the flower produces nectar to feed the butterfly.
- Animals and plants adapt to natural changes in the environment. Grass becomes dormant in the winter and grows again in the spring. A wolf's fur thickens as the temperature drops, and thins when the weather becomes warmer.
- To avoid ruining the land, natural resources used by man must be replenished. If trees are harvested in a forest, new trees should be planted in their place.

A ranger's knowledge of natural lore enhances his reverence for all living things. In practical terms, it allows him to recognize ecological and environmental problems, both actual and potential. In some cases, he may be able to offer suggestions for correcting them.

There are no hard and fast rules for determining the extent of a ranger's natural lore and its application. The DM must decide how much a particular ranger knows on a case by case basis, taking into account the ranger's training, background, and primary terrain. In most situations, experience is the main factor; the higher the ranger's level, the more he's likely to know.

Table 31 provides natural lore guidelines for rangers of various levels. The information is cumulative; a 7th-level ranger also knows the information available to lower-level rangers. Keep in mind that these are generalizations; a 2nd-level ranger who was raised on a farm may know as much about the ecology of growing crops as another ranger of 10th level. By way of illustration, the parenthetical comments indicate what the ranger might know if attempting to figure out why crops no longer grow in a once-fertile farmland.

## Table 32: Nature Lore

### Ranger

| Level | Quality of Information |
|---|---|
| 1-3 | Knows general principles of how climate, terrain, and life forms interact. Can identify problems, but can only guess at causes.(The topsoil has eroded away.) |
| 4-6 | Can determine causes of problems. (Heavy rainfall washed away the topsoil and leached away the nutrients.) |
| 7+ | Can suggest solutions to problems. (Add fertilizer to the remaining soil. To prevent further erosion, keep land covered with grasses or trees.) |

If the DM is stumped as to whether a ranger knows a particular piece of information, he may require the ranger to make a Wisdom check, adding bonuses or penalties to the roll depending on the relative difficulty of the question. For instance, knowing if a particular substance will work as a fertilizer is a relatively easy question, requiring no penalty to the roll. Knowing which specific crops the fertilizer will nourish is a more difficult question, and a penalty to the roll may be in order. In all cases, the DM should use common sense. A ranger who's never been out of the desert won't know much about the effects of a hurricane on a coastal environment, regardless of his level.

## Survival

The ranger is exceptionally skilled at surviving harsh conditions associated with his primary terrain. In game terms, the ranger is considered to automatically have the Survival proficiency in his primary terrain. This skill costs no proficiency slots. A ranger can spend slots in the Survival proficiency to acquire survival skills in environments other than his primary terrain.

The ranger's survival skill helps in the following ways, all of which apply only in the primary terrain. In certain cases, the DM may require a Survival check (which is equivalent to an Intelligence check). A ranger rolling less than or equal to his Intelligence score on 1d20 succeeds in the check.

- The ranger knows the basic precautions necessary to enhance the chances of survival, and can instruct and assist any companions accordingly. For example, a ranger whose primary terrain is Mountains realizes that physical exertion in high altitudes may result in headaches and fatigue (due to low air pressure). A Desert ranger knows that in arid climates, it's better to rest in the still air than exposed to a strong wind (wind promotes evaporation from the skin, increasing the degree of dehydration). An Aquatic ranger understands that saltwater can't be used for drinking. An Arctic ranger realizes that temporary protection can be had from a bitter wind by tunneling inside a snow drift. This knowledge doesn't guarantee survival by any means; it merely improves the odds. If the ranger wonders about any particular piece of information, the DM will decide if he knows it, requiring a Survival check if necessary.
- The ranger can stave off starvation by finding small amounts of food. A successful Survival check locates enough food to feed himself or one other character. He can locate food in this way once per day.
- The ranger can find enough water to keep himself or another character alive for one day by making a successful Survival check. This assumes that the water is

there to be found.

- The ranger can interpret subtle changes in the environment to anticipate natural disasters. A Plains ranger can recognize the appearance of the sky associated with a coming tornado. A Mountain ranger can identify the rumbling sound that precedes an avalanche. The DM may require Survival checks to verify a ranger's interpretations.

**Optional Rule:** One way in which a DM can use the Survival ability in a "quick-and-dirty" fashion is to set up special penalties (cumulative penalties for fatigue for fatigue or exposure) in especially harsh climes. A party with a ranger or one that is properly prepared and outfitted, simply avoids the potential penalties. Those who are unprepared take the penalties until the DM decides they have acclimated to the setting, or until they take other appropriate actions determined by the DM.

## Strongholds

Like fighters, rangers have the ability to build and maintain castles, forts, and strongholds. Unlike fighters, rangers are not joined by free soldiers or other special followers in doing so.

Theoretically, any ranger can build a stronghold. In practice, most rangers who build them are 9th level or higher, since rangers of lower level usually lack the necessary resources, reputation, and skills. A DM may allow a lower-level ranger to have a stronghold under exceptional circumstances; for instance, a ranger might come into an inheritance, or a group of peasants might build a castle in gratitude for his assistance.

Some rangers acquire strongholds in cooperation with the local king or ruler. The ranger begins the process by petitioning the ruler for permission to build a stronghold in a particular area. If the ranger demonstrates good will and has a reputation for trustworthiness and strong leadership, the ruler usually grants permission. In exchange for this permission, the ranger may have to pay an annual tax, or make himself available to serve in the ruler's military forces in times of war. If the ranger meets his obligations, the ruler may loan royal forces to the ranger if his territory is invaded or his stronghold besieged.

More commonly, rangers prefer to build their strongholds in the unsettled wilderness, beyond the sovereignty of any government. Though free of obligations to a ruler, the ranger must also fend for himself in times of peril; if an army of orcs lays claim to the ranger's territory, the ranger is on his own.

Because a ranger's stronghold gains him no special followers, it tends to be significantly smaller and less elaborate than that of a fighter of comparable level. Though a fighter may receive money by selling products produced on his land, taxing settlers, or charging rent, these options are rarely available to rangers. In most cases, a ranger's stronghold generates only a modest income, if any.

Guidelines for building and maintaining strongholds are beyond the scope of this book. For more information, you might investigate the *DMRG2 Castle Guide*, which includes details of castle construction along with a number of standard floor plans.

Though most rangers prefer castles and forts made of wood and stone, these are by no means the only types available. Other possibilities include tree houses (in Forest and

Jungle terrain), fortified encampments (Desert), observation platforms (Mountains), floating citadels (Swamp and Aquatic), and ice towers (Arctic).

# Chapter 3: Followers

Perhaps the ranger's most interesting ability is the chance to attract unusual followers. Unlike fighters and other character classes that acquire followers, the ranger's followers include animals and magical creatures as well as humans and demihumans. In fact, it's possible that all of a ranger's followers may be animals, which can result in unexpected benefits (strangers aren't as likely to mess with a ranger accompanied by a wolf pack) as well as unforeseen complications (ever try getting a room at an inn with a bear trotting behind you?).

Humans and demihumans (and magical creatures) are drawn to a ranger because of his sterling reputation. They serve as followers out of loyalty and respect, remaining true to the ranger so long as he treats them decently. In this way, such followers are different from normal hirelings and mercenaries who serve for pay.

The motivations of animal followers are less obvious. Animals have no conception of what constitutes a reputation, sterling or otherwise. Instead, animals bond to rangers by instinct. The nature of this bond lies somewhere between the relationship of an infant animal and its parent (picture a baby duck contentedly swimming behind its mother), and a master and his pet (think of a dog's affection for the person who provides him with companionship). If the ranger honors the bond, the follower will often remain loyal for its entire life.

It's important to keep in mind that this bond has no magical basis. The follower stays with a ranger of its own volition, not from some supernatural compulsion, and may leave if conditions become intolerable. Likewise, a ranger doesn't control the actions of his followers, though he may instruct human followers to carry out specific functions, and train animal followers to perform various tricks and tasks.

## Gaining Followers

It's strictly up to the Dungeon Master to determine when a ranger receives his followers, how many he's entitled to, and the circumstances under which they appear. Though the player is free to express his preferences, the DM has the final word.

### Number of Followers

As soon as a ranger reaches 10th level, the DM secretly rolls 2d6. The result indicates the maximum number of followers the ranger will receive over the course of his career. This roll is made only once, and the number is never revealed to the player. The DM should make a note of the number on a sheet of paper; he can use the same sheet to keep track of the followers as the ranger receives them to make sure he doesn't exceed his allotment. The player should also keep track of his ranger's followers; the record sheets at the end of this book are designed for this purpose.

Lost followers are not replaced. If a ranger has a limit of two followers and both are killed, he'll never receive another follower for the rest of his career.

## Identity of Followers

After the DM makes the 2d6 roll to determine the number of followers, it's time to think about who or what they're going to be. He should begin by deciding the identity of the first two or three followers, so that he can make plans to smoothly introduce them into his campaign. He can determine the identities of the remaining followers later, whenever he likes.

To determine the identity of followers, the DM may roll on Table 19 in Chapter 3 of the *Player's Handbook*, use Tables 33-43 in this chapter, or simply choose any particular creature he likes. Regardless of the method preferred, the DM should keep the following restrictions and recommendations in mind:

- The type of followers should make sense within the context of the campaign. Lions and crocodiles shouldn't show up in the arctic, just as dolphins shouldn't appear in the desert.
- The use of powerful creatures as followers should be kept to a minimum, so as not overshadow the efforts of the ranger and other player characters. It's difficult to design challenging encounters for a ranger with a dozen giants at his beck and call! Such creatures should be introduced with care and pacing; it is more fun for the player to have a chance for a powerful ally in his ranger's future.
- A species enemy can't be a follower. The ranger's antagonism for his species enemy makes bonding impossible.
- Generally, the follower will not be a poisonous creature. Rangers do not use poisons, and their followers tend to follow suit. Occasionally a ranger may find himself with an intelligent and poisonous follower; remember that poison use is not a good act, and that to some extent the ranger is responsible for his followers. This can be used by the DM as a special hindrance or to encourage role-playing.
- Certain character kits have specific follower requirements or limitations which take precedence over other considerations. See Chapter 4 for details.

## Using the Follower Tables

The DM may find the Follower Tables (Tables 33-43) especially useful for determining followers, as they provide a variety of types associated with specific terrains. To use the tables, select a terrain and roll 1d100. Some explanations:

- If the result has an asterisk (*) and the ranger already has a follower of this type--or if he's had a follower of that type and lost it--ignore the result and roll again.
- If more than one species of a particular animal is given in parentheses, the DM can choose whichever species he likes. For example, if the result on Table 33 is a herd animal, the DM can choose either a caribou, reindeer, or musk ox.
- If the result is "Human/demihuman," roll again on the Human/Demihuman Followers Table (Table 43). See the Humans and Demihumans section at the end of this chapter for further guidelines.
- The Trainability column indicates an animal follower's aptitude for learning tricks

and tasks; these notations are explained in the Training Followers section later in this chapter.

- Statistics for some creatures not found in core *Monstrous Compendium*® collections are in the Helpful Statistics section.

The DM isn't confined to the creatures listed on the tables. New entries can be drawn from the *Monstrous Compendium* volumes and other sources. New tables can be created, based on unique terrain and cultural demographics of a campaign; the Aquatic Followers Table, for instance, may be subdivided into Saltwater and Freshwater Tables.

The DM must also choose which tables to use for each ranger. He may decide to use only the table corresponding to the ranger's primary terrain (for instance, a ranger whose primary terrain is Desert receives followers only from the Desert table), use the table corresponding to the ranger's current location in the campaign, or focus on the primary terrain table with occasional use of the other tables (most of the Desert ranger's followers come from the Desert table, but he receives a few from the other tables as well).

There are advantages and disadvantages to each method. For instance, if you're only using the primary terrain table, a Desert ranger is likely to end up with a collection of creatures he's comfortable with, but he may have a hard time acquiring any followers at all if the campaign keeps him out of arid environments. Using the local table ensures that a ranger will have regular access to followers, but he may end up with a bizarre menagerie (imagine a Desert ranger with a merman, skunk, and baboon!). Regardless of which method you prefer, it's best to settle on one at the outset of a campaign and use it throughout.

## How and When Followers Appear

To give the DM maximum flexibility for introducing followers into his campaign, no fixed rules exist for determining exactly when they show up. Once the appropriate level is attained, followers should trickle in, one at a time, throughout the course of the ranger's career. As a rule of thumb, assume that a new follower makes an appearance no more than once every few months.

Keep the terrain in mind when deciding how often animal or special followers appear. Regions heavily populated with animals, such as dense jungles or lush forests, are more likely to generate such followers than barren mountains or bleak arctic landscapes. As seen in Tables 33-43, certain types of followers tend to show up in particular areas; for instance, a ranger is more likely to acquire a camel follower in the desert than in the jungle. But exceptions abound; a ranger might encounter a camel that accidently wandered into the plains, or encounter one on display in a zoo in the mountains. As long as the DM creates an explanation, animal and special followers can show up in a surprising variety of places.

Regardless of when and where followers show up, the DM should strive to work their appearance into the events of a campaign. Here are a few situations that may result in a new follower:

**Use of Proficiencies, Special Abilities, or Spells.** After the successful use of the animal handling or animal training proficiency, the affected creature might take a liking to the ranger and offer itself as a follower. This may also occur after a ranger uses his animal empathy ability. Likewise, an animal enchanted by a spell such as *animal*

*friendship* might linger in the area after the magical effects wear off. In any case, the effects of the proficiency or spell no longer apply; the animal in question has decided of its own accord to stick around.

**Planned Encounters.** As part of an adventure, the DM may decide to stage one or more encounters featuring potential followers. For instance, the party may need to explore a cave containing a curious bear, search for a sunken treasure chest surrounded by friendly dolphins, or navigate a jungle filled with mischievous baboons. Assuming that the ranger doesn't inadvertently sabotage the encounter--he kills the bear or avoids the treasure chest--this is one of the most dependable methods for introducing new followers.

**Hunting or Shopping.** When shopping for a new mount, a ranger may be surprised to find one of the horses in the stable noses its way to the front, as if presenting itself for purchase. When hunting for the evening meal, the ranger might suddenly notice that a deer or other game animal is following *him*. Perceptive rangers may realize that these animals are offering themselves as followers.

**Character Interaction.** The ranger spares a foe, only to be adopted by the grateful creature. An NPC youth of long acquaintance (perhaps one rescued on a previous adventure) decides to take ranger training with the PC as a mentor.

**Abrupt Appearance.** For no apparent reason, an creature may present itself to the ranger. Hiking through the woods, the ranger becomes aware of a brownie sauntering behind him. The ranger wakes up with a sleeping fox curled up on his chest. A pseudodragon flutters from the sky and perches on the ranger's shoulder. From a purist's point of view, this is the least satisfying option for introducing followers, as it doesn't arise directly from the events of the story. But it's an acceptable method when all else fails.

## Acquiring Specific Followers

Clearly, some types of followers are more desirable than others. Most rangers will find a horse to be more useful than a rabbit, a dog more advantageous than a mouse. Even in the best of situations, a snake or scorpion follower may be more trouble than it's worth.

There's not much a ranger can do to ensure he gets the type of followers he wants. Becoming a follower is essentially a choice made by the animal or NPC, not the ranger. Though the ranger can influence animal behavior to a certain degree, a ranger can't force a particular creature to become a follower against its will.

However, a ranger can increase his chances of acquiring specific followers in several ways. The easiest and most obvious way is to go where the animals live. A ranger who wants a polar bear follower should go to arctic. Farms and market places are good sources of domestic animals, while zoos and carnivals may stock a wide variety of exotic creatures.

The frequent use of the animal training or animal handling proficiencies, as well as the *animal empathy* special ability, brings the ranger in close contact with potential followers. Spells such as *locate animals* or *plants* can lead him to particular species, while the *call animal follower* spell (described in Chapter 6) may successfully summon a follower.

Note that such efforts don't guarantee the arrival of a follower in any way. In many

campaigns, however, extra efforts made to locate followers increases the likelihood of their appearance.

## Recognizing Animal Followers

A good DM tries to capture the behavior of real animals, and doesn't just announce to the ranger that an animal follower just presented itself. Instead, the DM describes the actions and behavior of the animal and allows the ranger to come to his own conclusions.

How does a ranger know if a particular animal is indeed a follower? Here are some signs:

- The animal doggedly follows him. If the ranger climbs a steep mountain, the animal struggles to keep up. If he goes swimming, the animal waits on the shore.
- The animal shows signs of affection. A lion rubs against the ranger's legs, a wolf licks his face, a horse nuzzles him.
- The animal is uncharacteristically docile. A tiger sits peacefully in the grass while the ranger has dinner. A wild dog yawns when the ranger approaches, but growls when the ranger's companion comes near.

A day or two spent observing such actions should convince even the most skeptical ranger that he's acquired a follower. The DM may verify this conclusion, but is under no obligation to do so. If doubt remains in the ranger's mind, he may be able to ask a companion to use *speak with animals* or a similar spell to verify the animal's status.

Human and demihuman followers tend to express their admiration openly and unambiguously, fawn over the ranger's every utterance, gazing admiringly at him, or offer their assistance at every opportunity. Unless he's exceptionally suspicious or just plain dense, a ranger should have much less trouble recognizing human and demihuman followers.

## Table 33: Arctic Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-07 | Animal, herd (caribou, reindeer, musk-ox) | Low |
| 08-15 | Avian (penguin, tern, snowy owl) | Low |
| 16-25 | Bear (polar) | Med. |
| 26 | Elephant (mammoth, mastodon)* | Med. |
| 27 | Elephant (oliphant)* | High |
| 28-30 | Great cat (snow leopard) | Med. |
| 31-32 | Great cat (giant lynx)* | High |
| 33-34 | Great cat (smilodon)* | Med. |
| 35-37 | Dog (wild, war) | Med. |
| 38-43 | Mammal, small (ermine, snow hare) | Low |
| 44-45 | Remorhaz* | Low |
| 46-49 | Seal | Med. |

| | | |
|---|---|---|
| 50-52 | Selkie | - |
| 53-54 | Toad (ice)* | High |
| 55-56 | Walrus | Med. |
| 57-62 | Wolf (common, dire) | Med. |
| 63-66 | Wolverine (normal, giant) | Med. |
| 67-70 | Yeti | - |
| 71-00 | Human/demihuman | - |

### Table 34: Aquatic Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-12 | Avian (gull, duck, osprey, parrot, pelican) | Low |
| 13-14 | Crab, giant | Neg. |
| 15-18 | Crocodile (common) | Neg. |
| 19-20 | Eel (electric, giant, weed) | Neg. |
| 21-22 | Fish, giant (pike, catfish) | Low |
| 23-24 | Frog, giant | Neg. |
| 25-32 | Dolphin | High |
| 33-34 | Hippocampus* | High |
| 35-36 | Locathah* | - |
| 37-41 | Mammal, small (beaver, sea otter, giant otter) | Low |
| 42-43 | Merman | - |
| 44-45 | Nixie* | - |
| 46-47 | Octopus, giant* | Neg. |
| 48-50 | Seahorse, giant | Med. |
| 51-54 | Sea lion | Med. |
| 55-58 | Selkie | - |
| 59-60 | Triton* | - |
| 61-00 | Human/demihuman | - |

### Table 35: Desert Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-08 | Avian (falcon, hawk, owl, vulture) | Low |
| 09-13 | Camel | Low |
| 14-23 | Dog (wild, war) | Med. |
| 24-25 | Dog, moon* | High |
| 26-28 | Griffon* | Med. |
| 29-35 | Horse (medium, light, wild) | Med. |
| 36-40 | Jackal | Med. |
| 41-42 | Jann* | - |
| 43-44 | Lizard (giant) | Neg. |

| | | |
|---|---|---|
| 45-50 | Mammal, small (jackrabbit, kangaroo rat, prairie dog) | Low |
| 51-52 | Scorpion (large) | Neg. |
| 53-55 | Snake (poisonous) | Neg. |
| 56-58 | Thri-kreen | - |
| 59-60 | Toad (fire, giant) | Neg. |
| 61-00 | Human/demihuman | - |

### Table 36: Forest Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-04 | Animal, herd (deer, stag) | Low |
| 05-12 | Avian (falcon, hawk, owl) | Low |
| 13-14 | Badger (common, giant) | Low |
| 15-16 | Bat (common, giant) | Low |
| 17-28 | Bear (black, brown) | Med. |
| 29-31 | Boar (wild, giant) | Med. |
| 32-34 | Centaur, sylvan | - |
| 35-41 | Mammal, small (ferret, fox, squirrel, raccoon, rabbit, woodchuck, chipmunk) | Low |
| 42 | Pegasus* (if ranger is female, 50% chance for unicorn*) | - |
| 43 | Pixie* | - |
| 44-45 | Porcupine (black, brown, giant) | Low |
| 46 | Pseudodragon* | - |
| 47 | Satyr* | - |
| 48-49 | Skunk (normal, giant) | Low |
| 50 | Treant* | - |
| 51 | Voadkyn* | - |
| 52-54 | Weasel (wild, giant) | Low |
| 55 | Werebear* | - |
| 56-60 | Wolf | Med. |
| 61-00 | Human/demihuman | - |

### Table 37: Hill Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-05 | Animal, herd (deer, goat, sheep) | Low |
| 06-07 | Aurumvorax* | - |
| 08-17 | Avian (falcon, hawk, owl) | Low |
| 18-19 | Badger (giant, common) | Low |
| 20-21 | Bat (common, large) | Low |
| 22-32 | Bear (black, brown, cave) | Med. |

| | | |
|---|---|---|
| 33-36 | Boar (wild, giant) | Med. |
| 37 | Brownie* | - |
| 38 | Dragonet (firedrake)* | Med. |
| 39 | Hippogriff* | Med. |
| 40-43 | Horse (medium, light, pony, wild, mule) | Med. |
| 44-46 | Lizard (minotaur) | Neg. |
| 47-54 | Mammal, small (fox, mouse, rabbit, squirrel) | Med. |
| 55 | Pegasus* | High |
| 56-59 | Wolf | Med. |
| 60 | Wereboar* | - |
| 61-00 | Human/demihuman | - |

### Table 38: Jungle Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-05 | Animal, herd (zebra, giraffe, antelope) | Low |
| 06-07 | Ape, carnivorous* | High |
| 08-15 | Avian (parrot, cockatoo, toucan) | Low |
| 16-17 | Bat (common, large) | Low |
| 18-19 | Boalisk | Low |
| 20-21 | Boar (warthog) | Med. |
| 22 | Couatl* | - |
| 23-24 | Faerie dragon* | - |
| 25-26 | Elephant | Med. |
| 27-36 | Great cat (lion, tiger, jaguar, leopard) | Med. |
| 37-38 | Grippli | Med. |
| 39-40 | Lizard man (advanced) | - |
| 41-47 | Mammal, small (ferret, monkey, mouse) | Low |
| 48-50 | Primate (baboon, orangutan) | High |
| 51-52 | Rhinoceros* | Low |
| 53-56 | Snake (normal constrictor, giant constrictor, jaculi) | Neg. |
| 57-58 | Weretiger* | - |
| 59-60 | Tabaxi | - |
| 61-00 | Human/Demihuman | - |

### Table 39: Mountain Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-03 | Aarakocra* | - |

| | | |
|---|---|---|
| 04-11 | Animal, herd (goat, deer, sheep) | Low |
| 12-21 | Avian (wild eagle, falcon, hawk, owl) | Low |
| 22-24 | Badger (giant, common) | Low |
| 25-36 | Bear (black, brown, cave) | Med. |
| 37 | Dragonet (firedrake)* | - |
| 38-39 | Eagle, giant* | High |
| 40 | Galeb duhr* | - |
| 41-45 | Great cat (mountain lion) | Med. |
| 46-47 | Griffin* | Med. |
| 48-50 | Hippogriff* | Med. |
| 51-53 | Lizard (minotaur) | Neg. |
| 54-60 | Mammal, small (fox, mouse, squirrel, beaver) | Med. |
| 61-65 | Wolf | Med. |
| 66-00 | Human/demihuman | - |

### Table 40: Plains Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-06 | Animal, herd (deer, goat, buffalo, sheep, cattle, antelope) | Low |
| 07-18 | Avian (falcon, hawk, owl, pigeon, crow, raven) | Low |
| 19-21 | Badger (common, giant) | Low |
| 22-24 | Boar (wild, giant) | Med. |
| 25-26 | Brownie* | - |
| 27-32 | Dog (wild, war) | Med. |
| 33-35 | Dog, blink* | High |
| 36-42 | Mammal, small (mouse, fox, chipmunk, rabbit, wild pig, gopher, hamster) | Low |
| 43-44 | Cat, small (domestic, wild) | Med. |
| 45-49 | Horse (heavy, medium, light, pony, wild, mule) | Med. |
| 50-51 | Hyena | Low |
| 52-53 | Rat (common, giant) | Med. |
| 54-55 | Wemic | - |
| 56-00 | Human/demihuman | - |

### Table 41: Swamp Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-08 | Avian (owl, heron, loon, | |

| | | |
|---|---|---|
| | raven) | Low |
| 09-11 | Badger (common, giant) | Low |
| 12-14 | Bat (normal, large) | Low |
| 15-17 | Boar (wild, giant, warthog) | Med. |
| 18-22 | Crocodile (common) | Neg. |
| 23-25 | Frog (giant) | Neg. |
| 26-28 | Lizard (giant) | Neg. |
| 29-32 | Lizard man (advanced) | - |
| 33-39 | Mammal, small (ferret, fox, otter, mouse, muskrat) | Low |
| 40-41 | Naga (water)* | - |
| 42-44 | Porcupine (black, brown, giant) | Low |
| 45-47 | Rat (common, giant) | Med. |
| 48 | Shambling mound* | Low |
| 49-60 | Snake (constrictor, giant constrictor) | Neg. |
| 61-63 | Toad (giant) | Neg. |
| 64-65 | Werebear* | - |
| 61-00 | Human/demihuman | - |

### Table 42: Underdark Followers

| D100 Roll | Follower | Trainability |
|---|---|---|
| 01-06 | Bat (normal, large) | Low |
| 07-18 | Bear (cave) | Med. |
| 19-21 | Beetle (fire, boring) | Low. |
| 22-24 | Crocodile (common) | Neg. |
| 25-26 | Doppleganger* | - |
| 27-34 | Lizard (giant--subspecies) | Med. |
| 35-38 | Lizard (subterranean) | Neg. |
| 39-40 | Mimic (common)* | High |
| 41-48 | Mongrelman | - |
| 49-51 | Myconid* | Low |
| 52-53 | Otyugh* | Med. |
| 54-59 | Owlbear | Low |
| 60-62 | Rat (common, giant) | Med. |
| 63-65 | Spider (giant—steeder) | High |
| 66-00 | Human/demihuman | - |

**Subspecies:** This assumes a subspecies native to the Underdark that is more intelligent or trainable than the standard species.

### Table 43: Human/Demihuman Followers

| D100 Roll | Follower |
|---|---|
| 01-02 | Bard |
| 03 | Bard (half-elf) |
| 04-06 | Druid |
| 07-08 | Druid (half-elf) |
| 09-14 | Cleric |
| 15 | Cleric (elf)* |
| 16 | Cleric (half-elf) |
| 17-23 | Fighter (elf) |
| 24-28 | Fighter (gnome) |
| 29-33 | Fighter (halfling) |
| 34-51 | Fighter |
| 52 | Fighter/Cleric (half-elf) |
| 53-54 | Fighter/Mage (elf)* |
| 55 | Fighter/Illusionist (gnome)* |
| 56-67 | Ranger (half-elf) |
| 68-92 | Ranger |
| 93 | Ranger/Cleric (half-elf) |
| 94-95 | Thief (halfling) |
| 96-97 | Thief |
| 98 | Thief (gnome) |
| 99-00 | DM's Choice |

* If ranger has had a follower of this type, roll again.

**Sea Ranger:** Any full elf follower is 80% likely to be an aquatic elf.

**Mountaineer:** Replace any full elf with mountain dwarf. Any full elf fighter/mage is replaced by a gnome fighter/illusionist.

**Helpful Statistics**

*Avian* (tern, penguin, pelican, duck, parrot, cockatoo, toucan, crow, raven, loon, heron): Int animal; AL N; AC 7; MV 1-3, Fl 24-36 (B) (penguin: MV 3); HD 1-4 hp; THAC0 nil or 20; #AT nil or 1; Dmg nil or 1; SZ T or S; ML 5-7; XP 0 or 15

## General Behavior of Followers

This section pertains to animal followers, as do the three sections which follow--Training Animal Followers, Follower Loyalty, and Parting Company. Information relevant to human and demihuman followers can be found in the last section of this chapter.

What exactly does an animal follower *do*, anyway?

At first, animal followers do little more than that--they follow. While an avian follower may perch on the ranger's shoulder for a few miles or a dog may scout up ahead, for the most part, followers linger behind, keeping perhaps 10-20 feet between themselves and the ranger.

In general, an animal follower attempts to accompany the ranger wherever he goes. If the ranger enters a cave, the follower goes in after him. If the ranger paddles a canoe, the follower attempts to swim alongside. If the follower can't swim, it waits on shore for the ranger to return. If the follower is too big to squeeze through an underground passage, it may surface and wait for the ranger outside.

Likewise, if a ranger moves at a pace faster than the follower can maintain, the follower will attempt to pursue as best it can. When a ranger interrupts his travels--for instance, if he stops to camp--he may give the lagging follower enough time to catch up. If a follower is unable to rejoin the ranger because of a lost trail (the animal hasn't seen the ranger in several days and can no longer track him), physical barriers (the animal is incapable of following the ranger across a vast river) or inhospitable terrain (a seafaring ranger has left for the shore, abandoning a water-breathing follower), the follower is considered to be released; see the Parting Company section below for details.

## Routine Activities

For the most part, an animal follower can take care of itself. Assuming there's an

adequate supply of game or edible vegetation in the area, the animal will hunt or graze as necessary to keep itself fed. It will find its own water, keep itself groomed, and rest when tired. If the ranger marches by day and rests by night, nocturnal animals will either reverse their normal sleeping patterns and sleep when the ranger sleeps, or sleep by day and catch up with the ranger in the evening.

In extreme circumstances, an animal follower may depend on the ranger for routine care. If an animal follower accompanies a ranger into a city or other area where it's unable to hunt, the ranger will probably have to supply food. In a hot desert, a ranger may need to share his water. Wounded or ailing animals sometimes require medical attention. If an animal fails to receive adequate care, it may abandon the ranger (see the Parting Company section).

As an animal becomes more attached to a ranger, it may require extra attention or reassurance. Usually, an animal lets the ranger know when it needs attention by rubbing against him, frolicking in front of him, or whining incessantly. Usually, a ranger can soothe an anxious animal follower by playing with it for a few minutes, offering some comforting words, or stroking its fur. If the ranger makes a habit of ignoring a follower, it may abandon him.

## Procreation

Most healthy animals have a powerful instinct to procreate. On occasion, a follower will disappear into the wilderness to seek a mate. Usually, the follower returns in a few hours, or at most, a few days. However, so strong is the urge that the follower may abandon the ranger altogether if it has to travel long distances to find a suitable partner. Also, the quest for a mate is not without risk; a male follower may die while fighting a rival for the attentions of a desirable female (which may account for why some followers mysteriously disappear and never come back). But more often than not, a follower will complete its liaison without incident, rejoining its ranger unharmed and content.

Should a female animal follower give birth, the offspring don't automatically become followers. Initially, offspring are considered "followers" of the parent, as their relationship with their mother more or less parallels the mother's relationship with the ranger. As the offspring mature, they may wander away to start lives of their own, or they may stay and become followers, as decided by the DM. Offspring who become followers count against the ranger's normal limit.

## Combat

Animal followers will rarely defend their rangers against attack unless trained to do so (see the Training Followers section below), especially if the opposition is supernatural or uses fire. In general, a follower is mainly concerned with its own safety, fighting only when necessary to protect itself. An exceptionally violent animal may relish any opportunity to attack, and some will stand guard over or attempt to drag away their incapacitated ranger, but most of the time, a follower is more likely to take cover or retreat than engage in combat. The DM determines the combat reactions of a follower just as he would for any animal in the game.

## Communication

When a ranger acquires an animal follower, he gains no special way of communicating with it. Unless the ranger trains the creature to respond to specific vocal sounds or physical signals, the follower passively accompanies the ranger on his travels, oblivious to his commands.

## Reactions to Others

Animal followers feel loyal and friendly to their rangers. Most animal followers would no more harm their rangers than they would their own mothers. A follower would be unlikely to retaliate violently if the ranger mistreated it; instead, the follower would simply leave.

The ranger's presence has a calming influence on wild animal followers which tempers their reactions to the ranger's other companions. The animal followers will generally leave other player characters alone, so long as the PCs keep their distance and don't antagonize them. However, if a PC comes too close to a lion, tiger, or other wild animal follower, the follower may respond with a warning snarl or even a swipe of the paw. If the PC doesn't get the message, the follower may attack. Such an attack continues until the PC withdraws or the ranger intervenes. If the ranger has trained the follower to attack only when ordered, fellow PCs won't have to worry about assaults. Otherwise, the ranger's companions are advised to keep their distance. Even a ranger will not approach a predatory follower just after it has made a kill.

Naturally docile animals, such as sheep and mice, pose no threat to the party. Neither do domesticated creatures, such as farm animals and pets. Unless a trained animal is responding to its ranger's commands, the DM will decide how docile followers react, exactly as he does for followers that are wild animals.

Wild animal followers respond to non-player characters in much the same way as they do the ranger's companions; that is, they ignore NPCs who keep their distance and make no hostile actions, but may attack NPCs who get too close or threaten them. Docile animals respond timidly to unfamiliar NPCs, possibly cowering behind the ranger or seeking cover.

A ranger's calming influence also extends to followers who would normally consider each other predator and prey. If a deer and a lion are both among a ranger's followers, they co-exist harmoniously so long as they remain with the ranger. Though it's unlikely the pair would cuddle up together to go to sleep, neither would the lion eat the deer. At the same time, the lion follower would consider all other deer fair game, hunting them as necessary to satisfy its hunger. Should the ranger abandon or dismiss his lion and deer followers, the animals would shortly revert to their natural states, and the deer might stand a good chance of becoming the lion's next meal.

## Disadvantages

Animal followers provide many benefits to rangers, but there can be drawbacks as well. Here are a few typical complications, which the DM can use to add color to a campaign, serve as story springboards, or enliven an otherwise routine encounter.

- Some animals attract predators. A rat follower could attract a giant snake, or a boar follower might lure a hungry dragon. The ranger and his companions could be ambushed along with the followers.
- Certain followers may be sought by hunters and collectors. A weasel follower with lustrous ivory fur might prove irresistible to unprincipled sportsmen. A renegade wizard could target the party to get her hands on the feathers of a black owl follower, which she needs for a spell component. Rustlers might assault a party just to steal a ranger's horse follower.
- The presence of unusual followers may make NPCs less likely to deal with the party. A traveler may hesitate to share information when a growling bear lurks in the background. A giant eagle fluttering overhead could discourage a merchant from trading with the PCs. The DM may modify an NPC's reaction by as much as -4 when disconcerting, threatening, or obnoxious animal followers are present.
- Some animals have habits which can make life uncomfortable, if not downright miserable, for the ranger and his companions. A filthy hyena follower might smell so bad that it makes the PCs' eyes burn. A parrot follower may insist on keeping the party up all night with its incessant chatter. A curious squirrel follower could pick the pocket of a slumbering wizard, steal a crucial spell component, then bury it in the forest.

## Training Animal Followers

Rangers can train their animal followers to perform a remarkable variety of tricks and tasks. Because of the ranger's unique rapport with his animal followers, he can teach them more efficiently than other characters are able to train normal animals. And because of the followers' eagerness to please, they learn their tricks and tasks more quickly.

Two methods are provided for representing this special relationship with animal followers. The Standard method is the simplest and most straightforward, but treats all animals more or less the same. The Alternative method requires extra bookkeeping, but is a bit more realistic, as it takes into account the learning capacities of different species. Both methods are similar to and compatible with the animal training proficiency (the animal training proficiency itself isn't used to train followers). Whichever method you prefer, it's best to stick with it throughout the entire campaign.

Before examining the training methods, let's clarify what is meant by tricks and tasks. These definitions apply to the animal training proficiency as well as the training methods described below.

A *trick* is a specific action performed in response to a specific stimulus, such as a command, a sound, or a gesture. The action involves only a single step and requires no independent decision-making. In every instance, the animal performs the action exactly as taught, without improvisation of any kind. The stimulus must be unambiguous and precise ("stay"); any variance in the stimulus ("Don't move") is likely to be misinterpreted, resulting in a failure to perform the trick as intended.

A *task* is general sequence of actions performed in response to a stimulus. The action may involve multiple steps and require some independent decision-making. Completion of the task may require a certain amount of improvisation. The stimulus may be non-specific (for instance, if taught the task of tracking, the follower is able to track a variety

of animals, not just one particular species). Obviously, tasks are more difficult to master than tricks.

## The Standard Method

This training method uses essentially the same rules as the animal training proficiency described in Chapter 5 of the *Player's Handbook*. The ranger announces the trick or task he wishes to teach a particular follower (examples of tricks and tasks are given below). The DM may disallow the trick or task if he decides the follower is incapable of performing it; a reptile, for instance, may be too dull to come on command, or a chipmunk may lack the attention span needed to track. If the DM approves, the ranger proceeds. It takes the ranger 2d4 weeks to teach a trick to a follower and two months to teach a task.

When the training period ends, the ranger makes a Wisdom check (using his own Wisdom score). If the check succeeds, the animal has mastered the trick or task. If the check fails, the ranger can make another attempt to teach the follower the same trick or task by expending the same time and effort. He then makes another Wisdom check. If it succeeds, the animal learns the trick or task. If it fails, then the animal cannot be trained to perform that trick or task. A follower can learn a maximum of 2d4 tasks or tricks, in any combination of the two.

A ranger can train up to three followers at the same time. As all followers are naturally cooperative with the ranger, he doesn't need to prepare "wild" animal followers by taming them (unlike the requirement given in the animal training proficiency).

Successful training assumes the ranger works with the followers for short periods on a regular basis; the amount of time spent is less important than working with the follower every day. If the ranger fails to maintain a regular schedule--say, if he skips a full week or so of training--he must start over, investing another two months for a task or 2d4 weeks for a trick.

The DM should write down the number of tricks and tasks a particular follower is able to learn. The player should also note the tricks and tasks on his ranger's record sheet as the followers learn them. Additionally, when teaching a follower a new trick or task, the player should keep track of how many weeks have passed for each training period.

## The Alternative Method

The Alternative method involves the use of a *trainability rating*, a general indication of a follower's capacity to learn. The higher the trainability rating, the more tricks and tasks an animal can know and the faster it can master them. The trainability rating is primarily based on the animal's Intelligence score, but also takes into account its fondness for humans and demihumans, its willingness to learn, and its eagerness to please. Trainability ratings apply only to a ranger's followers and have no bearing on the relationships between animals and other character classes or on the animal training proficiency.

Tables 31-42 give trainability ratings for a variety of animal followers. The DM can use the trainability ratings in these tables as guidelines for assigning ratings to species not listed, should he decide to modify or expand the tables.

The DM may also make exceptions for animal individuals. He may decide, for instance, that a particular squirrel is smart enough to merit a Medium rating rather than the Low rating given on Table 34. Likewise, he may rule that an exceptionally dull wolf deserves no better than a Low rating. In any case, the DM should make such a determination as soon as the follower arrives. A follower's trainability rating should not change once it has been assigned.

The four ratings--Negligible, Low, Medium, and High--are discussed in detail below. Each describes the types of animals encompassed by the rating, the time required to learn tricks and tasks, and the maximum number of tricks and tasks that followers with the rating can learn. For convenience, Table 44 summarizes this information.

Additionally, each description lists several tricks and tasks associated with the rating. The lists don't include all possible tricks and tasks, but a general sample; the DM should use the lists as a basis to determine the difficulty of any other trick or task that the ranger wishes to teach a follower. A follower can learn tricks and tasks associated with all lesser ratings, as well as those associated with its own rating; a Medium trainability follower, for instance, can learn tricks and tasks associated with Negligible, Low, and Medium ratings.

In all other respects, the Alternative method uses the same rules as the Standard method. Only the types and numbers of tricks and tasks, along with the training times, are different.

**Negligible Trainability**

This category includes animals with little aptitude for learning, such as fish, insects, arachnids, and reptiles. Most of these creatures have Intelligence scores of 0. Followers with negligible trainability can learn only the simplest tricks, such as those requiring movement towards or away from a stimulus. They can't learn tasks. Since some of these creatures are unable to discern sound, the ranger may need to use a bright light (such as a torch) or a broad gesture (a sweep of the hands) instead of a vocal command to get the follower to respond.

A follower with negligible trainability can learn no more than a few (1d4) tricks, though the DM may decide that a particular animal is not capable of learning *any* tricks. Training time is 2d6 weeks per trick.

Sample tricks:

**Withdraw.** The follower moves away from the ranger at maximum speed for 1-4 rounds, then stops.

**Come.** The follower advances toward ranger at maximum speed, stopping when it comes within a few feet.

**Stay.** The follower stays in place for 2-12 rounds, after which it resumes its normal activity.

**Attack.** The follower aggressively attacks any creature indicated by the ranger. The attacks persist until the ranger breaks the command. Whether a follower fights to the death is up to the DM; in many cases, a follower in danger of losing its life (an animal that has lost half of its hit points) will withdraw. If the ranger commands such an animal to continue its attacks, a morale check may be in order (see the Parting Company section below). Animals that have been attack-trained usually have a base morale of at least 11.

Attack-trained animals get a save vs. rods against another ranger's *animal empathy*

ability.

**Low Trainability**

Animals in this category have an average but unexceptional aptitude for learning. They can learn a wide range of tricks, but few tasks. The category includes herd animals, small mammals, and birds, most of which have Intelligence scores of 1. The majority of animals either belong to this category or the Medium trainability category.

A follower with Low trainability can learn 2-8 (2d4) tricks and tasks, of which half or less can be tasks. Training time is 2-8 (2d4) weeks per trick and 10 weeks for tasks.

Sample tricks:

**Heel.** The follower remains within a few feet of the ranger, mimicking his movement. The follower tries to move as fast as the ranger, stop when he stops, and stay with him until the ranger breaks the command. This type of movement is distinct from the follower's normal movement, as the follower remains at the ranger's side at all times, rather than lurking in back of the party. Mastery of the Come and Stay tricks usually precedes the learning of this trick.

**Sit**. The follower sits on its haunches until the ranger breaks the command, at which time the follower resumes its normal actions. Variations include Standing, Rearing, Rolling Over, Playing Dead, and other simple physical feats, all of which are distinct tricks and require individual training periods.

**Speak.** The follower growls, barks, chirps, or makes any other natural sound on command.

**Fetch.** The follower retrieves a specific object and brings it to the ranger. Typical objects include coins, balls, bones, or sticks. In order for the follower to execute the command, the ranger must first show the object to the follower before throwing it or hiding it. The follower won't search indefinitely; if the ranger tosses the object in a field of high grass, for instance, the follower may search for 10-30 minutes before giving up and returning to the ranger. Note that the Fetch trick doesn't allow the follower to hunt for and recognize objects belonging to a general category; that is, a follower can't enter a building and look for hidden gems or other treasure items.

**Carry Rider.** This assumes the animal is physically able to carry a rider. It obeys simple movement commands from the rider, such as turning left and right, stopping, and trotting. However, the follower can't execute any of the maneuvers associated with the Stunt Riding task explained in the Medium trainability section below. This does not replace riding proficiency; any maneuvers performed by the rider, such as using the mount as a shield or leaping from the steed's back to the ground, require the riding proficiency checks.

Sample tasks:

**Retrieve.** The follower can locate and bring back a specific type of item from a general location. Such items might include coins, jewelry, weapons, or food; a general location might be the interior of a building, a grove of trees, or a shallow stream. The ranger must show the follower a sample similar to the desired item, and must also indicate the area which the follower is to search. The follower won't search indefinitely; if unable to find an item, it usually will return empty-handed (or empty-mouthed) within an hour.

**Bodyguard.** The follower protects the ranger or a designated friend from attacks by

keeping opponents at bay or by attacking them directly, as commanded by the ranger. The follower will fight alongside the ranger, making its own decisions which enemies to attack (it may, for instance, attack an unnoticed opponent sneaking up behind the ranger). The Attack trick must be learned before this task.

**Medium Trainability**

Exceptionally bright animals belong to this group, including those commonly found as pets, trained for circuses, or used in warfare. These animals will tend to have Intelligence scores in the 2-4 range.

A follower with medium trainability is able to learn 4-10 (2d4+2) tricks or tasks in any combination. Training time is 2d3 (2-6) weeks for tricks, and 8 weeks for tasks.

Sample tasks:

**Track.** The follower can follow the trail of an animal, human, or demihuman; in general, only followers capable of tracking prey by scent are eligible to learn this task. The follower must be familiar with the creature being tracked, or the ranger must provide a sample of the scent (a piece of clothing, a scrap of hide). It can retrace its path to lead the ranger to the creature. If the follower assists the ranger in tracking, the ranger adds +1 to his Tracking proficiency checks (see Chapter 2). If the follower is tracking by itself, it makes Tracking checks independently of the ranger. Assume that the base Tracking score of a wolf, lion, or similar predator ranges from 13-16. A hunting dog's score may be as high as 19, while a young badger's score as low as 11; the DM makes the call.

**Stunt Riding.** An animal follower with this proficiency can ride, performing all of the feats associated with the airborne and land-based riding proficiencies (as appropriate to the follower's size and species). For airborne mounts, animal's Stunt Riding score is the same as the ranger's Wisdom score, with a -2 penalty. For land-based mounts, the Stunt Riding score is equal to the ranger's Wisdom score, with a +3 bonus. Therefore, a ranger with Wisdom 14 who wants his stunt-riding dog to balance on a horse leaping a gap wider than 12 feet must roll his Riding score of 17 or less (14 for his Wisdom, +3 for a land-based mount).

**High Trainability**

Only a handful of followers, such as dolphins and certain primates, qualify for this category. Animals with high trainability can reason, weigh options, and arrive at their own conclusions. Their ability to learn tasks rivals that of some humans and demihumans. Their Intelligence scores begin at 5 and go up.

A follower with high trainability can learn 6-12 (2d4+4) tricks or tasks, or any combination of the two. Training time is 1d4 weeks for tricks, and 6 weeks for tasks.

Sample tasks:

**Lookout.** As directed by the ranger, the follower stands watch or scouts ahead, keeping alert for signs of trouble. If the follower perceives a threat, it unobtrusively alerts the ranger. This training includes a special signal the follower can give for the ranger's species enemy.

**Complex Chore.** The follower can perform a complex chore requiring decision-making or a relatively detailed series of steps. Such chores include building a fire, washing dishes, or grooming a horse. Learning each chore requires a separate training period.

**Weapon Use.** The follower wields a sword, dagger, or other simple weapon, using it when attacking. Each weapon requires its own training period, and opposable thumbs are needed in most instances. This task is most useful when the follower has already mastered the Attack trick or Bodyguard task, described above.

**Not Applicable (-)**

Creatures who can communicate with spoken language and whose Intelligence scores are on par with those of humans don't have trainability ratings. To determine their behavior as followers, consult the guidelines in the Humans and Demihumans section below, along with the relevant information in their *Monstrous Compendium*® entries.

### Table 44: Follower Training Table

| TR | TT (Tricks) | TT (Tasks) | Max. Number |
|---|---|---|---|
| Neg. | 2d6 weeks | - | 1d4-1 |
| Low | 2d4 weeks | 10 weeks | 2d4* |
| Med. | 2d3 weeks | 8 weeks | 2d4+2 |
| High | 1d4 weeks | 6 weeks | 2d4+4 |

* Up to half of these can be tasks

Abbreviations:
**TR:** Trainability Rating
**TT:** Training Time (time required to learn trick or task)
**Max. Number:** Maximum number of tricks and tasks (in any combination) the follower may learn

### Success of Tricks and Tasks

Followers perform most tricks and simple tasks automatically; no die rolls or success checks are necessary. If the outcome of a particular task is uncertain (a follower taught to pull a wagon has a heavy load to haul) the DM may require an ability check if the relevant ability score is known (the follower pulls the wagon if a Strength check succeeds), or he can assign a percentile chance based on his assessment of the situation (the load is exceedingly heavy; the DM sets the chance of success at 20%).

The DM should adjudicate the Attack trick, the Bodyguard task, and similar combat-oriented tricks and tasks just as he would for normal combat situations, determining attack and damage rolls as required.

## Parting Company

If a ranger treats his followers well, they'll remain with him indefinitely. If the ranger has not neglected the well-being of his followers, or violated their trust, loyalty checks for them are rarely necessary.

### When a Follower Abandons a Ranger

However, there is a limit as to how much abuse a follower will tolerate. The actions--or inaction--of the ranger may necessitate morale checks, as determined by the DM. Should a morale check succeed, the follower remains with the ranger. Should a check fail, the follower goes its own way, in most cases never to return. Followers who permanently abandon their ranger are considered lost and are not replaced.

Here are some situations that may result in a follower abandoning its ranger. It's up to the DM to decide when a given situation becomes stressful enough for the follower to require a morale check.

**Inhospitable Terrain.** An animal may hesitate to enter an environment radically different from its own. A hawk follower native to the mountains probably won't resist following a ranger into a forest or plain, but it may balk at entering an arctic region. Even if an animal follows a ranger into hostile terrain, it may not remain there for long; for example, a hawk may tolerate the freezing climate of the arctic for no more than a day or two.

**Reckless Endangerment.** Followers trained for combat willingly participate in encounters that may result in injury or even death. However, if the ranger forces an animal to participate in an unrelenting series of battles, resulting in serious damage or chronic fatigue, the follower may rebel and leave. Likewise, if a ranger regularly compels an animal to follow him into caverns, ruins, and similarly dangerous places, the animal may flee.

**Starvation.** Though followers usually find their own food, in certain situations they may depend on their rangers for nourishment. If a ranger neglects to keep a follower fed, the follower may decide to look for greener pastures.

**Mistreatment.** Most followers won't stand for beatings, whippings, or other physical mistreatment. (Being of noble character, most rangers won't administer such punishments, but exceptions do occur.) If the ranger persists in this behavior, abandonment is inevitable.

**Inattention.** Some followers, particularly dogs and other domestic animals, have emotional as well as physical needs. A ranger who consistently ignores or withholds praise and affection from his followers risks losing them.

**Mating Season.** An animal's urge to mate may overwhelm its loyalty to its ranger. An animal may disappear during mating season and never return, particularly if it has trouble finding a suitable partner. Morale checks usually aren't applicable in these situations; instead, the DM may take advantage of mating season to restore balance to the game by eliminating a powerful follower, or getting rid of a cumbersome follower that's proving to be too much of a burden to a ranger.

**Impending Death.** When certain followers reach the end of their days, due to illness or old age, they may abandon their ranger to die alone (an aged elephant journeying to an elephant's graveyard). Morale checks aren't usually necessary. Instead, the DM may engineer a poignant scene where the ranger realizes that death is near for his loyal companion, and must come to terms with the loss.

### When a Ranger Abandons a Follower

Situations may arise where the ranger wants to rid himself of a particular follower. A

follower with negligible trainability may prove to be more annoying than helpful. A filthy or frightening follower may make the party uncomfortable. A follower may eat too much, move too slowly, or scare off too many NPCs. Whatever the reason, the ranger has two options for abandoning a follower, either of which he can exercise any time he likes.

**Release.** This is a form of temporary abandonment. Using commanding gestures and a firm voice, the ranger lets the follower know that he wants it to remain behind. Because of the special bond between the follower and the ranger, the follower instinctively understands what the ranger is telling it, and responds by reluctantly wandering away into the wilderness. Should the ranger return to the general area where he released the follower, and call out to the follower or otherwise make his presence known, the released animal may show up again, ready to resume its role as a follower. (The DM decides if a released follower returns; generally, if the ranger attempts to locate the follower within a few months of its release, the animal will show up within a day or so. Otherwise, the ranger should assume that the released follower has died or relocated.)

**Dismiss.** This is a form of permanent abandonment. As with release, the ranger communicates his desire to dismiss a follower through a series of gestures and vocal commands. The dismissed follower moves away into the wilderness, never to be seen again. A dismissed follower will not return to the ranger. A ranger can=t replace dismissed followers; they still count against his normal limit.

### Other Options

A ranger who doesn't want to release or dismiss an unwanted animal follower has a host of other options, limited only by his imagination and the DM's approval. He can arrange for a farmer, a zoo keeper, or other NPC to care for the follower (making sure, of course, the caretaker is of good alignment). He can keep it in his stronghold, asking a human or demihuman follower to care for it. He can also give it to a friendly NPC as a gift (again, presuming the NPC is of good alignment; failure to do so may be taken as a sign of betrayal by the ranger's remaining followers).

## Humans and Demihumans

Humans and demihumans become followers for different reasons than animals. Drawn to a ranger's reputation for honor and integrity, humans and demihumans serve as followers out of respect, admiration, and hero-worship. They remain loyal so long as their basic needs are met, and the ranger doesn't betray their trust.

Trainability doesn't apply to human and demihuman followers. Instead, they will perform any duties or functions within reason. Typically, such followers serve as soldiers, but they may also work as guards, servants, or personal aides.

Human and demihuman followers accompany the ranger as long as their basic needs are met and their are fairly treated. Some may serve with the understanding that the ranger will teach them the ways of the wilderness. It's up to the ranger to determine the needs and expectations of each new follower when he arrives.

A ranger's human and demihuman followers aren't confined to a stronghold. They may accompany him on his travels or undertake independent missions. In other respects, a ranger's followers adhere to the guidelines given in Chapter 12 of the *Player's*

*Handbook*. The DM should prepare a character sheet with all relevant statistics for each new follower. The DM, not the player, controls the actions of the follower.

**Restrictions.** In general, human and demihuman followers should be of 1st to 4th level when they appear; a 15th-level fighter has better things to do than tag along after a 10th-level ranger. Additionally, the follower should be of good alignment; except in rare cases, rangers won't tolerate neutral or evil followers.

**Followers can be of either sex.** The age of the follower is also unimportant, although because of their low levels, most followers will be relatively young.

**Personalities.** Impressionable youths, curious scholars, impulsive vagabonds, and orphaned wanderers all make good followers. Interesting quirks or personal problems make followers more fun for the players, and also provide springboards for adventures. Chapter 12 of the *DUNGEON MASTER Guide* offers suggestions for creating NPC personalities, which are also suitable for followers.

**Abandonment.** Just as he may do with animal followers, the ranger may dismiss or release his human and demihuman followers. Released followers may rejoin the ranger at a later time. Human and demihuman rangers who are dismissed or otherwise lost can't be replaced.

Human and demihuman followers may also abandon their rangers. Situations that may trigger abandonment include reckless endangerment, continual verbal abuse, or inattention to the follower's needs. If the ranger commits an act of cowardice or otherwise violates his code of honor, a follower may become disillusioned and abandon the ranger in disgust. The DM might make morale checks to determine if a follower stays or goes, he may resolve the situation by role-playing (the follower requests an explanation for the ranger's cowardly behavior; the follower stays if the ranger offers a reasonable justification), or in extreme cases, he may have the follower simply disappear without explanation.

## Notes on Falconry

The principle of training hunting birds is that all food comes from the trainer, otherwise they are likely to fly off. They will be very dependent on the trainer; failure to feed them for 24 hours is pushing their limits. If more than 36 hours pass, the birds will likely die.

Birds should be flown and exercised daily. Their health will deteriorate if they are not flown once at least every 3-4 days.

Flying multiple birds at once is nearly impossible, as species dominance instincts take over; the higher status bird will let the lower status bird do the dirty work, then come in and steal the kill. Rarely, a species will hunt in family groups--one main hunter and several others to flush out the prey. A real-world example of this behavior is the Harris hawk.

No falconer will fail to wear a heavy leather gauntlet on his catching arm (the "off" arm, usually the left). The gauntlet will not be metal, which is uncomfortable for the bird. It will cover the forearm, perhaps extending as far as the elbow. Carrying birds like this is tiring, so a perch of some sort (as on a staff) is desirable.

Hunting birds are never carried on the shoulder. Their natural instinct is to take out an eye or ear (which they can do with unbelievable speed) and their training reinforces the

instinct. Even a well-trained bird cannot be trusted so close to the face.

Owls can be flown as hunting birds. They are much harder to train than hawks or falcons (comparable to the independent feline versus the eager-to-please canine). Unlike other birds, owls can be flown in the dark; however, their instinct is to strike stationary targets. They will not attack while a target is moving, but only when it pauses, stops, or hunkers down. Owls will kill hawks and falcons; the two types of birds cannot be flown together.

# Chapter 4: Ranger Kits

Although they share similar abilities and philosophies, no two rangers are quite alike. But how do you make one different from another?

This chapter offers a convenient solution in the form of *character kits*. Character kits are structured collections of proficiencies, traits, benefits, and limitations that help define different rangers as unique individuals. A kit can serve as a basis for a ranger's personality, background, and role in a campaign.

Character kits are entirely optional--ranger characters can get along without them just fine. But they're a lot of fun, adding color and depth to a campaign, as well as making rangers more interesting to play. We'll take a look at a number of kits in detail, and explain how to use them. We'll also give some tips on designing new kits from scratch.

## Acquiring Kits

Players choose character kits for their rangers as part of the character creation process. Only one kit can be chosen for a particular ranger.

When creating a new ranger, begin by determining his ability scores (*Player's Handbook*, Chapter 1), race (*PH*, Chapter 2) and alignment (*PH*, Chapter 4). At this point, select a character kit, recording the pertinent information on the character sheet (the record sheets at the end of this book are designed for character kits; permission is granted to copy these pages for personal use). In accordance with the kit information, flesh out the character by determining other relevant details, such as character proficiencies (*PH*, Chapter 5; and Chapter 5 of this book) and equipment (*PH*, Chapter 6; and Chapter 7 of this book).

A player chooses a character kit at the outset of his ranger's career. It's possible, however, to incorporate the character kit rules into an existing campaign, providing the DM agrees that the kit is appropriate. A kit must be compatible with a ranger's personal history, his background, and his established personality traits. For example, the Mountain Man kit doesn't make sense for a ranger who's never been to the mountains. On the other hand, the Sea Ranger kit is a logical choice for a ranger who's spent most of his life at sea.

## DM Decisions

Before players create their characters, the DM should examine each of the kits and

consider the following questions:

Is this kit appropriate to the campaign? Not all kits fit with every campaign, and the DM is free to exclude any he feels are inappropriate. If the campaign takes place entirely on land, for instance, players may be barred from choosing the Sea Ranger kit. Before the players create their characters, the DM should tell them which kits are allowed and which are forbidden.

Do the players need additional information about any kit? Any campaign details relevant to a particular kit should be explained to the players before they create their characters. For example, the DM may announce that an army of orcs have allied with a group of stone giants and declared war against all Giant Killers, or that the local king has levied a hefty tax on anyone charging for guide services, Pathfinders included.

Are there changes in any kit? The parameters for each kit aren't engraved in stone, and the DM is free to make any changes he likes. He may decide that only female Guardians are allowed in his campaign world, or that all Justifiers must be members of a particular military order. All such changes should be made clear to the players before they create their characters.

## Kit Subsections

All character kits described in this chapter consist of the following elements:

**Description:** This section describes the features that distinguish a character associated with this kit, including his cultural background, duties, manner, and appearance.

**Requirements:** Any special racial, ability score, or alignment requirements are listed here. Characters can't take the kit if they don't meet the listed qualifications. "Standard" means that no special racial or ability requirements apply to this kit. A good alignment is assumed.

**Primary Terrain:** Certain kits tend to be associated with specific environments. *Required* indicates that a character taking the kit must take the indicated primary terrain; if more than one type is listed, the player may choose whichever type he prefers. *Recommended* means that a character taking this kit is advised to use one of the listed primary terrain types, but isn't required to do so. *Any* means that there are no required or recommended types for this kit; the player may use any primary terrain he likes.

**Role:** The character's role in society and in a campaign is detailed here. Typical motivations, personality, and beliefs are examined, along with common relationships with other people, reasons for joining an adventuring party, and usual function within a party. Note that these traits don't necessarily apply to each and every character associated with this kit; players may shape the personalities of their characters based on these suggestions, or they may disregard them entirely and create personalities of their own design.

**Secondary Skills:** If you're using the rules for secondary skills from Chapter 5 of the *Player's Handbook*, the character is restricted to the choice of skills listed in this section, or "no skill."

**Weapon Proficiencies:** If you're using the weapon proficiency rules, a kit may require the character to take specific weapon proficiencies or choose from a restricted list. Alternately, the character may have the option of choosing from a list of recommended

weapons.

**Nonweapon Proficiencies:** Although nonweapon proficiency rules are technically optional, they're strongly recommended when using ranger kits. However, if you're using secondary skills, you shouldn't use nonweapon proficiencies.

*Bonus* proficiencies are received free of charge; they cost no proficiency slots. A *required* proficiency must be taken and does cost slots. *Recommended* proficiencies are skills typical for the kit. They cost the normal number of proficiency slots. It's a good idea for a beginning player to spend all or most of the ranger's initial slots on recommended proficiencies. *Barred* proficiencies cannot be taken initially, though they can be taken during play.

An asterisk (*) indicates a new proficiency described in Chapter 5.

**Armor/Equipment:** Some character types tend to use specific equipment, while others have limitations on the items available to them. Requirements and recommendations are given here, along with any style preferences associated with the kit. Unless indicated otherwise, a character must buy the required equipment, including weapons, from his initial funds. Like all members of the warrior group, a ranger begins with 50-200 (5d4 * 10) gp. If he lacks the funds to buy all of his required equipment, he should buy as much as he can, then pick up the rest as soon as he gets the money.

**Species Enemy:** A particular species enemy may be required or recommended. If the enemy is *required*, the character has no choice; he must take the indicated creature as a species enemy. If more than one creature is listed as a required enemy, the character can pick the one he prefers. *Recommended* enemies are only suggestions; the character may choose one if he likes, or ignore the recommendation. *Any* means that a ranger should choose his species enemy normally, as described in Chapter 2.

**Followers:** As with the species enemy entry, this section may include either required or recommended followers. The DM should make sure that at least one of each *required* type shows up as a follower some time in the ranger's career (depending on there being enough slots available). *Recommended* followers show up at the DM's option. Any means that the character has no special follower restrictions or recommendations.

**Special Benefits:** All kits give special benefits that aren't normally available to other characters. Typical benefits include improved abilities, special relationships with followers, and reaction bonuses. All benefits are received free of charge, and don't count against the normal limitations of the ranger class.

**Special Hindrances:** To balance their special benefits, kits also carry special hindrances. Hindrances may include reaction penalties, cultural restrictions, or ability limitations. All special hindrances are in addition to any disadvantages normally associated with the ranger class.

## List of Kits

### Beastmaster

**Description:** A wanderer, the Beastmaster has a natural affinity for animals; in fact, he has a limited form of telepathic communication with them. This is often the result of a magical bond with the Animal Kingdom, formed either at the time of his birth or upon reaching young adulthood. Unlike other adventurers, the Beastmaster does not command,

train, or control his animal companions, rather they are his friends and comrades-in-arms. Misunderstood and feared by nobles and common folk alike for his unnatural abilities with animals, the Beastmaster seldom stays in one place for long, nor is he comfortable in civilized lands.

**Requirements:** Standard.

**Primary Terrain:** Any outdoor land.

**Role:** Beastmasters tend to walk alone, accompanied only by the fierce natural beasts that are their friends and allies. Traveling the fringes of settled lands, the Beastmaster has small use for the trappings of civilization, but even less for the minions of evil, particularly those of a magical or priestly nature. Thus, a Beastmaster will often find himself aiding the oppressed or enslaved, and pitted against the cruelties of evil priests or wizards and their allies.

**Secondary Skills:** Hunter, Fisher.

**Weapon Proficiencies:** A Beastmaster is initially limited to weapons that he can make himself: axe (any), club, dagger, dart, javelin, knife, quarterstaff, sling, or spear.

**Nonweapon Proficiencies:** *Bonus:* None, but see Special Benefits. *Recommended:* Agriculture, Bowyer/Fletcher, Endurance, Hunting, Leather working, Running, Swimming, Weather Sense. Optional: See Weaponsmithing (Crude) in the Mountain Man section).

*Barred:* Armorer, Etiquette, Heraldry, Navigation, Weaponsmithing.

**Armor/Equipment:** The Beastmaster starts only with leather armor and weapons he has made.

**Species Enemy:** Standard.

**Followers:** None, but see Special Benefits.

**Special Benefits:**

*Stealth:* The Beastmaster has a +5% chance to hide in natural surroundings.

*Animal Henchmen:* Although a Beastmaster receives no special followers at high level, he can acquire normal or giant animals as henchmen. He may acquire them at any level, and their number depends on his Charisma. If these animals are slain or driven away, they can be replaced by new animals without penalty (though this may take some time).

*Animal Telepathy:* The Beastmaster can establish telepathic communication with any normal or giant animal within 30', if he does nothing else in the round. The animal must have a minimum Intelligence of 1. This has the following benefits:

- The Beastmaster can communicate to the creature that he desires its friendship. If the offer is sincere (and the animal will be able to sense if it isn't), the creature can be calmed and will not attack or flee unless it is attacked.
- The Beastmaster can recruit an animal he has befriended as a henchman if he is not at his limit and if the creature fails a saving throw vs. rods. The saving throw is penalized by -1 for every three levels of experience the Beastmaster has earned. At the DM's option, animals may present themselves for recruitment in the same way that followers appear to other rangers.

*Animal Bonding:* The Beastmaster forms a mental bond with any animal he recruits as a henchman. There is no distance limit, but this ability does not cross planar boundaries. This bond has the following effects:

- The Beastmaster can communicate directly with any animal henchman to which

he has a bond. This gives him the ability to directly explain tricks or tasks he wishes the animal to attempt, or to communicate needs and desires. Conversely, the animal can also communicate its needs and desires to him.

- He can see through the eyes of the animal by concentrating on the mental link. He can see through the eyes of one creature in a round (himself included).
- He has the animal lore proficiency with respect to the bonded animal. Furthermore, if he is mentally linked to the animal, success with the proficiency is automatic.
- Every time the Beastmaster gains a level, all of his current animal henchmen gain an additional hit point.

*Animal Horde:* At 9th level, the Beastmaster can summon a horde of wild animals to fight for him. They must come from a land that he controls, and it takes one week to gather them.

They can be brought together only for some great purpose that can be explained simply. Up to 100 Hit Dice of animals per level of the Beastmaster will come. For every 10 animals, there will be a pack leader with one additional Hit Die and maximum hit points. The horde will stay together for one week for each level of the Beastmaster. There is no record of a Beastmaster summoning more than one horde in a year.

*Optional Rule:* The Beastmaster can split his experience award, giving up to half of his earned experience to any or all of his animal henchmen that played a role in the adventure. Such henchmen advance on the Fighter Experience Table, receiving +1 to attack rolls and +3 hit points for every level gained.

**Special Hindrances:**

*Empathic Shock:* The Beastmaster feels pain when one of his henchmen is wounded, suffering a -2 penalty to all rolls in the next round. If he is mentally linked with a henchman when it is killed, he suffers a -2 penalty to all rolls for the next 24 hours.

*Unruly Allies:* The Beastmaster's animal henchmen are free to come, go, or act as they will. Any attempt to arbitrarily restrict or regulate their freedom, or habitually ignoring their needs and desires, will result in resentment, sulkiness, and possible abandonment.

*Outcast:* The Beastmaster suffers a -1 penalty to reaction rolls by common NPCs, and a -2 when dealing with a civilized aristocracy. Further, his maximum effective Charisma when dealing with his own race is 15.

*Limited Funds:* The Beastmaster starts with 1d4 - 10 gp.

*No Fortress:* At no time will the Beastmaster build a fortress. At 9th level, he may establish himself as the protector of an area of land equivalent to a barony.

## Explorer

**Description:** The restless spirit of the Explorer makes him the most nomadic of all rangers. His travels take him around the world, as he continually seeks new lands to investigate and new cultures to study. No region is too remote, no society too primitive to pique the Explorer's interest. An expert in communication, survival, and anthropology, the Explorer's skills are invaluable for safely navigating uncharted terrain and negotiating

with suspicious natives.

**Requirements:** An Explorer must have a minimum Intelligence score of 12.

**Primary Terrain:** Any (no specialization; use for followers and species enemy only).

**Role:** Motivated as much by curiosity as money, the Explorer spends more of his time planning expeditions than looking for employment. Still, Explorers are in high demand as guides, mapmakers, and scouts. A reputable Explorer can demand a high price for his services. However, rumors of a lost civilization are more likely to intrigue an Explorer than the promise of treasure, and he chooses his jobs accordingly.

Though a Pathfinder (discussed elsewhere in this chapter) or similarly skilled guide plays a crucial role in leading an expedition through unexplored territory, it's often an Explorer who's actually in charge. The Explorer decides when it's best to forge ahead and when to rest. He knows that small parties travel better than large ones, as each additional member increases the likelihood of delays from injury and disease. Above all, he understands the relationship between safety and self-restraint. He discourages his companions from taking unnecessary risks whenever possible.

An Explorer balances his natural impulsiveness with healthy doses of caution and common sense. More of a scholar than a brawler, he is usually a reluctant combatant, resorting to violence only when all other options fail. But when attacking, he fights with a single-mindedness that can border on savagery. A seasoned Explorer counsels his companions to follow two rules vital to wilderness survival, particularly where primitive civilizations are suspected to exist: (1) negotiating is usually preferable to attacking; and (2) if you intend to attack, then attack to kill.

**Secondary Skills:** Fisher, Forester, Hunter, Navigator, Trader/Barterer, Trapper/Furrier.

**Weapon Proficiencies:** Because an Explorer favors lightweight, easy-to-use weapons, his weapon proficiencies are confined to the following choices: short bow, light crossbow, dagger, dart, knife, sling, short sword.

**Nonweapon Proficiencies:** *Special Bonus:* Survival; the Explorer receives the benefits of this proficiency in all terrain types. Assigning additional slots to this proficiency does not enhance its use in any way. *Required:* Cartography*, Reading/Writing. *Recommended:* Ancient History, Bowyer/Fletcher, Camouflage*, Direction Sense, Distance Sense*, Endurance, Fire-building, Fishing, Foraging*, Herbalism, Hunting, Languages (Ancient and Modern), Mountaineering, Navigation, Rope Use, Signaling*, Swimming, Trail Marking*, Trail Signs*, Weather Sense.

**Armor/Equipment:** An Explorer has no special armor or equipment requirements. However, he rarely wears armor heavier than leather and most Explorers find shields awkward and confining.

**Species Enemy:** Any.

**Followers:** An Explorer has the normal 2d6 career limit (however, see Special Hindrances).

**Special Benefits:**

*Languages:* An Explorer has the capability of learning twice the normal number of languages allowed by his Intelligence score (see Table 4 in Chapter 1 of the *Player's Handbook*). For instance, an Explorer with an Intelligence score of 12 can learn six languages instead of the usual three. All languages still cost a proficiency slot each.

*Find the Path:* The Explorer can use this ability to sense the correct direction that will

eventually lead to a desired geographical locale, which must be in an outdoor setting. The Explorer must have some clue, map, information, or body of research about the locale in order to use this ability. It can be used once per week, providing a day's worth of guidance (hence it is of greatest use on an expedition of weeks or months duration).

*Culture Sense:* This ability allows the Explorer to acquire general knowledge about the laws and customs of a tribe, village, or settlement. Once per week, the Explorer may attempt to use this ability by touching a member of the tribe or village. The villager must have the knowledge the Explorer wishes to gain; for instance, the villager can't be an infant or mentally deficient. Cooperation of the villager isn't required; touching an attacking or sleeping villager works as well.

The villager must make a saving throw vs. spells. If the throw succeeds, the Explorer learns nothing. If the throw fails, the Explorer acquires an instant understanding of the villager's laws and customs, including those applicable to related clans or tribes (such as the social etiquette pertaining to all aarakocra in the region, not just this particular group). Information learned through this ability might include local laws (no one is allowed on the village streets after dark without written permission), accepted courtesies (strangers bow to all children), and cultural taboos (hats and other head coverings are considered offensive). Successful use of this ability also gives the Explorer a +1 reaction adjustment when encountering any other members of the tribe, village, or settlement.

The DM may limit the quality and amount of information in any way he sees fit. The knowledge acquired through this ability doesn't ensure proper conduct; the Explorer's behavior (and the player's decisions) will ultimately determine the reaction of all villagers.

**Special Hindrances:**

*Limited Animal Empathy:* Because he spends little time in one place, and much of his time is spent on native cultures and geographical studies, an Explorer does not develop animal empathy to the degree of other rangers. When dealing with wild or attack-trained animals, the animal's saving throw vs. rods has a +2 bonus. Further, the Explorer must make a successful Wisdom check when trying to calm or befriend domestic animals.

*Few Followers:* The Explorer would travel lightly, unencumbered by followers that require his attention. Thus, he will have no more than two followers at the same time. If he already has two followers, a new follower won't arrive until one of his current followers is dismissed, lost, or killed.

*No Fortifications:* An Explorer has little interest in the responsibilities associated with property ownership. He will never build a castle or any other fortification.

## Falconer

**Description:** The Falconer is an expert in the handling and training of falcons, birds of prey capable of learning an impressive range of tricks and tasks. Under the direction of a skilled Falconer, a falcon can be taught to snatch a coin purse from a victim's belt, bring down game birds in mid-flight, and fight effectively against creatures many times its size. In addition to his expertise as a bird trainer, the Falconer excels as a hunter and outdoorsman.

**Requirements:** Standard.

**Primary Terrain:** *Required:* The Falconer must choose a primary terrain where

falcons are most commonly found: Desert, Forest, Hill, Mountain, or Plains.

**Role:** Many Falconers serve as retainers of kings or nobles. Others freelance as guides and mercenaries. Some stage public performances in rented halls or on street corners, demonstrating their birds' remarkable stunts for appreciative crowds. Regardless of how they make a living, Falconers are held in high regard by most people, who never fail to be impressed by the Falconer's amazing rapport with his birds.

As falcons are extremely sensitive creatures, most Falconers by necessity must be even-tempered, patient, and self-assured. These traits also make the Falconer a valuable asset to an adventuring party. The Falconer's comrades will usually find him dependable and supportive, though perhaps a bit preoccupied with the needs of his bird. Sometimes falconers will have traits much like their birds--fierce, swift, and observant.

In combat, the Falconer fights aggressively, he and his falcon generally conducting their attacks against the same opponent. If his falcon and a human companion are both threatened, the Falconer will often choose to defend his falcon. To prevent misunderstandings, an honorable Falconer will make it clear where his loyalties lie before he joins an adventuring party.

**Secondary Skills:** Bowyer/Fletcher, Forester, Groom, Hunter, Leather worker, Trader.

**Weapon Proficiencies:** *Required:* A Falconer must take two of his initial weapon proficiency slots in any of the following: bow (any), crossbow (light), dagger, knife, sling, spear. The remaining slots, as well as all subsequent slots, can be used for any weapon of the Falconer's choice.

**Nonweapon Proficiencies:** *Bonus:* Falconry*. *Recommended:* Alertness*, Bowyer/Fletcher, Endurance, Hunting, Leatherworking, Veterinary Medicine*.

**Armor/Equipment:** A Falconer has no special armor or equipment requirements. However, each falcon he trains requires a set of falconry training equipment (see Chapter 7).

**Species Enemy:** Any.

**Followers:** Unlike other rangers, a Falconer receives an allotment of 3d6 followers, determined at 1st level. The falconer immediately receives a falcon follower at this time, which counts against his allotment. This falcon will be exceptionally strong and able. The DM may use the statistics in the Falconry proficiency description (see Chapter 5) for the initial falcon follower, as well as for any subsequent falcon followers.

Until 10th level, a Falconer can only have one follower, and that follower must be a falcon. If the falcon follower dies or is otherwise lost, a new falcon follower will arrive in accordance with the guidelines in Chapter 3. The new falcon counts against the 3d6 allotment.

A Falconer becomes eligible to receive followers other than falcons when he reaches 10th level. At 10th level and beyond, the Falconer may have more than one falcon among his followers, depending on the circumstances of the campaign and decision of the DM.

*Important Note:* Remember that a Falconer's follower will be a bird of rare and remarkable characteristics and loyalty. The Falconer can also train lesser birds for himself or others, using the standard training rules.

**Special Benefits:**

*Enhanced Training:* If a normal falcon has failed to learn a trick or task and become untrainable, the Falconer can try again after gaining a level.

*Attuned Follower:* Under certain conditions, a Falconer is able to establish an exceptionally strong bond with a falcon follower. The bond enables the falcon to learn more efficiently, and enhances communication between the falcon and the Falconer.

Whenever a Falconer acquires a new falcon follower, including the falcon he receives at 1st level, the falcon may be trained as a normal follower (see Chapter 3). However, once the Falconer begins to train the falcon (using either the Standard or Alternate method), the falcon cannot become attuned.

Otherwise, the Falconer can forego training until he attempts to become attuned to the new falcon. The attuning attempt takes six weeks. For at least an hour each day, the Falconer talks to the bird, strokes its feathers, and engages in other nurturing behavior. The bird learns to respond to the Falconer's voice, though the Falconer refrains from teaching it any specific tricks or tasks during this time. (In combat encounters which take place in this period, the falcon will fly to safety at the first sign of trouble, then return to the Falconer's shoulder when all's clear).

At the end of the six-week period, the Falconer makes a Wisdom check. If the check fails, the attuning attempt has likewise failed. The falcon continues its relationship with the Falconer as a normal follower. The Falconer may begin to train the falcon according to either the Standard or Alternate method described in Chapter 3. The Falconer can't make a second attempt to attune the falcon.

If the check succeeds, the falcon is attuned. Normally, the Falconer can teach the attuned falcon a task or trick each time he gains a level, at the same time he undergoes his own level training. The Falconer may also use the normal training rule, either the Standard or Alternative method. Training time is half that given in the falconry proficiency (see Chapter 5). Regardless how it is trained, an attuned falcon can learn tricks or tasks in any combination, up to one per level of the falconer. An attuned falcon never becomes untrainable.

Additionally, once a falcon becomes attuned, it receives a one-time hit point bonus equal to twice the Falconer's level. For example, if a falcon becomes attuned to a 3rd level Falconer, the falcon receives a bonus of 6 hit points. This bonus remains the same, even if the Falconer later advances in level.

The following benefits apply only to a Falconer and an attuned falcon.

*Fearless Falcon:* When fighting on behalf of a Falconer or under a Falconer's direction, an attuned falcon never needs to make a morale check.

*Falcon Species Enemy:* An attuned falcon has its own species enemy. When a falcon follower becomes attuned, determine its species enemy, either by rolling on the appropriate table in Chapter 2 (Tables 20-27), or by the DM choosing a particular enemy. The falcon and ranger may share the same species enemy. The falcon has all of the species enemy bonuses and penalties described in Chapter 2.

*Attack Bonus:* An attuned falcon receives a +2 bonus to all attack rolls, except when fighting its species enemy (when it receives a +4 bonus).

*Speak With Falcon:* A Falconer who reaches 10th level acquires the ability to speak with an attuned falcon follower. The ability is similar to the 2nd level priest spell speak with animals, except it requires no components or casting time, and the Falconer can do so at will.

*Mental Communication:* At 15th level, the Falconer can communicate mentally with an attuned falcon follower. Both the Falconer and attuned falcon can send and receive

thoughts at will, up to a distance of 100 yards per level of the Falconer. Walls or other physical boundaries have no effect on this ability.

**Special Hindrances:** If an attuned falcon dies, or is lost for any other reason, the Falconer succumbs to grief and despair for 1-4 weeks. During this period of mourning, the Falconer makes all attack rolls and ability checks at a -2 penalty. Additionally, during this period, no new followers can be acquired, nor can the Falconer use the *animal empathy* ability.

## Feralan

**Description:** What happens to children who wander into the wilderness and are never recovered? Or worse, children who are abandoned by their families, left in the woods to fend for themselves? Sadly, most of them eventually succumb to the dangers of the wild. But a fortunate few are taken in by animals, raised as part of a lion's brood or a wolf's litter. Cut off from civilization, they gradually take on the characteristics of the creatures who adopted them. In the process, they become Feralans, beings who combine the savagery of a beast with the intellect of a man.

The Feralan may look like a human, but for the most part, he acts like a wild animal. He speaks the language of animals and lives in their lairs. He leads them on hunts, defends them against predators, and considers them his family. Yet, the Feralan retains vestiges of his own race, characterized by his agile mind and an unshakable curiosity about human civilization. Many Feralans have picked up enough human language to communicate with them, albeit on a limited basis.

Despite his bestial tendencies, the Feralan's moral principles are not so different from other rangers. He values the well-being of his followers as much as his own. He avoids needless killing and considers himself the nemesis of hunters who stalk game for sport. Greed and jealously are as unknown to the Feralan as they are to the creatures of the forest.

*Familial Species:* At the beginning of his career, the player should choose a familial species for his Feralan, representing the type of animal that raised him. A Feralan can have only a single familial species, which never changes. The familial species must share the Feralan's primary terrain and is subject to the DM's approval. Animals suitable as familial species include wild dogs, bears (any), wolves, great cats (any), and primates (any). The DM may augment this list with additional choices if he likes; familial species can't be human, demihuman, humanoid, or of magical or supernatural origin.

**Requirements:** Feralans must have a minimum Constitution of 15 and a minimum Strength of 14. They cannot be of lawful alignment.

Though some humans and demihumans raised by wild animals have neutral or evil outlooks, only those with good alignments qualify as Feralans. Because Feralans have little use for the laws and regulations of the civilized world, most are chaotic good.

**Primary Terrain:** The vast majority of Feralans have Forest or Jungle as their primary terrain. Arctic, Hill, Mountain, Plains, and Swamp are possible but less common.

**Role:** Many people fear Feralans, wrongly considering them to be ferocious wildmen or savage werecreatures. Those who befriend Feralans, however, come to know them as trustworthy, noble, and even gentle. Still, Feralans remain wary of most humans and demihumans, finding their actions unpredictable and often incomprehensible.

Feralans rarely volunteer to join adventuring parties. However, because Feralans are fervent animal advocates and protectors of the wild, they are inclined to cooperate with parties who share their concerns.

While a Feralan's human companions may admire his courage and respect his instincts, they may find his beast-like behavior offensive at best, frightening at worst. After a hunt, a Feralan may drag the carcass of his prey back to the party's campsite and eat it raw, tearing off chunks with his familial followers. Personal hygiene is rarely among a Feralan's priorities, though he may occasionally lick himself clean. He grooms his animal friends by picking bugs from their fur, then cuddles up with them to go to sleep. When disturbed, he may snarl like a wolf. To celebrate victory over a predator, he may howl at the moon. He communicates in grunts, growls, and sentence fragments. He may disconcert new associates by sniffing them.

**Secondary Skills**: Fisher, Forester, Hunter, Trapper/Furrier. The secondary skills reflect talents that Feralans have picked up in the wild; therefore, all skills have wilderness applications only. A Fisher Feralan, for instance, may know how to swim and catch fish, but won't be able to operate a boat.

**Weapon Proficiencies:** *Required:* club, knife. A Feralan's remaining slots must be spent on primitive weapons: blowgun (rare), dagger, short bow, dart, hand axe, sling, spear.

**Nonweapon Proficiencies:** *Bonus:* Hunting or Fishing; Trail Signs*. His remaining initial proficiencies must be chosen from these: Alertness*, Animal Handling, Animal Lore, Blind-fighting, Direction Sense, Endurance, Fire-building, Fishing, Foraging, Hunting, Rope Use, Running, Set Snares, Survival, Swimming, Veterinary Healing*, Weather Sense.

**Armor/Equipment:** Feralans adorn themselves in crude smocks or loincloths made of furs and hides. They wear only what is necessary to keep themselves warm and comfortable.

A Feralan wears no armor, nor does he carry a shield. His main weapons--the ones associated with his weapon proficiencies--he makes himself from bones, branches, rocks, and other natural materials. If he loses or breaks one of these weapons, he can come up with a replacement in few hours, assuming suitable materials are available. He can use weapons other than those he makes, but prefers not to.

**Species Enemy:** Any.

**Followers:** Unlike other rangers, the Feralan begins to receive followers at 5th level. At least half (rounded up) of his followers will be of his familial species. A Feralan will receive at most one human, demihuman, or humanoid as a follower, and this only at 10th level or higher.

**Special Benefits:**

*Stealth:* The Feralan receives a +10% chance to hide in natural surroundings and a +10% chance to move silently.

*Feral Rage:* During melee combat, the initial wounding of an opponent may impel the Feralan into a frenzy of blood lust, increasing his fighting effectiveness. A Feralan can make one attempt to become enraged at any particular opponent. After the first round in which a Feralan inflicts damage on an opponent, the Feralan has the option of making a saving throw vs. death magic. If the roll succeeds, the Feralan goes into a feral rage for the next 2d6 rounds. During that time, the rage gives the Feralan a +2 bonus to all attack

and damage rolls, and his base Armor Class improves by 2 (an unarmored Feralan's AC is temporarily raised to 8). However, all attacks must be made against the designated opponent and the Feralan must attack in every round he's able; he can't voluntarily break off an attack, or choose to attack a different opponent.

An enraged Feralan must continue to attack the designated opponent until the feral rage wears off, or the opponent dies or escapes. If the rage wears off, the Feralan may continue to attack normally, or take any other action; however, the Feralan can't attempt to become enraged again against the same opponent. If the opponent dies, the feral rage automatically ends. If the opponent flees, the Feralan will pursue for the duration of the rage.

*Climbing:* The Feralan has a base climbing success rate of 60%. This allows tree climbing at the Feralan's normal movement rate (cliff climbing instead if the primary terrain is Arctic, Desert, or Mountain). This ability is much more limited than the thief ability to climb walls. The climbing modifiers discussed in Chapter 14 of the *Player's Handbook* apply in all situations other than those given.

*Speak with Animals:* The Feralan can use this ability at will with animals from his familial species. The ability is similar to the 2nd level priest spell speak with animals, but requires no components or casting time.

*Familial Rapport:* The familial followers of a Feralan will generally do what they're asked, assuming they're physically capable of doing so, when the Feralan speaks to them in their own language. Mistreated familial followers may still abandon a Feralan, as detailed in the Parting Company section of Chapter 3.

*Animal Training:* The Feralan may train non-familial followers (use guidelines in Chapter 3).

*Call of the Wild:* When in his primary terrain, the Feralan may attempt to summon familial species animals by howling at the top of his lungs for 1-6 rounds. The DM then secretly rolls percentile dice. If the result is less than or equal to the Feralan's Wisdom score plus his level (a 5th level Feralan with Wisdom 15 has a base chance of 20%), 1-4 familial animals show up within the next hour. Once they arrive, these animals act as followers for the next 1-4 hours. During this time, the Feralan may command them with his *speak with animals* ability. At the end of the 1-4 hour period, the summoned animals disappear into the wilderness. A Feralan can attempt *call of the wild* once per day.

**Special Hindrances:**

*Limited Magic:* Because of his mental predisposition and animalistic tendencies, a Feralan can only learn and cast a limited number of spells. He has access only to spells of the animal sphere and can't cast spells any higher than 2nd level. Table 41 shows the Feralan's spell progression.

A Feralan may use any magical item normally allowed a ranger.

### Table 45: Feralan Spell Progression

| Feralan | Casting | Priest Spell Level* | |
|---|---|---|---|
| Level | Level | 1 | 2 |
| 1-7 | - | - | - |
| 8-9 | 1 | 1 | - |
| 10-11 | 2 | 2 | - |
| 12-13 | 3 | 2 | 1 |

| | | | |
|---|---|---|---|
| 14-15 | 4 | 2 | 2 |
| 16+ | 5 | 3 | 2 |

* Animal sphere only

*Limited Money:* A Feralan has little interest in money or gems, which for the most part are as worthless to him as rocks. He keeps only enough funds to cover training costs, equipment replacement, and basic living expenses. He usually allows fellow party members to divide the remainder of his share of treasure as they wish. (However, the Feralan still receives all experience points due him for finding treasure and fellow party members receive no experience point benefit for the Feralan's share.)

*No Fortifications:* Lacking extensive resources but mainly lacking the inclination, a Feralan will not build a castle or any other type of fortification at any point in his career.

*Reaction Penalty:* The rough manner and appearance of the Feralan inflicts a -3 penalty when encountering human, demihuman, or humanoid NPCs, including other Feralans.

A Feralan will seldom, if ever, develop any close relationship with politically powerful human, demihuman, or humanoid NPCs.

## Forest Runner

**Description:** Wherever a corrupt or oppressive regime holds power, there's bound to be a Forest Runner. Forest Runners rise in opposition to such regimes, living on the fringes of society, usually one step ahead of the law. They're criminals only in a technical sense, as they adhere to a personal code that compels them to wage war against greedy aristocrats and unjust rulers. While the powers-that-be view the Forest Runner as a lawless troublemaker, commoners see him as hero, perhaps their best hope against a tyrannical government.

Constantly on the move, Forest Runners live by their wits and have learned to make do with minimal resources. They excel in combat and make formidable opponents. Ever active and brimming with self-confidence, Forest Runners delight in harassing authority figures, particularly the pompous and well-to-do. Many a hapless aristocrat has been left bound, gagged, and penniless after a humiliating roadside encounter with a Forest Runner.

Any time after reaching 4th level, the Forest Runner will acquire a *personal nemesis*. This is an NPC of near equal level whose campaign goal is to capture or kill the Forest Runner.

**Requirements:** A Forest Runner must have a Charisma score of at least 12.

**Primary Terrain:** Most Forest Runners hail from civilized regions in Forest, Hill, Plains, Mountain, or Jungle. However, no terrain type is excluded, providing it contains a reasonably sized and sufficiently corrupt settlement. (A Forest Runner from a primary terrain other than Forest, modifies the name accordingly, such as Mountain Runner, Swamp Runner, and so on.)

**Role:** The Forest Runner is usually selfless, resourceful, and roguishly charming. A loner by circumstance and not by choice, a Forest Runner readily allies with adventuring parties who share his outlook. As a champion of underdogs everywhere, the Forest Runner doesn't necessarily feel bound to his homeland, and may journey anywhere in the

world to promote justice. Occasionally, he may join a party to acquire treasure for distribution to the needy. If the local authorities are putting the heat on, he may accompany a party simply to disappear for a while.

**Secondary Skills:** Bowyer/Fletcher, Forester, Farmer, Hunter, Leather worker, Teamster, Weaponsmith.

**Weapon Proficiencies:** The Forest Runner receives a bonus weapon proficiency slot, above and beyond those he's normally allowed. The bonus slot must be filled with one of the following weapons: long bow, quarterstaff, long sword, or dagger. He must then fill three of his first six slots with the remaining weapons on this list. Once he's met this requirement, he may fill subsequent slots with any weapons of his choice.

**Nonweapon Proficiencies:** *Required:* Bowyer/Fletcher. *Recommended:* Alertness*, Blacksmithing, Camouflage*, Disguise, Endurance, Leatherworking, Persuasion*, Riding (Land-based), Rope Use, Weaponsmithing.

**Armor/Equipment:** Standard.

**Species Enemy:** A Forest Runner's species enemy should have some association with the corrupt regime he opposes. It may be the king's pet (such as a wolf or tiger), an evil race with which the monarchy has aligned itself (goblins or ogres), a symbol of the government (a snake or a hydra) or a creature the opposed officials have used in war (a dragon or a giant).

**Followers:** Any.

**Special Benefits:**

*Stealth:* The Forest Runner has a +5% chance to hide in natural surroundings and a +5% chance to move silently.

*Inspire:* Once per day, prior to making an attack, a Forest Runner may spend 2-5 (1d4+1) rounds boosting the morale of his companions with flattering words and expressions of confidence. He can influence a number of companions equal to his level. If the Forest Runner makes a successful Charisma check afterwards, the companions enjoy a +2 bonus to their morale for the next 3-12 (3d4) rounds. Each companion also receives a +1 bonus to his first attack roll. The inspiring speech doesn't affect animals, other Forest Runners, or himself. The Forest Runner can't attempt to inspire his companions in the midst of battle or while they're occupied in any other activity.

*Disguise:* The Forest Runner can take the Disguise proficiency for one proficiency slot.

*Reaction Bonus:* In his homeland or any region where his reputation precedes him, a Forest Runner can count on food and shelter at no charge for himself and his companions from supportive commoners. A Forest Runner also receives a +1 reaction modifier from peasants of good or neutral alignment of all cultures.

**Special Hindrances:** Forest Runners will rarely develop a close relationship with any NPC with political power. Additionally, a Forest Runner runs a constant risk of arrest by authorities of his homeland, as well as from other regimes with which his homeland has extradition agreements. Law-enforcement authorities may plague a Forest Runner through his entire career.

## Giant Killer

**Description:** The Giant Killer is a skilled combatant, often from humble beginnings,

trained to the specific purpose of slaying giants. He has mastered combat techniques designed to fell giants, and has become an expert in their behavior and habits. A Giant Killer is nothing if not confident; a giant's immense size merely means he makes a good target.

For the purposes of this kit, giants include true giants, such as: cloud giants, fire giants, frost giants, hill giants, stone giants, and storm giants. Also included are giant-kin, such as cyclops, ettins, firbolg, fomorians, verbeeg, and voadkyn. The DM may augment this list with other giants relevant to his particular campaign.

**Requirements:** A Giant Killer must have a minimum score of 15 in both Strength and Dexterity.

**Primary Terrain:** Any terrain is acceptable, so long as some type of giant calls it home.

**Role:** Giant Killers have keen minds, strong bodies, and unshakable egos. Most Giant Killers tirelessly promote their own skills and accomplishments, boasting of their latest triumphs to anyone who'll listen. Not surprisingly, their reputations precede them in most civilized regions. However, reactions among residents vary. For every person who reveres the Giant Killer as a hero, there's another who dismisses him as a blowhard. But when giants plague a community, everyone welcomes a Giant Killer with open arms.

Even when their services are desperately needed, Giant Killers rarely exploit their position. Most charge only modest fees, or settle for a medal or other token of appreciation in lieu of payment. As often as not, Giant Killers seek no remuneration of any kind, fighting giants for the sheer pleasure of it.

Unsurprisingly, the mere promise of an encounter with a giant is reason enough for most Giant Killers to join an adventuring party. For the most part, a Giant Killer leaves decision-making to others. Though in principle, he may share the party's fervor for the expedition at hand, he's usually more concerned with finding giants. He may become impatient and surly if the party goes for too long without meeting one.

The Giant Killer relishes violent encounters of all kinds, if only to exercise his combat skills. Of course, he comes into his own when fighting giants, and it's a wise party that follows his lead in such situations.

**Secondary Skills:** Bowyer/Fletcher, Forester, Groom, Hunter, Tailor, Weaponsmith.

**Weapon Proficiencies:** Because the Giant Killer faces tall adversaries, he must become proficient with missiles and hurled weapons. The first weapon slot, and every odd slot (third, fifth, and so on), must be a missile weapon: bow (any), crossbow (any), sling, staff sling, or any melee weapon that can be hurled. The even-numbered slots may be filled with any weapons of the Giant Killer's choice.

**Nonweapon Proficiencies:** Giant Killers pursue their interest in giants with such single-mindedness that they have little time left to master other skills. Therefore, a Giant Killer is allowed only one nonweapon proficiency at first level. This must be selected from the following: Bowyer/Fletcher, Cobbler, Cooking, Hunting, Pottery, Riding (Land-based), Running, Tailor, Swimming, Weaving.

**Armor/Equipment:** Giant Killers have no special equipment requirements. They often carry shields decorated with medals and ribbons awarded them from grateful communities for slaying troublesome giants. Though such shields can be used normally, they're mainly for show; Giant Killers generally put them aside before engaging a giant in battle.

**Species Enemy:** None; however, see Special Bonuses against giants.
**Followers:** Normal (but see optional rule).
**Special Benefits:**
*Attack Bonuses:* A Giant Killer has all the following bonuses when attacking giants:

- **Giant Killers inflict bonus damage against giants, +1 point of damage for every level of the Giant Killer.** For example, if a 7th level Giant Killer makes a successful attack with a spear, the giant suffers 1-8 points of damage from the spear, plus 7 for the Giant Killer's level.
- **Giants have a base -4 to hit when attacking Giant Killers.** A giant with a THAC0 of 10 needs a 14 to hit a Giant Killer with AC 0.
- **Giant Killers can dodge giant attacks.** If a giant with initiative attacks and hits, the Giant Killer may give up his action to dodge. If the Giant Killer saves vs. death magic, the giant's attack misses. If the Giant Killer has initiative, he can dodge instead of attacking for the round.

*Infuriate:* A Giant Killer can goad a giant into making careless and ill-conceived attacks. To infuriate a giant, the Giant Killer spends two rounds darting between the giant's legs, waving his hands, and hollering insults. The Giant Killer cannot make attacks or take any other actions while attempting to infuriate the giant; if interrupted (to dodge, for example), he must start over. During this time, the giant can attack the Giant Killer; however, because of the Giant Killer's erratic movement, the giant's attacks are made at an additional -2 penalty.

At the end of this period, the giant makes a saving throw vs. spells. If the throw succeeds, nothing special happens. If the throw fails, the giant becomes enraged for the next 2-12 (2d6) rounds. During that time, the giant directs all of his attacks against the Giant Killer; the giant's attacks are made at an additional -4 penalty. The Giant Killer may attack normally while the giant is infuriated.

**Optional Rule:** Follower Infuriation

A Giant Killer may enhance his chances of infuriating a giant by using an animal follower that has been trained to infuriate. The follower, which must be a bird or other flying creature of small size (S), learns this trick in accordance to the Training Followers rules in Chapter 3. The trick counts against the follower's normal limit of tricks and tasks. Only a Giant Killer can train a follower to infuriate.

While the Giant Killer is executing his infuriating routine, the follower may also infuriate the giant by swooping around his head and screeching. The giant's saving throw against the infuriation is reduced by a -2 penalty for the infuriating follower. This effect is not cumulative with additional followers. An infuriated giant might direct its attacks at the infuriating follower in addition to the Giant Killer. If the giant tries to attack an infuriating follower, the follower successfully dodges the blow unless the attack roll is a 19 or 20. A follower can't attempt to infuriate alone. A follower can only augment the infuriating attempts of the Giant Killer.

*Giant Lore:* If a Giant Killer discovers a footprint, lair, campsite, or any other physical evidence of a giant, a successful Wisdom roll enables him to learn some general information about the giant in question. Such information may include the giant's type, approximate size, and companions. He may also learn how recently the giant was in the area and in what direction the giant traveled. The DM decides the quality and amount of

information the Giant Killer receives.

**Special Hindrances:**

*Tracking Limitation:* Unlike other rangers, the tracking ability of the Giant Killer is limited to tracking giants. A Giant Killer who selects a general Tracking proficiency can track other creatures as non-ranger character.

Because Giant Killers seldom make an effort to conceal their identities, they're often singled out for harassment. Insecure villagers may challenge Giant Killers to duels to impress their friends, or bullies may ambush Giant Killers to demonstrate their toughness.

To avenge the death of a companion, some giants may target Giant Killers for assassination. Giant tribes occasionally offer bounties for proof of a Giant Killer's death, making the Giant Killer a prime candidate for attacks.

## Greenwood Ranger

**Description:** The rarest and certainly the most unusual ranger, the Greenwood Ranger, or Limbant, combines characteristics of both humans and plants. The Greenwood Ranger begins life as a normal human, but through resolute appeals to the gods, he gradually acquires plant-like qualities that enhance his relationship with the vegetable kingdom and endow him with remarkable powers.

A Greenwood Ranger resembles a normal human covered from head to toe with a layer of thick brown bark, similar to that of an oak tree. The bark on the back of his head and the backs of his hands and arms is tinged with green; the green bark enables him to absorb nutrients directly from the sunlight (see the Special Benefits section below). He has no body hair, no teeth, and his tapering fingers and toes look like gnarled branches. Tangles of short roots grow from his feet and ankles.

Aside from these physical differences, the Greenwood Ranger moves, speaks, and behaves much like an ordinary human. As his human qualities are dominant, he has a +2 bonus when saving against *hold plant, charm plant*, and similar plant-related spells. Otherwise, the Greenwood Ranger makes saving throws, attack rolls, and ability checks as a normal human ranger.

*Becoming a Greenwood Ranger:* A ranger must make the commitment to become a Greenwood Ranger at 1st level, even though the Greenwood Ranger's special abilities are not acquired until 4th level. From 1st through 3rd level, he is considered to be a latent Greenwood Ranger. A latent Greenwood Ranger operates as the standard ranger described in the *Player's Handbook*, though following the Secondary Skill, Weapon Proficiency, and Nonweapon Proficiency restrictions described below (and receiving the indicated Bonus Proficiencies). He may wear any armor allowed a normal ranger. He does not have any of the Greenwood Ranger's special benefits or hindrances at this time.

During this latency period, the ranger must spend a minimum of three hours per week in silent prayer, petitioning the gods to transform him into a Greenwood Ranger. It isn't necessary for the player to keep track of the hours spent in prayer; presumably, the character will set aside enough spare time to meet this requirement. The gods may tolerate an occasional lapse--for instance, the ranger may be too sick to pray in a particular week--but the ranger is otherwise expected to keep up with his prayers. If the ranger intentionally neglects his prayers on a regular basis (as determined by the DM), the gods will inform the ranger in a dream that he's no longer eligible to become a

Greenwood Ranger. The ranger is forced to abandon the kit, and may *not* take another.

When the latent Greenwood Ranger reaches 4th level, the gods give him a simple task to complete, involving the protection or support of plant life. Typical tasks include assisting a treant, replanting an area of forest devastated by fire, and teaching a primitive tribe how to grow and harvest their own crops. A latent Greenwood Ranger who fails to complete this task within a month must spend an additional 1-4 months praying, at which time the gods will grant a new task.

A latent Greenwood Ranger who completes the task then locates an isolated area of forest or jungle, lies on the ground, and covers himself with leaves and branches. He then falls asleep for a full day. If disturbed before 24 hours elapse, the transformation is interrupted; the ranger may try again at another time. Otherwise, upon awaking, the ranger will have transformed into a Greenwood Ranger. Once transformed, the Greenwood Ranger *cannot* abandon this kit, although actions that would normally cost a ranger his class result in the loss of spell use and other penalties determined by the DM.

**Requirements:** A Greenwood Ranger must be human. Otherwise, the ability requirements are the same as those for a normal ranger.

**Primary Terrain:** *Required:* Forest or Jungle.

**Role:** Because he must sacrifice a portion of his humanity to become a Greenwood Ranger, a human drawn to this kit usually has only a tenuous link with formal society. He is an outsider, with few close friendships or family ties, capable of walking away from the civilized world without regret. Orphans, social outcasts, and eccentric personalities are good candidates to become Greenwood Rangers.

Greenwood Rangers live deep in the forest or jungle, far from urban centers. Most people tend to shun Greenwood Rangers, repulsed by their appearance or fearful of their strange powers. But their distrust is unwarranted. Greenwood Rangers are gentle-natured, thoughtful souls to whom all life is precious. A Greenwood Ranger will mourn the loss of a favorite shade tree as much as the passing of a human companion. To the Greenwood Ranger, the wilderness is a glorious, sacred place. If necessary, he will risk his life to preserve it.

In most cases, a Greenwood Ranger will align with any adventuring party who shares his affinity for nature, providing he agrees with their cause. A Greenwood Ranger tends to keep to himself, offering his opinion only when asked and deferring to the party's leader in most situations.

**Secondary Skills:** Bowyer/Fletcher, Farmer, Forester, Woodworker/Carpenter.

**Weapon Proficiencies:** A Greenwood Ranger's weapon proficiencies are limited to the following choices: axe (any), bow (any), crossbow (any), dagger, knife, quarterstaff, sling, spear, long sword, short sword.

**Nonweapon Proficiencies:** *Bonus:* Herbalism. Required: Agriculture. *Recommended:* Carpentry, Endurance, Foraging*, Swimming, Trail Marking*, Weather Sense. *Barred:* Armorer, Blacksmithing, Fire-building, Engineering, Leatherworking, Mining, Mountaineering, Navigation*, Riding (Land-based and Airborne), Seamanship, Spelunking*, Stonemasonry, Weaponsmithing.

**Armor/Equipment:** A Greenwood Ranger can't wear armor. However, his bark-like skin provides comparable protection. At 4th level, the Greenwood Ranger's skin gives him an Armor Class of 5. For every level thereafter, the AC increases by 1; an 8th level Greenwood Ranger, for example, has an AC of 1. At 15th level, the Greenwood Ranger

reaches his maximum AC of -6.

Normally, Greenwood Rangers don't wear clothing aside from a cloth loincloth or simple smock. Thanks to their tough feet, shoes are unnecessary. Some Greenwood Rangers are fond of decorative pins made of gems or colorful minerals. Greenwood Rangers wear such pins by attaching them directly to their skin.

**Species Enemy:** Any.

**Followers:** A Greenwood Ranger will have at least one treant follower at some point career.

**Special Benefits:**

*Speak with Plants:* The Greenwood Ranger can speak with plants at will. This ability is similar to the 4th level priest spell, except it requires neither components nor a casting time.

*Photosynthesis:* Unlike a normal human, the Greenwood Ranger has no need to drink or eat. He receives nourishment directly from the sun. So long as he is exposed to sunlight at least an hour per day, he stays healthy. He suffers 1-2 points of damage every day he goes without exposure to the sun. Overcast days are sufficient to nourish a Greenwood Ranger.

A Greenwood Ranger satisfies his thirst by dipping his feet in any pool or puddle of fresh water for 10 minutes every other day. Exposure to a light rain or soaking his feet in a bucket will also suffice. If he goes without water for 48 hours, he begins to suffer damage at the rate of 1-2 points per day.

*Buoyancy:* A Greenwood Ranger requires oxygen like any other human and is subject to drowning and suffocation. However, because the Greenwood Ranger's woody skin makes him naturally buoyant, he can't drown unless he's physically held underwater.

*Rooting:* Upon reaching 8th level, a Greenwood Ranger can accelerate healing by *rooting*. He may attempt this once per week. To use this ability, the Greenwood Ranger must bury his feet in the earth (not sand or snow; the soil must be capable of supporting plant life) up to his ankles. He must stand stationary and silent for 1-4 hours, taking no other actions during that time. If interrupted, the rooting fails; he may try again the following week. If uninterrupted, tiny roots sprout from his feet and bury themselves into the ground, absorbing healing nutrients from the soil. At the end of the rooting period, the roots withdraw, and the Greenwood Ranger has recovered 3-12 (3d4) points of damage.

*Limbing:* Under certain circumstances, a Greenwood Ranger can grow an extra limb. The limb grows from the center of the Greenwood Ranger's chest and functions as a normal arm.

Only Greenwood Rangers of 10th level or higher can attempt *limbing*. A Greenwood Ranger may make an attempt once a month by lying on the ground and covering himself with leaves, branches, and earth. For the next 24 hours, he enters into a state of suspended animation, similar to that caused by a *temporal stasis* spell. If the Greenwood Ranger is disturbed during this time, the enchantment is broken and limbing will not occur. The Greenwood Ranger can try again the following month.

If the Greenwood Ranger is undisturbed, he awakens in 24 hours with a new limb extending from his chest. The new limb may be useful to the Greenwood Ranger in several ways:

- The Greenwood Ranger can wield three weapons at the same time. Attacks made with the third weapon suffer a -2 penalty. The Greenwood Ranger's reaction

adjustment (based on his Dexterity) modifies this penalty, although it can't result in a positive modifier. The Greenwood Ranger gains only two additional attacks per round, regardless of the number of attacks he's normally allowed. Therefore, a Greenwood Ranger able to attack 3/2 with one weapon (once in the first round, twice in the second) can attack 7/2 when using three weapons (three times in the first round, four times in the second).

- The Greenwood Ranger with a third limb receives a +3 bonus when punching, wrestling, or overbearing.
- A Greenwood Ranger with a third limb can swim at 150% of his normal swimming speed. He receives a +20% modifier to all climbing attempts.
- The extra limb helps the Greenwood Ranger perform ordinary activities more efficiently. For instance, he can carry three buckets of water at the same time or wash dishes in half the normal time.
- The third limb improves the Greenwood Ranger's performance when using certain nonweapon proficiencies involving the hands. For example, when using the juggling proficiency to catch items, he makes an attack roll vs. AC 2 instead of AC 0. When using the weaving proficiency, he can create three square yards of material per day instead of two. The DM determines the extent of the improvement depending on the particular proficiency and the attempted task.

The Greenwood Ranger's new limb withers and falls off in 1-4 days. A Greenwood Ranger can't have more than one extra limb at a time.

**Special Hindrances:**

*Stiff Limbs:* The Greenwood Ranger has a -5% penalty when trying to move silently. He gets no Dexterity bonus to his armor class.

*Vulnerability to Fire:* If an opponent attempts any normal or magical fire-based attack against a Greenwood Ranger, he qualifies for a +4 bonus to his attack roll and a +1/die bonus to his damage roll. The Greenwood Ranger suffers a -4 penalty to all saving throws involving fire-based attacks. Any fire-based attacks that hit inflict +1 hit point per die of damage.

*Vulnerability to Extreme Climates:* Though his skin provides protection in most environments, the Greenwood Ranger risks damage from prolonged exposure to extreme temperatures. After any full day spent in a climate where the temperature is below freezing, or averages 100 degrees or more, a Greenwood Ranger must make a Constitution check. Failure results in the loss of 1-4 hit points.

*Limited Magic:* A Greenwood Ranger can only learn and cast spells from the plant sphere. He uses the ranger's normal spell progression (given in Table 5 in Chapter 1).

*Reaction Penalty:* Because of his bizarre appearance, the Greenwood Ranger suffers a -3 reaction adjustment penalty when encountering any NPCs, with the exception of learned nobles, sages, and other high level characters of good or neutral alignment. Such worldly characters aren't intimidated by his appearance.

## Guardian

**Description:** The Guardian is a self-appointed protector of the wilderness. Compelled by a strong sense of duty, he has assumed responsibility for an unsettled tract of land, doing his utmost to maintain it in its natural state and protect its animal occupants.

Though he feels kindly towards woodsmen, elves, and others who share his respect for nature, he has little patience for those who would exploit the wilderness for gain or spite.

A Guardian constantly monitors the region he has sworn to protect. He scrutinizes the activity of strangers, advises travelers, and intercepts careless hunters. He keeps an eye out for fires, floods, and other natural disasters, and does what he can to comfort animals in times of crisis.

*Domain:* All Guardians have a specific region that they protect. The DM should establish the boundaries of a Guardian's domain at the beginning of his career. There are no fixed rules for assigning domains, but in general, a 1st level Guardian's domain shouldn't exceed a few square miles. The domain expands by several square miles each time the Guardian increases in level. By 5th level, a Guardian's domain might encompass a region about 20-25 miles across. By 15th level or higher, the domain might comprise an area the size of a small country.

A Guardian's domain should correspond to his primary terrain. The domain is typically located in an uncivilized part of the world, such as a remote mountain range or unexplored jungle. Two or more Guardians may share an especially large domain, but such cases are rare.

**Requirements:** Standard.

**Primary Terrain:** Forest, Hill, Jungle, Mountain, or Plains.

**Role:** A Guardian operates of his own volition, having no official sanction or title. He carries out his custodial duties as he sees fit, taking whatever steps he deems necessary to protect his domain. Despite his independence, he usually maintains good working relationships with officials of bordering lands. The relationship benefits both parties. The Guardian notifies the officials of approaching armies or other potential threats, while the officials may provide help for problems the Guardian can't handle alone. Though many governments would jump at the chance to have such able warriors in their employ, Guardians resist all such offers, and steadfastly maintain their autonomy.

An adventuring party entering a Guardian's domain has a good chance of encountering the Guardian himself. A Guardian will usually agree to guide a party through his domain and--presuming the party's intentions are compatible with the Guardian's philosophy--assist them in their efforts. Though a Guardian is reluctant to leave his domain, he may do so if presented with a compelling reason, such as the ravaging of a pristine wilderness or a threat to the ecology in another land.

Guardians tend to be self-sufficient, clear-headed, and conscientious. They make excellent leaders. Though a Guardian may develop deep friendships with other party members, he always parts company at the end of an adventure, returning to his domain as soon as he can.

**Secondary Skills:** Bowyer/Fletcher, Farmer, Fisher, Hunter, Trapper/Furrier, Woodworker/Carpenter.

**Weapon Proficiencies:** *Recommended:* Bow (any) or crossbow (any), dagger, javelin, knife, quarterstaff, sling, spear, staff sling.

**Nonweapon Proficiencies:** *Bonus:* Hunting or Fishing. *Recommended:* Agriculture, Bowyer/Fletcher, Fire-building, Fishing, Foraging*, Herbalism, Hunting, Riding (Land-based), Rope Use, Set Snares, Swimming, Veterinary Healing*, Weather Sense.

**Armor/Equipment:** Standard.

**Species Enemy:** Any.

**Followers:** A Guardian acquires at least one human or demihuman follower at some point in his career. There are no other restrictions or recommendations.

**Special Benefits:**

*Bonus Sphere:* The Guardian has miner access to the Protection sphere.

*Bonus Spells:* A Guardian can cast certain spells within the boundaries of his domain. These are detect evil (three times per day), and bless and commune with nature (once per week each).

*Revive Plants:* This ability enables the Guardian to revitalize any type of natural plant life suffering from drought, disease, insect infestation, or other forms of non-magical trauma. Dead plants can't be affected, nor can the Guardian invigorate plants beyond their normal limits (for instance, a Guardian can't cause an apple tree to blossom in the winter).

The process requires 8 hours and can affect a square area whose sides are 10 yards times the Guardian's level (a 5th level Guardian can revive all of the plant life within a 50 yd. - 50 yd. square). The Guardian can use this ability once per month.

**Special Hindrances:** If a Guardian leaves his domain for any length of time, he must make arrangements for someone else to assume his duties. He may hire a caretaker, or assign temporary custody of his domain to a human or demihuman follower. There are no fixed penalties for a Guardian who fails to do this. However, should a Guardian abandon his responsibilities for more than a few days, the gods may deny him the use of the special benefits associated with this kit. If he's absent for longer periods--say, a few weeks--the gods may also deny him the use of all spells. The Guardian recovers use of his special benefits and spells as soon as he returns to his domain.

## Justifier

**Description:** Some expeditions are so demanding and some foes so dangerous that they require the attention of a highly trained specialist whose combat skills far exceed those of the typical ranger. Enter the Justifier, a master tactician whose military instincts, fighting versatility, and steely nerves places him in the first rank of elite warriors.

Though the Justifier specializes in neutralizing monsters, his skills qualify him for a wide range of adventures. He may organize guerilla forces and lead them into hostile territories. He may stage reconnaissance operations to gather information concerning enemy strength and logistics. He may execute strikes against monster lairs, rescue hostages, or eliminate tribal leaders or spell casters. For a determined Justifier, no job is too difficult, no enemy too formidable.

**Requirements:** Justifiers must have minimum scores of 14 in Strength and Dexterity. They must be human and of lawful good alignment.

**Primary Terrain:** Any.

**Role:** Justifiers boast extensive training in weapon use, scouting, warding, and outdoor survival. Some learn these skills in a regular standing military, others are trained by military orders. A few highly motivated individuals are self-taught. Justifiers are in high demand by rulers as army officers, as well as by private individuals who use them as bodyguards. Many hire themselves out as mercenaries or volunteer for causes that further their own ideals.

As Justifiers thrive on action, most are eager to join adventuring parties. On occasion, freelance Justifiers may demand a retainer from a party or a guaranteed percentage of any

treasure found. But more often than not, a freelance Justifier will join a party without remuneration if their task is just and promises him the chance to exercise his combat skills.

A Justifier's companions will find him disciplined, focused, and unyielding in his determination to accomplish his objectives. He socializes little, preferring instead to keep his body strong with punishing exercise and his mind sharp with quiet meditation. A natural leader in combat situations, he fights with grim intensity and fearless perseverance.

**Secondary Skills:** Armorer, Bowyer/Fletcher, Forester, Hunter, Trapper/Furrier, Weaponsmith.

**Weapon Proficiencies:** *Recommended:* Bow (any), crossbow (any), dagger, sling, spear, sword (any). See Special Bonuses.

**Nonweapon Proficiencies:** *Bonus:* Survival; in addition to having this proficiency in his primary terrain, the Justifier receives the proficiency in an extra terrain of his choice (see also, Special Hindrances). *Recommended:* Alertness*, Blind-fighting, Bowyer/Fletcher, Camouflage*, Endurance, Falconry*, Hunting, Mountaineering, Navigation, Riding (Land-based), Rope Use, Running, Set Snares, Swimming, Weaponsmithing.

**Armor/Equipment:** A Justifier has no special armor or equipment requirements. Though most Justifiers prefer light armor, such as leather, they can wear any type of armor and still hide in shadows and move silently. Refer to Table 13: Optional Armor Adjustments in Chapter 1 for adjustments to success chances.

**Species Enemy:** Any. A Justifier is more respected by his enemies than other rangers, and therefore suffers only a -2 penalty on encounter reactions with his species enemy, and no penalty if there is a formal truce.

**Followers:** Any.

**Special Benefits:**

*Weapon Specialization:* Because of his extensive combat training, the Justifier must use some of his initial proficiency slots to take one weapon specialization (see Chapter 5 of the *Player's Handbook*). The weapon of specialization is taken from the list of recommended weapons.

*Stealth:* The Justifier receives a +5% bonus to his chance of hiding in natural surroundings and to his chance of moving silently.

*Tactical Advantage:* This ability allows the Justifier and his companions to gain a combat advantage by studying the enemy and exploiting their weaknesses. The Justifier must spend at least a full, uninterrupted turn secretly observing an enemy or group of enemies prior to making an attack. At the end of this period, the Justifier makes a Wisdom check. If successful, the Justifier has correctly assessed the enemy's weaknesses and is able to maximize the timing of an attack. The Justifier and his party automatically surprise the enemy and gain the initiative for the first round. A Justifier can attempt to gain a tactical advantage only once in a particular encounter.

*Unarmed Combat Expertise:* When fighting with his bare hands, the Justifier inflicts 1-4 points of damage on a successful attack roll. If the Justifier throws an unmodified 20 on his attack roll, the victim suffers 1-4 points of damage and must also make a saving throw vs. paralyzation. If the throw fails, the victim is stunned for 1-6 rounds.

*Coordinated Attack:* The Justifier can use this ability, in conjunction with a trained

animal follower, to inflict maximum damage on an opponent. The animal follower must have been trained to attack on command (see the Training Followers rules in Chapter 3).

To attempt a coordinated attack, the Justifier and the animal both make a single attack on the same enemy in the same round (even if one or both are normally allowed multiple attacks; the animal will use its most damaging attack). If either roll misses, then that attacker automatically loses initiative in the next round. If both rolls hit, each attack causes twice the normal amount of damage. A coordinated attack involves only one follower. A coordinated attack may be attempted at any time during a combat, but only once against any particular opponent during an encounter.

**Special Hindrances:**

*Limited Proficiencies:* The Justifier's mastery of weapons and combat comes at the expense of learning other skills. For this reason, he receives only one nonweapon proficiency slot at 1st level (in addition to his Survival bonus). He acquires additional proficiency slots at the normal rate.

*Limited Spell Use:* Because the Justifier devotes less time to the study of magic than to the military arts, he has less access to spells than other rangers. The Justifier doesn't acquire spells until he reaches 10th level. Table 46 shows the Justifier's spell progression.

### Table 46: Justifier Spell Progression

| Justifier Level | Casting Level | Priest Spell Level 1 | 2 | 3 |
|---|---|---|---|---|
| 1-9 | - | - | - | - |
| 10 | 1 | 1 | - | - |
| 11 | 2 | 2 | - | - |
| 12 | 3 | 2 | 1 | - |
| 13 | 4 | 2 | 2 | - |
| 14 | 5 | 2 | 2 | 1 |
| 15 | 6 | 2 | 2 | 2 |
| 16+ | 7 | 3 | 2 | 2 |

## Mountain Man

**Description:** Some people find the lure of the wild irresistible. Having tasted the pleasure of life in its purest, most primitive state, these hardy souls reject the trappings of civilization and wholeheartedly embrace the challenges of the untamed wilderness. These Mountain Men (and Women) spend their lives in relative isolation, enduring uncertain climates, hostile creatures, and chronic shortages of food and other vital supplies. They couldn't be happier.

The typical Mountain Man is robust, courageous, and uncomplicated. Book learning and formal schooling mean far less than self-reliance and common sense. Though uneducated by conventional standards, the Mountain Man has mastered all the skills needed to survive. He can manufacture his own weapons from the crudest materials, brew potent medicines from wild herbs, and doggedly persist in strenuous physical labor when others have long since succumbed to exhaustion. While hunting wild game and navigating dangerous terrain may be daunting to an outsider, it's all in a day's work for the Mountain Man.

**Requirements:** A Mountain Man must have a minimum Strength of 14 and a minimum Constitution of 15. The Mountain Man cannot be a full elf.

**Primary Terrain:** *Required:* Mountains.

**Role:** Mountain Men value privacy more than comfort. Accordingly, they make their homes in secluded caves or crude shacks hidden in remote mountain ranges. Many are nomadic, wandering from place to place with their possessions strapped to their backs, or carried by a bear or other loyal animal follower. They have little need for money, but occasionally procure goods from traveling salesmen or small town merchants, bartering with fur or hides.

Even the most stubbornly independent Mountain Man hankers for human companionship now and then, which is one of the reasons he might agree to hook up with an adventuring party. Faced with a problem too formidable for him to tackle alone--such as an encroachment from an enemy army or an infestation of powerful monsters--a Mountain Man may seek out an agreeable party to lend him a hand.

The Mountain Man speaks his mind openly and directly, regardless of who he might offend. Etiquette is hardly his strong suit, nor is personal hygiene. While some party members may find the Mountain Man's straightforward approach to life refreshing, or even endearing, most will probably view him as an unsophisticated brute, gruff and ill-mannered. Some Mountain Men have a crude sense of humor that compels them to play adolescent practical jokes, such as leaving bear droppings in a companion's sleeping bag. The Mountain Man has little interest in art or philosophy, but is a natural storyteller and loves to tell outlandishly embellished tales--often of his own exploits. He approaches combat much as he does the other elements of his life, attacking with vigor.

**Secondary Skills:** Bowyer/Fletcher, Fisher, Forester, Hunter, Miner, Trapper/Furrier.

**Weapon Proficiencies:** A Mountain Man must choose his initial weapon proficiencies from among the following: axe (any), bow (any), crossbow (any), club, dagger, dart, javelin, knife, quarterstaff, spear, staff sling, warhammer.

**Nonweapon Proficiencies:** *Bonus:* Mountaineering. Required: Hunting. *Recommended:* Alertness*, Endurance, Fire-building, Foraging, Mining, Running, Set Snares, Signaling*, Trail Marking*, Trail Signs*, Weather Sense. *Barred:* Agriculture, Armorer, Blacksmithing, Boating*, Bowyer/Fletcher (included in the special Weaponsmithing bonus, described below), Charioteering, Engineering, Etiquette, Falconry*, Heraldry, Navigation, Reading/Writing, Seamanship, Spellcraft.

**Special Bonus:** The Mountain Man also receives Weaponsmithing (Crude) as a bonus proficiency. He is restricted to making the weapons listed in Table 47, and can only make weapons in which he is proficient. He uses stones, wood, and other naturally available materials, so these weapons are made at no cost. This proficiency can't be improved; that is, assigning additional slots to Crude Weaponsmithing has no effect.

*Optional Rule:* If a weapon made of stone or bone scores a hit, roll 1d6. A stone weapon shatters on a roll of 1; a bone weapon shatters on a roll of 1 or 2 (as per *The Complete Fighter's Handbook*).

### Table 47: Crude Weaponsmithing (Mountain Man)

| Weapon | Construction Time |
|---|---|
| Arrows | 7/day |

| | |
|---|---|
| Axe, Battle | 4 days |
| Axe, Hand | 1 day |
| Axe, Throwing | 6 days |
| Bow, Long* | 15 days |
| Bow, Short | 12 days |
| Dagger | 2 days |
| Dart | 3/day |
| Javelin | 1 day |
| Knife | 2 days |
| Quarterstaff | 1 day |
| Spear | 2 days |
| Staff Sling | 3 days |
| Warhammer | 5 days |

*Seasoning the wood takes 1 year.

**Armor/Equipment:** A Mountain Man begins his career with any two weapons in which he has a weapon proficiency. He receives these weapons at no charge. These weapons are handmade. Once his career is begun, the Mountain Man may manufacture additional weapons in accordance with the rules for his Crude Weaponsmithing proficiency. He may also use weapons he obtains from his companions or other sources.

A Mountain Man normally doesn't wear armor. Instead, he wears a handmade suit of leather and fur which gives him an Armor Class of 8. A Mountain Man often decorates his suit with dyed porcupine quills or strings of colorful pebbles. He sometimes adds bone necklaces, elaborate leather fringes, or a hat made of beaver or raccoon skin.

Though not strictly forbidden from wearing metal armor, a Mountain Man is so uncomfortable when doing so that he suffers a -2 penalty to all attack rolls.

**Species Enemy:** Any.

**Followers:** A Mountain Man has only a 20% chance of attracting human, demihuman, or humanoid followers. Treat a roll of 81-00 as a bear (type determined by DM: usually black, brown, or cave). Any followers rolled as full elves will be dwarves instead (except for full elf mages, who will instead be gnome illusionists).

**Special Benefits:**

*Will to Live:* Where others would submit to death, the hardy Mountain Man clings to life ferociously. This ability manifests itself in the following ways:

- If missing a saving throw vs. death magic would be fatal, the Mountain Man receives a +2 saving throw bonus.
- If a damage roll would reduce the Mountain Man to zero hit points or less, the Mountain Man makes a Constitution check. If the check succeeds, he is reduced to 1 hit point. A Mountain Man cannot use this ability if he has only 1 hit point remaining.
- If an encounter results in the death of a Mountain Man, he may not die immediately. If he makes a *system shock* roll, he fights on for another 1-4 rounds or until he suffers damage below -10 hit points equal to his level, whichever occurs first. He then drops dead.

*Brew Healing Elixir:* When a Mountain Man reaches 7th level, he gains the ability to brew a special healing elixir. He must spend 1-4 hours gathering the necessary fresh

herbs and mosses, usually available in any forest, jungle, or mountain region (as determined by the DM). It takes an hour to brew the elixir, which remains potent for 24 hours. The elixir acts as one dose of a potion of healing. The Mountain Man may brew the healing elixir once per day.

**Special Hindrances:**

*Limited Stealth:* The Mountain Man has a -5% chance to hide in natural surroundings and a -5% chance of moving silently.

*Limited Magic:* A Mountain Man lacks the patience and discipline to wield magic effectively. He memorizes fewer spells than other rangers and doesn't acquire them until he reaches 10th level (see Table 48).

**Table 48: Mountain Man Spell Progression**

| Mountain Man Level | Casting Level | Priest Spell Level 1 | 2 | 3 |
|---|---|---|---|---|
| 1-9 | - | - | - | - |
| 10-11 | 1 | 1 | - | - |
| 12-13 | 2 | 2 | - | - |
| 14-15 | 3 | 2 | 1 | - |
| 16+ | 4 | 2 | 2 | - |

*No Fortifications:* A Mountain Man has no interest in fortifications and will never build one.

*Limited Money:* Other than his weapons and clothing, a Mountain Man may own only a single item worth 15 gp or more. The total value of all of his other possessions, including money and treasure, save training costs, cannot exceed 100 gp. Excess treasure and possessions are given away as the Mountain Man sees fit. (However, the Mountain Man still receives all experience points due him for finding treasure and fellow party members receive no experience point benefit for the gifts from a Mountain Man.)

*Reaction Penalty:* The Mountain Man's crude manner and ungainly appearance make strangers uncomfortable. He suffers a -1 reaction adjustment from all NPCs.

The Mountain Man suffers a -2 reaction penalty when encountering nobles, aristocrats, and other cultural elite, as they find him particularly unpleasant.

## Pathfinder

**Description:** The Pathfinder has an uncanny knack for blazing trails, a skill that allows him to find the easiest routes, reduce travel time, and avoid natural hazards. His acute sense of direction minimizes his chance of getting lost. He can estimate the number of miles he's covered with startling accuracy. The Pathfinder makes an invaluable guide, helping to ensure safe and efficient passage.

Though Pathfinders come from all walks of life, most have homelands in sparsely settled or exceptionally hostile terrains where learning to find one's way can mean the difference between life and death. A Pathfinder usually demonstrates an aptitude for trailblazing early in life, but diligent practice is required to refine his skills. Often, a young Pathfinder exercises his skill by asking a companion to blindfold him, lead him into an unexplored area in the wilderness, then abandon him. The Pathfinder must find his way home using only his wits. Experienced Pathfinders occasionally engage in this

game to brush up on their technique or to impress potential clients.

**Requirements:** Same as standard ranger.

**Primary Terrain:** Forest, Hill, Jungle, Mountain, or Plains.

**Role:** Though some Pathfinders are retainers of kings or lords, most operate independently. Pathfinders are generally regarded as honest, although their services are rarely inexpensive.

Being characters of high principle, Pathfinders often offer their services to parties undertaking adventures to promote the common good. Rarely will a Pathfinder join a party purely for gain, though he may consider such an arrangement when business is slow.

As a member of an adventuring party, the Pathfinder usually finds himself in front, scouting the terrain ahead to ascertain the best route and spot potential hazards. Unless the Pathfinder has organized the party himself, he usually leaves the leadership role to someone else while he concentrates on trailblazing.

**Secondary Skills:** Farmer, Forester, Groom, Hunter, Navigator, Trapper/Furrier.

**Weapon Proficiencies:** A Pathfinder must fill an initial weapon slot with the machete (see Chapter 7), hand axe, or sword; such weapons are useful for cutting away brush and clearing paths. Subsequent slots may be filled with any weapons of his choice (see also Special Benefits).

**Nonweapon Proficiencies:** *Bonus:* Direction Sense, Distance Sense*, Trail Marking*. Required: Alertness*. *Recommended:* Camouflage*, Endurance, Fire-building, Foraging*, Mountaineering, Navigation, Signaling*, Trail Signs*, Weather Sense.

**Armor/Equipment:** Because he spends a lot of time on foot, the Pathfinder favors light armor, such as leather or padded. He seldom carries a shield. Otherwise, the Pathfinder has no particular preferences or requirements.

**Species Enemy:** Any.

**Followers:** All species are eligible, though the Pathfinder is likely to attract followers with higher movement rates (12+), as he tends to have little patience with creatures that can't keep up with him.

**Special Benefits:**

The first two benefits, *trail sense* and *overland guiding*, apply only when the Pathfinder leads the party. At least 20 feet must separate the Pathfinder from the rest of the party; the proximity of others distracts the Pathfinder, making him unable to take advantage of these benefits.

*Trail Sense:* The Pathfinder's chance of getting lost in any outdoor land setting is reduced by 10%. Furthermore, his base chance of getting lost in his primary terrain (i.e. the Surroundings column of Table 81 in the *DUNGEON MASTER Guide*) will not exceed 20%. This is not cumulative with other benefits, such as the one for the direction sense proficiency.

*Overland Guiding:* A Pathfinder is able to find the optimum trail through rough terrain, increasing the party's movement rate when traversing long distances. To determine terrain costs for overland movement when a Pathfinder leads the party, use Table 49 in this book in place of Table 74 in Chapter 14 of *the DUNGEON MASTER Guide*. The movement costs indicate points of movement spent per mile of travel; when moving through the various terrain types, subtract the points from the total movement

available to the party for that day. (Note that less rugged terrain types are relatively unaffected, as the optimum paths are usually obvious, even without the help of a Pathfinder.)

### Table 49: Terrain Costs for Pathfinders

| Terrain Type | Movement Cost |
|---|---|
| Barren, wasteland | 1 |
| Clear, farmland | 1/2 |
| Desert, rocky | 1 |
| Desert, sand | 2 |
| Forest, light | 1 |
| Forest, medium | 2 |
| Forest, heavy | 3 |
| Glacier | 1 |
| Hills, rolling | 1 |
| Hills, steep (foothills) | 3 |
| Jungle, medium | 4 |
| Jungle, heavy | 6 |
| Marsh, swamp | 6 |
| Moor | 3 |
| Mountains, low | 3 |
| Mountains, medium | 4 |
| Mountains, high | 6 |
| Plains, grassland, heath | 1 |
| Scrub, brushland | 1 |
| Tundra | 2 |

*Marksmanship:* Owing to his steady hand and acute vision, the Pathfinder has a +1 bonus to the attacks made with a favorite missile weapon. It must be one in which he has proficiency and selected as a weapon of choice.

*Recognize Trail Hazard.* By observing subtle changes in the terrain, the Pathfinder is able to recognize natural hazards, enabling him and his companions to avoid them. Typical hazards include quicksand, sinkholes, slippery slopes, and thin ice. A Pathfinder has no special ability to recognize man-made hazards, such as pit traps or dangerous bridges, nor does he have any special talent for anticipating encounters with hostile natives or animals.

A Pathfinder's chance of recognizing a hazard is 10% per experience level; to a maximum chance of 90% at ninth level. If the DM determines that the Pathfinder is approaching an area containing a natural hazard, he secretly rolls percentile dice. If the roll is equal to or less than the Pathfinder's chance, the Pathfinder recognizes a potential hazard. (Optionally, the DM might only describe an unusual aspect of the terrain and let the Pathfinder come to his own conclusions. For example, if the Pathfinder is approaching a pool of quicksand, the DM might say that the ground feels exceptionally spongy. If the Pathfinder nears a patch of thin ice, the DM might point out that the ice ahead is discolored and laced with tiny cracks).

**Special Hindrances:** By moving ahead of the party, the Pathfinder places himself in a position of risk. Separated from his companions, the Pathfinder is more likely to be the victim of enemy attacks. He runs a greater risk of drawing fire from snipers, and is more susceptible to ambushes from hostile creatures. If he fails to recognize a hazard, he'll probably be the first to become a victim.

## Sea Ranger

**Description:** Though most rangers live and work on land, the Sea Ranger makes his home at sea. Whether sailing the ocean in a mighty galleon or riding a river's currents in a handmade raft, the Sea Ranger finds the world's waters an endless source of wonder. A sailor and an adventurer, he guards his watery domain with vigilance, and counts many of its creatures among his friends and allies.

He has an extensive understanding of weather patterns at sea and of the behavior of marine animals. He specializes in combat, both on and under the water. He may be a member of a formal navy, an independent operator, or a mercenary. He may be charged with enforcing naval laws. Some Sea Rangers protect ports or fishing territories. Others serve as escorts for trade fleets.

*Aquatic Terrain:* For the purposes of this kit, Aquatic terrain includes oceans, lakes, ponds, and rivers, as well as coastlines, beaches, and small islands.

**Requirements:** Because a Sea Ranger must master a wide range of knowledge he requires a minimum Intelligence score of 12. Because few elves and half-elves have the temperament for the seaman's life, virtually all Sea Rangers are human (though being human isn't a strict requirement).

**Primary Terrain:** *Required:* Aquatic.

**Role:** Sea Rangers have reputations as dedicated, sharp-minded professionals. As such, they are often sought by adventuring parties in need of their special skills, particularly when an adventure takes them to aquatic environments or they expect to face opponents of oceanic origin. Though Sea Rangers generally prefer to remain at sea, they travel on land as necessary to achieve the goals of their party. As many of a Sea Ranger's followers are waterbound, he obviously has less access to them when adventuring on land, a handicap he endures graciously but without enthusiasm.

The environment has a profound effect on a Sea Ranger's attitude. On land, his party companions will find him hesitant and uncertain, following orders without comment and reluctant to offer advice. In an aquatic setting, however, he becomes a different person--confident, assertive, and commanding. Only the most stubborn or foolish parties will decline a leadership role to a Sea Ranger in watery terrain.

**Secondary Skills:** Fisher, Navigator, Sailor, Shipwright, Trader/Barterer, Weaver.

**Weapon Proficiencies:** *Recommended:* Dagger, knife, harpoon, sword (any), pole arm (any), trident; *Optional:* Belaying pin, cutlass, gaff/hook.

**Nonweapon Proficiencies:** *Bonus:* Boating* or Seamanship; Swimming. *Recommended:* Cartography*, Direction Sense, Distance Sense*, Endurance, Fishing, Navigation, Riding (Sea-based)*, Rope Use. *Barred:* Agriculture, Blacksmithing, Charioteering, Falconry*, Mining, Mountaineering, Riding (Land-based), Spelunking*, Stonemasonry.

**Armor/Equipment:** Because heavy armor interferes with swimming and makes

moving around a ship uncomfortable, most Sea Rangers wear armor with an AC of 8 or less.

**Species Enemy:** Any aquatic creature is eligible as a species enemy.

**Followers:** The primary terrain of all animal followers must be Aquatic. Any full elf follower is 80% likely to be an aquatic elf.

**Special Benefits:**

*Sea Tracking:* Because of his knowledge of prevailing winds, currents, and other general aquatic conditions, the Sea Ranger can effectively track waterborne craft and aquatic creatures. This is not so much a reading of physical signs as an instinctive deduction of the probable course and destination of the quarry. For purposes of general play, the Sea Ranger uses the normal Tracking proficiency check rules.

*Land Scent:* When at sea, the Sea Ranger can smell the presence of land (including islands) within 50 miles. Further, if the Sea Ranger has ever been to that land before, he has a 10% chance per level of identifying it precisely.

*Sea Legs:* The Sea Ranger has a fine sense of balance, which comes into play when he must fight on a narrow beam (such as a yardarm or boarding plank) or a pitching deck. Not only is he sure-footed under such conditions (avoiding any attack penalties for them), but any saving throws or Dexterity checks made to maintain his balance are made at a +2 bonus.

*Aquatic Combat:* A Sea Ranger suffers no penalties to his attack rolls when in water; otherwise he follows the standard rules for underwater combat given in Chapter 9 of the *DUNGEON MASTER Guide.*

*Parliament of Fishes:* When a Sea Ranger reaches 12th level, he may attempt to call a parliament of fishes. He may use this ability once per week. If successful, the Sea Ranger can demand a service of the school. Typical services include the location or recovery of small items, the provision of edible water plants, information about local monsters or conditions, and perhaps transport across a small body of water if the parliament members are large enough. Once a month this can be the equivalent of a *commune with nature* spell.

To call a *parliament of fishes*, the Sea Ranger locates a pond, lake, or any other body of water containing aquatic life. Sometime between sunset and dawn, he kneels beside the body of water and concentrates for a full turn. An attack or interruption in any other way during this time will break his concentration, and he can't attempt to call a *parliament of fishes* until the following week.

Otherwise, at the end of 10 rounds, 10-100 (10d10) fish or other aquatic creatures (as appropriate to the body of water) surface and stare expectantly at the Sea Ranger. The Sea Ranger must then toss an offering into the water; the gift may be food, a coin, or any other object of the ranger's choice.

The DM then rolls 1d10 and consults Table 50. If the offer was reasonably generous, increase the result by +1. If the offering was exceptionally valuable, increase the result by +2. If the offering was meager (a copper piece or a chunk of bread), decrease the result by -1. If the offering was essentially worthless (a bone or a chunk of rock), decrease the result by -2. The result can't be decreased below 1 or raised above 10.

**Table 50: Parliament of Fishes Results**

| D10 Roll | Results |
|---|---|
| 1-2 | The fish immediately submerge; the offer is rejected. From dawn to sunrise the following day, the ranger suffers a -1 penalty to all attack rolls and ability checks. |
| 3-7 | The fish swim listlessly in circles for a few moments, then submerge; the offer is neither rejected nor accepted. The ranger is unaffected. |
| 8-10 | The fish dive and splash excitedly for a few moments, then submerge; the offer is accepted. The parliament grants the ranger a boon within their power. |

**Special Hindrances:**

*Tracking Limitation:* A Sea Ranger's chance of tracking in non-Aquatic terrain is halved.

*Move Silently/Hide in Shadows:* The Sea Ranger has neither of these abilities, replacing them with Sea Legs and Aquatic Combat.

## Seeker

**Description:** Devoted to spiritual awareness and self-enlightenment, the Seeker's deep beliefs affect him more than any other elements of his life. The Seeker seeks fulfillment by following the tenets of his faith and striving to understand the relationship between himself and the natural world. He views animal followers as fellow travelers on his spiritual journey.

Seekers can come from any culture, but typically originate from societies placing a premium on religion and scholarship. Many Seekers begin their spiritual quests as students of priests. Others are self-taught philosophers or restless academicians hungry for knowledge that can't be learned from books. Regardless of their background, all Seekers have felt compelled to embark on a wilderness pilgrimage that may last the rest of their lives.

No particular religion is common to all Seekers. Some worship specific gods, while others venerate nature itself as an unknowable but all-encompassing force. All Seekers, however share a reverence for life and a philosophy that embodies discipline, and personal responsibility, and self-sacrifice.

**Requirements:** A Seeker must have a Wisdom score of 15 or more. A particular religion may impose additional requirements, as determined by the DM.

**Primary Terrain:** Any.

**Role:** Good people of all cultures tend to look favorably on Seekers. At worst, Seekers are dismissed as useless but harmless eccentrics. More often, they're regarded as sensitive seekers of truth, admired and respected for their devotion. Priests of compatible alignment are especially deferential to Seekers; even if such a priest follows a different belief system, he recognizes that the Seeker shares his veneration of a higher power.

Though Seekers generally prefer solitude, they constantly seek opportunities to broaden their outlook and stimulate spiritual insight. For these reasons, they may join adventuring parties solely for the promise of new experiences. Moral considerations also motivate Seekers; parties can sometimes recruit Seekers by appealing to their sense of justice.

Typically, the companions of a Seeker will find him amiable, thoughtful, and comforting. Seekers aren't proselytizers--rarely are they interested in converting others to their beliefs--but they enjoy nothing more than debating philosophical issues. A companion who engages a Seeker in such a discussion may find himself listening to a detailed, scholarly discourse that may last the better part of the day.

Though Seekers usually decline to make decisions for the party, they often serve as counselors and advisors to the leaders. Non-aggressive by nature, Seekers avoid combat whenever possible, but fight fearlessly to thwart attacks against their followers or comrades. A Seeker is reluctant to take the life of another creature except to protect a companion, a follower, or himself, or to destroy his species enemy.

**Secondary Skills:** Farmer, Forester, Groom, Mason, Scribe, Tailor/Weaver, Woodworker/Carpenter.

**Weapon Proficiencies:** A Seeker receives only a single weapon proficiency at first level. This proficiency must be spent on one of the following weapons: club, light crossbow, dagger, dart, knife, quarterstaff, or sickle, sling. He cannot ever use a sword of any type.

**Nonweapon Proficiencies:** *Bonus:* Religion. *Recommended:* Agriculture, Ancient History, Artistic Ability, Astrology, Carpentry, Cobbling, Etiquette, Languages (Ancient), Pottery, Reading/Writing, Spellcraft, Veterinary Healing*, Weaving. The Seeker can take clerical proficiencies at the listed (non-doubled) costs.

**Armor/Equipment:** In most cases, Seekers have no special equipment restrictions beyond those normally associated with rangers. However, Seekers worshipping particular gods or adhering to strict religious doctrines may have additional restrictions, as determined by the DM. Certain Seekers, for example, may be forbidden from using any bladed weapon or wearing any type of armor. Such restrictions should be made clear at the outset of the Seeker's career.

Seekers have little interest in material possessions. After keeping enough money to meet their basic needs, they typically give away the rest of their gold and treasure to the poor.

**Species Enemy:** The species enemy must be evil. Alternately, a specific evilly-aligned religious group or cult may be taken, in which case members and minions of the group are considered the species enemy. Other common species enemies include ghouls (and other undead), evil dragons, death dogs, evil humanoids, etc.

**Followers:** All creatures are eligible as followers, except the species designated as a sacred animal (see the Special Hindrances section).

**Special Benefits:**

*Increased Access to Spells:* Unlike other rangers, the Seeker acquires spells when he reaches 6th level. He can also cast 4th level spells. Table 51 shows the Seeker's spell progression.

The Seeker has access to spells from an extra sphere in addition to those of plant and animal. When reaching 6th level, he chooses an extra sphere from the following options: divination, healing, protection, weather. This extra sphere remains the same for the rest of his career.

*Magical Staff Use:* The Seeker can use any magical staff that can be used by a druid.

### Table 51: Seeker Spell Progression

| Seeker Level | Casting Level | Priest Spell Levels 1 | 2 | 3 | 4 |
|---|---|---|---|---|---|
| 1-5 | - | - | - | - | - |
| 6 | 1 | 1 | - | - | - |
| 7 | 2 | 2 | - | - | - |
| 8 | 3 | 2 | 1 | - | - |
| 9 | 4 | 2 | 2 | - | - |
| 10 | 5 | 2 | 2 | 1 | - |
| 11 | 6 | 3 | 2 | 1 | - |
| 12 | 7 | 3 | 2 | 2 | - |
| 13 | 8 | 3 | 3 | 2 | 1 |
| 14 | 9 | 3 | 3 | 3 | 1 |
| 15 | 10 | 4 | 4 | 3 | 1 |
| 16+ | 11 | 4 | 4 | 3 | 2 |

**Special Hindrances:**

*Mediation:* A Seeker must spend a full hour each day in silent meditation. This hour must always occur at the same time of day, such as the first hour of dawn or at high noon; once decided, it can never be changed. If a Seeker neglects to mediate or is interrupted more than once (for more than a total of two rounds), he suffers a -1 penalty to all ability checks and attack rolls the following day.

*Sacred Animal:* Every Seeker has a sacred animal that symbolizes his ideals. A Seeker's sacred animal at the same time he is determined at the same time as the species enemy. The player selects the sacred animal from the options listed in Table 52, subject to the DM's approval; for example, if the Seeker's primary terrain is Arctic, his sacred animal might be the polar bear, the snow leopard, or the seal. A Seeker retains the same sacred animal throughout his career. He cannot acquire a follower of the same species as his sacred animal. The player may choose a sacred animal other than those listed in Table 52, so long as it's different from the Seeker's species enemy.

## Table 52: Sacred Animals

| Primary Terrain | Species |
|---|---|
| Aquatic | Dolphin, whale, or giant turtle |
| Arctic | Polar bear, snow leopard, or seal |
| Desert | Camel, owl, or hawk |
| Forest | Bear (brown or black), wolf, or small mammal (raccoon, fox, squirrel, or rabbit) |
| Hills | Bear (black or brown), elk, or wolf |
| Jungle | Elephant, lion, or chimpanzee |
| Mountains | Wild eagle, giant eagle, or bear (black or brown) |
| Plains | Falcon, horse, or raven |
| Swamp | Owl, raven, or small mammal (fox, otter, or mouse) |

In compliance with his religious principles, the Seeker has vowed to protect his

sacred animal in the following ways:

- He is forbidden from intentionally or unintentionally inflicting harm on his sacred animal, or standing by while others do.
- He is required to care for injured or ailing sacred animals.
- He must liberate captive sacred animals held against their will. This requirement excludes followers of other rangers, or domesticated animals serving as pets or mounts. However, it includes farm animals that are being raised for consumption.
- He must protect his sacred animal from hunters, trappers, and predators.

If the Seeker violates any of these requirements, as determined by the DM, he is consumed with guilt and remorse, preventing him from casting spells of any kind for the next week. If his action or inaction directly results in the death of a sacred animal, he is unable to cast spells for a full month. If he benefits from an *atonement* spell cast by a sympathetic priest, the one week suspension is reduced to four days, and the month suspension is reduced to two weeks.

## Stalker

**Description:** At first glance, this soft-spoken, rather nondescript character seems hopelessly out of place in an adventuring party, looking instead like an town dweller who's wandered into the wilderness by mistake. But the drab demeanor is only a facade, concealing keen senses, a shrewd mind, and remarkable insight. Only his closest friends realize the extent of his expertise in intelligence-gathering. And that's just the way he likes it.

Stalkers serve as spies, informants, and interrogators. Unlike other rangers, Stalkers are comfortable in both wilderness and urban settings. A Stalker may covertly observe a bandit camp to inventory their supplies and hostages, or eavesdrop in the corridors of an evil wizard's castle. A few innocuous questions enable him to distinguish friend from foe, and fact from fiction. His mastery of stealth makes him a deadly opponent.

**Requirements:** A Stalker must have a minimum Intelligence score of 14. Stalkers must be human.

**Primary Terrain:** Any; in addition, the Stalker's primary terrain can be Urban (see Special Benefits).

**Role:** Stalkers tend to be introspective and reflective, valuing intellect over physical prowess. They avoid drawing attention to themselves, seldom speaking unless directly addressed, then responding succinctly and without elaboration. They avoid small talk and socializing, instead preferring the company of a good book or an hour spent examining an unusual footprint. Stalkers tend to suppress their emotions so their decisions aren't colored by what they consider to be irrelevancies.

Though most people respect Stalkers, they are also wary of them. The Stalker's stealthiness and secrecy make many people uneasy, as these are traits usually associated with thieves and sneaks. But Stalkers value honor as much as any ranger, and nobles rarely hesitate to hire one in times of crisis. A hired Stalker can be trusted to focus on the job at hand, complete it efficiently, make his report, then go his own way without comment.

Adventuring parties often hire Stalkers on retainer, though occasionally, a Stalker will join a party with no assurance of monetary reward if the adventure presents an intriguing

challenge. Stalkers rarely are party leaders, though they express their opinions freely when invited to do so. In combat, most Stalkers are brave but cautious, waiting for tactical opportunities to present themselves rather than charging into the fray. They prefer to surprise their opponents, striking silently and quickly.

**Secondary Skills:** Any.

**Weapon Proficiencies:** Stalkers become proficient only with weapons they can easily conceal. Their weapon proficiencies are limited to blowgun, dagger, dart, knife, short sword, staff, and sling. *Optional:* garrote, rapier (walking stick), stiletto.

**Nonweapon Proficiencies:** *Bonus:* Alertness*, Camouflage*. *Recommended:* Blind-fighting, Etiquette, Modern Languages, Persuasion*, Signaling*, Trail Marking*, Trail Signs*.

**Armor/Equipment:** A Stalker prefers to carry no more gear than he can comfortably strap to his back. He wears well-made but unpretentious clothing, similar to that of a laborer or peasant, that allows him to blend in with crowds. Though he can wear any type of armor (see Special Benefits) he favors leather. Stalkers almost never carry shields, finding them awkward and restrictive.

At the beginning of his career, a Stalker receives a free "terrain suit" (see Chapter 7). The terrain suit corresponds to his primary terrain (night black for Urban).

Species Enemy: Any. Optionally, the Stalker can declare a specific thieves' guild or assassin's guild as his enemy.

**Followers:** Because a Stalker prefers to work unhampered, his followers are limited in number, species, and size. Though he receives a career total of 2d6 followers like other rangers, a Stalker has only one follower at a time. A new follower won't appear until the Stalker's current follower dies or is dismissed. A Stalker won't acquire a new follower even if he releases his current follower or arranges for its care elsewhere; he must sever all ties with the old follower before another will arrive.

A Stalker never accepts human or demihuman followers. Nor will he accept followers whose intelligence compares favorably with that of humans, such as pixies or aarakocra, as he fears such beings are undependable and may cause unnecessary distractions. Because he wishes to minimize the chances of attracting attention, all animal followers must be less than four feet tall (size "S" or "T").

**Special Benefits:**

*Tracking:* A Stalker has normal ranger tracking abilities in outdoor land settings. In addition, he has full (not half) tracking capabilities in urban settings.

*Stealth Abilities:*

- A Stalker has a +10% bonus to his base chance to hide in shadows/hide in natural surroundings and a +10% bonus to his chances to move silently.
- A Stalker has the full (not half) chance for success when attempting to hide in shadows or move silently in urban settings or in non-natural constructions such as crypts or dungeons.
- Stalkers can hide in shadows and move silently when wearing armor of AC 6 or less (see Table 13: Optional Armor in Chapter 1).
- When a Stalker successfully uses his move silently ability to sneak up on an opponent to surprise him, the opponent suffers a -3 penalty to his surprise roll. The Stalker must be 90' or more from party members without similar silent movement abilities.

*Interrogation:* When interrogating an NPC for any reason, a Stalker can acquire special knowledge about the NPC in one (but not both) of the following ways:

- By making a successful Intelligence check (use half the Intelligence score, rounded up), the Stalker can determine the general alignment of the NPC. If successful, the Stalker learns the good-evil component of the NPC's alignment (good, neutral, or evil).
- The Stalker can ascertain the NPC's honesty. The DM secretly makes an Intelligence check for the Stalker. If the check fails, the DM tells the Stalker nothing about the honesty of the NPC. The Stalker must make up his own mind about the NPC's reliability based on the NPC's responses.

If the check succeeds and the NPC is being honest with the Stalker, the DM tells the Stalker that the NPC is telling the truth to the best of his knowledge. A successful check in no way compels the NPC to reveal any information to the Stalker. The NPC may refuse to cooperate, but the Stalker is assured of the truthfulness of anything the NPC decides to share (note that the NPC may still pass along unreliable information that he believes to be true).

If the check succeeds, and the NPC is being dishonest with the Stalker, the DM tells the Stalker that the NPC may be lying. It's up to the Stalker to separate the truth from the lies; a successful check only tells him that he shouldn't take everything the NPC says at face value.

*Photographic Memory:* When a Stalker reaches 10th level, he acquires a limited photographic memory, enabling him to recall details about anything he's seen or heard since achieving 10th level. He can recall a fragment of a conversation, conjure up a mental image of a place he's visited, or remember words on a printed page. To use this ability, the DM secretly makes an Intelligence check for the Stalker, with a -2 penalty. If the roll fails, the memory is too vague to be of any use to the Stalker. If the roll succeeds, the DM tells the Stalker what he wishes to remember. If the roll is a natural 20, the DM gives the Stalker intentionally misleading information about whatever he's trying to remember (a room, for instance, is incorrectly recalled as having a locked window or mysterious claw marks on the walls). Because of the mental stress involved, this ability can be used only once per day.

**Special Hindrances:** Neither lawbreakers nor outlaws appreciate snoops. Typically, the harshest possible penalties are reserved for captured Stalkers. Should a band of orcs or goblins realize that a Stalker is in their midst, they're likely to chase him down and beat him mercilessly. A Stalker caught lurking in private residence will probably be prosecuted to the fullest extent of the law. An otherwise friendly NPC may be less likely to cooperate with the party if he recognizes one of the members as a Stalker.

## Warden

**Description:** The Warden works for a noble, king, or wealthy land-owner, and is charged with managing and protecting a tract of land owned by his overlord. He keeps his overlord's land free of monsters, guards against spies and trespassers, intervenes when natural disasters occur, and sees to the welfare of the animal population. While a Warden may operate alone, making decisions as he sees fit, he ultimately answers to a higher authority.

Areas overseen by Wardens vary by size and geography, depending on their overlords' holdings and interests. A Warden may be in charge of a game reserve or oversee a parcel of farmland. He may supervise a private park, or be responsible for undeveloped property in the mountains or desert. The size of a guarded land may range from a few square miles for Wardens just beginning their careers, to vast estates for high-level Wardens. Generally, as a Warden's experience increases, so do the boundaries of the land he supervises.

**Requirements:** As a representative of a greater lord, a Warden is required to deal diplomatically with a variety people from all walks of life. Therefore, a Warden must have a minimum Charisma of 12. A Warden cannot be of chaotic alignment.

**Primary Terrain**: Any, though Forest and Plains are the most common. The primary terrain should correspond to the area the Warden is first assigned to supervise.

**Role:** In most societies, Wardens occupy positions of modest status, comparable to those of mid-level bureaucrats or well-to-do merchants. Some are members of the military, but more often, they're aides to government officials or affluent civilians. Wardens tend to hold the same job for life.

A Warden serves his lord with the loyalty of a good soldier. He tends to be fastidious in his behavior and strictly law-abiding, which also makes him a bit inflexible. To most Wardens, rules are rules, and there's not much middle ground.

When an adventuring party enters a Warden's guarded area, he may agree to assist them for the sake of expediency; the sooner the party leaves his area, the sooner things will get back to normal. Conversely, a Warden may seek out a party to help with a particularly difficult task, such as ridding the guarded area of destructive creatures or locating a treatment for a crop disease. Depending on the circumstances, a Warden may journey anywhere in the world; he is not bound to remain in his guarded area. However, a Warden will not undertake any adventure without direct orders from, or with the express permission of his overlord.

Other members of an adventuring party may find a Warden to be cordial but distant. A Warden's loyalties lie primarily with his overlord, not with his companions, and this can create stress for party members who insist on comradeship. Some Wardens are also prone to homesickness; the further an expedition takes him from his guarded area, the more anxious and sullen he may become.

Nevertheless, a Warden's dedication and professionalism can only enhance a party's effectiveness. Many comply unwaveringly with orders from the party leader, offer pointed advice when needed, and fight courageously on the battlefield.

**Secondary Skills:** Armorer, Bowyer/Fletcher, Farmer, Forester, Groom, Weaponsmith, Woodworker/Carver.

**Weapon Proficiencies:** *Recommended:* Bow (any), crossbow (any), quarterstaff, pole arm (any), spear, sword (any).

**Nonweapon Proficiencies:** *Recommended:* Agriculture, Carpentry, Engineering, Etiquette, Falconry*, Heraldry, Hunting, Languages (Modern), Reading/Writing, Riding (Land-based), Stone Masonry.

**Armor/Equipment:** Wardens have no special armor or equipment requirements. Depending on the affluence and generosity of the overlord, Wardens may have access to the finest equipment money can buy, such as gem-studded shields and onyx-tipped arrows. As a rule, Wardens take meticulous care of their gear, spending much of their

free time honing their blades to razor-edge sharpness, and polishing their armor until it gleams like silver. Wardens affiliated with the government may wear elaborate uniforms emblazoned with medals, ribbons, and other service commendations.

**Species Enemy:** Any, though the species enemy is often a creature that plagues the Warden's guarded land or torments his overlord (in human lands, this is likely to be brigands).

**Followers:** Any.

**Special Benefits:**

*Stipend:* A Warden in good standing with his overlord receives a monthly stipend commensurate with his responsibilities and experience. Warden salaries average 30-50 gp per month, plus a monthly bonus of 10 gp times the Warden's level.

*Expenses:* When undertaking an expedition on behalf of his overlord, the Warden may receive a small stipend to cover his expenses. A typical stipend ranges from 100-500 gp, depending on the length of the expedition, the level of the Warden, and the generosity of the overlord. The Warden may spend these funds only on goods and services directly relating to the success of the expedition. In lieu of money, the Warden may receive loan of a mount, weapons, or equipment necessary for the undertaking.

*Annual Boon:* Once per year, the Warden can ask the overlord for a boon. It is traditional that this be granted insofar as the resources of the overlord (and the judgement of the DM) allow, although exceptionally greedy or ill-considered requests will reflect badly upon the Warden.

Reaction Bonus: When representing his overlord, a Warden receives a +2 bonus to his reaction checks with all good and neutral characters of high social status (including aristocrats, government officials, and affluent citizens), regardless of their culture or whether he's met them before.

**Special Hindrances:**

*Accountability:* A Warden is held fully accountable for any actions that may reflect badly on his overlord. Should the Warden break the law, insult a noble, or otherwise behave improperly, his overlord will demand an explanation. An unsatisfactory explanation will result in a reprimand at best, and termination of his job at worst. A terminated Warden is forced to abandon this kit, suffering all of the penalties described in the Abandoning Kits section elsewhere in this chapter.

If a Warden receives expenses (as detailed in his Special Benefits), he must make a full accounting of his expenditures and return any excess funds at the conclusion of his expedition. Should a discrepancy be discovered, the Warden may be fined or imprisoned. If he's been given special equipment instead of or in addition to expenses, all items must be returned in good condition. Otherwise, money may be deducted from the Warden's stipend to replace them, or the overlord may confiscate an equivalent amount of the Warden's goods.

*Overlord Demands:* A Warden is always subject to orders from his overlord. Some orders are critical, others trivial, but all must be followed in order for the Warden to remain in good standing. Failure to comply with an order may result in a variety of penalties, ranging from fines to termination of employment.

An overlord may require the Warden to carry out a special order in conjunction with his primary assignment, or a Warden may receive burdensome duties as part of his regular job. In all cases, the DM decides when the overlord makes a special demand, the

type of demand, and the penalties for violation. Some sample demands of a Warden:

- When an expedition takes the Warden far from home, he must take along a young relative of the overlord who wants to see the world. The Warden accepts responsibility for the relative's safety and behavior.
- While on an expedition to a distant land, the Warden must make contact with a long-lost friend of his overlord and extend an invitation to visit.
- At all times and wherever he goes, the Warden must display a banner bearing the insignia of his overlord.
- In times of austerity for the overlord, the Warden must turn over some or all of the treasure he collects on an adventure.

## Abandoning Kits

Once a kit is chosen for a ranger, it can't be exchanged later in the game for a different one. However, unless otherwise specified, it can be abandoned entirely, the character continuing the game as a standard ranger; that is, a ranger as described in the *Player's Handbook* without any of the benefits or hindrances associated with a particular kit.

Why would a player want to abandon a kit? Maybe recent campaign events have made the kit less fun to play (the king has declared amnesty for all Forest Runners). Perhaps the player feels limited by the kit restrictions (he wants more spells than those allowed to the Greenwood Ranger). Or maybe he's just tired of it (the Sea Ranger is fed up with life on the water). Whatever the reason, the DM should honor a player's request to abandon his kit. The abandonment may take place gradually, if the DM's wishes to work the change into an adventure, or immediately, if the DM doesn't see the change as significantly affecting the story line of his campaign.

A character who abandons a kit undergoes the following modifications:

- All of the kit's bonuses and benefits are lost. All penalties and hindrances are ignored.
- The character may use any weapons and armor normally available to the ranger.
- Should the character acquire new weapon proficiency slots, they may be spent on weapon proficiencies of the player's choice.
- The nonweapon proficiencies associated with the kit, including requirements and recommendations, no longer apply.
- Bonus proficiencies *aren't* forfeited. Instead, they are set aside (written down but not used) until the character acquires new nonweapon proficiency slots. The new slots must be spent paying for the former bonus proficiencies, in an order determined by the player. The player must pay for all former bonus proficiencies before he can choose any new nonweapon proficiencies.

## Creating New Kits

Players aren't restricted to the ranger kits described in this chapter. If a player is interested in a certain type of character not discussed here, he can design a new kit from scratch, using the above examples as guidelines.

Before going to all the trouble of designing a new kit from the ground up, study the

existing kits to see if any of them can be modified to fit the archetype you have in mind. If not, copy the Ranger Kit Record Sheet in the back of this book. Begin by filling out the description of the new kit, then write down the information needed in each section. Refer to the Kit Subsections descriptions at the beginning of this chapter if necessary.

When you've finished filling out the Record Sheet, let your DM look it over. He may make some adjustments to ensure that characters taking the new kit aren't too powerful or that the kit is sufficiently different from existing kits. The DM reserves the right to make additional adjustments after he sees how it works in the context of a campaign.

Stuck for ideas? Here are some suggestions that might be developed into new kits:

**Crypt Ranger.** Cemeteries, battlefields, or other locales associated with death are his primary terrain. His followers are non-evil undead.

**Dragon Killer.** Similar to the Giant Killer, he has special abilities that increase his effectiveness when fighting dragons.

**Extra-Planar Ranger.** His primary terrain is another plane of existence. His followers include extra-planar creatures.

**Militant Ecologist.** He's a conservation expert who retaliates violently against despoilers, polluters, and poachers.

**Lycanthropic Ranger.** He can change into an animal and counts werecreatures among his followers. Werebears and weretigers are suggested.

**Ranger-Knight.** He's a private landowner primarily interested in protecting and expanding his own holdings.

**Survivalist.** He can thrive in any terrain, under any conditions. He can improvise deadly weapons from the simplest materials.

## Demi-Rangers

According to the *Player's Handbook*, only humans, elves, and half-elves can be rangers. But using the rules in this book, it's possible to include characters of other races with ranger-like abilities in a campaign. However, lacking the necessary qualities to become rangers in the true sense, these other races are subject to specific limitations. They are known as demi-rangers.

Demi-rangers are restricted in the following ways:

- Demi-rangers *must* take character kits. Only a few kits are available to each race, as indicated in Table 53. Further, they must meet all the initial ability score requirements for both the ranger class and the kit.
- Demi-rangers use only the basic Tracking proficiency; they do not track as rangers, nor can they specialize in a primary terrain if that optional rule is being used.
- Demi-rangers do not get the two-weapon attack ability of standard rangers.
- Demi-rangers do add their racial modifier (if any) to their move silently and hide in shadow abilities.
- Demi-rangers are limited as to the maximum level they may achieve. Table 53 lists the maximum level for each kit.
- Demi-rangers attract 2d3 followers instead of the 2d6 normally allowed rangers. (Dwarf demi-rangers will rarely have elf or half-elf followers; gnomes will have an exceptionally high number of burrowing mammals.)

- Demi-rangers are restricted as to their terrain types. These include:
- *Dwarf:* Arctic, Hill, Mountain, Desert.
- *Gnome:* Arctic, Forest, Hill, Underdark.
- *Halfling:* Aquatic, Forest, Plains, Jungle (exception, Explorer).
- Halfling demi-rangers are unable to learn the priest spells normally available to rangers. Dwarf and gnome demi-rangers may learn priest spells (from appropriate spheres) but not until they reach 10th level. As indicated in Table 53, they learn fewer spells than other rangers and cast them at lower levels.

### Table 53: Demi-Rangers

| Race Kit | Maximum Level |
|---|---|
| Dwarf | |
| Guardian | 15 |
| Mountain Man | 15 |
| Warden | 15 |
| Gnome | |
| Forest Runner | 11 |
| Pathfinder | 11 |
| Stalker | 11 |
| Halfling | |
| Explorer | 9 |
| Feralan | 9 |
| Sea Ranger | 9 |

### Table 54: Demi-Ranger Spell Progression and Dexterity Modifiers

| Demi-ranger Level | Casting Level | Priest Spell Level 1 | 2 |
|---|---|---|---|
| 1-9 | - | - | - |
| 10 | 1 | 1 | - |
| 11 | 2 | 2 | 1 |
| 12 | 3 | 2 | 2 |

| Race | Hide in Shadows | Move Silently |
|---|---|---|
| Dwarf | - | - |
| Gnome | +5% | +5% |
| Halfling | +10% | +15% |

### New Kits for Demi-Rangers

Just as you're free to create new ranger kits, it's also possible to design kits specifically for demi-rangers. Follow the suggestions outlined in the Creating New Kits section above. The DM has the right to disallow *any* kit he feels is inappropriate for his campaign.

Some suggestions for demi-ranger kits:

**Dwarven Spelunker.** This is a subterranean ranger whose primary terrain encompasses caves and underground passages.

**Gnomish Terraformer.** He pursues techniques for physically reshaping the lay of the land.

**Halfling Agronomist.** He's a master of agriculture and animal husbandry.

### Dual-Classed Rangers

Dual-classed characters must be human. A dual class ranger may be of any character kit, presuming the DM allows it in his campaign.

To change from a ranger to another class, the ranger must have a minimum score of 15 in Strength, Dexterity, and Wisdom. He must have a score of 17 or better in the prime requisites of the new class.

If a character from another class wants to switch to a ranger, he must have a minimum score of 15 in his prime requisites and a score of 17 or better in Strength, Dexterity, and Wisdom.

### Multi-Class Rangers

The main multi-class option open for a ranger is the half-elf cleric/ranger. The half-elf advances in both classes simultaneously, up to 16th level ranger and 14th level cleric. All the usual rules for multi-class characters as given in the *Player's Handbook* should be followed.

**Optional Rule: The Ranger-Druid**

Generally, a ranger/druid combination is not possible, due to the conflicting alignments of the classes. However, campaign conditions may allow their creation, should the players and DM decide that they wish to experiment with them.

First, there must be a nature deity of good alignment whose specialty priests are druidic. Second, the priesthood must have an allied group of rangers. Given these conditions, a half-elf ranger/druid character may be possible.

Such a character is still bound by racial level limits, in this case 16th level ranger and 9th level druid. Even if the optional level advancement for exceptional ability scores is used, such a character is unlikely to become a 12th level druid (a level for which the character must fight). At the very least, the character will have formidable enemies among conservative members of the priestly hierarchy, and is likely to become the target of subtle plots. Also, such a character would be under constant pressure from divided loyalties, as his chosen professions will tend to pull him in different directions.

## Chapter 5: Proficiencies

It's strongly suggested that you incorporate the optional proficiency rules into your campaign, especially if you're using the character kits from Chapter 4. This chapter

presents all of the nonweapon proficiencies relevant to the ranger from the *Player's Handbook*, along with descriptions of a few new ones and clarifications of some old ones.

## Compiled Proficiencies

Table 55 lists all of the nonweapon proficiencies normally available to the ranger, which includes all of the proficiencies associated with the warrior, wizard, and general groups. Rangers may also acquire proficiencies from the priest and rogue groups described in Chapter 5 of the *Player's Handbook*, but at a cost of one additional proficiency slot above the listed number.

**Bold-faced** entries are new proficiencies described in this chapter.

*Italicized* entries require the player to select a specific area of specialization. For instance, a ranger proficient in artistic ability must specialize in one particular art form, such as painting, sculpture, or origami. Spending another slot on this proficiency allows him to improve an already chosen art form, or to pick another one.

Entries marked with an asterisk (*) are proficiencies with special applications for rangers, explained in the Clarifications and Modifications section.

### Table 55: Nonweapon Proficiencies

| Proficiency | # of Slots Req'd. | Relevant Ability | Check Modifier |
|---|---|---|---|
| Agriculture | 1 | Int | 0 |
| **Alertness** | 1 | Wis | +1 |
| *Ancient History* | 1 | Int | -1 |
| Animal Handling* | 1 | Wis | -1 |
| Animal Lore | 1 | Int | 0 |
| *Animal Training** | 1 | Wis | 0 |
| Armorer | 2 | Int | -2 |
| *Artistic Ability* | 1 | Wis | 0 |
| Astrology | 2 | Int | 0 |
| Blacksmithing | 1 | Str | 0 |
| Blind-fighting | 2 | NA | NA |
| **Boating** | 1 | Wis | +1 |
| Bowyer/Fletcher | 1 | Dex | -1 |
| Brewing | 1 | Int | 0 |
| **Camouflage** | 1 | Wis | 0 |
| **Cartography** | 1 | Int | -2 |
| Carpentry | 1 | Str | 0 |
| Charioteering | 1 | Dex | +2 |
| Cobbling | 1 | Dex | 0 |
| Cooking | 1 | Int | 0 |
| Dancing | 1 | Dex | 0 |
| Direction Sense | 1 | Wis | +1 |
| **Distance Sense** | 1 | Wis | 0 |
| Endurance | 2 | Con | 0 |

| | | | |
|---|---|---|---|

| Weaponsmithing, Crude | 1 | Wis | -3 |
| Weather Sense | 1 | Wis | -1 |
| Weaving | 1 | Int | -1 |

## Clarifications and Modifications

The following modifications are used in addition to the information in the proficiency descriptions given in Chapter 5 of the *Player's Handbook*. The modifications apply to rangers only. Except where specified otherwise, rangers must spend the slot points indicated in Table 55 to acquire any proficiency.

Whenever a proficiency bonus is indicated, the bonus is added to the normal check modifier. For example, if a terrain-specialized ranger with a Wisdom of 14 uses direction sense (Wis +1) in his primary terrain (+2), the check is made at Wis +3. A roll of 17 or less on 1d20 is a success.

### Animal Handling

A ranger's animal empathy ability (see Chapter 2) can produce essentially the same calming effect on an animal as the animal handling proficiency. If a ranger also has the animal handling proficiency, he may attempt to soothe an animal either by making a proficiency check or by using his *animal empathy* ability--but not both.

If an animal is among a ranger's followers, neither animal empathy nor the animal handling proficiency is necessary to control the follower. Use the guidelines in Chapter 3 instead.

The animal handling proficiency has no effect on a ranger's species enemy.

### Animal Training

Rangers are more efficient than other characters at training animals. In the Standard method (see Chapter 3) a ranger needs two months to train an animal to perform a general task. Training for a specific trick requires 2d4 weeks. At the end of the training period, he makes a proficiency check. If the check is successful, the animal has learned the task or trick. If the check fails, the ranger may make a second attempt at teaching it the same task (requiring another two months) or trick (requiring another 2d4 weeks), followed by a second proficiency check. If this second proficiency check fails, the animal is too dumb or too stubborn to learn that particular trick or task. The ranger may repeat the training process with a different trick or task. An animal can learn a maximum of 2d4 tasks or tricks, in any combination of the two.

The animal training proficiency isn't necessary to train followers. Use the guidelines in Chapter 3 instead.

A species enemy can't be trained by the ranger, neither with the follower guidelines nor the animal training proficiency.

### Riding, Airborne and Land-based

A ranger cannot use his species enemy as an airborne or land-based mount. If the mount is a follower, use the guidelines in Chapter 3 instead of the proficiency rules.

### Survival

All rangers have basic survival skills in their primary terrain. Additional proficiency slots may be spent to add more terrain types. Thus, if a ranger spends slots to acquire this proficiency, he must choose a terrain type other than his primary terrain, giving him the survival proficiency in two types of terrain.

### Tracking

Most rangers will have this proficiency in outdoor land terrain without spending any slots, as discussed in Chapter 2. Generally, success chances in urban, man-made, or aquatic terrains are halved, unless a specific kit description says otherwise. Some kits give tracking in alternative terrains instead of the usual outdoor land environment.

## New Proficiencies

Rangers of any character kit can acquire these proficiencies by spending the points listed in Table 55. The "Crossover Groups" mentioned at the end of the description are eligible to buy the proficiency at the normal cost. Groups not mentioned may buy the proficiency by paying one additional point beyond the listed cost.

### Alertness

A character with this proficiency is exceptionally attuned to his surroundings, able to detect disturbances and notice discrepancies. A successful proficiency check reduces his chance of being surprised by 1. (This replaces the description of this proficiency in *The Complete Thief's Handbook*.)

**Crossover Groups:** General.

### Boating

This proficiency allows the character to pilot any small boat, such as a kayak or canoe, operating it at maximum speed. It also allows make minor repairs and improvements in these boats, such as waterproofing them and patching holes. A successful proficiency check enables the character to handle the craft in treacherous situations; for instance, maneuvering the boat though choppy water without capsizing it, or avoiding collisions when guiding it through a narrow channel choked with rocks or ice. Note that while the navigation and seamanship proficiencies deal with ships in oceans, seas, and other large bodies of water, the boating proficiency is confined to small craft on rivers, lakes, on oceans close to shore, and over similar terrain, usually on relatively calm waters.

**Crossover Groups:** General.

### Camouflage

By using this proficiency, the character can attempt to conceal himself, his companions, and inanimate objects by using natural or man-made materials. Successful use assumes the availability of all necessary materials. In forests and jungles, the

character can use shrubbery, mud, and other readily available resources. Arctic or similarly barren terrain usually requires special clothing, paints, or other artificial materials (although "digging in" is an old trick which may be applicable in such terrain, depending on local conditions). It takes a character a half-hour to camouflage himself or another person, two or three hours to conceal a cart or inanimate object of comparable size, and a half-day to hide a small building.

Neither human, demihuman, monster, nor animal passersby will be able to see a camouflaged character, presuming the character makes a successful proficiency check. Camouflaged companions will also go unnoticed; only one proficiency check is required for the entire group.

Objects may also be camouflaged. Objects the size of a person require no penalty to the check; cart-sized objects require a -1 penalty, while building-sized objects require a -3 penalty. The DM may adjust penalties based on these guidelines.

Camouflaging has no effect on predators that locate prey by scent or other keen senses; a hungry wolf can still sniff out a camouflaged human. A camouflaged person has no protection against a passerby who accidently brushes against or bumps into him. Likewise, a camouflaged person may reveal himself if he sneezes, cries out from the sting of a bee, or makes any other sound.

Note that camouflaging is only necessary for persons or objects that would otherwise be partially or entirely exposed. A person hiding behind a stone wall wouldn't need to be camouflaged to avoid detection, nor would a buried object.

**Crossover Groups:** Fighter, Rogue.

### Cartography

This proficiency grants skill at map making. A character can draw maps to scale, complete with complex land formations, coastal outlines, and other geographic features. The character must be reasonably familiar with the area being mapped.

The DM makes a proficiency check in secret to determine the accuracy of the map. A successful proficiency check means that the map is correct in all significant details. If the roll fails, the map contains a few errors, possibly a significant one. A roll of exactly 20 means the map contains serious errors, making it useless.

**Crossover Groups:** General.

### Distance Sense

This proficiency enables a character to estimate the total distance he's traveled in any given day, part of a day, or a number of consecutive days equal to his level. For instance, a 7th level character can estimate the distance he's traveled in the previous week. The estimate will be 90% accurate.

**Crossover Groups:** General.

### Falconry

This is most properly the Animal Training (Falcon) proficiency. A character with this proficiency is an expert in training and handling falcons, enabling him to teach them

tricks and tasks (This proficiency also allows the training of hawks at a -1 penalty. Owls are a separate proficiency and can be trained at -2).

A character can teach a falcon 2d4 (2-8) tricks or tasks in any combination. It takes 2d6 weeks to teach the falcon a trick, three months for a task. At the end of a training period, the character makes a proficiency check. If the check succeeds, the falcon has learned the trick or task. If the check fails, the falcon is incapable of learning more.

If not using falconry training equipment (see Chapter 7), the success roll required for training is penalized by -2.

**Crossover Groups:** General.

*Note:* The foregoing is the standard proficiency. Optionally, the training rules for rangers given in Chapter 3 can be used. Training times and number of tricks/tasks may vary.

Sample general tasks:

*Hunting:* The falcon is trained to hunt its natural prey: small mammals and game birds; and to return with them to the falconer. Nearly all trained falcons receive this training first.

*Ferocity:* The falcon receives a +1 bonus to all attack and damage rolls, and a +2 morale bonus.

*Guard:* The falcon shrieks at the approach of strangers. If approached closer than 20' or 30', the falcon will attack unless ordered not to. The bird can recognize designated friends.

*Homing:* The falcon recognizes one place as its roost and returns there upon command.

*Loyalty:* The falcon is exceptionally loyal to an individual selected by the trainer. It has a +4 saving throw bonus against charm, control, empathy, or friendship attempts by others. Further, it comes when the individual summons it, guards its master from attack and may perform unusual acts of loyalty as decided by the DM.

*Species Enemy:* The falcon is trained to recognize an entire species as a natural enemy. Its basic reaction will be hostile, it will reject empathy, and have a +4 saving throw bonus against the enemy's charm or control attempts. It will attack the species enemy in preference to others.

*Track:* The falcon will track a designated creature and return. It can retrace its path to lead the falconer to the creature.

Sample specific tricks:

*Attack:* The falcon will attack on command a creature designated by the falconer until called off. The falcon's base morale is at least 11. The falcon receives a save vs. rods against another ranger's animal empathy ability.

*Capture Prey:* A hunt-trained falcon will return with the prey alive and unharmed.

*Catch Object:* Upon command, the falcon will catch a small object thrown into the air or a small falling object and return to the falconer.

*Distract:* The falcon is trained to feint at an opponent. The opponent must make a saving throw vs. paralysis or lose its next action.

*Eye Attack:* The falcon is trained to strike at an opponent's eyes. A beak hit has a 25%

chance of striking an eye. An opponent struck in the eye is blinded for 1d4 rounds and has a 10% chance of permanently losing sight in the eye.

*Hand Signals:* The falcon can be commanded by hand signals as well as by voice.

*Hide Object:* The falcon takes an object from the falconer, flies away with it, and conceals it. The falcon will retrieve the object on command.

*Pit Fighting:* The falcon is trained as a fighting bird. It has a +2 attack bonus against any fighting bird that is not so trained.

*Recall:* The falcon will immediately return to the falconer upon receiving the command.

*Nemesis:* The falcon is trained to attack a specific individual. The falcon never checks morale when attacking the individual.

### Foraging

By using this proficiency, a character can search a wilderness area to locate a small amount of a desired material, such as a branch suitable for carving into a bow, enough kindling to start a fire, a medicinal herb, or a component required for a spell. The character must spend 2-8 (2d4) hours searching, and the material must theoretically be available in the area being searched (for instance an icicle isn't available in the desert, nor dry kindling on the ocean floor). The DM doesn't confirm if the material sought is actually available until after the character has searched for the designated period. If the DM decides the material isn't in the area, no proficiency check is necessary; he merely reveals that the search was in vain.

If the DM decides the material is indeed available, a successful proficiency check means the character has found what he's been looking for. As a rule of thumb, the character locates no more than a handful of the desired material, though the DM may make exceptions (if searching for a few leaves of a particular herb, the character may instead find an entire field).

If the check fails, the material isn't found. The character may search a different area, requiring another 2-8 hours and a new proficiency check.

**Crossover Groups:** Warrior, Rogue.

### Persuasion

This proficiency enables the character to make a compelling argument to convince a subject NPC character to see things his way, respond more favorably, or comply with a request. The character engages the NPC in conversation for at least 10 rounds (meaning that the subject must be willing to talk with the character in the first place); subjects whose attitudes are threatening or hostile aren't affected by this proficiency.

A successful proficiency check means that the subject's reaction is modified by +2 in favor of the character (see Table 59 in Chapter 11 of the *DUNGEON MASTER Guide*). This bonus is *not* cumulative with any other reaction modifiers, such as those derived from Charisma; other reaction modifiers don't apply. For every additional slot a character spends on this proficiency, he boosts the reaction modifier by +1 (for example, spending two slots on this proficiency gives a +3 reaction bonus).

**Crossover Groups:** General.

## Riding, Sea-based

This proficiency allows the character to handle a particular species of sea-based mount The type of mount must be specified when the proficiency is acquired. The character may spend additional slots to enable him to handle other species.

In addition to riding the mount, the proficiency enables the character to do the following:

- When the mount is on the surface of the water, the character can leap onto its back and spur it to move in the same round. No proficiency check is required.
- The character can urge the mount to leap over obstacles in the water that are less than 3' high and 5' across (in the direction of the jump). No proficiency check is required. Greater jumps require a proficiency check, with bonuses or penalties assigned by the DM according to the height and breadth of the obstacle and the type and size of mount. Failure means the mount balks; an immediate second check determines if the character stays on the mount or falls off.
- The character can spur the mount to great speeds. If an initial proficiency check fails, the mount resists moving faster than normal. Otherwise, the mount begins to move up to 2d6 feet per round beyond its normal rate. Proficiency checks must be made every five rounds. So long as the checks succeed, the mount continues to move at the faster rate for up to two turns. After the mount moves at this accelerated rate for two turns, its rate then drops to 2/3 of its normal rate. It can move no faster than 2/3 of its normal rate until allowed to rest for a full hour.

If the second or any subsequent check fails, the mount's movement drops to half its normal rate. It continues to move at this half-speed rate until allowed to rest for an hour.

- If a sea-based mount on the surface of the water is attacked, it will normally submerge unless it makes a successful morale roll. If the morale roll fails, the rider can command the mount to re-surface by making a successful proficiency check. If the check fails, the rider can attempt another check each round thereafter, so long as he is physically able. While submerged with the mount and attempting to force it to surface, the rider risks drowning (see Chapter 14 of the *Player's Handbook*). Because he's exerting himself, the number of rounds the rider can hold his breath is equal to half his Constitution score.

**Crossover Groups:** General.

## Signaling

This proficiency gives the character the ability to send messages over long distances. The character must designate his preferred method for signaling. Typical methods include smoke signals, whistling, waving flags, drums, or reflecting mirrors. For each additional slot spent, the character may choose an additional method.

Because signaling is essentially a language, messages of reasonable complexity can be communicated. A practiced signaller can transmit as many as 10 words per combat round.

To interpret the signal, the recipient must be able to see or hear it. He must also have the signaling proficiency and know the same signaling method as the sender. To send a

message and have it understood, both the signaler and the recipient must make successful proficiency checks. If one fails his roll, the message is distorted; the message can be sent again in the following round, and proficiency checks may be attempted again. If both checks fail, or if either character rolls a natural 20, an incorrect message was sent and received; the message has the opposite of the intended meaning. Characters without the signaling proficiency, as well as characters who have the proficiency but use a different signaling method, can't understand the signals.

**Crossover Groups:** General.

### Spelunking

A character with this proficiency has a thorough understanding of caves and underground passages, including their geology, formation, and hazards. The character generally knows what natural hazards are possible and what general equipment a spelunking party should outfit itself with. A successful proficiency check can reveal the following information:

- Determine, by studying cracks in the walls and pebbles on the floor, sniffing the air, etc., the likelihood of a cave-in, flash flood, or other natural hazard. This only works with respect to natural formations, and is negated if the natural formations have been shored up, bricked in, or otherwise tampered with.
- Estimate the time required to excavate a passage blocked with rubble.
- While exploring extensive underground caverns, a successful check reduces the chance of getting hopelessly lost when confronted by multiple unmarked passages, sinkholes, etc. to a maximum of 30%, assuming good lighting (see DMG Table 81-82).

**Crossover Groups:** Warrior.

### Trail Marking

By notching trees, scattering pebbles, piling stones, and clipping weeds, the character can mark a trail through any wilderness area. Providing he moves at 2/3 his normal movement rate, he can mark a continuous trail as long as he likes; however, the longer the trail, the less likely he'll be able to follow it back.

A successful proficiency check enables a backtracking character to follow his own trail for a distance equal to his level in miles. If he fails a check, he loses the trail. For instance, assume a 3rd level character marked a 12-mile trail. His first successful proficiency check enables him to follow this trail back three miles. A second successful proficiency check means he can follow the trail another three miles. The third check fails, and he loses the trail; he's only been able to follow his trail for a total of six miles.

The tracking proficiency isn't necessary to use the trail marking proficiency. However, when a ranger loses his own marked trail, he may still attempt to follow it using his tracking proficiency. Any other characters with the tracking proficiency may also attempt to follow a ranger's marked trail, using the rules applicable to the tracking proficiency.

A marked trail lasts unless it is obscured by precipitation, a forest fire, or the passage of time (an undisturbed trail marked in a forest should last for weeks, while an arctic trail

may last less than a day during periods of heavy precipitation; the DM decides). A ranger or other character with the tracking proficiency may still attempt to follow an obscured trail using the tracking rules.

**Crossover Groups:** Warrior.

### Trail Signs

A character with this proficiency can read symbolic messages indicated by an arrangement of stones or other physical objects. The character must designate the method of leaving messages preferred by his family, tribe, or culture. Typical methods include piling rocks, stacking branches, or building snow sculptures. When the character encounters such a message, he understands the meaning if he makes a successful proficiency check. ("A dragon dwells in these woods." "Eat the green berries for restored health.") The message is meaningless to characters without the trail signs proficiency. A character with the trail signs proficiency who uses methods other than the one encountered can try to read it at half the normal chance for success. This proficiency can also be used to identify the cultural group or tribe that has left a specific trail sign.

**Crossover Groups:** Warrior, Rogue.

### Veterinary Healing

The character can attempt to heal all types of normal animals, following the same procedures described in the description of the healing proficiency (returns 1-3 hit points if done within one round of wounding, once per creature per day; continued care can restore 1 hit point per day during non-strenuous traveling for up to 6 creatures; gives a +2 to save vs. poison if treated for 5 rounds within a round after poisoning; diagnose disease, magical origins identified, natural diseases take mildest form and shortest duration). Supernatural creatures (such as skeletons or ghouls) or creatures from another plane (such as aerial servants or xorn) cannot be treated with this proficiency.

This proficiency is not cumulative with the healing proficiency--the first used will take precedence. The veterinary proficiency can be used on humans, demihumans, and humanoids at half the normal chance for success.

**Crossover Groups:** Priest.

### Weaponsmithing, Crude

This proficiency allows the making simple weapons out of natural materials. This skill is most often found in those from a primitive, tribal, or savage background.

The crude weapons are limited to natural materials: stone, wood, bone, sinew, reed, and the like. Crude weapons take a certain amount of time to make. The DM may add additional primitive weapons to the basic list.

The chance for success is based on the character's Wisdom, with a -3 penalty. Any warrior or a character with the hunting proficiency has a +3 bonus. The fashioner must be proficient in the use of the weapon.

If successful, the weapon can be used normally. If failed, the weapon is so badly flawed as to be useless. On a roll of 20, the weapon seems sound, but will break upon

first use. On a roll of 1, the weapon has no chance of breaking except against a harder material.

*Optional:* Crude weapons check for breaking upon inflicting damage; roll 1d6. Bone weapons break on a roll of 1 or 2, stone weapons break on a roll of 1.

**Crossover groups:** Warrior.

| Weapon | Construction Time |
|---|---|
| Arrows | 7/day |
| Axe, Battle | 4 days |
| Axe, Hand | 1 day |
| Axe, Throwing | 6 days |
| Bow, Long* | 15 days |
| Bow, Short | 12 days |
| Dagger | 2 days |
| Dart | 3 day |
| Javelin | 1 day |
| Knife | 2 days |
| Quarterstaff | 1 day |
| Spear | 2 days |
| Staff Sling | 3 days |
| Warhammer | 5 days |

* Seasoning the wood takes 1 year.

# Chapter 6: Magic

A ranger who reaches 8th level can learn and use certain spells. Unlike a wizard, he doesn't need a spell book, nor does he need to roll to learn spells. Instead, he obtains spells like a priest, acquiring the spells he wants to memorize through meditation and prayer. Chapter 8 examines the relationship between rangers, priests, and faiths in more detail.

Unlike priests, rangers have access to spells only from the animal and plant spheres. As shown on Table 5 in Chapter 1, a ranger can cast spells at an increasingly higher level as he himself advances in level; a 9th-level ranger casts spells as a 2nd-level caster, while a 12th-level ranger casts spells as a 5th-level caster. Also note that a ranger can choose to memorize *any* plant or animal sphere spell of the level shown on Table 5; for instance, a 13th-level ranger can have any three 1st-level spells from the plant and animal spheres and any two 2nd-level spells from the plant and animal spheres memorized at one time.

This chapter presents several new spells that the ranger should find especially useful, along with a few new magical items. For quick reference, Table 56 lists all spells available to the ranger. **Bold-face** spells are described in this chapter; the rest are detailed in the *Player's Handbook.*

## New Spells

## First-Level Spells

**Allergy Field** (Alteration)

Sphere: Plant
Range: 10 yards/level
Components: V, S, M
Duration: 3 rounds + 1 round/level
Casting Time: 4
Area of Effect: 5-foot/level cube
Saving Throw: Neg.

This spell causes characters entering the affected area to suffer extreme allergic reactions. It may be cast on any field, meadow, forest, or other outdoor area with an abundance of plant life, causing the plants to produce pollen, antigens, or similar allergens. Characters coming in contact with the affected area who fail their saving throws vs. spell, experience swelling of the eyes, fits of sneezing, and dull headaches for the next 2-5 (1d4+1) turns. During that time, they make all attack rolls and ability checks at a -1 penalty.

The spell affects a cubic volume whose sides are 5 feet long per level of the caster; thus, a 9th-level caster could affect a 45'x45'x45' cube. The spell lasts until the end of the indicated duration, or until the first frost, whichever comes first.

The material component for this spell is a pinch of ragweed.

**Recover Trail** (Divination)

Sphere: Plant
Range: Special
Components: V, S
Duration: Special
Casting Time: 4 + Special
Area of Effect: Special
Saving Throw: None

A caster who has lost a quarry's trail while using the tracking proficiency can use this spell to proceed. The spell only works in terrain containing some type of vegetation (such as trees, grass, or seaweed). The quarry must have left some potential trail on which the spell can act (the spell cannot track a creature that has *teleported* or *plane shifted*, for example).

If successful, within an hour after casting the spell, the vegetation in a particular area will begin to flutter, as if being blown by a gentle breeze. If the wind is already blowing, the vegetation moves up and down, or moves in another unusual way to attract the caster's attention. When examining this area, the caster will notice a footprint, broken twig, or other sign previously overlooked, indicating to correct trail. The spell has a success chance of 60% + 2% per level of the caster.

This spell will immediately negate a *pass without trace* spell if cast directly for that

purpose, otherwise it will still function normally to allow tracking along the disguised trail.

Any spellcaster with access to both the plant sphere and the tracking proficiency can use this spell.

**Revitalize Animal** (Necromancy)

Sphere: Animal
Range: Touch
Components: V, S
Duration: Permanent
Casting Time: 4
Area of Effect: One animal
Saving Throw: None

This spell allows the caster to heal an animal by transferring life force (hit points) from himself to the animal. If the animal is touched with one hand, it regains 1d4 hit points, just as if it had received a *cure light wounds* spell. Touching the animal with both hands restores 2d4 hit points. In either case, the caster temporarily loses the number of hit points that the animal regains. The caster will recover his lost hit points 1-4 hours later (if he transferred 3 hit points, he recovers 3 hit points in 1-4 hours). The caster's recovery of these hit points has no effect on the restored animal.

During the 1-4 hours before the caster recovers his transferred hit points, he feels weak and dizzy, making all attack rolls at a -1 penalty during that time. Should the ranger die during that 1-4 hour period, the recovery process stops immediately and no hit points are recovered.

The animal cannot recover hit points beyond the normal allotment. For instance, an animal that normally has 10 hit points, but has been reduced to 6 due an injury, can't receive more than 4 hit points from this spell. Also, the caster will have at least 1 hit point remaining after using this spell; if the caster has 6 hit points, he won't transfer more than 5 to a damaged animal.

*Revitalize animal* works on animals only; it has no effect on humans, demihumans, humanoids, magical creatures, etc. The spell is not reversible; that is, an injured caster can't receive hit points from an animal.

## Second-Level Spells

**Animal Eyes** (Necromancy)

Sphere: Animal
Range: 0
Components: V, S, M
Duration: 3 rounds + 1 rnd/level
Casting Time: 5
Area of Effect: One creature
Saving Throw: None

By using this spell, the caster can temporarily see through the eyes of any animal. The caster points at any single animal within 100 yards, then closes his eyes and remains stationary. In his mind's eye, he sees whatever the animal is seeing. If the subject animal is a squirrel studying the party from a tree branch, the caster sees himself and the party from the perspective of the squirrel. If the subject animal is a bird soaring overhead, the caster gets a bird's eye view of the area below.

The spell has no effect on the subject animal, nor can the caster control the animal's actions in any way. The animal is unaware of the spell and acts as it normally would. The spell persists until the end of its duration, or the caster moves or takes another action. The caster may voluntarily negate the spell by opening his eyes. The spell also ends if the animal is killed, or moves more than 100 yards away from the caster.

The subject animal must be one normally found in nature. It may not be supernatural, human, demihuman, nor of extraplanar origin.

The spell requires a glass lens no larger than one inch in diameter as a focus, which is not consumed in the casting.

**Locate Animal Follower** (Divination)
*Reversible*

Sphere: Animal
Range: 60 yards + 10 yards/level
Components: V, S, M
Duration: 8 hours
Casting Time: 5
Area of Effect: 1 animal follower
Saving Throw: None

Occasionally, a ranger's animal follower may wander away in search of food or a mate. An animal follower may also be abducted or trapped. The *locate animal follower* spell helps the ranger find such lost creatures.

The spell takes affect once the ranger fixes in his mind the follower being sought. The spell locates only that specific follower.

Once the spell is cast, the ranger slowly turns in a circle. If the follower is within range, the ranger senses when he is facing in the direction of the sought follower. If the follower isn't within range, the spell doesn't work. If the follower moves out of the area of effect, the spell is immediately negated. As soon as the ranger sees the lost follower, the spell ends. The spell is blocked by lead.

The spell works only on a natural animal follower (including giant animals); not a supernatural creature, human, demihuman, humanoid, or other. If the follower is dead, the spell still seeks it out, providing other conditions of casting are met.

The material component is a hair, feather, scale or other physical remnant of the lost follower.

The reverse of this spell, *obscure follower*, hides an animal follower from detection by spells, crystal balls, and similar means for eight hours.

## Third-Level Spells

**Call Follower** (Conjuration/Summoning)

Sphere: Animal
Range: 0
Components: V, S
Duration: Special
Casting Time: 6
Area of Effect: 10 mile radius/level
Saving Throw: None

A ranger who has not yet received his full allotment of followers can use this spell in an attempt to summon one. After the spell is cast, the DM secretly consults the list of followers he's chosen for the ranger, or rolls an appropriate table. If the DM decides that a potential follower exists within the area of effect, the follower appears within the next 24 hours. If the DM decides that a follower isn't available within the area of effect, nothing happens (no follower appears). Note that the ranger can't request a specific type of follower; as always, the type of follower is up to the DM. The spell can be attempted no more than once per month.

*DM Note:* Notes on staging the arrival of the follower are also given in Chapter 3.

**Chatterbark** (Divination)

Sphere: Plant
Range: Touch
Components: V, S
Duration: Special
Casting Time: 1 turn
Area of Effect: One tree
Saving Throw: None

A variation of the 4th-level priest spell, *speak with plants*, this spell enables a ranger to ask a simple question to a tree and receive a spoken response. The tree can be any species, so long as its trunk is at least 1 foot in diameter. Before casting the spell, the ranger must spend at least an hour carving a humanoid face in the trunk; if the ranger has a proficiency in wood carving (a variation of artistic ability), he can carve a suitable face in one turn.

After carving the face, the ranger spends 1 turn casting the spell, at which time the face becomes animated, twitching and grimacing as if just awakening from a long sleep. The tree face then looks at the caster expectantly, waiting for a question. The caster may ask the tree any single question that can be answered in a single word or short phrase. Typical questions might include: "Has a dragon passed this way within the last few days?" "Has it rained here recently?" "Are there any fruit trees nearby?" The tree answers the question honestly. If the question is beyond the scope of its knowledge, the tree says, "I don't know." After answering, the face disappears.

The DM should keep in mind that a typical tree doesn't know very much, as it has little experience, never travels, and rarely interacts with other living things in meaningful ways. As a rule of thumb, a tree's knowledge is limited to things it has observed (passersby, weather conditions) and general information about the immediate area (animal populations, location of landmarks). A tree can't give dependable advice or make judgements. If the DM is in doubt about what a particular tree knows, the tree answers, "I don't know."

**Animal Trick** (Enchantment)

Sphere: Animal
Range: 30 yards
Components: V, S
Duration: 1 round/level
Casting Time: 6
Area of Effect: One animal
Saving Throw: Special

This spell temporarily enables any animal to perform a trick it normally doesn't know or lacks the intelligence to execute. The animal must be within 30 yards of the caster and must be able to hear his spoken commands. If these conditions are met, the animal will do exactly what the ranger tells it. A lion will batter down the door of a cell, a cat will fetch a key and carry it in its mouth, a parrot will draw a circle in the sand with its claw. A creature with less than 5 hit dice and no prior allegiances receives no saving throw. Any willing creature predisposed to aid the caster (such as an animal follower) will not resist this spell at all.

The animal can't execute a trick or task that exceeds its physical limitations. A snake can't pick a lock, and a horse can't play a trumpet. Note also that the caster must give specific instructions, not general commands. If the caster commands a lion to "Get something to help me put out this fire," the puzzled lion won't know what do to. However, if the caster says, "Take this bucket in your mouth, dip it in the stream, and carry the water back to me," the lion will do as it's told.

The caster can take other actions while the animal is completing the trick. Once the animal completes its trick, the caster may give it additional tricks to complete until the spell expires. If the spell expires while the animal is in the middle of a trick, or if the spell is broken by some means, the animal immediately stops what it's doing.

**Polymorph Plant** (Alteration)

Sphere: Plant
Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 6
Area of Effect: One plant
Saving Throw: None

This spell enables a ranger to transform any single plant, including a fungus or mold, into any other type of plant of the ranger's choice. The change is permanent. The changed plant has the physical appearance of its new form, but not all of the associated properties. If edible, the new form tastes as bland as cotton. If normally used as a spell component, the new form has only a 50% chance of actually functioning as a component. If normally used for medical purposes (such as for a healing salve or poison antidote), the new form has only a 50% chance of having any beneficial properties.

Only living plants can be polymorphed; the spell won't work on a fallen leaf, a nut, or a picked fruit. The size of the plant is not relevant; a blade of grass may be polymorphed into a towering oak tree and vice versa. The new form doesn't have to be indigenous to the environment; an evergreen tree on a frigid mountain may be polymorphed into a cactus (although it may not thrive for long).

Neither the original vegetation nor its polymorphed form can be an intelligent plant or a plant-like creature. Nor are unnatural plant forms allowed; a mushroom may be transformed into a normal-sized cornstalk, but not a 50-foot-tall cornstalk or a stalk that produces apples instead of corn.

The material component for this spell is any seed.

**Table 56: Ranger Spells**

| Level | Name | Sphere |
|---|---|---|
| 1 | *Allergy Field* | Plant |
| 1 | *Animal Friendship* | Animal |
| 1 | *Entangle* | Plant |
| 1 | *Invisibility to Animals* | Animal |
| 1 | *Locate Animals or Plants* | Both |
| 1 | *Log of Everburning** | Plant |
| 1 | *Pass Without Trace* | Plant |
| 1 | *Recover Trail* | Plant |
| 1 | *Revitalize Animal* | Animal |
| 1 | *Shillelagh* | Plant |
| 2 | *Animal Eyes* | Animal |
| 2 | *Barkskin* | Plant |
| 2 | *Charm Person or Mammal* | Animal |
| 2 | *Goodberry* | Plant |
| 2 | *Locate Follower* | Animal |
| 2 | *Messenger* | Animal |
| 2 | *Snake Charm* | Animal |
| 2 | *Speak With Animals* | Animal |
| 2 | *Trip* | Plant |
| 2 | *Warp Wood* | Plant |
| 3 | *Animal Trick* | Animal |
| 3 | *Call Animal Follower* | Animal |
| 3 | *Chatterbark* | Plant |
| 3 | *Hold Animal* | Animal |
| 3 | *Plant Growth* | Plant |

| | | |
|---|---|---|
| 3 | *Polymorph Plant* | Plant |
| 3 | *Slow Rot** | Plant |
| 3 | *Snare* | Plant |
| 3 | *Spike Growth* | Plant |
| 3 | *Summon Insects* | Animal |
| 3 | *Tree* | Plant |
| 4** | *Animal Summoning I* | Animal |
| 4** | *Call Woodland Beings* | Animal |
| 4** | *Giant Insects* | Animal |
| 4** | *Hallucinatory Forest* | Plant |
| 4** | *Hold Plant* | Plant |
| 4** | *Plant Door* | Plant |
| 4** | *Repel Insects* | Animal |
| 4** | *Speak With Plants* | Plant |
| 4** | *Sticks to Snakes* | Plant |

**Tome of Magic*
** Seeker Kit

## New Magical Items

The following magical items are intended for rangers, but if the DM so chooses, he may allow fighters, wizards, and other character classes to use them, too. All of these items are relatively rare and should turn up no more often than a typical item listed in the Miscellaneous Magic Tables in Appendix 2 of the *DUNGEON MASTER Guide*; if you like, you may use any of these items as an option when a DM's Choice is rolled.

**Chameleon Cloak.** This lightweight cloak, which covers the wearer from neck to foot and also includes a hood, may be worn comfortably over studded leather or lighter armor. The color of the cloak automatically changes to blend in with the surrounding terrain. If the wearer enters a jungle, the cloak becomes mottled with patches of green and brown. If the wearer enters a plain of snow, the cloak turns white. At night, the cloak becomes black. The color changes are instantaneous.

A *chameleon cloak* allows a character to be personally camouflaged, as if using the camouflage proficiency, in any terrain. The *chameleon cloak* can only conceal one person at a time. The cloak conceals with an effective Wisdom equal to its rating.

| **d20 roll** | **Wisdom Rating** | **XP** |
|---|---|---|
| 1-6 | 15 | 750 |
| 7-15 | 16 | 800 |
| 16-19 | 17 | 850 |
| 20 | 18 | 900 |

**Horn of Animal Calls (1200XP).** This wooden instrument, painted bright red with tiny silhouettes of various animals along the sides, resembles a recorder about six inches long. The instrument can duplicate the cries and calls of any animal. The user closes his

eyes, pictures the animal in his mind, then blows into the instrument. The sound is indistinguishable from the cry of the actual animal. The instrument can be used to call particular animals or frighten them away. The DM determines the effect of any particular use of the horn; for example, summoning 2d4 animals might be 80% likely in an animal's home terrain, with an arrival time of 1-4 rounds.

**Ice Box (800 XP).** This is an airtight box one foot square, made of black metal with a single hinged panel. Opening the panel reveals the hollow interior. Centered on the outside of the panel is a white metal pointer resembling a small arrow. This pointer can be rotated in any direction to regulate the temperature inside the box. If pointed straight up (toward the hinges), the temperature remains at 70 degrees F. For every complete clockwise rotation of the arrow, the temperature inside the box drops 1 degree. Therefore, if the arrow is rotated 30 times, the temperature drops to 40 degrees F. Rotating the arrow counter-clockwise raises the temperature 1 degree per rotation. The temperature can't be lowered below zero degrees or elevated beyond 70 degrees. The box is useful for making ice and preventing food spoilage.

**Portable Shadow (1,000 XP).** Similar in appearance to a *portable hole*, a *portable shadow* resembles a gauzy black circle about 10 feet in diameter that can be folded up into a packet about 6 inches square. When unfolded and laid on any horizontal surface, the *portable shadow* looks like any normal area of shade, as dark as a shadow cast by a tree or other solid object under a midday sun. This magical item is useful for concealment and makes as good a hiding place as any naturally shaded area; rangers, thieves, and others have their normal chance of hiding in shadows when standing in a portable shadow. The shadow can be picked up by lifting the edge and folding it like a tablecloth.

Dungeon Masters should use common sense adjudicating the use of a *portable shadow*. If a character attempts to use it to hide in shadow while crossing a featureless plain, the presence of a "black hole" attached to nothing will be more likely to attract attention than to divert it. However, it can provide a shady place to cool off away from the desert sun.

**Species Enemy Medallion (750 XP).** A character wears this copper disk on a chain around his neck and under his clothing so that the metal touches his chest. When the character comes within 100 yards of his species enemy, the medallion becomes warm, alerting him to the enemy's presence. The intensity of the warmth varies according to the number and proximity of the enemy. The medallion doesn't get hot enough to cause damage, nor does it reveal the exact location or number of enemies in the vicinity.

**String Cage (500 XP).** This looks like a piece of white thread 20 feet long, flecked with gold. When arranged in a circle so that the ends touch, the *string cage* creates an invisible barrier that prevents any creature contained inside from leaving. The invisible barrier has the strength of a *wall of force* and has the shape of a closed cylinder about 6' tall. The *string cage* only functions if placed on the ground or other solid surface; if moved, the barrier dissipates. Because of its light weight, the string can't be thrown like a lasso; if rocks or other weights are attached, its magic is negated. Therefore, the device is mainly useful to contain creatures that are sleeping, trapped, restrained, or cooperative.

A *string cage* can contain any single creature, so long as the creature fits inside the circle. Physical attacks and most spells have no effect on a string cage. The creature trapped inside can't move it. A *disintegrate* spell destroys the device, as will a *rod of cancellation* or a *sphere of annihilation*. A creature contained in a string cage can escape by using dimension door, teleport, or a similar spell.

Only the person who originally formed the circle can separate the ends and free the creature inside. Otherwise, a *string cage* lasts for 3-12 (3d4) hours, at which time the ends separate automatically. A *string cage* can be used only once per day.

**Thorn of Sleep (100 XP each).** The *thorn of sleep* looks like the thorn of a plant, about three inches long. It is dry and smooth to the touch. If pricked by the thorn, a creature must make a saving throw vs. paralyzation. Failure means the creature falls into a deep slumber. The creature will not waken until attacked or strongly roused. Noises, even those of battle, will not awaken the sleeping creature. Each thorn can be used but once. Only 1-8 thorns will be found at any one time. A *thorn of sleep* can be projected by a blowgun.

# Chapter 7: Equipment

To help him thrive in a variety of environments, the ranger has developed a wide range of specialized equipment. This chapter describes some of the more useful items, along with some of the more unusual.

Table 57 lists costs and weights of clothing, transport, and miscellaneous equipment. Table 58 provides similar information for weapons; see Chapter 6 of *the Player's Handbook* for the meaning of weapon size, speed factors, and type.

## Clothing

**Aba.** This desert robe is made of lightweight fabric and covers the entire body. Typical colors include brown, gold, black, and white. Elaborate embroidery, made of brightly colored cloth strips or gold thread, often decorates the hem. A silken or cotton sash ties the aba at the waist.

In deserts and other dry climates, such garments help prevent evaporation, allowing the wearer to retain more moisture and function more comfortably. Assuming adequate water, a character wearing a desert robe is no more likely to suffer heat exhaustion on days of extreme heat than a normal person would on days of moderate temperatures. Note that desert robes don't help in areas of high humidity; in humid environments, as much skin should be exposed as possible to encourage cooling from the evaporation of perspiration.

**Arctic Coat.** Designed for protection against extreme cold, the arctic coat is a knee-length single-piece garment with a billowing hood. The long sleeves allow the wearer to warm his hands by drawing them inside and holding them against his chest. Arctic coats are usually made of thick bear fur, lined with seal skin for comfort. An arctic coat keeps

the wearer comfortable in temperatures well below zero degrees F.

**Rain Poncho.** A one-piece garment resembling a large cloak with a head-sized hole in the center, a poncho helps keep the wearer dry during rain storms. Ponchos are made of canvas or similar material, often treated with a waterproofing oil. A poncho can double as ground cover and can also be used as an emergency tent. Crude ponchos are sometimes woven from grass or reeds.

**Snowshoes.** Each about three feet long, these oval-shaped wooden frames are laced with leather webbing to allow the wearer to walk across snow without sinking. A character newly introduced to wearing snowshoes moves at half his normal rate until he gets used to them. After a day or so of practice, he moves at his normal rate. A character wearing snowshoes receives no bonuses for charging.

**Terrain Suit.** Made of lightweight material, usually fine linen or silk, the terrain suit consists of a long-sleeved shirt or blouse and long trousers, dyed in various colors to help the wearer blend in with his surroundings. Styles include arctic (colored solid white), sand (mottled patches of various shades of brown, for desert and similarly sandy terrain), woodland (patterns of green and brown, for forests and jungles), and urban (black). A terrain suit must be precisely made and fitted to the person to wear it. It is worn most commonly by Stalkers, though some individual tribes and groups of warriors, woodsmen, or thieves use them, too. (As a rule of thumb, terrain suits should be slightly more common than elven chain mail.)

A terrain suit gives the same advantages as the camouflage proficiency when worn in the appropriate terrain, using a base Wisdom rating of 14. A character wearing a terrain suit with the camouflage proficiency uses his Wisdom (or 14, whichever is higher) with an additional +1 bonus.

**Waterproof Boots.** These thick boots are made of tough, water-resilient hide (such as alligator or caribou) treated with a waterproofing oil (typically derived from seals or minks). The wearer tucks his trousers inside the boots, then ties them near the knees with a leather drawstring. The boots keep the feet dry, even when wading in water.

**Wilderness Harness.** This device resembles a thick leather belt with straps that cross over the wearer's back. Both the belt and the straps contain a series of small pouches, useful for storing supplies, ammunition for missile weapons, and other materials. A secret compartment in the back section of the belt conceals a 6-inch-long flat knife (the knife comes with the harness; see Table 58 for statistics).

### Transport

**Dog Sled.** One of the best ways to travel in snowy or icy terrain, a dog sled consists of a wooden frame for carrying supplies, wooden runners extending the length of the sled, a platform on which the passenger stands, and a lattice on the front to which the dog team is harnessed. About 6-11 dogs (or equivalent) can pull a sled 10 feet long and 3 feet wide, carrying up to 880 pounds (including the weight of the sled). Fewer animals are

required for smaller sleds. A typical 8-dog sled travels at a movement rate of 15 with a load of about 680 lbs., including the sled.

When adjudicating movement via dog sled, DMs should take into account that animals not bred or trained to pull a sled can create a considerable amount of trouble for the driver--tangling traces, fighting with nearby animals, and so on--and movement could be slower than expected.

**Kayak.** This is a single-person boat, fast-moving and easy to maneuver. Its lashed wooden frame is about ten feet long and two feet wide, covered with canvas, sealskins, or hides of similar water-dwelling animals. The skins are attached to the frame, allowed to tighten by drying, then coated with oil to make the craft water resistant. The passenger squeezes into the hole in the top of the craft and sits so his legs extend into the bow. To seal out water, the opening of the kayak has an "apron" (often made of whale intestines) which the kayaker laces around his waist. He propels the kayak with a single long oar with a paddle on either end. A kayak can move 200'/round (its movement rate can be rounded down to 6) and it can carry 250 pounds.

**Water Sled.** This resembles a dog sled with inflated skins in place of runners, enabling the craft to float on the surface of the water. Long leather reins, treated with waterproofing oil, connect with the animals pulling it, usually a team of eight seals or six dolphins. A water sled carries no more than two passengers (about 480 pounds, including the sled), unless the animals pulling it are exceptionally fast and strong. Made to ride as much above the water as in it, the sled can achieve a top movement rate of 15 if pulled by strong steeds, but 9-12 is a more sustainable speed.

## Miscellaneous Equipment

**Breathing Tube.** This simple device helps a character function underwater. A breathing tube made of a hollow reed, about a foot long, strengthened with wax and treated with waterproofing oil. The user places the tube in his mouth, then submerges himself with the end of the tube protruding from the water. The tube enables the submerged user to breathe indefinitely.

**Camouflage Paint Kit.** This compact leather case contains several cakes of greasepaint (in various shades of brown, green, yellow, and black), applicator brushes, a jar of paint removal cream, and a small mirror. Characters apply the paint to areas of exposed flesh to help them blend in with their surroundings. A kit contains 12 uses.

By itself, camouflage paint doesn't give a character any particular advantage. However, when used with a terrain suit (described above), it boosts the character's success chances by +1. The camouflage proficiency is required to apply the camouflage paint well; those without this proficiency have *half* the usual chance of success. A character using camouflage paint and a terrain suit gains a +2 bonus to his camouflage check.

**Chain Leash.** Made of chain links with a leather muzzle, this leash can be adjusted to fit any animal ranging in size from a small dog to a wolf. The length of the leash varies

from 6-12 feet long. When using a properly-fitted chain leash on an animal, a character receives a +1 bonus to his animal training proficiency checks. Chain leashes are available in other sizes and lengths to fit larger and smaller animals.

**Falconry Gauntlet.** Also called a perch glove, this is a heavy arm-length glove of thick leather upon which a falcon or hawk can perch.

**Falcon Training Equipment.** This equipment makes falcon training more efficient. A character using the falconry proficiency without this equipment suffers a -2 penalty to training proficiency checks. One set is required for each falcon.

Each set consists of *jesses* (leather bands with rings, attached to the falcon's legs), *talon guards* (metal coverings for the bird-s claws to prevent it from harming the owner during training), a *creance* (a slender leather leash attached to the jesses, held by the user or secured to the perch glove), and a *hood* (a leather covering fitting over the falcon-s head that restricts vision; the hood forces the falcon to rely on its senses of hearing, touch, and taste). Customized or richly appointed equipment, such as an embroidered hood or golden jesses, is also available, usually at double or triple the normal price.

**Fishing Tackle.** This meticulously crafted set of polished wooden lures, colorful flies made of feathers and catgut cord, bone hooks, and cork bobbers can be quite useful in the hands of a skilled fisherman. If used by a character with the fishing proficiency, the proficiency checks are modified by +1.

**Healing Kit.** This is a waterproofed leather or canvas backpack or handbag containing cloth bandages, splints, needles and thread (for stitching wounds), ointments, and a selection of herbs for soothing pain (these don't heal damage). It also has room for special medicines, such as poison antidotes or healing potions, but these are not included in the standard kit. The kit is useful in treating injuries of all types; a character with the healing or veterinary healing proficiency without this kit or equivalent may not be able to use the proficiency, depending on the situation.

**Insect Repellent.** Applying this rare, minty cream over a character's face, arms, and other areas of exposed flesh repels bees, ants, and all other types of insects less than 1 Hit Die in size. One application wears off after 8 hours. A jar of insect repellent contains 12 applications.

**Scent Lure.** A scent lure is a pungent liquid used to attract animals in the wild. Each scent lure attracts a specific type of animal, usually woodland game such as deer, wolf, or fox; individual animals of the species find the odor irresistible.

Each bottle of scent lure contains five applications. One application near a tree, rock, or snare has a 15% chance of attracting an animal of the given species within 24 hours, presuming the animal passes within 100 yards of the application (the DM determines if an animal comes close enough). Extra applications do not increase the chance of attraction. The scent evaporates in 24 hours.

**Sleeping Bag.** More comfortable, but bulkier than blankets, the sleeping bag is made of two layers of canvas or wool, stuffed with down for warmth. The user slips inside the sleeping bag and secures the open side by fastening several buckles or tying a series of leather straps.

**Sun Goggles.** Arctic or mountaineering sun goggles are made from solid wood. The wearer peers through two narrow slits. These reduce or eliminate the effects of dazzling lights, such as fatigue from traveling under very bright sun (for example, across deserts, or flat plains on cloudless days). Sun goggles also prevent snowblindness, where the eyes become swollen from exposure to bright sun reflecting off ice and snow. (Attack penalties for snowblindness vary from -1 to -4.)

Sun goggles will not prevent blindness caused when a *light* spell is cast directly against the wearer's eyes. Sun goggles also reduce the field of vision; the wearer can't see above or below without moving his head. This may increase chances of being surprised or attacked from a blind side, at the DM's option.

**Sunburn Ointment.** Characters risk damage from sunburn in any terrain during seasons of bright sunlight, not only in deserts, but also in the arctic, where the sun reflects off the ice and snow. If characters don't protect exposed flesh with scarves, mask, or other covering, they risk suffering 1 point of damage from sunburn per day. An application of sunburn ointment, gives protection against sunburn for a full day. A jar of sunburn ointment contains 14 applications.

Sunburn ointment gives no protection from magical or non-magical fire; it is ineffective against any source of damage other than the sun.

Sunburn ointment is rare, found only in the best-stocked shops in large cities.

**Survival Kit.** A character may strap this small leather pouch, about four inches on each side and an inch thick, around his thigh, upper arm, or anywhere else where it can remain concealed. The kit contains a number of small items useful in emergencies: a scrap of parchment and piece of graphite (for writing messages), a fish hook, a 25-foot length of fishing line on a spool, one gold piece (good for bribing guards), a small razor (for severing rope or inflicting 1 hit point of damage against captors), a wooden whistle (for signaling), a cloth pad (for making an emergency bandage), and a few pieces of sugar candy and dried fruit (for quick energy, or luring animals). Similar items may be substituted to customize individual kits.

**Tents.** These portable shelters, usually made of canvas or tanned animal skin, provide shelter from the elements for weary travelers. They're easy to erect and light to carry. Here a few of the most popular small tents, suitable for one or two occupants:

- *Bell Tent*. This is one of the simplest tents, consisting of a single sheet of fabric arranged around a pole to form a cone. Ropes attached to stakes surrounding the bottom of the tent are pulled to stretch the fabric tight. Though quick to construct and easy to transport, bell tents don't provide much protection against strong winds.
- *Wedge Tent*. Also known as an A-frame tent or a wall tent, the wedge tent is built

on a frame consisting of two vertical poles with a horizontal pole secured between them. The fabric is laid across the horizontal pole, then stretched with ropes attached to stakes. The wedge tent is somewhat sturdier than the bell tent, although like that tent, it provides only modest protection against severe weather.

- *Pyramid Tent*. Combining elements of both the bell and wedge tents, the pyramid tent frame is made of four vertical poles arranged in a square, with horizontal poles attached between them. A longer pole rises from the center of the square. The fabric extends from the center pole to form four slanting walls, secured with stakes. The sturdy pyramid tent resists light to moderate winds.
- *Bundle Tent*. Particularly useful in cold climates, the bundle tent consists of from six to eight ribs about five feet long, connected to each other by the tent covering. The covering consists of two layers of skin from a furry animal, such as a bear or caribou. The layers are arranged fur-side out, creating a pocket of air for extra insulation. The tent opens like an umbrella to form a domed shape or folds into a bundle.

**Traps.** These finely-crafted metal traps can be set up in a matter of minutes. Two general types are available; both come in *small* (rabbit), *medium* (wolf), and *large* (bear) varieties. A character using either type of trap adds a +1 bonus to his set snares proficiency checks.

- *Enclosing Trap:* This type of trap resembles a box. It catches animals alive. Lured by edible bait or a shiny object, the animal enters the box and steps on a trigger which causes the front of the box to snap shut.
- *Killing Trap:* A killing traps has two metal jaws lined with sharp points. A small platform, which holds a lure, rests in between the jaws. The slightest pressure on the platform causes the jaws to snap shut, killing the animal.

**Tinderbox, Waterproof.** This waterproof box contains flint and steel, along with a small supply of wood shavings for kindling. The box keeps the contents dry during a rainstorm or when submerged underwater. Once per round, a character can attempt to start a fire using these materials. A roll of 1 or 2 on a 1d8 is necessary to start a fire in normal, dry conditions. A 1 on a 1d8 is necessary if the area is damp; the DM may require more difficult rolls (for instance, a 1 on 1d12) in wet terrain, or may rule that a fire can't be started at all.

**Weaponblack**. When rangers or thieves apply this oily paste to their weapons or armor, it makes the metallic surfaces non-reflective and nearly invisible. Modify their base chance to hide in shadows by +5%. A coat of weaponblack lasts until the character engages in melee combat, at which time enough of the substance flakes away to negate any camouflaging advantage. The substance is flammable; if lighted, a sword coated with the paste will become the equivalent of a *flametongue* for 2-5 rounds, and will also inflict 1d4 points of heat damage upon the wielder unless he is magically protected. A vial of weaponblack contains 1 application. This substance is uncommon and only available through shady under-the-counter dealing.

## Weapons

**Flail, Grain.** This consists of a leather strap two or three feet long that connects a wooden handle to a block of wood about a foot long. Farmers use the grain flail to thresh wheat, barley, and other grassy crops. It also makes a good bludgeoning weapon.

**Hatchet.** This one-handed woodsman's axe has a broad blade, a smooth wooden handle for a good grip, and its own leather scabbard for the head, which can be strapped to the wearer's belt. The hatchet is useful for chopping wood and serves as an excellent melee weapon.

**Ice Pick.** This special type of metal awl is used to break holes in frozen lakes for ice fishing and to chip away ice chunks when building snow houses. (Note, however, that the snow blade, or iuak, described below, is the primary tool for such a job.) Consisting of a bone or wood handle and a sharp metal point about six inches long, an ice pick also can be used as an impaling weapon.

**Snow Blade.** Also called an *iuak*, the snow blade resembles a machete made of bone, about two feet long and six inches wide. The end is flat rather than pointed. Mainly used by arctic rangers to slice blocks of snow to make shelters, the snow blade also doubles as a weapon.

**Machete.** Farmers in tropical regions use this 3-foot-long flat blade to chop cane and clear undergrowth. Wielded like a sword, it can inflict serious damage. The price of a machete includes a canvas sheath.

**Ritiik.** This 6-foot-long weapon consists of a wooden shaft with a point and a hook on the same end. Primarily used by primitive tribes of arctic and tundra regions for hunting bear and other large game, the ritiik is thrust, not thrown. When the point pierces the animal, the user jerks and twists the shaft to embed the hook.

**Scythe.** A curved blade attached to a 5-foot wooden pole, this farm tool is used to cut grain at harvest and also doubles as a weapon. A user wields the scythe by holding the short wooden bars on the end opposite the blade. The scythe is always used as a two-handed weapon.

### Table 57: Clothing, Transport, and Misc. Equipment

| Item | Cost | Weight (lb.) |
|---|---|---|
| Aba** | | |
| Common | 9 sp | 3 |
| Embroidered | 20 gp | 3 |
| Arctic coat** | 10 gp | 5 |
| Boots, Waterproofed | 4 gp | 2 |
| Breathing Tube | 2 sp | * |
| Camouflage Paint Kit | 50 gp | 1 |

| | | |
|---|---|---|
| Chain Leash | 6 gp | 1 |
| Dog Sled | 30 gp | 40 |
| Falconry Gauntlet | 5 sp | 1 |
| Falconry Training Equipment | 10 gp | 1 |
| Fishing Tackle | 2 gp | 1 |
| Healer's Kit | 25 gp | 1 |
| Insect Repellant | 5 gp | * |
| Kayak (& paddle) | 35 gp | 50 |
| Poncho, Rain | 6 gp | 2 |
| Scent Lure | 3 gp | * |
| Sleeping Bag | 3 gp | 8 |
| Snowshoes | 2 gp | 1 |
| Sun Goggles | 1 gp | * |
| Sunburn Ointment | 2 gp | * |
| Survival Kit | 10 gp | * |
| Tents | | |
| Bell | 4 gp | 10 |
| Bundle | 20 gp | 12 |
| Pyramid | 15 gp | 15 |
| Wedge | 5 gp | 10 |
| Tinderbox, Waterproof | 8 sp | * |
| Trap | | |
| Enclosing*** | 3/7/12 gp | 3/8/15 |
| Killing*** | 2/5/10 gp | 5/10/20 |
| Water Sled | 35 gp | 30 |
| Weaponblack**** | 2 gp | * |
| Wilderness Harness | 2 gp | 1 |

* Weight is inconsequential (a few ounces).
** Price is double to triple this amount unless bought in a desert setting.
*** Prices and weights are for small, medium, and large sizes, respectively.
**** Rare. Only available under-the-counter.

## Table 58: Weapons

| Item | Cost (gp) | Wt. (lb.) | Size | Type | Speed Factor | Damage S-M | L |
|---|---|---|---|---|---|---|---|
| Flail, Grain | 3 | 3 | M | B | 6 | 1d4+1 | 1d4 |
| Hatchet | 2 | 3 | S | S | 4 | 1d4+1 | 1d4+1 |

| Sabre | 15 gp | 5 | M | P | 4 | 1d6+1 | 1d8+1 |

*The harness knife's cost is included as part of the cost of the wilderness harness (Table 57). The knife itself weighs only a few ounces.

**Optional Weapon Notes**

**Belaying Pin:** A short wooden rod used on ships (rigging lines are tied to them). This can be used as an improvised club. If using related proficiencies, the belaying pin is related to club and mace.
**Gaff/Hook:** This is a metal hook with a metal or wooden crossbar at the base. "Attached" means the hook has been used to replace a hand.
**Main-Gauche:** A large-bladed dagger with a basket hilt, used as a secondary weapon in a two-weapon fighting style. Gives +1 to disarm attempts. Hilt gives +1 to parry and the effect of an iron gauntlet when punching.
**Stiletto:** A narrow-bladed knife, with a sharpened point only. Has a non-magical +2 bonus against ring mail, chain mail, and plate mail. Knife proficiency covers the stiletto.
**Cutlass:** Short heavy slashing sword, sharp along one edge, with a basket hilt (+1 to parry, punch as iron gauntlet). If using related proficiencies, related to dagger, knife, and short sword.
**Rapier:** Long-bladed sword, with point only, requires its own proficiency. A basket hilt can be added for 2 gp (+1 to parry, +1 lb., punch as iron gauntlet). If using related proficiencies, this is related to sabre.
**Sabre:** A light slashing sword. Can be fitted with a basket hilt for 2 gp (+1 parry, +1 lb., punch as iron gauntlet). If using related proficiencies, this is related to rapier.

# Chapter 8: Role-Playing

Each ranger is a unique individual with his own feelings, motivations, and personal history. Because there are an endless number of possibilities for ranger personalities, step-by-step guidelines for generating them are not practical, nor are they particularly desirable. Strong characters have constantly evolving personalities, reflecting their

experiences as well as their players' inclinations. Just about anything goes, so long as the DM approves and the resulting character is fun to play.

Look over the topics in this chapter and consider how they relate to your character. Ask yourself how he become a ranger in the first place. Where does he come from? What drives him? What makes him feel angry, happy, fulfilled? How does he spend his free time? As you answer these and other questions, your mental image of the character should begin to sharpen. Before you know it, he'll be as familiar as an old friend.

## Demographics

The total number of rangers is difficult to determine. Because of their independent nature and tendency to avoid civilized society, rangers aren't likely to cooperate with a formal census. Additionally, many rangers reside in the most remote regions of the world, making a population count impractical if not impossible.

Still, it's safe to say that rangers are among the less numerous of the character classes, if for no other reason than the demanding ability score requirements limit their number. It's a good bet that there are fewer rangers than bards. They're perhaps more common than paladins. Beyond these generalities, it's anybody's guess.

Terrain preferences are a little easier to ascertain. Most rangers prefer forests, hills, and plains, thanks to the flourishing animal life and comfortable climates. Rugged mountains, and jungles attract the more adventurous rangers, while only the hardiest rangers make their home in the harsh lands of the desert and arctic. As a rough guideline, assume that about 40% of all rangers have Forest as their primary terrain, about 15% have Hill, another 10% or so each have Jungle, Mountain, or Plain, and the rest are more or less equally divided among Swamp, Desert, Arctic, and Aquatic.

## Race

Unless the demi-rangers described in Chapter 4 are allowed in your campaign, rangers must be human, elf, or half-elf. Roughly 70% of all rangers are human, 10% are elves, and 20% are half-elves. Even in demi-ranger campaigns, less than 1% of the ranger population are dwarves, gnomes, or halflings.

## Gender

Gender plays no part in determining one's aptitude for becoming a ranger. About half the ranger population is male, and the other half, female, reflecting the percentages in the general population.

## Social Background

No particular social background predominates in the ranger population. Lower, middle, and upper class rangers are more or less equally represented, with a slight bias toward the lower classes at low levels because these are closest to the land.

Certain kits also tend to favor certain social classes. Feralans and Greenwood Rangers tend to come from lower economic backgrounds, while Falconers, Sea Rangers, and

Wardens often come from wealthier families. Social class, however, is only one element that influences a ranger's personality. A Guardian with a lower class background who has worked his way up might behave little differently than one with middle class origins.

### Family

More relevant to the ranger's choice of career is the size of his family and his role within it. Because his duties place him into a life of relative isolation, the best candidates for rangers are those with few family ties. Orphans and late children are disproportionately represented in the ranger population, as are those who have been disowned or cast out by their families.

### Age

There are no rigid age requirements for rangers. However, few adolescents are capable of commanding the respect due a ranger, while many older individuals have trouble managing the rigors of the wild. Consequently, the majority of rangers fall between the ages of 18-60.

### Alignment

All rangers are of good alignment, and the number of lawful good, neutral good, and chaotic good rangers are approximately equal. The more independent and isolated a ranger, the less likely he'll be lawful good. Lawful good rangers are often drawn to the Guardian, Justifier, and Warden kits. The Pathfinder and Explorer kits tend to have more than their share of neutral good rangers. Chaotic good rangers are generally associated with the Feralan and Mountain Man kits.

## Becoming a Ranger

Unlike many other character classes, rangers have no clear career paths. Wizards may be taught in magic academies and clerics may be recruited by a church, but no structured training centers exist for rangers. There are guilds for thieves and worldwide hierarchies for druids, but rangers stubbornly resist organizations of any kind. Since the ranger class stresses self-reliance and independence, it's not surprising that the circumstances under which they acquire their skills are as varied as the rangers themselves. Here are some of the most common ways to become a ranger, along with a few kits typically associated with them. Of course, the standard ranger might have any of these.

### Apprenticeship

An elderly ranger may wish to make sure that his territory will be in good hands after his death. Rather than award conservatorship of the territory to another ranger or a local government, he may instead decide to recruit an apprentice. The elder not only teaches the ways of the wilderness to the young man or woman, but also passes along his values, ensuring that his philosophy will live on. Friends or family members of the elder make

ideal candidates for apprentices, as do orphans and human followers.

*Suggested Kits:* Falconer, Forest Runner, Greenwood Ranger, Guardian, Pathfinder, Sea Ranger, Seeker.

### Self-Determination

Individuals attracted to this character class may take it upon themselves to master the necessary skills without a formal apprenticeship. Such an individual may be motivated by curiosity (he's fascinated by nature and longs to learn what books can't teach), a compelling event (an army of orcs makes a surprise attack against his village from an unpatrolled forest; he vows to guard the forest to prevent a recurrence), or a restless urge to explore the world (he feels smothered by the secure but boring life his parents have planned for him).

A self-determined ranger often takes a circuitous route to learning his craft. He may begin by petitioning his lord or king to allow him to accompany military personnel on wilderness excursions, learning from observation how soldiers survive in the field and track their enemies. He may offer to keep house or work for a sage or hedge wizard in exchange for private lessons in botany and other natural sciences. A few years as a neophyte in a nature-oriented church may give him access to priestly magic. And a surreptitious partnership or adoption by a notorious thief may teach him the knack of hiding in shadows and moving silently.

*Suggested Kits:* Explorer, Forest Runner, Guardian, Justifier, Pathfinder, Sea Ranger, Seeker, Stalker.

### Conscription

Occasionally, a king or other official requires a ranger to explore, settle, or administer a recently annexed territory. A replacement may be needed for a ranger who has retired or died. If a suitable candidate isn't available, the most suitable young man or woman may be drafted. Generous authorities may reward the draftee's family with a monthly stipend in exchange for the cooperation of their son or daughter. More often, however, the authorities offer no remuneration, expecting some type of service from all citizens; recruitment as a ranger is generally preferable to the risky life of a soldier or dull routine of a bureaucrat.

Conscripted rangers often receive first-class training, perhaps at the hands of elder or retired rangers. Some countries have special units of border runners or scouts, which can provide a training ground for the potential ranger. Terms of services range from several years in most cases to a few decades in extremely militaristic societies. Though many choose to re-enlist when their service terms expire, most conscripted rangers eventually part company with the established rulers and continue their careers as free agents.

*Suggested Kits:* Justifier, Giant Killer, Pathfinder, Sea Ranger, Warden, Stalker.

### Happenstance

A common way for a young character to become a ranger is though circumstances beyond his control. The following are typical. A youth who makes his way to an

uninhabited island after his ship sinks has to master the skills of a ranger in order to survive. The lone survivor of a pioneer family slaughtered by grizzly bears wanders for years in the wilderness, becoming a ranger in the process. A youth captured by slavers escapes into the wilderness and eventually learns ranger skills. He returns much later as an accomplished ranger with a mission to destroy or drive out the band of slavers who imprisoned him.

*Suggested Kits:* Beastmaster, Explorer, Feralan, Guardian, Mountain Man, Pathfinder.

### Divine Intervention

For purposes of their own, the gods may choose a mortal to receive the skills of a ranger. If the gods see a need for a protector of a favored tract of land, or desire an advocate for threatened animals, they may seek out a youth with the prerequisite physical skills, mental agility, and moral attitude. If the youth is open to their offer--generally, the gods won't bother with an unreceptive candidate--he will be guided through a lengthy series of quests and training exercises to develop the skills necessary to become a ranger. In some cases, the gods may grant him the skills directly.

*Suggested Kits:* Beastmaster, Greenwood Ranger, Guardian, Justifier, Mountain Man, Sea Ranger, Seeker.

### Social Misfit

Society has no use for some of its citizens, shunning them because of their appearance, race, social standing, or nonconformist philosophies. Outcast youths often find solace in the wilderness. Animals, they discover, are far less judgmental than humans. In time, those with strong wills and a knack for survival may become rangers through sheer tenacity.

*Suggested Kits:* Feralan, Greenwood Ranger, Guardian, Mountain Man, Stalker.

## Common Traits: the Classic Ranger

Perhaps the most important aspect of creating a three-dimensional character is determining his core traits, the values and principles upon which he bases his philosophy. A character with specific values tends to be more consistent in his reactions. And while few real-world people are wholly consistent, the more consistently a character behaves, the more lifelike he'll appear in the context of a game.

While no two rangers are exactly alike in their outlook, all share a set of common traits which form the foundation of their personality. These traits are described in general terms below, and are not intended to straitjacket a good role-player. A player doesn't necessarily have to incorporate all of these traits into his character, but he should think carefully before setting them aside. In a sense, these traits are as crucial to defining the ranger character class as his ability scores.

### Strong Ethics

Rangers have firm values that impel them to promote goodness and justice.

Regardless of whether he's lawful good, neutral good, or chaotic good, a ranger has definite ideas about the difference between right and wrong. He behaves honestly, and most rangers believe in altruism and service. Selfishness and greed are antithetical to the ranger. He champions the powerless and fights for the weak. In many cases, a ranger's respect for life extends to animals as well as humans. Though in essence rangers are warriors, most have no fondness for war. Even when fighting for a cause in which he believes, the ranger looks forward to the end of the conflict and the natural healing process promised by peace.

### Love of Nature

A ranger is as much a creature of the wilderness as a lion or wild horse. Many rangers find urban life suffocating and would no more make their homes in a city than volunteer for a prison sentence. A typical ranger prefers songbirds to orchestras, flowers to jewelry, and forests to grand castles. Most rangers are sophisticated enough to handle themselves well in urban settings, but they generally can't wait to finish their business and leave.

### Solitary

By virtue of his duties and disposition, the ranger spends a lot of time alone. Most rangers come to enjoy the solitary life, and have no particular need for the company of other people. In most cases, animals satisfy a ranger's desire for companionship.

On the positive side, the ranger's penchant for solitude encourages him to be self-reliant and independent. On the negative side, rangers may come across as remote and detached, even antisocial. While a ranger may be perfectly capable of social etiquette, his companions may believe that he's not especially interested in fostering lasting friendships.

### Taciturn

By observing wild animals, many rangers have learned the importance of keeping their emotions in check. A juvenile wolf who charges impulsively is certain to scare away his prey. A young lioness who makes unprovoked, pointless attacks against the pride leader may find herself ostracized and alone. Consequently, rangers often conceal their feelings from friends and strangers alike, revealing little about themselves in actions or words. For all but the ranger's closest companions, it's often difficult to tell if he's happy or sad, angry or forgiving, troubled or content.

Though rangers certainly experience emotions as deeply as anyone else, many suffer in silence when wounded, and grieve in private at the loss of a beloved animal or comrade. A ranger's companions invariably find him to be a dependable, competent, and trustworthy professional. But as a person, he often remains an impenetrable enigma.

### Devout

Many rangers are deeply and privately spiritual, perceiving their access to spells and their appreciation of nature as gifts from a greater power. Whether a ranger worships

nature itself as a unifying force or follows an established religion, he combines his love of nature with his faith to form the foundation of his moral code. Such rangers regularly reaffirm their commitment through moments of quiet reflection. (See Chapter 9 for more about rangers and religion.)

## Daily Life

When a ranger is not adventuring, he still has plenty to do to keep busy. Some of the more common ranger activities are described below.

Most of a ranger's daily routine occurs off stage; that is, neither the player nor the DM need keep a detailed record of what a ranger does between adventures. However, a creative DM may use elements of a ranger's routine as the basis for an adventure--while patrolling his territory, a ranger intercepts a goblin who turns out to be a scout for an advancing army; or as a springboard for a ranger to acquire a new follower--a bear rescued from poachers takes a liking to the ranger. A ranger's routine might also generate encounters to introduce him to important NPCs--the ranger provides first aid to a hunter who turns out to be a powerful official in a prosperous kingdom; or gain him experience--the ranger earns experience points by fighting a small forest fire.

Of course, not every ranger regularly engages in all of these activities. A ranger occupying an arctic territory doesn't have to worry much about forest fires, while a Warden probably spends more of his time enforcing laws than a Greenwood Ranger or Feralan. Still, the activities described here should give you a good idea of how a typical ranger fills his day.

### Patrolling

The ranger spends much of his free time patrolling his territory. He may follow the same route every day, or he may wander wherever his fancy takes him. He keeps an eye out for signs of trouble, such as eroded fields or withered plants, and makes contact with other sentient residents, listening to their problems or engaging in small talk. Some rangers ride mounts, particularly if they have a lot of ground to cover, but most prefer to patrol on foot, which enables them to traverse obstacles more easily, as well as minimizing the chance of drawing attention to themselves. Though patrolling is necessary to keep abreast of the condition of their territories, rangers also patrol for the sheer pleasure of basking in the open air and savoring nature's splendor.

### Monitoring Strangers

A ranger is ever-watchful for strangers in his territory. Followers or other contacts may alert him to the presence of strangers, or he may become aware of them himself by noticing disturbances in the terrain or observing them directly.

In most cases, a ranger monitors strangers discretely, watching them from the cover of trees or shadows, or requesting his followers to make regular reports of their activities. Usually, a ranger can ascertain the intention of strangers without ever making direct contact with them. Most turn out to be harmless travelers or hunters who pose no threat to the ranger or his territory, and the ranger leaves them alone.

If a stranger's motives are more ambiguous--for instance, if he's chopping down trees or hunting animals beyond his needs--the ranger will confront him, politely but firmly inquiring about his intentions. Generally, the abrupt appearance of an intimidating ranger, particularly if he's accompanied by a bear or two, elicits immediate cooperation. If the stranger explains himself satisfactorily, the ranger departs, perhaps implying that he'll be back if the stranger doesn't keep his nose clean. Should the stranger resist the ranger's authority, the ranger may take whatever actions he deems necessary to ensure compliance, using violence as a last resort.

However, physical confrontations are rare. More commonly, strangers require directions, medical care, or advice. A ranger is usually willing to help, especially if his assistance facilitates their leaving his territory more quickly. If the strangers are lost, the ranger will point out the best route leading to their desired destination. In some cases, he'll volunteer to guide them. Most rangers have a rudimentary knowledge of first aid, and can bind sprained ankles, splint bones, and attempt to resuscitate for drowning victims. A ranger can explain which plants are edible and which are poisonous. He can direct strangers to sources of fresh water, orchards of ripe fruit, and safe campsites.

In return, the ranger may well insist that strangers clean up after themselves, avoid disturbing local habitats, and preserve the natural beauty of the environment. Those who violate the ranger's trust can expect a brisk escort out of his territory.

## Trailblazing

A ranger who occupies an undeveloped wilderness must spend a fair amount of time making and maintaining trails. Some of these trails may be permanent roads or paths, usable by anyone traversing the ranger's territory. Other trails may be known only to the ranger, concealed by dense woods or similar terrain. The ranger and his followers use these concealed trails to get from place to place while monitoring the movement of strangers. Although animals in their native habitats are efficient trailmakers, the ranger may improve their trails by making the footing safer, or linking feeding grounds, watering holes, grazing pastures, and lairs.

An effective trail system requires a thorough understanding of the land, including the precise location of streams, hills, and other significant terrain features. A ranger occupying a small territory may be able to hold this information in his head. For larger regions, the ranger may need to keep maps. In this case, a conscientious ranger will regularly review and update his maps, adding new features and looking for discrepancies.

Constructing a new trail begins with clearing debris and smoothing the ground. This may involve cutting trees, pulling stumps, and filling in holes. If a road passes though a valley or ravine, the ranger may have to dig ditches to direct rainwater away from the trail. He may then need to plant grasses along the roadside to prevent soil from washing into the ditches.

Trail maintenance is an ongoing chore, requiring weeding in the spring and ice removal in the winter. In exceptionally harsh climates, the ranger may have to build snow fences, which are constructions of wood or stone that run parallel to a trail. During blizzards, blowing snow piles up along the fence instead of covering the trail.

## Wildlife Management

A dutiful ranger looks after the interests of the wildlife in his territory. He tracks down poachers and unprincipled hunters, relocates creatures that have been displaced by natural disasters, and cares for young animals whose parents have been killed. He notes fluctuations in animal populations and tries to determine if an excess of predators (or prey) is only a temporary adjustment to current conditions, or if it foreshadows a more serious problem. A sudden drop in the number of songbirds or frogs, for instance, may indicate that the insects they eat have been poisoned by some outside source.

## Conservation

A ranger is dedicated to the preservation of his environment. He uses timber, water, and other natural resources judiciously and encourages others to do the same. If he cuts a tree, he replaces it with a new seedling. If he raises herd animals, he keeps them moving so as not to overgraze a pasture. If he farms, he rotates his crops so as not to exhaust the soil, replacing the nutrients with natural fertilizers.

Unfortunately, the ranger must continually struggle against the carelessness and greed of those who don't share his concerns. They strip the land of timber and minerals, and level entire forests to build new cities. For commerce or sport, they hunt scarce species to extinction. They relentlessly farm the same acreage until the soil can no longer support crops, and dump raw sewage and other waste products into lakes and rivers until the water is no longer fit to drink.

The ranger employs several methods to counter this selfishness and indifference. He educates travelers passing through his territory, demonstrating the importance of proper waste disposal and the danger of smoldering camp fires. He negotiates with local villages to regulate mining and farming, and to set aside virgin forests and jungles as protected sanctuaries. In extreme situations, a ranger may resort to guerilla tactics, such as sabotaging oppressive and ruinous activities.

A ranger must also be constantly vigilant for natural disasters. As prevention is the key to effective disaster management, a ranger remains alert for the earliest signs of trouble, taking immediate steps to intervene before the problem becomes a full-blown catastrophe.

Here are some the most common natural disasters a ranger might have to face:

**Insects/Disease.** Infestations of beetles, locusts, aphids, and other insects can strip forests and pastures in a matter of days or weeks. Molds and rusts can ravage woodlands if unchecked. Old trees, which aren't as resistant to disease as younger ones, are particularly vulnerable. To prevent the spread of destructive insects and fungi, rangers remove and dispose of infested plants as quickly as possible.

**Flood.** An excess of precipitation, sudden snowmelt, or high winds producing strong coastal waves may result in flooding. Floods can wash away valuable topsoil, destroy trees and buildings, and drown the unprepared. Rangers reduce the severity of river flooding by planting and maintaining the trees and grasses in elevated lands. This vegetation controls runoff and absorbs melted snow, preventing it from running off into rivers and causing the water to rise over the embankments. Ambitious rangers with leadership skills will sometimes coordinate the local population to assist him building levees to contain rivers prone to flooding. This must be handled with care, as such rivers

can silt up, causing worse problems later.

Seacoast floods, on the other hand, are almost impossible to prevent. A ranger's best strategy for dealing with them is to become familiar with the weather patterns that precede them. With sufficient warning, a ranger can warn others to seek protection in the highlands until the storm subsides.

**Earthquake.** Violent shifting of the earth's inner layers may produce earthquakes, which can occur anywhere in the world. Earthquakes can indirectly cause flooding and fires, but the biggest danger comes from avalanches, falling rocks, trees, mudslides, and collapsing buildings.

As with seacoast floods, there's not much a ranger can do to prevent earthquakes, but he can learn to recognize the signs that precede them. Unusual animal behavior (such as the agitated prancing of small mammals), spontaneous geyser eruptions, and clusters of small tremors often indicate an impending major earthquake. While the warnings may not come long in advance, a forewarned ranger can spread the word to head for plains or open fields, which may be safer havens in the event of a major earthquake.

**Drought.** Higher than average temperatures and a lack of rainfall may result in a drought. When water is scarce, rivers dry up, vegetation withers, and animals suffer from dehydration.

Rangers can't accurately predict when droughts will occur. However, in regions of irregular rainfall, he can check tree rings, which give an excellent indicator of rain received in previous seasons. Thick rings occur in wet years, thin rings in dry years. Since wet periods tend to alternate with dry periods, studying the rings can help the ranger anticipate the next drought. A ranger can't offset the overall effects of a drought, but he can reduce the local impact of the drought on marginal habitats by storing water, and encouraging others to do the same.

**Fire.** Fires are perhaps the most devastating of all natural disasters. A fire not only wipes out trees and vegetation, it also kills animals and pollutes lakes and rivers with ash. Travelers who carelessly burn trash or toss unwanted torches into the brush are a common source of fires. While lightning strikes are a primary cause of forest fires, some fires are intentionally set by enemies.

Rangers occupying forests or other territories susceptible to fire constantly watch for smoke. Tall mountains make the best vantage point, but where mountains are unavailable or where scaling them frequently is impractical, rangers may construct lookout towers--simple platforms supported by long poles and nearby trees. A rope or wood ladder gives the ranger access to the tower.

Fighting fires isn't easy, nor is it something one ranger can effectively do alone. Because fires spread so rapidly, particularly in dry seasons, a ranger's chance of stopping a fire decreases with every moment it's allowed to burn. Water or dirt can be used to smother small fires. If a ranger has prepared for help beforehand, he can coordinate the building of a fireline--an area cleared of all vegetation and other combustible material. This helps contain larger fires, but an adequate fireline usually requires the efforts of many individuals working as a team. Once a fire is extinguished, a close watch must still be kept for many days, lest a smoldering limb start the fire blazing once again.

## Law Enforcement

Certain rangers, such as Wardens and Sea Rangers, may be charged with enforcing the laws of the local ruler. They arrest and punish poachers, patrol the lands they guard, and sometimes negotiate land use agreements with farmers, loggers, and others. If a royal decree protects a particular animal species, the ranger may be charged with enforcing it. Some rangers have the authority to act as judge and jury, allowing them to try cases on the spot and pass sentences as they see fit. Fines may be levied for minor infractions, such as trespassing, while more severe crimes, such as killing an animal from the king=s private stock or picking fruit from the king's tree, may be punishable by death. In such cases, the ranger will have a charter or royal writ from the ruler.

## The Ranger's Personality

After considering the ranger's background, core traits, and routine duties, let's focus on his personality. The purpose of this section is to help players and DMs determine how ranger characters may behave in a campaign--for instance, how he responds to NPCs, interacts with other PCs, and reacts in combat situations. There are several courses to consider.

To begin with, you can consult the previous volumes in the *Complete Handbook* series. The first four books *The Complete Warrior, Priest, Wizard,* and *Thief* provide lists of archetypes drawn from literature, film, and other fictional and mythological sources. In these books, players are encouraged to adopt the Folk Hero, the Vigilante, or other archetypes as models for their characters' personalities. Many of these archetypes can also be adapted to ranger characters; the archetypes in *The Complete Fighter's Handbook* are especially applicable.

*The Complete Bard's Handbook* features a series of tables containing traits associated with intellect, interests, and other personality components. The key traits listed on these tables can be picked or determined randomly. The tables can be used for rangers as well as bards (or for that matter, any other character).

You can also refer to the kit descriptions in Chapter 4 of this book, many of which suggest traits associated with a particular ranger type. Players can use the descriptions as springboards for working out the details of their rangers' personalties.

Another way to shape a character's personality is to come up with a single word that summarizes his identity. This word--which we'll call the *defining characteristic*--describes the essential nature of the character and how he comes across to others. While a character's personality is comprised of many elements, the defining characteristic is the most dominant, the trait from which all other personality components arise.

If basing a personality on a single word seems restrictive or artificial, think about how you describe people in your own life. A particular teacher may be *crabby*, a close friend may be *funny*, a favorite game designer may be *eccentric*. Defining characteristics may also spring to mind for fictional characters; consider the *noble* Sir Galahad, the *brilliant* Sherlock Holmes, the *stingy* Ebenezer Scrooge. The defining characteristic forms an overall impression. The details come afterwards.

There's no best method for choosing a defining characteristic. Whatever word seems appropriate to you is good enough, so long as it brings the character into focus and feels right. To get you started, a sample list of defining characteristics appropriate for rangers is given below. The descriptions are intentionally vague, since personal interpretations

are more important than rigid definitions. After all, it's *your* character!

You'll know if you've chosen a good defining characteristic if you can immediately begin to visualize how the ranger will respond in various situations. For instance, an *arrogant* ranger may enter a deserted castle without hesitation, certain that he can contend with whatever dangers wait inside. In combat, he may fight aggressively and enthusiastically, each blow accompanied by a declaration of his own magnificence. If defeated, the arrogant ranger may sulk for days, his ego taking longer to heal than his fleshly wounds. Of course, it's not necessary to think through every situation before it occurs--having your character react spontaneously is a big part of what makes role-playing fun--but deciding on a primary characteristic can be a lot of help in getting him off the ground.

If you like, you can choose secondary traits that complement the defining characteristic. These secondary traits, called *corollary characteristics*, add dimension to the character; in combination with the defining characteristic they help define a unique individual. The entries below list several corollary characteristic suggestions for each defining characteristic. Choose one or two that appeal to you, or make up your own. Any corollary characteristics are fine, so long as they don't contradict the defining characteristic; an *arrogant* ranger might also be *proud* and but it's unlikely he'd be *shy*, too.

Some kits work with certain defining characteristics better than others, and each entry below lists a few recommendations. However, don't feel restricted by them. You can use any defining characteristic with any kit that feels right to you. Likewise, you can mix and match the various corollary characteristics, or ignore them altogether. You may also use the defining characteristics in conjunction with the archetypes from the first four *Complete Handbooks* or to supplement the trait tables from the *Complete Bard*. Regardless of your approach, the goal remains the same--to create ranger personalties that are believable and interesting.

## List of Defining Characteristics

### Altruistic

A selfless humanitarian who puts the welfare of others before his own, the Altruistic ranger tirelessly fights for the common good. Unhampered by jealousy or self-interest, he commands respect from friends and foes alike. He shows mercy to his opponents, compassion to the dispossessed, and unwavering loyalty to his friends.

*Corollary Characteristics:* Kind, honest, reserved, introverted, reverent, courteous.

*Suggested Kits:* Beastmaster, Greenwood Ranger, Guardian, Seeker, Warden.

### Analytical

An agile mind and eclectic interests mark the Analytical ranger. He loves knowledge and relishes every opportunity to ponder the mysteries of nature. New cultures, unusual creatures, and scholarly strangers fascinate him. He respects intellectual prowess more than physical skills, and may seek to negotiate with a potential opponent rather than engage in combat.

*Corollary Characteristics:* Ponderous, meticulous, dignified, thoughtful, cautious, dispassionate.

*Suggested Kits:* Explorer, Seeker, Stalker.

**Arrogant**

An arrogant ranger believes he can do no wrong. He views indecision as weakness and compromise as cowardice. He glories in the memory of his accomplishments, which typically have been both numerous and impressive. If there are stronger, smarter, or more skilled rangers than himself, he is unaware of them--or at least, he chooses not to acknowledge them.

*Corollary Characteristics:* Haughty, confident, patronizing, energetic, extroverted, optimistic.

*Suggested Kits:* Falconer, Forest Runner, Giant Killer, Mountain Man, Warden.

**Boisterous**

A boisterous ranger has little patience with social etiquette. He says what he thinks and behaves as he pleases, and may be oblivious to how his actions might offend others. A man of action, he likes to get to the point, avoiding what he considers to be time-wasting conversation and endless planning. Beneath it all, there often beats a heart of purest gold.

*Corollary Characteristics:* Brash, impulsive, lusty, spontaneous, intimidating, vulgar.

*Suggested Kits:* Feralan, Forest Runner, Giant Killer, Mountain Man, Pathfinder.

**Distrustful**

Usually as a result of limited contact with other people, the distrustful ranger remains emotionally distant from strangers and comrades alike. He may be cordial and cooperative, but he rarely gets close to anyone other than his animal followers. He is awkward in social situations, uncomfortable in large groups, and suspicious of friendly overtures. The reason is usually hidden in his past.

*Corollary Characteristics:* Suspicious, paranoid, cold, reflective, lonely, moody.

*Suggested Kits:* Beastmaster, Falconer, Feralan, Forest Runner, Mountain Man.

**Inspiring**

The inspiring ranger radiates authority and confidence, making him a natural leader. He instinctively takes charge in times of crisis, displaying bold initiative when others hesitate to act. His companions depend on his decisiveness and common sense, and he rarely lets them down. Always, he is the first to the battlefield and the last to leave.

*Corollary Characteristics:* Flamboyant, fearless, cheerful, driven, virtuous, honorable.

*Suggested Kits:* Explorer, Forest Runner, Justifier, Sea Ranger, Warden.

**Laconic**

The laconic ranger is a soft-spoken, thorough professional. He says little, sees much, and lets others go their own way as he goes his. He takes quiet pleasure in a job well done, and avoids needless confrontation with lazy, the foolish, and the incompetent (though he might remark with shrewd humor upon their foibles). He nearly always lends his neighbor a helping hand.

*Corrollary Characteristics:* Steady, thoughtful, pithy, keen, practical, skilled, canny.

*Suggested Kits:* Falconer, Guardian, Justifier, Pathfinder.

**Melancholy**

The melancholy ranger shoulders the weight of the world. Plagued with self-doubt and tormented by the injustice of a seemingly indifferent universe, he is preoccupied with his own misery and prone to deep depression. Ironically, though he may perceive himself as a failure, he may actually be quite accomplished. Whatever success he experiences, however, doesn't seem to bring him much pleasure.

*Corollary Characteristics:* Brooding, quiet, cynical, tentative, impulsive, neurotic.

*Suggested Kits:* Guardian, Greenwood Ranger, Justifier, Warden, Seeker.

**Merry**

The merry ranger is full of the joy of life. He spreads springtime and sunlight wherever he goes, regardless of how bleak the situation may be. Always ready with a tale, a story, or a practical joke to break the tension, he puts the counsel of the eternal doom-sayer to shame. Though he may, in fact, have serious problems of his own, these never discourage him for long, nor does he inflict them on his companions.

*Corrollary Characteristics:* Bright, flippant, vibrant, honest, buoyant, optimistic.

*Suggested Kits:* Forest Runner, Mountain Man, Pathfinder, Sea Ranger.

**Mysterious**

The mysterious ranger envelops himself in an aura of secrecy, keeping even the most pedestrian details of his background hidden from his companions. He seldom speaks, and when he does, his words may be ambiguous or laden with cryptic overtones. Though he dutifully fulfills his role within a party, he minimizes his contact with his comrades. For no apparent reason, he may disappear for days at a time, then reappear as unexpectedly as he departed. He may whisper poetry to his followers, make bizarre notations on the trunks of trees, or brew sweet-smelling soup which he dumps on the ground rather than drink, all without explanation. His strange behavior may be due to religious reasons, cultural requirements, or merely a desire to keep his companions at arm's length.

*Corollary Characteristics:* Eccentric, threatening, somber, distant, taciturn, studious.

*Suggested Kits:* Feralan, Pathfinder, Seeker, Stalker.

**Nurturing**

The nurturing ranger serves as a caretaker and counselor, supporting his companions and followers in times of stress. He comforts the troubled, reassures the doubtful, and soothes the anxious. He has a kind word for all and strives to bring out the best in his friends by bolstering their self-esteem. He may leave leadership roles to others, preferring to work in the background, or a loss of leadership or sudden crisis may bring him to the fore.

*Corollary Characteristics:* Diplomatic, inquisitive, philosophic, humble, passive, empathetic.

*Suggested Kits:* Falconer, Guardian, Greenwood Ranger, Seeker.

**Obsessed**

A single, all-consuming goal motivates the obsessed ranger to the exclusion of all

else. Typical obsessions include destroying a species enemy, revenge on an overlord who illegally annexed his territory, or locating a animal believed to be extinct. Though an obsessed ranger may function effectively within his party, the party=s objectives are always secondary to his own. Often, such a character will mature out of the obsession as the campaign continues.

*Corollary Characteristics:* Irritable, grim, passionate, anxious, determined, tireless.

*Suggested Kits:* Explorer, Giant Killer, Justifier, Sea Ranger.

## Experience

As explained in Chapter 2 of the *DUNGEON MASTER Guide*, rangers gain experience much like other warriors. Table 59 summarizes their standard experience awards.

### Table 59: Ranger Experience

| Action | XP |
|---|---|
| Per hit die of creatures defeated | 10/level |
| Monster experience | Typ* |
| Other group experience | Typ* |

*** Typ** = Typical share of experience, as described in the *DMG*.

Table 59 is fine as far as it goes, but for those using the guidelines in this book, it may not go far enough. If the DM decides that a little more detail is needed when determining experience awards for rangers, he may decide to use Table 60 to award experience points instead DM.

### Table 60: Optional Individual Experience Awards

| Action | XP |
|---|---|
| Per spell level cast to overcome foes or problems, or further ethos* | 100 |
| Per successful use of special ability (class or kit) | 100 |
| Per Hit Die of creatures defeated | 10/level |
| Per Hit Die of species enemy defeated | 20/level** |
| Follower, per trick or task trained | 100 |
| Monster experience | Typ*** |
| Other group experience | Typ*** |

* Like priests, rangers gain experience for using spells to promote their philosophies and principles. A ranger who's accepted the responsibility of protecting a forest would not gain experience for using *charm person* or *mammal* to coerce an woodcutter into finding some tasty fruit, but he would gain experience for using the spell to ensure the

woodcutter helps him put out an uncontrolled fire in the forest.

** The ranger receives double the normal amount of experience points when defeating a species enemy (20/level). In addition he receives a 1,000 experience point bonus for defeating the long-range plans of a species enemy.

*** **Typ** = Typical share of experience, as described in the *DMG*.

# Chapter 9: Rangers and Religion

Most rangers are privately religious, convinced that there are powers at work in the world much greater than themselves. Though different rangers may worship in different ways, all regard the embodiment of their devotion with awe and respect, and try to abide by the ideals it represents.

## Aspects of Faith

Rangers manifest their faith in a number of ways:

### Inner Peace

A ranger's devotion gives him a sense of purpose, a feeling that his life has a purpose. Even though his role may seem at times to be minor, he feels that he has a definite place in the scheme of things.

### Code of Behavior

A ranger's beliefs give structure to his life by providing a set of principles for him to follow. Being of good alignment, rangers tend to adopt beliefs that encourage honesty, compassion, and selflessness.

### Access to Spells

In practical terms, the access to spells enjoyed by the high level ranger is one of the most immediate and visible results of a life of service. Much like a druid, the ranger receives his spells as a consequence of his beliefs. Though prayer or meditation, the ranger asks for the spells he wishes to memorize, and in most cases, his requests are granted.

Unlike the druid and other priests, the ranger's access to spells is limited. A priest, after all, devotes much energy to the service of his faith, while a ranger's other activities and duties place great demands on his time. For this reason, the ranger is able to acquire spells only when he reaches 8th level, and then has only minor access to the plant and animal spheres. The ranger can fill his spell slots with any spells of the appropriate level listed for those spheres. Some kits may have expanded or restricted spell use.

## Types of Faith

Many rangers venerate nature itself. Others develop private faiths, more follow recognized religions that are based on established traditions and doctrines. Rangers aren't necessarily affiliated with churches or monasteries; in fact, rangers generally avoid formal religious organizations, preferring to worship alone or with a small group of trusted followers. Certainly the travels of most rangers often take them far from the centers of organized religion. As a result, a ranger's worship may differ from that of a priest, even if they technically share the same faith.

Regardless of how a ranger practices his faith, there will be some power that is the beneficiary of his devotion. Most rangers worship the divine in nature; monotheistic rangers worship one particular god, while polytheistic rangers may worship several. A few base their faith on an individual philosophy. All of these approaches provide support to their disciples, as well as access to the spells available to the a ranger. In game terms, they all function identically.

## Nature

Many rangers choose nature itself as the focus of their devotion. Nature worshipers revere nature as a process and a source of life; whether it was designed by a greater intelligence or arose from the interaction of primal forces is largely irrelevant. Ethics and morals are derived from observing the natural order, and the perception of the majesty of the natural world and its relationship to the ranger is a closely personal one. The natural life force of the world can be felt by the ranger who becomes attuned to it. Any ranger may be drawn to the worship of nature. For some rangers, particularly those with few ties to the civilized world (such as Beastmasters, Feralan, Greenwood Rangers, and Mountain Men), the pull is especially strong.

## Gods

Gods are supernatural beings considered by their worshipers to be the supreme sources of might and authority. Often, a god embodies a particular principal that is manifested or promoted in the material world.

The total number of gods is impossible to know, as are the number and identities of the rangers who worship them. These factors will vary from campaign world to campaign world. DM's who design customized pantheons for their own campaigns should consider including gods specifically intended for rangers. Gods concerned with agriculture, animals, plants, birth, fertility, geology, weather, and hunting are appropriate, providing they're of good alignment. One place to go for ideas is *The Complete Priest's Handbook*, which contains many suggestions for adding religions to a campaign, and dozens of sample priesthoods.

Rangers with gods worship them in a variety of ways. Some may erect simple shrines to their deities that complement the natural features of their primary terrain. For instance, a ranger whose primary terrain is Forest might plant a private grove. An Arctic ranger might build a towering ice pillar.

Religious practices for the same deity may also vary from ranger to ranger, depending on their primary terrain. Prior to an important hunt, a Desert ranger might immerse his

hands in the sand, a Forest ranger might conduct a spirited dance under a tall tree, and a Plains ranger might snap an arrow in two to attract the god's attention (a smooth break may be interpreted as an omen of a favorable hunt, while jagged edges may indicate that the god discourages hunting at that particular time).

### Philosophy

A belief system derived from intellectual concepts rather than supernatural forces or the natural world may also be the basis for a ranger's religion. The sheer intensity of the believers' devotion is sufficient to attract the magical energy necessary to cast spells.

Worshipers of philosophic faiths tend to concentrate in small sects in isolated areas of the world. For example, the Iulutiun rangers of the Great Glacier, for example, follow an animistic philosophy called *qukoku*, which holds that all creatures share a life essence called *eaas*. The teachings of *qukoku* maintain that all creatures are morally equivalent, and that animals and men share the same emotions and intellect, which their *eaas* compels them to express in different ways. (For more about the Iulutiuns and *qukoku*, see the FORGOTTEN REALMS® FR14 *Great Glacier* sourcebook.)

## Expressions of Faith

Regardless of whether a ranger worships nature, gods, or a philosophy, he is assumed to engage in various practices to affirm his faith. Some of these practices may be formally established; for instance, a particular group of disciples may be required to kneel before the setting sun every day. Other practices may be self-imposed; a ranger may decide for himself that the best way to express his devotion is to refrain from violence during nights with a full moon. Once a player establishes a practice as routine for the ranger, the player and DM can assume the character continues it "off stage" unless campaign events dictate otherwise.

It's up to the DM, in conjunction with the player, to decide what, if any practices a ranger should follow in order to remain true to his faith. Typical practices might include any of the following:

**Meditation.** Having private moments of quiet reflection and communion is a common practice. These may take the form of the soft verbal recitation of sacred verse, spoken at the same time every day, to periods of silent meditation, performed whenever the ranger gets a chance. Observing particular phenomena, such as a shooting star, or experiencing certain events, such as acquiring a new follower, may inspire special periods of this type.

**Offerings.** The ranger make regular offerings of food or treasure. Offerings may be given to the underprivileged, cast into the sea, or buried in the ground. Small offerings, such as a scrap of meat or a few copper pieces, usually suffice.

**Symbol Display.** The ranger may declare his devotion to the world by displaying the symbol of his faith. The symbol may be a distinctive article of clothing, a brooch or pendant, a tattoo, or a tiny mark made on a tree or stone wherever the ranger spends the night. The ranger might mark his animal followers with the deity's symbol. The symbol may be engraved in a collar or bracelet, shaved into the animal's fur, or notched in the animal's horn.

**Pilgrimage.** The ranger may make a periodic journey to a sacred location, such as a temple, mountain peak, or holy village. The pilgrimage may take place on a particular date (say, the first day of spring) or whenever he gets the chance within a particular timeframe (he must make the pilgrimage once a year).

**Taboos.** Some faiths may impose strict prohibitions on the ranger's behavior. For example, the ranger may not be allowed to eat meat, wear head coverings, or start more than one fire in the same day.

Players and DMs may also make up their own religious requirements. Remember that a ranger might follow practices unlike other disciples of the same faith; just because most worshipers of a nature deity make shrines out of polished stone doesn't mean that a ranger can't build a shrine out of deer bones. Care should be taken to ensure that the practices don't conflict with the requirements of the ranger's character kit (it's unreasonable to expect a Sea Ranger to make an annual pilgrimage to the middle of a desert).

Most importantly, any routine practices should be simple enough that they don't distract from the campaign or tie up an undue amount of the ranger's time and effort. A ranger who has to come up with a weekly offering of 500 gp or must spend four hours per day in solitude won't be welcome in very many parties.

Once the practices are established, the ranger is expected to follow them. Should a ranger fail to uphold the requirements of the religion, or intentionally violate them, he may lose the use of his spells for a brief period, he may become ill, or one or more of his followers may desert him. The DM determines the penalty based on the severity of the ranger's negligence. In most cases, a warning should be enough (which the ranger may experience as a dream or vision), but continued abuse may call for a more severe response.

## Rangers and Druids

Rangers have much in common with druids. For instance, both classes are predominantly oriented toward nature. Both receive spells in similar ways; in fact, both of the ranger's spheres are shared with druids. Both strive to live up to the tenets of a higher power. They are natural allies against raiders, evil humanoids, and others who would despoil and ruin the land.

Some rangers won't form anything other than casual relationships with druids. They may work with them on projects of mutual interest and occasionally call on them for guidance or advice, but otherwise the rangers go their own way, oblivious to how druids exercise their faith and not particularly concerned with what goes on in their places of worship. In special circumstances, however, rangers and druids may establish more formal alliances, especially when a druid becomes a ranger's follower.

Any ranger may acquire a low-level druid as a follower, and may do so for a variety of reasons. If the ranger is skilled in areas in which the druid is deficient, the druid may seek him out as a teacher. The druid's superior may instruct him to serve a ranger as part of a penance, or to serve as a go-between for a network of wilderness protectors that exchanges information and favors. Or like other human followers, the druid may be drawn by the ranger's reputation, hoping for a working relationship that will allow the projects of both to prosper.

Secretive and mysterious, a druid may never let on as to why he's chosen to follow a

ranger. He may simply show up, tag along, obey orders, then abruptly disappear a few weeks later. His initial appearance may be equally cryptic; a ranger who believes he's acquired a lizard or raccoon follower may be shocked to discover that the animal is, in fact, a shapechanged druid.

Likewise, a low-level ranger may become a follower of a druid. Though many druids are reluctant to take on such strong-willed characters, open-minded druids are often receptive to rangers with a thirst for nature lore and a commitment to conservation.

Most of the time, however, rangers and druids operate independently. On occasion, they may find themselves competing for dominance of the same territory. A novice ranger who wishes to move into a region occupied by a druid may be wise to petition for permission, even though such permission is rarely required by law. Failure to do so may result in lasting resentment at best, open hostility at worst. Should the ranger act courteously and respectfully, permission is usually granted.

Conversely, an initiate assigned to a ranger's territory would do well to request an audience with the ranger before settling in. Most rangers will appreciate the gesture, which minimizes the likelihood of misunderstandings or conflicts. A ranger probably won't attempt to drive away a druid who doesn't bother to make contact--assuming that the druid otherwise behaves himself--but relations between them may remain strained indefinitely.

Because their outlooks are so similar, rangers and druids can usually share the same territory without any trouble, though their paths may seldom cross. Druids tend to keep to themselves even more than rangers. They are less likely than rangers to involve themselves in the affairs of men. Since they're of neutral alignment, druids aren't particularly interested in promoting the ranger's conception of justice. Rangers tend to work more openly, druids more deviously.

Rangers and druids may informally agree to divide the responsibilities of their territory. The ranger may agree to deal with human and demihuman travelers, while the druid handles the problems of the native animals. They may join forces to contend with a natural disaster, only to part company when the danger has passed.

## Rangers and Clerics

Low-level clerics may become followers of rangers for many of the same reasons as druids. Not all clerics make suitable followers. The cleric must be of good alignment and should be several experience levels lower than the ranger. Since most rangers are human or half-elven, clerics of these races are the most likely to sign on, though a ranger will rarely reject a follower solely on account of race. Gender considerations usually aren't important, but a cleric with a strict upbringing may hesitate to follow a ranger of the opposite sex.

The faith of a clerical follower should be compatible with that of the ranger. This doesn't mean that the faiths must be identical--an inquisitive cleric might want to follow a ranger solely to study the nuances of an unusual religion--but the goals of the faiths can't be diametrically opposed. For instance, if the cleric believes that anyone who prays to inanimate objects is a heathen, he won't follow a ranger who worships mountains.

A cleric serves the ranger in the same way as other followers--assisting him in combat, performing routine chores, and offering advice. In turn, the ranger benefits from

the cleric's priestly skills and loyalty. The cleric may be able to assist with some of the ranger's religious requirements; for example, the cleric might handle the blessing of new followers, or come up with the daily offering of food or treasure. If they share the same faith, the cleric may teach the ranger new ways to worship, as well as engaging him in enlightening conversations concerning all things spiritual.

As with all followers, a cleric will remain in the company of a ranger as long as the relationship is mutually beneficial. When the cleric reaches the end of his penance or learns what he wants to know, he may express his desire to leave. A gracious ranger will grant this request, either dismissing or releasing the cleric at the earliest opportunity. Should the cleric prove to be a nuisance--or worse, if the ranger finds the cleric's religious practices to be unacceptable--the latter may be dismissed without explanation.

Conversely, a ranger may find it advantageous to serve as a temporary follower of a cleric. He may seek out a cleric because an obligation requires him to spend a period of time working for a church, or because he wishes to learn more about that religion in a structured setting. Alternately, a ranger may volunteer to protect a clerical stronghold, or his deity may have commanded him to become a follower to show his dedication. Regardless of his motivation, a ranger usually serves as a follower for a limited period of time, seldom exceeding a few months. He typically begins his term of service early in his career, usually before reaching 3rd level. When his term ends, however, he may continue an informal relationship with that particular church for a much longer period.

Clerics of 8th level or higher who establish large places of worship may accept ranger followers. Some clerics may have gender, racial, or kit preferences for their followers, but usually they'll accept any ranger whose faith is compatible with their own and who demonstrates a sincere commitment to serve. Once accepted, the ranger is expected to obey his clerical superiors and adhere to their traditions. The ranger may be required, for instance, to pay a weekly offering for the upkeep of the fortification, take a vow of chastity, or wear a distinctive cloak or other garment. He may also be expected to perform any number of special duties. Typical duties might include:

- Performing routine maintenance on the stronghold. This may include repairing damage, sweeping floors, polishing metalwork, cleaning latrines, and so on.
- Constructing a wilderness shrine or temple. Usually, this is performed under the supervision of a superior. The ranger handles most of the manual labor.
- Recopying faded sacred texts on fresh parchments. Often the language will be unfamiliar to the ranger, as some clerics believe that copying foreign script enhances the disciplinary benefits of the practice.
- Supervising the fortification's herd animals. This includes feeding, watering, administering to sick animals, and cleaning barns and stables.
- Tending the church's gardens and harvesting the crops.
- Protecting the stronghold against monsters and enemy armies.

A ranger can expect to be disciplined if he refuses to obey his superiors or becomes derelict in his duties. For minor infractions, he may be confined to his quarters or given additional chores. Major infractions may result in beatings or even a banishment from the fortification. In extreme cases, the ranger's superiors may be able to exert their influence to permanently separate the ranger from their religion, causing him to lose all associated privileges and benefits.

In the context of a game, a ranger's term as a clerical follower may take place

between adventures, or it may be incorporated into a campaign, possibly as a springboard for an expedition involving the entire party (the ranger must complete a quest for his cleric, and recruits other companions to help him).

A ranger's term as a clerical follower may have a variety of consequences, for weal or woe. On the good side, he may make some powerful new contacts and learn some new skills. He may even acquire a new follower or two of his own (a low-level cleric or fighter decides to accompany the ranger when he leaves). On the other hand, the ranger may become burdened with new duties to perform (in exchange for his training, his clerical superiors now expect him to offer extra donations every month in their honor). At any time, he may be unexpectedly summoned to the clerical stronghold to help train novices or defend against attackers.

# Chapter 10: Forgatherings

Though they generally avoid organizations and communal events, many rangers participate in informal get-togethers called *forgatherings* or moots. At forgatherings, rangers can exchange ideas, barter for supplies, and participate in contests of skill, as well as catch up on gossip and blow off steam. Attendance at forgatherings is by no means mandatory, but most rangers look forward to the opportunity to spend a few days socializing with others who share the same general philosophy and professional challenges.

These are often times of much merriment and celebration. Old friends are greeted warmly and new rangers are initiated, sometimes with raucous practical joking. There are food and fun for all, and tests of skill and prowess to pass the time and take each other's measure.

## Attending a Forgathering

A ranger can go through his entire life without ever hearing about a forgathering, let alone attending one. But chances are that sooner or later, he'll hear a rumor about an upcoming forgathering, or receive an invitation from another ranger. He may also notice strange symbols etched on trees or stones, intended as guideposts to lead attendees to the forgathering site (depending on how secret is the location of the meeting, a ranger might need the trail sign proficiency to translate the symbols).

In most cases, forgathering attendance requires no prior arrangements. These gatherings are by their nature informal, and they are rarely interrupted by serious business except under the most unusual circumstances. Any ranger who shows up is usually welcome; rangers who bring extra meat, fruit, or wine to share are welcomed with open arms. Attendees are expected to supply their own bedding, tents, and food. First-timers may be required to perform extra chores, such as guard duty or trash disposal.

A ranger may bring non-ranger companions with him as guests, providing the guests keep to themselves and stay out of the way. The ranger is responsible for his guests' behavior; should they cause trouble or make nuisances of themselves, both the ranger and his guests will be summarily ejected. It's unlikely that ranger will be welcome at any

future forgatherings unless things are smoothed over.

## Types, Sites, and Dates

There are as many types of forgatherings as there are rangers. Some are held in well-traveled forests, others in remote deserts. Some attract only specific kit types, such as Mountain Men or Sea Rangers, while others are primarily intended for specific races, such as elves. In general, however, most forgatherings are open to any ranger who cares to come.

Though some established forgatherings occasionally change locations and dates, most are held in the same place and at the same time every year for the convenience of the attendees. Any open wilderness area, reasonably isolated, can serve as a forgathering site. Forests, mountains, and plains are preferred, as they give the easiest access to the greatest number of rangers. Because travel can be difficult in the winter, and summer can bring uncomfortably hot temperatures, forgatherings are usually held in late spring or early fall. Most forgatherings last from two to three days, but some drag on for several weeks or until the last few diehards call it quits and head for home.

Specifics about individual forgatherings are hard to come by, since rangers tend to keep the details to themselves. Brief descriptions follow, the pieced-together bits and pieces of information that have trickled out over the years regarding a few of the best-attended and longest-lived meetings: feel free to add to them and adapt them to your campaign world.

### Equinox Festival

One of the most important annual meetings is the gathering at this festival, held during the six days following the first full moon after the autumn equinox. Rangers of every type and specialty can be found here, though standard rangers outnumber all the others. The site shifts every other year, alternating between a heavily forested area and a plains region, far from any civilized settlement. The organizers announce next year's site at the end of the current festival. As this is primarily a trade fair, rangers bring a wide variety of goods to sell, and haggle with each other long into the night. Prices tend to be high, but so does the quality.

### Glass Eye Concourse

This is one of the wildest and least structured forgatherings, attracting Mountain Men by the dozens, along with a few rowdy Giant Killers, Pathfinders, and Forest Runners. The name derives from the person who organized the first of these forgatherings, a rowdy Mountain Man who lost an eye in a drunken sharpshooting contest. Held near the base of a tall mountain in mid-spring, the Glass Eye Concourse features a weekend of physical contests, lewd jokes, and lots and lots of cheap ale.

### High Tide Assembly

In contrast to most forgatherings, the High Tide Assembly is downright sedate,

emphasizing philosophic discussion and formal lectures. This forgathering takes place during the first high tide of spring on a quiet seashore. The Assembly lasts for three days. Seekers, Sea Rangers, and Explorers are the primary attendees. By tradition, the forgathering climaxes with a wild boar hunt. Following a traditional feast, the bones of the wild boars are tossed into the sea, to the accompaniment of triumphant cheers and whistles.

### Solstice Jamboree

Most often held in a central plains location, the Solstice Jamboree attracts all types of rangers, as well as a number of bards and druids. The event lasts for six days, beginning on the first day of the summer solstice. Lavish banquets, featuring exotic meats and rich candies are held three times daily, and general good fellowship is encouraged. This is an important event, for much serious business is discussed on the side. Comrades who died the previous year are honored on the last day of the forgathering with poetry recitations and silent meditations.

## Physical Layout

Most forgathering sites have few permanent features or structures. Upon their arrival, attendees construct any necessary buildings or fixtures, and take them down when the forgathering ends. Forgathering fixtures are simple but functional, with building materials consisting usually of wood, stones, and mud. Here are a few features common to most sites:

**Sleeping Area.** The driest and clearest patch of ground makes the best sleeping area. Attendees pitch their tents or lay out their sleeping bags in lines, spaced well apart. In colder climates, the sleeping area is located where the sun (whatever there is of it) can warm the earth before nightfall. In warmer climates, shady locations are preferred.

**Dining Area.** A typical dining area consists of a few benches or logs for sitting on, some stone barbecue pits, and a simple lean-to for storage. The optimum location for the dining area is several hundred feet from the sleeping area, positioned so that breezes don't carry the cookfire smoke in the direction of resting rangers. A stream nearby for washing up is also desirable, if available.

**Fire Pit.** A pit for burning waste is constructed near the dining area, preferably away from trees or brush to minimize the chance of a fire getting out of control. It's located where the prevailing breezes don't carry the smell of burning garbage toward the sleeping or dining areas.

**Barn.** A barn, stable, or pen is constructed to house the rangers' animal followers for the duration of the forgathering. Large forgatherings may require several pens and stables to accommodate a variety of species. Rangers are responsible for the feeding and grooming of their animals, and are also held accountable for their animals' behavior; it's considered a grievous breech of etiquette for a lion follower of one ranger to eat the goat follower of another ranger.

**Chapel.** The forgathering chapel may be as simple as a stone platform, or as elaborate as a full-sized cabin with a podium and wooden pews. Religious symbols are not exhibited here, so that the chapel may accommodate worshipers of diverse beliefs. Most

often, the chapel is isolated from the main forgathering site, erected in a nearby woodland or other quiet location.

**Campfire.** The communal campfire, typically constructed in a central location, serves as the focal point of the forgathering. The campfire burns all night and day, continually tended and fed deadfall logs. At any hour, rangers can be found crowding around the camp fire, roasting meat and exchanging stories.

## Activities and Events

As forgatherings are primarily intended as social events, rarely are there fixed agendas or schedules. Activities tend to develop spontaneously, continue as long as the rangers show an interest, and end when the participants have had enough. Following are a few of the activities and events most likely to occur:

**Trading**.

Trading goes on virtually non-stop at most forgatherings, ranging from private transactions between individuals to dozens of rangers peddling their wares in what amounts to an open air market. Merchandise includes both the common (rope, saddles, boots) and the unusual (chainlink leashes, camouflage paint, homemade wine). Weapons and maps are especially in demand, particularly bows and quarterstaves with hand-carved designs, and maps of exotic territories that detail the newest trails. Rangers pay for their purchases in fur, food, and trinkets as well as gold pieces.

Magical items are occasionally available, but many rangers are more inclined to loan them to needy comrades rather than sell them outright. Rangers who borrow magical items are expected to return them at the next forgathering. Being men and women of integrity, the borrowers rarely fail to honor their agreements.

**News and Gossip.**

Information flows freely at forgatherings, and most rangers are eager to learn about the trials and tribulations their comrades have experienced in the previous year. They hear of marriages, births, and deaths, as well as followers acquired and abandoned. They learn which expeditions resulted in new discoveries and which ended in disaster. Rumors abound of lost civilizations, hidden treasures, and gruesome monsters. An attentive ranger may hear about employment opportunities or new hunting grounds. If he's lucky, an unattached ranger may make contact with a potential mate.

**Training.**

The typical forgathering attracts rangers with a wide range of skills. Often, they're willing to give instruction to novices for a small fee or as a gesture of friendship. If he locates a willing teacher, a ranger may be able to pick up hunting or tracking tips, acquire cooking secrets from a master chef, or learn how to construct emergency shelters from an elder woodsman. (The optional training rules in Chapter 8 of the *DUNGEON MASTER Guide* can be used to allow rangers to acquire new skills as a result of their forgathering experiences.)

**Contests.**

No forgathering would be complete without games and contests for rangers to demonstrate their skills and compete for prizes. Conservative forgatherings feature debates, target shooting, and knotting matches (where contestants see who can untangle complex knots in the shortest time). The Glass Eye Concourse and similarly rowdy forgatherings feature contests of a more physical nature, such as head-slamming (contestants butt heads as hard as they can until one passes out), dagger juggling (often done blindfolded), and bear wrestling.

Mountain Men in particular have a tradition of rather intense competition. For example, Mountain Men enjoy a bizarre drinking contest where bitter roots, fish scales, rotten vegetables, and other distasteful substances are mixed with water; whoever consumes the most of this vile brew is declared the winner.

Other contests common to forgatherings include horse races, rabbit hunts, and mock battles using swords and spears bound with thick layers of cloth. Winners are awarded silver pendants, hiking boots, or other prizes donated by the more affluent attendees. If donations aren't available, each participant puts a few coins in a pot before a contest begins; whoever wins claims the pot. Wagering is rampant for all types of contests, with rangers betting everything from animal pelts and dried meat, to arrowheads and leather gloves.

# Appendix: AD&D 1st Edition Ranger

## Class Description

Rangers are a sub-class of fighter who are adept at woodcraft, tracking, scouting, infiltration, and spying. All rangers must be of good alignment, although they can be lawful good, chaotic good, or neutral good. A ranger must have a Strength score of at least 13, Intelligence of at least 13, Wisdom of at least 14, and Constitution of at least 14. If the ranger has ability scores of greater than 15 in Strength, Intelligence, *and* Wisdom, he gains the benefit of adding 10% to experience points awarded by the referee.

Unlike other members of the fighter group, rangers have eight-sided Hit Dice (d8) but at first level they get 2, rather then 1, Hit Dice. It should also be noted that rangers get 11 Hit Dice rather than the 9 of other fighter-types. Table 61 shows the experience points needed for each level, along with the associated titles. Table 62 lists the number of attacks per round a ranger can make at various levels.

### Table 61: Experience Levels (1st Edition)

| Level | XP Needed | Hit Dice (d8) | Level Title |
|---|---|---|---|
| 1 | 0 | 2 | Runner |
| 2 | 2,251 | 3 | Strider |
| 3 | 4,501 | 4 | Scout |
| 4 | 10,001 | 5 | Courser |
| 5 | 20,001 | 6 | Tracker |
| 6 | 40,001 | 7 | Guide |

| | | | |
|---|---|---|---|
| 7 | 90,001 | 8 | Pathfinder |
| 8 | 150,001 | 9 | Ranger |
| 9 | 225,001 | 10 | Ranger Knight |
| 10* | 325,001 | 11 | Ranger Lord |
| 11 | 650,001 | 11+2 | Ranger Lord (11th level) |
| 12** | 975,001 | 11+4 | Range Lord (12th level) |

* Rangers gain 2 hit points per level after the 10th.
** 325,000 experience points per level for each additional level above the 12th.

### Table 62: Attacks Per Round (1st Edition)

| Level | Attacks/Round* |
|---|---|
| 1-7 | 1/1 round |
| 8-14 | 3/2 rounds |
| 15+ | 2/1 round |

* This applies to any thrusting or striking weapon.

## Special Abilities

In addition to considerable prowess as fighters, rangers have druidic and magical spell capabilities when they attain high levels. Thus, they are very formidable opponents, for they have other abilities and benefits as well.

When fighting humanoid-type creatures of the "giant class," listed hereafter, rangers add 1 hit point for each level of experience they have attained to the points of damage scored when they hit in melee combat. Giant class creatures are listed on Table 66. **Example:** a 5th level ranger hits a bugbear in melee combat, and the damage done to the opponent will be according to the ranger's weapon type, modified by his Strength, and +5 (for his or her experience level) because the opponent is a bugbear (a "giant class" humanoid).

Rangers surprise opponents when rolling 1-3 on 1d6 and are themselves surprised only when rolling 1 on 1d6.

Tracking is possible both outdoors and underground (in dungeons and similar settings). Underground, the ranger must have observed the creature to be tracked within 3 turns (30 minutes) of the commencement of tracking, and the ranger must begin tracking at a place where the creature was observed. Table 63 lists the ranger's chance to track creatures underground in various situations.

### Table 63: Underground Tracking Chances

| Creature's Action | Chance to Track |
|---|---|
| Going along a normal passage or room | 65% |
| Passes through normal door or uses stairs | 55% |
| Goes through a trap door | 45% |
| Goes up or down a chimney or | |

| | |
|---|---|
| through a concealed door | 35% |
| Passes through a secret door | 25% |

Outdoors, a ranger has a base 10%, plus 10% per level, chance of following a creature (1st: 20%, 2nd: 30%, etc). Table 64 shows the modifications to the base chance.

### Table 64: Outdoor Tracking Modifiers

| Situation | Modifier |
|---|---|
| For each creature above 1 in the party being tracked | +2% |
| For every 24 hours that have elapsed | -10% |
| For each hour of preparation | -25% |

At 8th level, rangers gain limited druidic spell ability. Additional spells are added through 17th level. At 9th level, rangers gain limited magic-user spell ability, as with druidic spell ability (see Table 65). Rangers can't read druid, cleric, or magic-user spells from magical scrolls in any event.

### Table 65: Spell Progression (1st Edition)

| | Spell Level | | | | |
|---|---|---|---|---|---|
| **Ranger** | | **Druidic** | | **Magic-User**** | |
| **Level** | **1** | **2** | **3** | **1** | **2** |
| 8 | 1 | - | - | - | - |
| 9 | 1 | - | - | 1 | - |
| 10 | 2 | - | - | 1 | - |
| 11 | 2 | - | - | 2 | - |
| 12 | 2 | 1 | - | 2 | - |
| 13 | 2 | 1 | - | 2 | 1 |
| 14 | 2 | 2 | - | 2 | 1 |
| 15 | 2 | 2 | - | 2 | 1 |
| 16 | 2 | 2 | 1 | 2 | 2 |
| 17* | 2 | 2 | 2 | 2 | 2 |

*Maximum spell ability
**The ranger must check which spells he can learn, just as if he was a magic-user.

At 10th level (Ranger Lord), rangers are able to employ all non-written magical items which pertain to *clairaudience*, *clairvoyance*, *ESP*, and *telepathy*.

Also at 10th level, each ranger attracts 2-24 (2d12) followers. Note that these henchmen once lost can never be replaced, although mercenaries can be hired, of course. These followers are determined by the DM who then informs the ranger.

## Special Restrictions

Any change to non-good alignment immediately strips the ranger of all benefits, and

the character becomes a fighter, with eight-sided Hit Dice ever after. He can never again regain ranger status.

Rangers may not hire men-at-arms, servants, aides, or henchmen until they attain 8th level or higher.

No more than three rangers may ever operate together at any time.

Rangers may own only those goods and treasures which they can carry on their person and/or place upon their mount. All excess must be donated to a worthy communal or institutional cause (but never to another player character).

Rangers do not attract a body of mercenaries to serve them, but when (and if) rangers construct strongholds, they conform to the fighter class in other respects.

The following is a list of "giant class" creatures for which the ranger receives his special combat bonus.

### Table 66: Giant Class Creatures

| | |
|---|---|
| bugbear | kobold |
| cyclops | meazel |
| cyclopskin | norker |
| dune stalker | ogre/merrow |
| ettin | ogre mage |
| giant (all) | ogrillion |
| giant-kin (all) | orc/orog |
| gibberling | quaggoth |
| gnoll/flind | spriggan |
| goblin | tasloi |
| grimlock | troll/scrag (all) |
| hobgoblin/kaolinth | xvart |

### Optional Rule (from *Unearthed Arcana*)
### The Ranger's Weapons

By the time a ranger gains a fourth weapon proficiency at 4th level, the character's weapons must include:

- a bow (of any sort) or light crossbow*
- a dagger or knife
- a spear or an axe
- a sword (any type)

* This choice must be made at 1st level.

## Introduction

*To ride abroad redressing human wrongs,*
*To speak no slander, no, nor listen to it,*
*To honor his own word as if his god's,*
*To lead sweet lives in purest chastity,*
*To love one maiden only [...]*
*And worship her by years of noble deeds....*

——credo of the Knights of the Round Table
(Alfred, Lord Tennyson, *The Idylls of the King*)

What comes to mind when you think of the paladin? For many of us, his image is indelibly linked to that of the medieval knight, the supreme hero of the Middle Ages.

Clad in shining armor, his lance gleaming in the morning sun, the knight is the quintessence of gallantry, the champion of the powerless, and the personification of courage—at least as we remember him from history.

Though *The Complete Paladin's Handbook* encompasses aspects of the historical knight, it casts a much wider net. While you'll find the horse soldiers who served the lords of the feudal age, you'll also meet riders of unicorns, killers of dragons, and nemeses of the undead; men and women who ride majestic war horses and wield magical swords; and worshippers of ancient religions and followers of arcane philosophies, some serving powerful churches and monarchies, others answering only to their own consciences.

This book focuses on the paladin's motivations, special abilities, and unique restrictions—that is, all of the elements that distinguish him from other character types and make him so challenging to play. We probe the paladin's personality, unravel his emotions, and try to understand what makes him tick; look at his role in an adventuring party and in society as a whole; and examine what his religion demands of him and what he expects from himself. Along the way, we discuss more than a dozen new character kits, show you how to design a code of behavior for your paladin, and describe new proficiencies and equipment.

For your convenience, this book compiles and summarizes all of the relevant rules from the *DUNGEON MASTER™ Guide* (abbreviated *DMG* in the text) and *Player's Handbook* (abbreviated *PH*). It also includes a new set of character sheets in the back of the book, designed to record virtually every detail about a paladin character.

Keep in mind that all of this material is *optional*. Every idea must have the approval of the DM™ before it can be incorporated into a campaign.

All of the material in this book uses the AD&D® 2nd Edition rules. Players using the original AD&D *PH* and *DMG* should *carefully* adapt this handbook to the campaign. For reference, the appendix of this book summarizes original AD&D paladin rules.

The *Unearthed Arcana* book, a supplement to the original AD&D rules, declared the paladin to be a sub-class of the cavalier. In the AD&D 2nd Edition game, this no longer applies. The paladin remains tied to the fighter group, with the cavalier, in a streamlined form, reworked as a character kit in *The Complete Fighter's Handbook*.

Many concepts in The Complete Paladin's Handbook draw heavily on the proficiency rules introduced in the AD&D 2nd Edition *PH*. We strongly recommend you use proficiencies in your campaign and review the rules before proceeding.

## The Roots of the Paladin

The life of the historical knight was less romantic than fictional accounts would have us believe. The word *cniht* was first used to describe the sons of French peasants who arrived in England following the Norman conquest in 1066. Crude in manner and appearance, the *cniht* soldiers attracted attention because of their expensive armor and horsemanship, a skill held in high regard. Despite these advantages, the cniht were still second-class citizens, a notch above peasants but decidedly inferior to the aristocracy.

With feudalism the status of the *cniht* (eventually Anglicized to *knights*) improved dramatically. The feudal era began when wealthy lords gave small pieces of land to groups of peasants in exchange for their labor, and struggling land-owners signed over

their property to a lord in return for protection. The relationship was secured by a bond of honor and a clear understanding of their mutual responsibilities. In time, all parties in feudal relationships became part of the nobility, and feudal offers were extended only to those of acceptable stature.

As a lord's holdings grew, so did his need for skilled warriors to defend against foreign invaders. Knights made ideal candidates. In the feudal tradition, lords secured their services by offering them property, grand estates including much farmland, many buildings, and even the peasants who provided the labor. As the knights acquired wealth, they also gained prestige, becoming a distinct and honored social class that was usually restricted to the sons of aristocrats.

The status of the knights solidified in the 11th century when the church, prompted by self-interest and a genuine desire to promote order in an increasingly anarchic society, gave its official sanction. Knighthood was declared a sacred calling, and the ordainment of new knights became a holy ritual. With this new accreditation came new responsibilities, formally defined in the code of chivalry, a set of principles based on religious ideals. While continuing in the lower ranks of the privileged class, the knight now symbolized the highest standards of moral behavior and was admired by peasants and royalty alike.

Though the knight commanded respect, he was rarely envied. His life was dangerous and brutal, marked by incessant confrontations and the constant threat of humiliation. Rather than adventuring for honor or pleasure, most engaged in a constant struggle for income, desperately seeking any and all opportunities to earn an honest living. The rigid chivalric code, which made abstract principles of loyalty more important than life itself, resulted in a death sentence for most knights. Few lived beyond age 30. Those who survived often spent their remaining years penniless and broken, depending on the charity of a society that had all but forgotten them.

# Chapter 1: Character Creation

This chapter compiles all of the statistics, adjustments, and level progressions from the *PH* and *DMG* pertaining to the paladin. Although no two paladins are exactly alike, all of them have these fundamentals in common.

## Paladin Requirements

It takes an exceptional character to become a paladin, as reflected in the class qualifications listed in Table 1.

### Table 1: Class Qualifications

**Ability Requirements**

| | |
|---|---|
| Strength | 12 |
| Constitution | 9 |
| Wisdom | 13 |

Charisma 17

**Prime Requisites**
Strength
Charisma

**Races Allowed**
Human

**Alignments Allowed**
Lawful good

A player who tries to generate a paladin by using Method I, described in Chapter 1 of the *PH*, may be rolling dice all day. Although the odds improve slightly when using Methods II-IV, only Methods V and VI give a reasonable, albeit slim, chance of producing the necessary numbers.

Although the strict ability requirements may frustrate a player wanting to create a paladin character, they're necessary to regulate play balance. Paladins are among the game's most formidable characters. If they were as easy to roll up as, say, warriors or mages, the surplus of powerful characters would make it difficult, perhaps impossible, for the DM to come up with encounters challenging enough for all members of a party. A DM may also have other reasons for limiting the paladin population—for instance, the campaign world may discourage the development of paladins—or may restrict the number of paladins simply to enhance their mystique.

But if your DM is open to paladin player-characters, you might consider using Table 2 instead of dice rolls to generate the required ability scores. Roll 1d12 and use the indicated statistics.

**Table 2: Pregenerated Ability Scores**

| D12 | Str | Dex | Con | Int | Wis | Cha |
|---|---|---|---|---|---|---|
| 1 | 12 | 8 | 16 | 10 | 15 | 17 |
| 2 | 17 | 10 | 10 | 9 | 14 | 17 |
| 3 | 12 | 9 | 12 | 10 | 16 | 18 |
| 4 | 15 | 13 | 15 | 11 | 14 | 17 |
| 5 | 14 | 16 | 9 | 15 | 18 | 17 |
| 6 | 12 | 11 | 11 | 9 | 13 | 18 |
| 7 | 18* | 12 | 12 | 12 | 14 | 17 |
| 8 | 13 | 11 | 14 | 10 | 17 | 18 |
| 9 | 16 | 10 | 11 | 11 | 16 | 17 |
| 10 | 13 | 14 | 13 | 9 | 13 | 17 |
| 11 | 15 | 12 | 17 | 14 | 15 | 18 |
| 12 | 14 | 15 | 10 | 13 | 13 | 17 |

* Roll percentile dice for exceptional Strength.

## Level Advancement

Paladins advance in level and hit points at the same rate as fighters. For each level up to 9, they gain 1d10 hit points. They receive 3 extra hit points at level 10 and beyond. Table 3 summarizes the paladin's level advancements, along with the corresponding THAC0 scores.

Keep two adjustments in mind:

• Paladins whose Strength and Charisma scores equal or exceed 16 earn a 10% bonus to all earned experienced points. A paladin must have a 16 or more in *both* of these abilities to qualify for the bonus.

• Unusually high Constitution scores award hit point adjustments. A paladin with a Constitution of 17 receives a +3 bonus per hit die, and a score of 18 grants a +4 bonus.

### Table 3: Experience Levels

| Level | XP Needed | Hit Dice (d10) | THAC0 |
|---|---|---|---|
| 1 | 0 | 1 | 20 |
| 2 | 2,250 | 2 | 19 |
| 3 | 4,500 | 3 | 18 |
| 4 | 9,000 | 4 | 17 |
| 5 | 18,000 | 5 | 16 |
| 6 | 36,000 | 6 | 15 |
| 7 | 75,000 | 7 | 14 |
| 8 | 150,000 | 8 | 13 |
| 9 | 300,000 | 9 | 12 |
| 10 | 600,000 | 9+3 | 11 |
| 11 | 900,000 | 9+6 | 10 |
| 12 | 1,200,000 | 9+9 | 9 |
| 13 | 1,500,000 | 9+12 | 8 |
| 14 | 1,800,000 | 9+15 | 7 |
| 15 | 2,100,000 | 9+18 | 6 |
| 16 | 2,400,000 | 9+21 | 5 |
| 17 | 2,700,000 | 9+24 | 4 |
| 18 | 3,000,000 | 9+27 | 3 |
| 19 | 3,300,000 | 9+30 | 2 |
| 20 | 3,600,000 | 9+33 | 1 |

Advancing in level, a paladin gets new proficiency slots, as shown on Table 4. Remember that a paladin suffers a –2 penalty when using a weapon without the required proficiency.

### Table 4: Total Proficiency Slots

| Level | Weapon | Nonweapon |
|---|---|---|
| 1-2 | 4 | 3 |

| | | |
|---|---|---|
| 3-5 | 5 | 4 |
| 6-8 | 6 | 5 |
| 9-11 | 7 | 6 |
| 12-14 | 8 | 7 |
| 15-17 | 9 | 8 |
| 18-20 | 10 | 9 |

Table 5 summarizes the saving throws applicable to each level. Unlike other characters, paladins receive a +2 bonus to all saving throws. For convenience, the paladin's modified throws are given in parentheses; for example, a 1st-level paladin must roll a 12 or better to avoid the effects of paralyzation.

### Table 5: Saving Throws

| Level | PPDM | RSW | PP | Breath | Spell |
|---|---|---|---|---|---|
| 1-2 | 14 (12) | 16 (14) | 15 (13) | 17 (15) | 17 (15) |
| 3-4 | 13 (11) | 15 (13) | 14 (12) | 16 (14) | 16 (14) |
| 5-6 | 11 (9) | 13 (11) | 12 (10) | 13 (11) | 14 (12) |
| 7-8 | 10 (8) | 12 (10) | 11 (9) | 12 (10) | 13 (11) |
| 9-10 | 8 (6) | 10 (8) | 9 (7) | 9 (7) | 11 (9) |
| 11-12 | 7 (5) | 9 (7) | 8 (6) | 8 (6) | 10 (8) |
| 13-14 | 5 (3) | 7 (5) | 6 (4) | 5 (3) | 8 (6) |
| 15-16 | 4 (2) | 6 (4) | 5 (3) | 4 (2) | 7 (5) |
| 17+ | 3 (1) | 5 (3) | 4 (2) | 4 (2) | 6 (4) |

**Abbreviations**
PPDM = Paralyzation, Poison, or Death Magic
RSW = Rod, Staff, or Wand
PP = Petrification or Polymorph
Breath = Breath Weapon

## Armor and Weapons

As members of the warrior group, paladins can wear any type of armor. Regardless of the armor worn, paladins suffer no penalties to any of their special abilities.

Paladins can also wield any of the weapons listed in Chapter 6 of the *PH*. As they increase in level, they can make more than one attack per round, as shown in Table 6.

### Table 6: Paladin Attacks Per Round

| Level | Attacks/Round |
|---|---|
| 1-6 | 1/round |
| 7-12 | 3/2 rounds |
| 13+ | 2/round |

A paladin may fight with two weapons at the same time, holding one in each hand,

providing the second weapon is smaller and lighter than the main weapon, and that he avoids using a shield. With these qualifications, the paladin may make an additional attack each round with the second weapon. However, fighting with two weapons simultaneously gives a penalty on both attack rolls. The base penalty is –2 for the main weapon and –4 for the second weapon. The paladin's Reaction Adjustment, based on Dexterity, modifies both penalties, though neither may be modified above 0. Table 7 summarizes these penalties.

**Table 7:**
**Two-Weapon Attack Roll Penalties**

| Dex. | Main Weapon Penalty | Second Weapon Penalty |
|---|---|---|
| 1 | –8 | –10 |
| 2 | –6 | –8 |
| 3 | –5 | –7 |
| 4 | –4 | –6 |
| 5 | –3 | –5 |
| 6-15 | –2 | –4 |
| 16 | –1 | –3 |
| 17-18 | 0 | –2 |

## Clerical Magic

At 9th level, a paladin becomes eligible to cast clerical spells. Table 8 shows the number of spells a paladin receives at each level. The table also indicates the spell level cast. For example, if a 13th-level paladin casts the 2nd-level *slow poison* spell, the effects persist for 5 hours; the spell's duration is 1 hour/level and, as shown on Table 8, a 13th-level paladin casts it at 5th level. A paladin's spells never rise beyond 9th level.

Paladins only have access to spells of the Combat, Divination, Healing, and Protective spheres. For reference, Table 9 lists all spells from the *PH* available to paladins. The following restrictions also apply:

• Paladins don't get bonus spells for high Wisdom scores.

• Paladins can't use priestly magical items, nor can they cast spells from clerical or druidical scrolls. However, they may use any magical items intended for the warrior group, even if priests use them too.

**Table 8: Paladin Spell Progression**

| Paladin Level | Casting Level | Priest Spell Levels 1 | 2 | 3 | 4 |
|---|---|---|---|---|---|
| 9 | 1 | 1 | - | - | - |
| 10 | 2 | 2 | - | - | - |
| 11 | 3 | 2 | 1 | - | - |
| 12 | 4 | 2 | 2 | - | - |
| 13 | 5 | 2 | 2 | 1 | - |

| | | | | | |
|---|---|---|---|---|---|
| 14 | 6 | 3 | 2 | 1 | - |
| 15 | 7 | 3 | 2 | 1 | 1 |
| 16 | 8 | 3 | 3 | 2 | 1 |
| 17-18 | 9 | 3 | 3 | 3 | 1 |
| 19 | 9 | 3 | 3 | 3 | 2 |
| 20 | 9 | 3 | 3 | 3 | 3 |

## Table 9: Paladin Spells

| Level | Name | Sphere |
|---|---|---|
| 1 | Cure Light Wounds | Healing |
| 1 | Detect Magic | Divination |
| 1 | Detect Poison | Divination |

| 3 | Prayer | Combat |
| 3 | Remove Curse | Protection |
| 3 | Remove Paralysis | Protection |
| 3 | Speak with Dead | Divination |
| 3 | *Protection from Fire** | Protection |
| 4 | Cure Serious Wounds | Healing |
| 4 | Detect Lie | Divination |
| 4 | Divination | Divination |
| 4 | Neutralize Poison | Healing |
| 4 | Protection from Evil, 10' Radius | Protection |
| 4 | Spell Immunity | Protection |

| | | |
|---|---|---|
| 4 | Tongues | Divination |
| 4 | *Protect. from Lightning** | Protection |
| 4 | *Reflecting Pool** | Divination |
| 4 | *Repel Insects* | Protection |

* Italicized entries were classified as druidic spells in the original AD&D® rules. Paladins using the 1st Edition may not choose any of these spells.

**Optional spell restriction:** At the DM's discretion, AD&D® 2nd Edition paladins may be forbidden to cast the italicized spells on Table 9.

At 3rd level, a paladin gains the ability to turn undead. The number and type of undead turned depends on the paladin's level, as per Table 10.

A paladin turns undead just like a priest of two levels lower than the paladin. The player rolls 1d20 and consults the relevant column of Table 10. A result equal to or greater than the listed number indicates success. A "T" means the attempt succeeds automatically; no roll is necessary. A "D" means the targeted undead are destroyed. Turning attempts can't be made against categories of undead indicated by a dash. A successful roll, or a "T" or "D" notation, affects 2-12 (2d6) undead. Only one die-roll is made per turning attempt, regardless of the composition of the undead group.

Use the same die result on all applicable columns of Table 61. (See Chapter 2 for more about this ability.)

## Table 10:
## Turning Undead (Paladin)

| **Paladin** | **Category of Undead** | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Level** | **1** | **2** | **3** | **4** | **5** | **6** | **7** | **8** | **9** | **10** | **11** | **12** | **13** |

| 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - | - | - | - | - |
| 5 | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - | - | - | - |
| 6 | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - | - | - |
| 7 | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - | - |
| 8 | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - |
| 9 | D | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - |
| 10 | D* | D | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - |
| 11 | D* | D* | D | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 |
| 12-13 | D* | D* | D* | D | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 |
| 14-15 | D* | D* | D* | D* | D | D | T | T | 4 | 7 | 10 | 13 | 16 |
| 16+ | D* | D* | D* | D* | D* | D | D | T | T | 4 | 7 | 10 | 13 |

**Key to Categories**

1: Skeleton (or 1 HD undead)
2: Zombie
3: Ghoul (or 2 HD undead)
4: Shadow (or 4 HD undead)

5: Wight (or 5 HD undead)
6: Ghast
7: Wraith (or 6 HD undead)
8: Mummy (or 7 HD undead)
9: Spectre (or 8 HD undead)
10: Vampire (or 9 HD undead)
11: Ghost (or 10 HD undead)
12: Lich (or 11+ HD undead)
13: Special undead, including one-of-a-kind creatures, free-willed undead of the Negative Plane, outer planes undead, and certain greater and lesser deities.
* An additional 2d4 creatures of this type are turned.

# Chapter 2: Paladin Abilities

All paladins have innate abilities that set them apart from other character classes. These are granted powers resulting from the paladins' strong faith. In this chapter, we examine each of these abilities in detail, discussing their applications, limitations, and special rules.

## Detect Evil Intent

The paladin, so thoroughly aligned with the forces of good, can experience the mere *presence* of evil as a physical sensation. Although similar to the *detect evil* spell, the paladin's sensitivity to evil essentially functions as a sixth sense. But, like the spell, this ability doesn't work automatically. The player must make it clear that the paladin is attempting to detect evil; only then will the DM reveal the relevant information.

### Use and Limitations

Unlike other senses, the detection of evil works only when the paladin concentrates for one full round, remaining still and taking no other actions. Often, paladins close their eyes, lower their head, and clear their minds by focusing on their own breathing. Some paladins extend their palms, touch their foreheads with their fingers, or sweep their hands slowly in front of them. Details of the concentration routine vary from paladin to paladin, and each is free to come up with a unique routine. Once settled on a routine, the paladin should always execute it the same way.

If attacked, distracted, or otherwise disturbed while concentrating, the paladin fails to detect evil. He may try again in subsequent rounds.

The paladin may target an individual or group up to 60 feet distant, in an area about 10 feet wide, or a location where an individual or group might be hiding, such as a clump of bushes or a concealed alcove. The paladin must face the indicated individual, group, or location, but need not see the target. If blindfolded or in thick fog, for example, the paladin can target an individual by voice or movement, or just take a guess. In a shadowed corridor, the paladin's detect-evil ability can determine if anyone—or anything—with strong evil intent lurks in the darkness.

## Eligible Targets

A paladin can detect evil radiated by characters and monsters; undead created by evil magic; Negative Plane influences; evil artifacts; certain enchanted swords; and other intelligent objects that radiate evil. The ability can't detect cursed objects or traps, nor does it work on creatures of Animal intelligence or less (Intelligence 0 or 1), such as centipedes or carnivorous plants.

The paladin's sensitivity to evil responds to the target's intention to commit an evil act. The ability doesn't reveal the precise nature of the intended act, nor does it reveal the target's actual alignment. Characters who are strongly aligned, who do not stray from their faith, and are of at least 9th level might radiate evil if intent upon appropriate actions. For instance, if the paladin uses this ability on a suspicious nonplayer character, the paladin may sense that the NPC radiates evil, but not that the NPC is neutral evil, or that the NPC plans to ambush and kill the paladin. If an NPC recently murdered a passerby, the paladin might pick up evil emanations from the NPC but cannot determine the nature of the crime. Creatures such as the rakshasa, who disguise themselves with illusions, may conceal their appearances but not their evil intentions.

A high-level character unshakably committed to an evil alignment may radiate evil even when not specifically planning an evil act or thinking evil thoughts. Powerful evil monsters, such as red dragons and hill giants, also radiate evil uncontrollably. A paladin can always detect the presence of these types of evil beings, unless unusual conditions are in effect. For instance, in some evil strongholds or planes, *everything* reads evil, effectively negating the paladin's evil-sensing ability.

Subject creatures may not make saving throws to resist a paladin's attempt to sense evil. However, *undetectable alignment* and similar spells cast on a target temporarily prevent the paladin from sensing the target's evil emanations. But as soon as the spell ends, the paladin is free to make another attempt.

A paladin can't detect an evil presence through 3 feet or more of wood, 1 foot or more of stone, or 1 inch or more of metal. A thin coat of lead also prevents the use of this ability. A paladin perceives such barriers as nonspecific obstructions, without knowing their composition or widths.

## Interpreting the Results

If an attempt at sensing evil fails, or if there's no evil present, the paladin feels nothing out of the ordinary. If evil is present, the paladin might experience an unmistakable physical sensation. Though the type of sensation varies among paladins, a given paladin always has the same reaction. Typical reactions include tingling in the fingertips, a warm flush, a cold chill, or a dull throb behind the eyes; the DM can make up sensations. Usually the sensation lasts only a moment.

If the paladin scans a crowd of people, tingling fingers won't pinpoint the character responsible for the evil emanations. If scanning a pool of murky water, throbbing eyes won't reveal the number or species of evil creatures lurking below the surface. However, the paladin may determine the degree of evil from the intensity of the sensation. Table 11 lists four general degrees and examples of sources. Two ways that a paladin might

experience the corresponding sensations also appear. In an encounter, the DM describes only the sensation when a paladin successfully detects evil; the player must interpret the meaning of the sensation.

At the DM's option, the paladin may discover the general nature of the evil as well as its degree. A pickpocket may radiate an expectant evil, a vampire's evil may be malignant. The DM may use the sensations suggested in Table 11 to indicate the nature of evil (the paladin experiences an expectant evil as an itch on his fingertips), or may employ a different set of sensations (a warmth in the chest indicates expectant evil).

### Table 11: Degrees of Evil

| Degree | Typical Sources | Sensations |
|---|---|---|
| Faint | Pickpocket; nonevil bully | Slight itch on tips of fingers; light throb behind eyes |
| Moderate | Mugger; skeleton created by evil cleric; imp; typical orc | Tiny pinpricks along fingers; dull pounding behind eyes |
| Strong | Mass murderer; ghoul; vampire | Pinpricks over entire surface of hands; intense pounding hurts eyes |
| Over-whelming | Venerable red dragon; lich; vampire mage | Sharp pain in hands; agonizing headache |

Ambiguous situations produce ambiguous results. If a vampire waits behind a 3-inch-thick stone wall fortified with 2 feet of wood, a paladin may detect a moderate or strong sensation of evil, rather than an overwhelming one. If a murderer hides behind a window with a coat of flaking lead paint, a paladin may detect a moderate instead of a strong sensation.

If the DM can't decide which category in Table 11 to use, it's acceptable to give the paladin mixed signals. If a vicious mugger hides in a closet, but plans to surrender rather than fight if discovered, a paladin may detect both faint and moderate sensations (fingertip itches alternating with pinpricks).

## Saving-Throw Bonus

As detailed in Chapter 3, a paladin's ethos compels him to put his life on the line far more often than other characters. While companions may hesitate, a paladin will fight to the last enemy, volunteer for near-suicidal missions, and face death to defend a principle.

To compensate for these risks, a paladin's faith grants increased immunity to poisons, death magic, and similar hazards. This immunity is manifested as a permanent +2 bonus to all saving throws. The bonuses take effect at 1st level. Table 5 in Chapter 1

summarizes the paladin's saving throws.

These bonuses do *not* apply to a paladin's ability checks. A paladin with a Strength of 16 attempts a Strength check at 16, not 18. However, the paladin does benefit from the saving-throw bonuses available to other characters, such as those awarded for high Dexterity and Wisdom scores (shown on Tables 2 and 5 in the *PH*) and magical armor.

## Immunity to Disease

A paladin has complete immunity to all forms of organic disease. This immunity includes diseases from rat, otyugh, and neo-otyugh bites, as well as nonlethal but disabling maladies like measles and earaches. A paladin never catches a cold or suffers from tooth decay, and is unaffected by parasitic monsters such as green slime, violet fungi, gas spores, phycomids, and rot grubs. His wounds never become infected. The process occurs instantly, automatically, and painlessly; the paladin isn't even aware of exposure to a disease.

A paladin's disease resistance is divinely given and can't be transferred to another character. A magical blood transfusion, for instance, would not grant disease immunity to the recipient. Nor are a paladin's progeny automatically immune to diseases, unless they become paladins themselves.

A paladin experiences the normal consequences of the following:

**Physical trauma**. All wounds inflict normal damage. A paladin is as susceptible to concussions, broken limbs, and exhaustion as any other character, and also suffers the normal effects of extreme temperature, such as sunburn, heatstroke, and frostbite.

**Poison**. A paladin is vulnerable to nearly all types of ingested, injected, and inhaled toxins. These include irritants (acids, mercury), organic toxins (poison mushrooms, snake venom, crystal ooze), nerve poisons (belladonna, arsenic), and poisonous gases (vapors that stop the heart or inhibit breathing). The paladin can become intoxicated by drinking too much alcohol, and may experience allergic reactions to pollen, dust, or other substances, but does not suffer from virus-based or bacteria-based toxins, such as the saliva of a rabid dog or bat.

**Curses and magical diseases**. Lycanthropy, mummy rot, and similar afflictions are curses and not diseases. A paladin suffers the normal effects. (See the *PH*, page 27, and the *DMG*, page 131, for details.)

Note that paladins are immune to the *cause disease* spell. The DM may decide that very powerful diseases, like mummy rot, may override the paladin's natural immunity, but could be cured by the paladin's *cure disease* ability.

**Effects of aging**. A paladin ages at the normal human rate. Age brings the ability penalties given on Table 12, Chapter 1 of the *PH*, and also the normal debilitations associated with aging. For instance, even though the paladin's teeth resist bacterial decay, they may still fall out as a result of enamel erosion. A paladin whose body wears out dies, at the same age as a normal human.

**Psychological disorders**. A paladin is as prone as anyone else to hallucinations, nightmares, memory loss, insanity, and similar mental and emotional disorders, providing the disorder isn't a consequence of a disease (such as a fever-induced delirium).

### Table 12: Level Progression of Powers

| Paladin Level | Cure Diseases* | Laying On Hands** | Other |
|---|---|---|---|
| 1 | 1 | 2 | - |
| 2 | 1 | 4 | - |
| 3 | 1 | 6 | Turn undead |
| 4 | 1 | 8 | Bonded mount |
| 5 | 1 | 10 | - |
| 6 | 2 | 12 | - |
| 7 | 2 | 14 | - |
| 8 | 2 | 16 | - |
| 9 | 2 | 18 | Priest spells |
| 10 | 2 | 20 | - |
| 11 | 3 | 22 | - |
| 12 | 3 | 24 | - |
| 13 | 3 | 26 | - |
| 14 | 3 | 28 | - |
| 15 | 3 | 30 | - |
| 16 | 4 | 32 | - |
| 17 | 4 | 34 | - |
| 18 | 4 | 36 | - |
| 19 | 4 | 38 | - |
| 20 | 4 | 40 | - |

* Times per week.
** Hit points restored.

## Cure Diseases

A paladin is not only immune to natural diseases, but can cure such diseases in others. This requires no materials or rituals, merely a touch of the victim with a finger, usually on the forehead, cheek, or hand. Only a moment's contact is necessary, so long as skin touches skin. The cure occurs automatically. The victim may be any human, humanoid, demihuman, or natural animal. A paladin can't cure lycanthropes, undead, or creatures of extraplanar or supernatural origin.

A paladin can use this ability once per week for each five levels of experience (see Table 12). A victim receives no additional benefits from being cured for the same disease more than once; multiple applications won't accelerate recovery or heal damage. However, should the victim succumb to the same disease at some point in the future, a paladin may cure him again.

A paladin may cure any disease. He can't use this ability to heal physical trauma, cure lycanthropy (or most other curses), or neutralize poisons. Mummy *rot* can be cured with this power. Diseases from *wishes*, artifacts, gods, or similar sources, however, might not be curable.

### Recovery

The victim's recovery begins immediately after the paladin touches him. Recovery time varies from a few minutes to 10 days, depending on the severity of the disease and how long the victim has been suffering. A victim cured of a mild cold or a toothache may recover in a turn. A victim with advanced pneumonia or smallpox may require the full 10 days. The DM decides the recovery period based on these parameters.

A cured victim doesn't automatically recover hit points lost as a result of the disease, but ceases to lose additional hit points. Hit points are recovered at a normal rate, abetted by rest, medicinal or magical treatments, and possibly the paladin's ability of *laying on hands* (see below). Though the curing alleviates disabling symptoms of the disease (such as headaches associated with a fever or blurred vision from an eye infection), it doesn't correct any physical consequences (such as pockmarks or weight loss).

## Laying On Hands

A paladin can restore lost hit points to himself, another character, or a natural animal with the *laying on hands* ability. To use this ability, the paladin briefly presses both palms against the damaged character or creature—usually against the temple or chest, but any surface of the body will do. Touching the skin directly isn't necessary. The paladin may be gloved or the subject may be wearing clothing, so long as the paladin presses hard enough for the recipient to feel the pressure.

Laying on hands works automatically, restoring a number of hit points equal to twice the paladin's experience level (see Table 12). A paladin can use this ability only once per day, and only on a single character or creature. The following restrictions also apply:

• The recipient can't recover more hit points than he normally has. If a 6th-level paladin lays hands on a character who's lost a total of 3 hit points, the character recovers exactly 3 hit points and no more. Though the paladin could theoretically restore 12 hit points, the excess are "lost" in this case.

• The recipient must still be alive. Laying on hands can't bring dead characters back to life.

• Laying on hands doesn't cure diseases—that requires a different paladin power (discussed earlier). However, laying on hands may restore hit points lost to disease or poison. (Note that laying on hands doesn't negate poison or lengthen its onset time; the *neutralize poison* and *slow poison* spells cause these effects.)

• If the paladin is unconscious or immobile, a companion can't pick up the paladin's hands and heal himself or anyone else. Laying on hands requires the paladin's willful participation.

• Laying on hands won't work unless the paladin employs both hands at the same time. Before using this ability, he must sheath his sword, put down his bag, or take whatever other actions are necessary to free his hands. If he's disabled—for

example, if he's lost an arm in an accident—he may petition the gods to allow him to heal with a single hand. Assuming the paladin has served honorably, the gods probably grant his request.

## Aura of Protection

An invisible aura of protection continuously surrounds a paladin. The aura extends 10 feet in all directions, enveloping anyone and anything within its boundaries. The aura persists even when the paladin is asleep or unconscious, dissipating only when the paladin dies. However, it doesn't extend through walls, doors, or any physical barrier.

The magical aura has a disrupting and disturbing effect on evil opponents, causing them to make all attack rolls at a –1 penalty. Affected opponents include:

• Monsters and characters whose alignments are lawful evil, neutral evil, and chaotic evil.

• Extraplanar, conjured, and summoned evil entities, or those summoned by evil spellcasters.

• Monsters and characters who have been charmed by evil casters or otherwise have been compelled to commit evil acts.

Only evil opponents within the radius of the aura suffer the attack penalty. The aura affects a large opponent if even a portion of its body occupies the aura's radius. When an evil opponent moves out of the aura, the penalty no longer applies, but as soon as the opponent re-enters the aura, the penalty again takes effect.

An evil opponent within the aura suffers the –1 penalty when directing attacks against the paladin, other characters or creatures within the aura, or characters or creatures outside the aura. The penalty applies to all physical attacks made by an evil opponent, but not magical attacks. Because the aura disrupts living creatures and not inanimate objects, missile attacks made outside the aura's radius aren't penalized; an ogre who throws a rock at a paladin from a distance of 11 feet makes a normal attack roll.

Special considerations include these:

• Evil opponents experience the paladin's aura of protection as an unpleasant physical sensation, such as mild nausea, a prickling of the skin, a tightening of the throat, or a sudden chill. Because the sensation is so pronounced, evil opponents can almost always identify a paladin as the source, even if the paladin is disguised. Non-evil creatures and characters don't experience these sensations. Consequently, they may not be sure when they move in and out of the aura's range. Nor does the paladin feel anything unusual when an evil opponent enters the aura; therefore, the aura in no way helps to detect evil.

• A paladin may benefit from a *protection from evil* spell, even though the aura mimics many of the spell's properties. *Protection from evil* also blocks attempts at exercising mental control and prevents bodily contact by extraplanar and conjured creatures. The spell and the aura function simultaneously for the spell's duration, with the paladin receiving the benefits of both. However, the attack penalties aren't cumulative; evil creatures suffer a –2 penalty to their attack rolls, not –3.

• The aura of protection gives the paladin obvious advantages in melee combat. But though a paladin may be inclined to gather companions around during a battle so that they may also benefit from the aura, this isn't always a good idea. Strategic movement can be difficult when several people struggle to remain in a confined area, and a 10-foot radius doesn't allow much freedom. A cluster of characters also makes a good target for enemy missile attacks as well as spell attacks affecting large areas.

## Holy Sword

A holy sword is a special type of consecrated weapon that provides a paladin with unique benefits. Though the *sword +5, Holy Avenger* (described in the Appendix of the *DMG*) is one of the more common examples, others exist as well. A few are described in Chapter 6 of this book.

Aside from their exceptional craftsmanship, holy swords are often indistinguishable from ordinary magical weapons. A paladin may not become aware of the sword's special powers until he uses it. In some cases, a paladin may be able to identify a holy sword by its cryptic inscription (which may require the Ancient Languages proficiency or a friendly mage's *read magic* spell to translate). A skilled weaponsmith or sage may also recognize a holy sword. Occasionally, a holy sword will glow when touched by a paladin, or the paladin's arm may tingle when he picks it up.

Holy swords are hard to come by, and a paladin rarely finds more than one in his entire career. Usually, a paladin acquires a holy sword under difficult or extraordinary circumstances. A holy sword may be part of a venerable red dragon's treasure horde, concealed in a cave atop a high mountain. A paladin may hear rumors of a holy sword buried in a desert ruins; in fact, the ruins contain a map that shows the actual location of the holy sword, embedded in a glacier in an arctic wilderness. If a paladin reaches a high level without acquiring a holy sword, his deity might direct him to one in a temple on the ocean floor or a treasure chest on a remote island. In any case, the DM should treat the acquisition of a holy sword as a significant campaign event, and design the circumstances of its discovery accordingly.

When unsheathed and held by a paladin, every holy sword projects a *circle of power* 10 feet in diameter. The paladin's hand serves as the center of the circle. The circle moves with the paladin and persists as long as he grips the sword. The sword projects the circle even if a glove, gauntlet, or bandage covers the paladin's hand.

**Note:** The first sentence in the paragraph regarding the paladin's holy sword in Chapter 3 of the PH (page 27) should read: "A paladin using a *holy sword* projects a circle of power 10 feet in diameter when the sword is unsheathed and held."

Within its range, the circle of power dispels all hostile magic of a level less than or equal to the paladin's experience level and creates a magic resistance of 50%. Specifically:

• All evil opponents within the circle are unable to cast spells, including monsters and characters of evil alignment; extraplanar, conjured, and summoned evil entities; and monsters and characters who have been charmed or controlled by evil casters. The circle neutralizes a spell the instant it's cast. Opponents may not make saving throws to resist the circle of power.

• Evil opponents have normal use of their spell and spell-like abilities once they leave the range of the circle. However, the paladin remains immune to their spells, even when cast from outside the circle. An evil wizard can cast a *fireball* spell at a paladin, but the *fireball* dissipates as soon as it enters the circle. An evil spellcaster's attempts to mentally probe or control a paladin (with spells such as *ESP* and *magic jar*) will also fail.

• Magical items created by evil magic won't work within the circle. Physical properties remain unchanged, however; a *sword +1* may still be wielded as a normal sword. Outside the circle, magical items function normally, but the paladin remains immune to their effects.

The following restrictions also apply:

• The paladin is always vulnerable to magic from opponents whose level exceeds his own. The paladin has the normal chances of avoiding the affects of these magical attacks.

• The circle functions only as long as the paladin grips the holy sword. Should he sheathe or drop it, he immediately becomes vulnerable to evil magic.

• The paladin must be conscious and in control of his own actions for the holy sword to project a circle of power. A holy sword doesn't dispel magic in the grip of a comatose or sleeping paladin.

• An evil spellcaster may temporarily negate the magic of a holy sword, including its power to project a circle of protection, by casting *dispel magic* directly on the weapon. The holy sword may resist the spell with a successful saving throw vs. spell, using the paladin's saving-throw number. If the throw fails, the holy sword's magic is inert for 1-4 rounds.

• A paladin is still subject to indirect effects of evil magic. If an evil spellcaster uses a *lighting bolt* spell to cause an avalanche, the paladin risks damage from falling boulders.

Certain holy swords may have additional benefits and limitations. A *Holy Avenger*, for instance, inflicts +10 points of damage on chaotic evil opponents. Each holy sword described in Chapter 6 has its own special properties. In designing holy swords, the DM may use the standard benefits and limits described above, perhaps adding a +1 to +5 bonus on attack and damage rolls against certain kinds of evil opponents.

## Turning Undead

By tapping into the powerful forces generated by his faith, the paladin can become a living conduit of lawful good energy. He may focus this energy to terrify undead or blast them out of existence.

A paladin gains the ability to turn undead at 3rd level. As shown on Table 10 in Chapter 1, a paladin turns undead at two levels lower than a cleric; that is, a 3rd-level paladin turns undead as a 1st-level cleric. Otherwise, a paladin has the same restrictions as a cleric:

• A turning attempt counts as an action and takes one combat round to execute. The attempt occurs during the paladin's turn, determined by the order of initiative.

• A paladin can make only one attempt to turn a particular group of undead. In general, a group consists of all undead that the paladin can see, within a reasonable range (as determined by the DM). If a paladin successfully turns five of a group of seven skeletons, he can't make a second attempt on the remaining two. Another priest or paladin, however, may make try to turn them.

Two or more paladins (or priests) can attempt to simultaneously turn the same group of undead. If a particular undead suffers more than one penalty, apply the most effective result. For instance, if a skeleton suffers a "T" result from a paladin and a "D" result from a priest, apply the "D" result.

• The paladin's hands must be free, and he must be able to speak; he can't turn undead by simply standing in place. The attempt should be accompanied by a dramatic gesture (the paladin sweeps his arms before him, or extends both palms towards the undead, then squeezes his hands into fists) or phrase (such as "Disperse and dispel!" or "Fall before the power of righteousness!"). The exact gesure or phrase is up to the paladin.

What happens to an undead when it is turned? A "D" result destroys it, instantly and

permanently. The DM determines the physical effects—the flashier, the better. A skeleton crumbles to dust. A crimson flame envelopes a ghoul, then disappears. A spectre screams as it is sucked through an invisible portal the size of a pinhole. A vampire melts into a steaming puddle.

The effects of a "T" result depend whether the undead is bound by the orders of another or has free will. A bound undead, such as a skeleton, retreats, hugs the wall, or otherwise gets out of the way of the paladin and his companions. If free-willed, the undead tries to flee. If unable to escape, it circles at a distance, coming no closer to the paladin than 10 feet. Once turned, the undead may hiss or claw the air, but it will take no direct action against the paladin, even if the paladin turns away. Should he move within 10 feet of the undead, the paladin violates the turning, and the undead attacks normally.

## Bonded Mount

Perhaps the paladin's greatest asset is the bonded mount, usually a heavy war horse of exceptional strength, courage, and intelligence that serves its master with steadfast devotion. The bond is partly instinctual, partly divine; many believe that the gods bring them together to insure the paladin has a companion as noble as himself. Once joined, the mount remains loyal so long as the paladin stays true to his principles.

A paladin becomes eligible to receive a bonded mount at 4th level. The mount may appear any time thereafter. Because the mount's arrival marks a major event in the paladin's career, the DM may wish to delay its appearance. For instance, if a 4th-level paladin is about to embark on a lengthy exploration of an underground civilization, the DM may postpone the mount's appearance until the paladin surfaces. In all cases, the DM determines when and how the mount appears.

A paladin may never have more than one bonded mount at a time. Further, he can have no more than one mount in the same decade. If the mount dies or is otherwise lost, the paladin won't become eligible for a replacement until 10 years after the day he acquired his original mount.

Most bonded mounts are war horses, but other creatures can also become mounts. Table 13 lists some of the possibilities. The DM may augment Table 13 with other creatures, so long as they are suitable for riding, reasonably intelligent, and of good or neutral alignment.

The player may suggest the type of mount he prefers for his paladin character, but the DM makes the final choice. The DM may roll on Table 13 or select a particular creature. Regardless of the method used, remember that only the strongest, smartest, and bravest creatures become bonded mounts. To qualify as a bonded mount, most creatures must meet certain statistic requirements. These are recommendations, not rigid rules; the DM may modify them as desired.

**Hit Points.** Most mounts have at least 6 hit points per hit die. A heavy war horse, for instance, has 21-27 hit points.

**Intelligence.** A species' listed Intelligence must be at least Animal (1). However, the Intelligence of the mount may differ from the listed Intelligence of the species:

• If a mount's species normally has Animal Intelligence, the mount itself has an Intelligence score of Semi- (4). For example, the war horse species has an Intelligence of 1, but a war horse bonded mount has an Intelligence of 4.

• If the mount's species normally has an Intelligence score of Semi- or higher, the mount itself has +2 over the highest typical score. The *Monstrous Manual* shows an Intelligence range of 2-4 for the griffon; a griffon bonded mount has an Intelligence of 6.

**Morale.** A species' listed Morale must be at least Unsteady (5-7). The Morale of a mount may exceed that of its species:

• If a mount's species normally has Unsteady or Average morale, the mount has a Morale of 11 (Steady).

• If the mount's species has a range of Morale scores, the mount has the highest possible score. The griffon has a Morale range of 11-12; a griffon bonded mount has a Morale of 12.

**Upgraded mounts.** The DM may improve any species of bonded mount by adding 2+2 HD to its hit dice base and 3 to its movement base. An upgraded heavy war horse bonded mount has 5+5 HD and a movement rate of 18.

**Level Restrictions**

To maintain balance, the DM should consider restricting a low-level paladin's choice of bonded mounts. For instance, the DM may decide that a paladin can't acquire a bonded mount other than a war horse until he reaches 7th level, or an aerial mount before 10th level.

Alternately, a DM may restrict *all* paladins to the following choices:

• A paladin may only have a land-based mount whose hit dice are less than or equal to the paladin's experience level.

• A paladin may only have a flying mount whose hit dice are no more than half the paladin's experience level.

Using these guidelines, a 7th-level paladin could have a 3+3 HD hippogriff as a bonded mount, but not a 7 HD griffon. If an unacceptable choice comes up on Table 13, roll again or choose an acceptable mount.

**Campaign Restrictions**

The DM should select bonded mounts with the rest of the party in mind, as well as the parameters of the campaign. A griffon mount may be disruptive if the paladin's companions all ride horses, particularly if the griffon has a taste for horseflesh. A hippocampus won't be much fun if the campaign rarely takes the party near water. Again, disregard any inappropriate outcome on Table 13 and make a new roll or choose something else.

**Species Preference**

Bonding requires the voluntary participation of the mount, and some species may have their own ideas about what constitutes a suitable companion. Unicorns, for instance, will only accompany female paladins, while light war horses may be reluctant to bond with overweight riders. If a match doesn't work, try a different combination.

**Character Kits**

Certain character kits may have specific mount requirements that take precedence over other considerations. See Chapter 4 for details.

### Table 13: Bonded Mounts

| D100 Roll | Mount |
|---|---|
| 01-77 | War horse* |
| 78-79 | Griffon |
| 80-81 | Unicorn** |
| 82-83 | Pegasus |
| 84-85 | Hippogriff |
| 86-87 | Giant eagle |
| 88-89 | Dire wolf |
| 90-91 | Elephant or oliphant |
| 92-93 | Great cat (lion or tiger) |
| 94-95 | Giant lizard |
| 96-97 | Aquatic (hippocampus, sea horse, sea lion, small whale, or dolphin) |
| 98-00 | DM's choice |

* The paladin's standard war horse.
** Female paladins only.

### Paladin's War Horse

The paladin's standard war horse is an unusually hardy steed, slightly larger than a heavy war horse and more heavily muscled. Its shaggy coat and thick hide provides it with natural armor. Powerful legs enable it to move at the speed of a medium war horse. It has a carrying capacity of 300, an encumbered (half-speed) capacity of 450, and an encumbered (one-third movement) capacity of 600.

**Paladin's standard war horse:** Int low (7); AL N; AC 5; MV 18; HD 5+5; THAC0 15; #AT 3; Dmg 1d3/1d8/1d8; SZ L; ML 12; XP 270.

### Acquiring a Mount

Usually, an opportunity to acquire a bonded mount occurs within a few months after a paladin reaches 4th level and declares himself receptive. The DM decides the exact time and the circumstances, working the mount's appearance into the flow of the campaign. The acquisition of a mount should be dramatic; after all, it is a landmark of a paladin's career. Some possibilities:

**Dream.** The paladin may experience a dream, induced by the gods, where he sees a mount in a specific location. He may dream of a wounded war horse on a battlefield, surrounded by the corpses of lizard men. A unicorn may lie comatose in a field of crimson flowers, overcome by the petals' anaesthetic fragrance. The dream may be a premonition of an event yet to come or an image of a situation that has already occurred. The paladin may experience the dream with increasing regularity over several weeks. The dream may become more vivid near the source. Eventually, he encounters a scene exactly as portrayed in the dream. By overcoming a final obstacle, such as fighting off predators

from the wounded horse or finding an antidote for the comatose unicorn, the paladin unites with the bonded mount.

**Reward.** A paladin may receive a mount as a reward for an exceptional act of heroism. If he saves a village from a family of red dragons or single-handedly turns back an advancing army of orcs, the grateful community may present him with their finest war horse. A paladin honoring his faith by building a temple at the peak of a high mountain may slip and fall; as he plummets into the abyss, a griffon swoops from the cloud and rescues him, a gift sent by the gods.

**Quest.** The paladin may hear of the whereabouts of a potential mount and decide to track it down. The information may come from a befriended sage, a rumor overheard at an inn, or a mysterious document found in an abandoned castle. He may spend weeks or months pursuing the lead, only to discover one or more obstacles preventing him from bonding with the mount. The mount may be guarded by a monster, in the custody of an evil monarch, or for sale at an auction at an astronomical price. A spirited mount may resist capture, leading the paladin on a wild chase through treacherous terrain.

**Magic.** A magical ceremony may evoke the appearance of a bonded mount. A paladin may learn the details of such a ceremony from an arcane parchment or a helpful mage. A giant eagle trapped in a diamond may be freed if bathed in a leprechaun's tears. A painting of a war horse on a cave wall may come to life if the paladin burns a special incense. If he gathers the scattered bones of a griffon and casts them into the sea, a living griffon may arise from the water, ready to serve.

### Recognizing a Bonded Mount

Though a mount always knows when bonding has occurred, it may not be immediately obvious to the paladin. The DM shouldn't announce to the paladin that he's just bonded with a mount, but instead describe the behavior of the mount and let the paladin come to his own conclusions. Here are a few signs the paladin might look for:

• The mount seems unusually bright. A war horse immediately comes when called. A hippogriff fetches on command.

• The mount seems unusually brave, fearlessly fighting alongside the paladin against formidable opponents or intervening when a monster attempts an ambush.

• The mount seems unusually loyal and affectionate. A horse trots placidly behind the paladin wherever he goes, stopping when he stops, moving when he moves. A unicorn rests its head in the paladin's lap.

After observing such actions for a day or two, even the dullest paladin should conclude that he's acquired a bonded mount. To alleviate lingering doubts, a friendly spellcaster may verify the bonding by casting *speak with animals* or a similar spell.

### Routine Care

In general, a bonded mount has the same needs as a normal steed. For the most part, it can care for itself, grazing or hunting when hungry, and drinking when thirsty. Unless ordered otherwise, a bonded mount rests when the paladin rests.

Occasionally, the mount may have to count on the paladin for routine care. In the absence of a suitable pasture or hunting grounds, the paladin will have to provide food. In

a dry desert, the paladin may have to share his water. Mounts often need regular doses of salt to replace the salt lost from sweating. Sick or wounded mounts may need medical attention.

Some mounts, horses in particular, require daily grooming to stay healthy. The mount's coat must be brushed, then wiped down with a soft cloth. Its hooves must be thoroughly examined for cracks, imbedded stones, and other abnormalities that could cause serious damage if left unattended. All mounts appreciate expressions of affection, such as tasty snacks, soft words, and soothing touches.

## Special Traits

All bonded mounts, regardless of their species, have the following traits in common:

**Faithful service.** A bonded mount's loyalty is unshakable. It obeys the paladin's commands without hesitation, assuming it understands them. When the paladin is on foot, the mount remains at his side, following wherever he goes unless ordered to stay put.

On the battlefield, the mount remains with the paladin, even in the face of impending death. A bonded mount will never abandon the paladin to save itself; in game terms, the mount is considered to have Fearless (20) Morale when fighting beside or defending the paladin.

A bonded mount is indifferent to the paladin's companions, unless it has been specifically trained to protect them or respond to their commands. Should a companion approach the paladin in what the mount perceives as a threatening manner, the mount may snort or stamp its hooves as a warning, or even attempt to push the companion away. Once reassured by the paladin, the mount withdraws, though it may keep a wary eye on the companion. The mount responds to nonplayer characters in the same way, ignoring nonhostile NPCs who keep their distance, reacting strongly to those who appear to pose a threat.

**Comes when called.** A bonded mount comes immediately to the paladin's side when summoned. The mount responds to a shout, whistle, hand gesture, or any audible or physical signal of the paladin's choice. The paladin must demonstrate the signal to the mount only once; the mount unfailingly responds to the signal ever after.

**Handling.** The paladin can always calm an excited or agitated bonded mount. The Animal Handling proficiency isn't required.

**Riding.** A paladin requires neither the airborne nor the land-based riding proficiency to ride his bonded mount. Additionally, the paladin can perform all of the feats associated with the proficiency that applies to his mount's species. Feats normally requiring proficiency checks (described in Chapter 5 of the *PH*) instead require Riding checks. For land-based mounts, make the Riding check against the paladin's Wisdom score, modified by +3. For airborne mounts, the Riding check equals the paladin's Wisdom –2. (These modifiers are identical to the standard check modifiers given on Table 37 in the *PH*.)

Unless trained otherwise, a bonded mount allows only the paladin to ride it, bucking and snorting furiously if anyone else makes an attempt. A soothing word from the paladin prevents the mount from actually harming an unwanted rider.

**Combat.** A bonded mount aggressively defends its paladin against attacks, biting and kicking until the attacker withdraws. The mount also attacks any target indicated by the paladin, continuing its attacks until the paladin orders it to stop.

## Training

A bonded mount can perform all of the actions discussed in "Special Traits." A paladin may also wish to train the mount to perform additional tricks and tasks. Tricks are simple actions performed in response to specific commands; such actions require no independent decision-making from the mount. Tasks are more complex actions which may require multiple steps and a bit of improvisation. Because of its rapport with its paladin, a bonded mount can master an impressive repertoire of tricks and tasks, and can learn more efficiently than other animals.

The Animal Training proficiency isn't necessary to train a bonded mount, though the procedure is similar. The paladin tells the DM which trick or task he wants to teach. If the DM approves, the paladin begins the training. It takes 1-2 weeks to teach a trick to a bonded mount, and 2-5 (1d4+1) weeks to teach it a task. At the end of the training period, the paladin makes a Wisdom check (using his own Wisdom score, not the mount's). If the check succeeds, the mount has learned the trick or task. If the check fails, the paladin may try again, investing another 1-2 weeks of training for a trick, or 2-5 weeks for a task. When the training period ends, he makes a second Wisdom check. If this check fails, the mount is incapable of learning that particular trick or task. A bonded mount can learn 9-20 (1d12+8) tricks and tasks, in any combination.

A paladin can use the Animal Training proficiency to train other animals while training his mount. He can train three animals, including the mount, at the same time.

A paladin must regularly work with the mount to teach it a trick or task. The exact time spent is less important than working with the mount every day. If the paladin falls behind—for instance, if he skips a training session several days in a row—the DM may rule that he must start the training again, beginning a new period of 1-2 or 2-5 weeks.

Several examples of tricks and tasks suitable for bonded mounts are described below. A paladin isn't confined to this list; he may attempt to teach his mount any task or trick he can think of, so long as the mount is physically and mentally capable of performing it and the DM approves.

A mount executes most tricks and tasks automatically; die-rolls or success checks aren't needed. The DM may ask for an ability check if the outcome is uncertain (for instance, a mount successfully walks a plank spanning a deep chasm if it makes a Dexterity check). Alternately, the DM may assign a percentile chance of success (the mount has a 30% chance of safely crossing the chasm). The DM adjudicates all combat-related tricks and tasks like any other combat action, using attack and damage rolls as necessary.

**Exceptionally intelligent mounts.** Mounts who can communicate with spoken language and whose Intelligence scores are comparable with those of humans need no training. Such creatures perform any tricks or tasks their paladins ask them, within reason.

### Sample Tricks

**Speak.** The mount neighs, growls, or makes some other predetermined sound on command.

**Pack Animal.** Normally, bonded mounts resist being used as pack animals. Some are

only comfortable carrying human riders; others feel that hauling equipment is beneath their dignity. Once a mount masters this trick, however, it effortlessly shifts between carrying riders and gear. To avoid chafing and sores, a mount usually requires a pack saddle when carrying gear. The cost of a pack saddle for a horse is 5 gp. The cost of pack saddles for other species ranges from 5-15 gp, depending on the animal's size and the DM's decision.

**Pursue.** Normally, a mount breaks off its attacks when an aggressor withdraws. When taught to pursue, the mount chases a retreating enemy. If the mount catches the enemy, it resumes its attacks. The mount may pursue indefinitely, returning when the enemy has been defeated or has escaped, or it may be taught to return at the paladin's command.

**Stay.** The mount stands still until the paladin gives it permission to move.

**Sample Tasks**

**Rescue.** If the paladin falls unconscious on the battlefield, the mount drags him to safety, either to a predetermined location, such as the paladin's campsite, or to the nearest safe location.

**Strategic attacks.** In a combat encounter, the mount makes its own decisions regarding strategy and choice of targets. The mount may temporarily leave the paladin to lure away a charging monster, or it may attack an enemy that the paladin doesn't see (such as one about to plunge a knife into the paladin's back).

**Guard duty.** The mount stands guard at a campsite or other location, watching for intruders. Should the mount spot an intruder, it reacts as directed by the paladin. It may alert a sleeping paladin (or other designated character) by nudging him awake, crying out, or attacking.

As some mounts may not be able to distinguish between friendly and hostile intruders, the mount will most likely react if *any* person or creature enters the guarded area. To improve the mount's value as a guard, the paladin may teach it to respond to a specific type of intruder (say, anyone riding a horse, or any ogre). Recognizing a specific type of intruder is considered a distinct trick, requiring a separate training period. In other words, the mount must first learn the *task* of guard duty, then any number of *tricks* to recognize specific types of intruders.

**Search.** The follower can search for a particular type of item in a general location and, if it finds it, return the item to the paladin. Suitable items include gems, weapons, bundles, flasks, or parchments. Suitable locations include a small cave, a shallow valley, or the interior of a building. The paladin must show the mount a sample of the sought object, the more specific, the better. (If the paladin wants a particular weapon from an armory, he must show the mount a close copy.) The paladin must also designate the area to be searched. The mount won't search indefinitely, usually returning within an hour if it can't find the item.

If the circumstances of the search are unusually difficult, the DM may call for ability checks. For instance, if the mount searches an armory for a particular golden sword, but the building contains dozens of similar swords, the DM may require the mount to make an Intelligence check. The mount locates the correct sword only if the Intelligence check succeeds.

A mount may also be taught to locate specific people. However, a mount can't locate

a person that it hasn't been taught to recognize. The mount must first learn the *task* of searching, then any number of *tricks* to recognize specific individuals. A bonded mount can *always* recognize its paladin; no special training is required.

### Bonded Mounts as Nonplayer Characters

Because bonded mounts are living, breathing entities with thoughts and feelings of their own, the DM should consider running them as nonplayer characters. Like a human or demihuman NPC, a bonded mount has a distinct personality. It may be stubborn or bold, complacent or curious, foolhardy or cautious. It may have an aversion to bearded strangers, a fear of water, a fondness for apples. Exceptionally intelligent mounts may communicate with head shakes, foot stomps, or a spoken language, letting them serve as confidantes and advisors.

### Parting Company

Under normal circumstances, a bonded mount serves its paladin for no more than 10 years. During this time, the paladin may voluntarily dismiss the mount if it becomes crippled or ill, if the paladin's journeys take him to a terrain inhospitable to the mount, or for any other reason of the paladin's choice. The mount instinctively knows when the paladin dismisses it, and responds by dutifully wandering away. The DM should stage this parting as a significant event similar to the mount's arrival.

If the paladin returns to the area where he dismissed the mount and calls out for it, the mount may return. A dismissed mount returns if all of the following conditions exist:

- The mount is alive and ambulatory.
- The mount hasn't left the area and can hear the paladin's call.
- Ten years haven't yet passed since the day the paladin originally acquired the mount.
- The paladin hasn't acquired a new, conventional mount in the interim.
- The DM approves of the return.

A bonded mount abandons its paladin for either of the following reasons:

- Ten years have passed since the mount originally bonded with the paladin. Many steeds, particularly horses, are too old for a life of adventure at this age. Others, like unicorns, become restless for new experiences.

After a decade of service, the paladin may voluntarily dismiss his mount. Otherwise, the mount simply disappears at the earliest opportunity. A paladin in good standing then becomes eligible for a new bonded mount. The opportunity may arise within the next few months, under the guidelines described in the "Acquiring a Mount" section above. The new mount may be a different species from the previous mount.

- If the paladin is stripped of his special abilities as a consequence of violating his ethos (see Chapter 3), the bonded mount loses its allegiance to the paladin and escapes at the earliest opportunity. Once stripped of his abilities, a former paladin can never again acquire bonded mounts.

## Clerical Spells

A paladin acquires spells through prayer, just like a priest. Assuming the paladin has adhered to the tenets of his faith, the deity or greater power usually grants the requested spells. After receiving spells, a paladin uses them the same way as a priest, employing identical components, casting times, and effects. See Chapter 8 for more about paladins and their faiths.

# Chapter 3: Ethos

The set of principles that structures a paladin's life and regulates his behavior is called an *ethos*. While an ethos may encompass the written laws of society, its scope is much broader, incorporating spiritual edicts and moral absolutes to form an ethical ideal. A paladin's ethos defines his attitudes, shapes his personality, and influences virtually every decision he'll ever make.

Though a guiding ideology is certainly not unique to paladins, the paladin's ethos differs from that of other character classes in two significant ways. First, the paladin's ethos is complex, comprising a long list of general guidelines and specific rules. Second, the paladin's ethos is uncompromising, requiring absolute dedication. Violations have severe consequences, ranging from reprimands to suspensions of privileges. Extreme violations may result in a complete loss of status and permanent removal of all his special abilities.

Still, the paladin considers his ethos a privilege, not a burden. To him, all conduct has a moral quality. Every action is a choice between right and wrong. With justifiable pride, he considers himself an embodiment of the highest standards of human behavior.

We begin with the three general components of the paladin's ethos: *strictures* (formal rules), *edicts* (commands from authorities), and *virtues* (behavioral values). The final section explains how a paladin may violate his ethos, and suggests suitable punishments and atonements.

## Strictures

The most important elements of a paladin's ethos are his *strictures*, a set of inviolable rules from the *PH* that the paladin must follow at all times. The paladin's strictures are as inflexible as his ability requirements; they are part of what defines a character as a paladin and distinguishes him from other classes.

### Lawful Good Alignment

Every paladin must be lawful good. The moment he abandons the conditions of this alignment is the moment he stops being a paladin.

At the heart of a lawful good alignment is the belief in a system of laws that promotes the welfare of all members of a society, ensures their safety, and guarantees justice. So long as the laws are just and applied fairly to all people, it doesn't matter to the paladin whether they originate from a democracy or a dictator.

Though all lawful good systems adhere to the same general principles, specific laws may be different. One society may allow a wife to have two husbands, another may

enforce strict monogamy. Gambling may be tolerated in one system, forbidden in another. A paladin respects the laws of other lawful good cultures and will not seek to impose his own values on their citizens.

However, a paladin will not honor a law that runs contrary to his alignment. A government may believe that unregulated gambling provides a harmless diversion, but a paladin may determine that the policy has resulted in devastating poverty and despair. In the paladin's mind, the government is guilty of a lawless act by promoting an exploitative and destructive enterprise. In response, the paladin may encourage citizens to refrain from gambling, or he may work to change the law.

Particularly abhorrent practices, such as slavery and torture, may force the paladin to take direct action. It doesn't matter if these practices are culturally acceptable or sanctioned by well-meaning officials. The paladin's sense of justice compels him to intervene and alleviate as much suffering as he can. Note, though, that time constraints, inadequate resources, and other commitments may limit his involvement. While a paladin might wish for a cultural revolution in a society that tolerates cannibalism, he may have to content himself with rescuing a few victims before circumstances force him to leave the area.

When will a paladin take a life? A paladin kills whenever necessary to promote the greater good, or to protect himself, his companions, or anyone whom he's vowed to defend. In times of war, he strikes down the enemies of his ruler or church. He does not interfere with a legal execution, so long as the punishment fits the crime.

Otherwise, a paladin avoids killing whenever possible. He does not kill a person who is merely suspected of a crime, nor does a paladin necessarily kill someone he perceives to be a threat unless he has tangible evidence or certain knowledge of evildoing. He never kills for treasure or personal gain. He never knowingly kills a lawful good being.

Though paladins believe in the sanctity of innocent life, most kill animals and other nonaligned creatures in certain situations. A paladin may kill animals for food. He will kill a monster that endangers humans, even if the monster is motivated by instinct, not evil. While some paladins avoid hunting for sport, others may hunt to sharpen their combat and tracking skills.

## Magical Item Limit

The paladin's limited access to spells also extends to the number of magical items he may possess. Under no circumstances may a paladin retain more than 10 magical items, regardless of his level, kit, or status.

Paladins are limited not only to the number of magical items, but also the type. Specifically, a paladin can have the following:

**One suit of magical armor.** This excludes all pieces of normal armor that have been temporarily enchanted, as well as accessories such as a *cloak of protection*, *a helm of protection*, or *boots of speed* (all of which count against the paladin's miscellaneous item limit). A single piece of magical armor, such a chest plate, counts as a full suit for limitation purposes.

**One magical shield.**

**Four magical weapons.** This excludes all normal weapons temporarily affected by *enchanted weapon* or similar spells, but includes *holy swords*. A quiver or case of arrows

or bolts counts as one item. Individual arrows and bolts are counted as one item if they have special magical properties, such as *arrows of direction* and *arrows of slaying*.

**Four miscellaneous magical items.** This category includes rings, rods, staves, gems, and scrolls. A *bag of beans*, a set of *ioun stones*, and a *deck of many things* each count as one item. A magical potion counts as one item, regardless of the number of doses. Items temporarily enchanted by spells are excluded.

To ensure that a paladin stays within his limit, it's important to clarify who owns each of the party's magical items. In general, a paladin won't use a magical item unless it's his. It doesn't matter who actually carries the item; if a paladin has claimed ownership, it belongs to him. A paladin may loan items to his companions, but so long as he retains ownership, loaned items count against his limit.

Conversely, if a paladin has 10 items, he won't borrow items from other characters. A paladin won't look for ambiguities to exploit; he remains true to the spirit as well as the letter of these rules.

Of course, a paladin may not know that an item is magical when he acquires it. But as soon as he becomes aware of its special properties, he's obligated to give it away or to get rid of another item to remain within his limit.

A paladin may voluntarily rid himself of a magical item if he finds a more desirable one. For instance, he may give up an *arrow of direction* if he discovers a *javelin of lightning*.

Excess magical items may be given to other lawful good characters, donated to the paladin's religious institution, or simply discarded. Since excess items technically don't belong to the paladin (he won't claim ownership), they may not be sold or traded, even if the paladin intends to funnel the profits to a worthy cause.

## Wealth Limits

A paladin has no interest in wealth for its own sake. He seeks spiritual rather than material satisfaction, derived from serving his faith and his government to the best of his ability. To a paladin, the pleasures of ownership are fleeting, superficial, and ultimately debasing. The rewards of duty are lasting and deep.

Still, the paladin realizes that a certain amount of money is necessary to survive. Rather than forego money altogether, he retains enough wealth to meet his worldly obligations and sustain a modest lifestyle.

A paladin doesn't expect handouts, nor does he rely on the generosity of strangers or his companions. He feels responsible to pay his own way and takes pride in his self-sufficiency. He earns income from treasure, rewards, and fees, the same as anyone else. Unlike most other characters, however, the paladin operates under strict guidelines as to how he can spend his money and how much he can save.

### Budgeting

A paladin requires funds to cover the following expenses:

**Food.** A paladin is responsible for feeding himself and his steed. To hold down costs, the paladin might hunt his own game, and may gather fruits, nuts and vegetables from the wilderness.

**Weapons, armor, and clothing.** This includes the costs of purchase, upkeep, repair,

and replacement. A paladin seldom skimps in this area, spending as much as his funds will allow to secure the highest-quality equipment.

**Tack and harness.** As with weapons and armor, many paladins splurge to buy the best, especially for bonded mounts.

**Lodging.** When sleeping outdoors isn't practical, paladins seek out the least expensive inns.

**Taxes and licenses.** The paladin must make all payments required by his liege. He must also pay all foreign tolls and fees levied during his travels.

**Training costs.** A paladin may pay a tutor for training, providing the tutor is of lawful good alignment and the paladin has permission from his patron. (See Chapter 7 for more about training procedures.)

**Miscellaneous provisions.** Including medicines, lantern oil, clothing, bedding, and grooming supplies. Many paladins prefer to forage, improvise, or manufacture these items instead of buying them outright, in order to save money.

**Salaries.** Fair salaries are required for all servitors and henchmen.

**Stronghold expenses.** A paladin pays all costs associated with the construction and maintenance of his stronghold.

**Strongholds**

In addition to his contingency fund, a paladin may also maintain a separate fund to save for a stronghold. As explained in Chapter 7, construction prices vary wildly, though all are expensive. A paladin may have to save for years, even decades, to accumulate enough wealth to build a stronghold. A wise paladin, then, begins his stronghold fund as soon as possible; 1st level isn't too early to start saving.

Once a paladin establishes a stronghold, he acquires a universe of new expenses, particularly those involving personnel and maintenance. The paladin must adjust his monthly budget accordingly. He may also wish to build up his contingency fund to cover two or three months' worth of overhead.

An established stronghold typically falls into one of three economic categories, each of which has a particular impact on the paladin's finances:

*Subsidized*. The stronghold has no significant agricultural or manufacturing base. Any crops or goods produced at the stronghold are insufficient to pay the stronghold's maintenance costs and employees. The paladin must make up the difference out of his own pocket, which raises his monthly financial obligations dramatically.

It's not unusual for a paladin to subsidize a new stronghold until it gets up and running. With careful management and a little luck, a stronghold becomes self-sustaining within a few months or, at most, a few years. Some paladins, however, subsidize their strongholds indefinitely, usually for one of two reasons:

• The stronghold was never designed to generate income, functioning instead as a military stronghold, training center, hospital, or religious sanctuary. Such a stronghold requires the commitment of a paladin with considerable resources.

• The stronghold was designed to generate income, but due to misfortune or incompetent management, never succeeded. Should the paladin decide to cut his losses and abandon the stronghold, he must first see to the well-being of his faithful employees, giving them adequate severance pay and doing what he can to find them new jobs.

*Self-sustaining*. The stronghold pays its own way through the sale of crops, goods, or services. The paladin needn't subsidize the operation in any way, nor does he have to

worry about the proper disposal of excess profits (there aren't any). This is the ideal arrangement for most paladins.

*Profit-making*. The stronghold generates regular and dependable profits from the sale of crops, goods, or services. The paladin uses these profits to expand his holdings (to provide jobs for more people or to further glorify his deity, never for personal gain) or to increase his donations to his church or other worthy causes. A profit-making stronghold usually requires extra time and attention from the paladin, or the services of skilled managers.

**Excess Funds**

All of a paladin's excess funds must be forfeited. This includes all money remaining after he pays his regular expenses, as well as any money not specifically allocated to a savings fund for building a stronghold. He may keep a contingency fund equal to two or three times his normal monthly budget (including maintenance costs and employee salaries for his stronghold) but no more. He may *not* stockpile money to buy gifts, leave to his heirs, or pay a friend's expenses.

What does a paladin do with the excess? He has three options:

• *Refuse it*. If an appreciative community offers him a sack of gems for destroying a vampire, he politely declines. ("Your gratitude is more than sufficient.") If he discovers a treasure chest filled with pearls, gold pieces, and a book of poetry, he takes the book and leaves the rest (and he's likely to give the book to a friend or a library after he's finished reading it).

• *Donate it to the church*. This does *not* count as a regular tithing (see the Tithing section below), as it's not considered part of his income.

• *Donate it to another worthy institution of lawful good alignment*. Suitable recipients include hospitals, libraries, and orphanages. Research facilities, military organizations, and governmental operations are acceptable only if the paladin is certain that the money will be spent on lawful good projects.

Within these guidelines, a paladin may dispose of his excess funds as he wishes. He may donate treasure to a hospital on one occasion, and refuse a monetary reward for rescuing a kidnapped prince on another. However, he may *never* give his excess funds to another player character, or to any nonplayer character or creature controlled by a player.

Remember, too, that just because a paladin declines a reward for rescuing a prince doesn't mean his fellow party members can't accept it. If a paladin kills an evil dragon, then walks away from its treasure hoard, his companions are still free to help themselves.

**Loans**

A paladin falling on hard times or confronted with unanticipated expenses may arrange for a loan from a lawful good character or institution. While borrowing money may be a humiliating experience, it's rarely an ethos violation unless the paladin borrows money he doesn't need or doesn't intend to repay.

In general, a paladin may borrow only small amounts of money (say, an amount equivalent to his monthly budget). He may also borrow the minimum amount required for an emergency; an opportunity to buy a treasure map leading to a *holy sword* doesn't qualify, but medicine to treat a dying companion might. Borrowing money to pay the monthly operating expenses of a stronghold is allowed, but only if necessary to keep

lawful good workers employed or to make vital repairs. (A leaking roof can wait; a crumbled wall probably can't.) A paladin should strive to repay his debts as quickly as possible.

Repeated borrowing is discouraged, and chronic debt should be considered an ethos violation. If a paladin borrows money for several consecutive months, he might lose his stronghold, his bonded mount, or any other obligation that's costing him more than he can afford.

### Tithing

A paladin must give 10% of all his income to a lawful good institution. This 10% is called a *tithe*. In most cases, a paladin tithes to his church or other religious organization. If he doesn't belong to a church or operates independently (as in the case of the Expatriate character kit described in Chapter 4), he may designate any lawful good organization, such as a hospital or university, as the recipient of his tithes. A paladin has no say in how his tithes are spent, though the money typically goes towards the institution's maintenance, recruitment, equipment, and education costs. A paladin usually tithes to the same institution for his entire career.

A paladin's first tithe usually comes out of his starting funds of 5d4 x 10 gp. After that, he must tithe from all sources of income, including rewards, treasure, wages, and profits generated from his stronghold. When he acquires a gem or magical item, he owes his designated institution 10% of the item's value (as determined by the DM), payable at the earliest opportunity. If he finds a diamond worth 500 gp, he owes 50 gp; if the gem is lost or stolen, he still owes 50 gp (the institution isn't penalized for the paladin's carelessness).

Tithes are due only on funds the paladin actually claims for himself. If he walks away from a treasure or refuses a reward, no tithes are necessary.

It's the paladin's responsibility to get his tithes to his institution as soon as possible. A monthly payment will suffice in most cases, with the paladin turning in 10% of all the income he's acquired in the previous four weeks. If a monthly payment is impossible or impractical—for instance, if the paladin is on a mission halfway around the world, or if he's a prisoner of war—he may make other arrangements, providing he offers a satisfactory explanation. A paladin may personally present his tithings to his institution or he may deliver them by messenger.

Tithes carried by the paladin but not yet delivered are still considered to be the property of the institution. A starving paladin who has no other funds aside from 10 gp of tithes may *not* spend his tithes on food, unless he first petitions his deity for permission. If he's behaved responsibly—say, if he used his last gold piece to pay for treatment of a dying child—permission is usually granted, with the understanding that the tithes must be replaced.

### Alignment of Associates

A paladin is known by the company he keeps. Ideally, a paladin associates only with good-aligned companions. Relationships with neutral characters may be tolerated in limited circumstances, but prolonged contact may result in an ethos violation. *Any*

association with an evil-aligned character can be construed as an evil act. In general, a paladin bears responsibility for the actions of his associates, even those taken without his knowledge or consent.

**Hirelings.** Without exception, all of a paladin's men-at-arms and stronghold employees must be lawful good. The paladin should do his best to determine their alignment before he hires them. Should a hireling commit an evil act or otherwise reveal himself to be of an alignment other than lawful good, the paladin has no recourse but to fire him and, if necessary, turn him over to the proper authorities for prosecution.

In some cases, a paladin shares responsibility for the evil actions of his hirelings. For instance, a paladin's stable master commits murder. The paladin may not be legally liable, but he may be considered an accomplice in an ethical sense. Although the authorities may not prosecute the paladin, he may still suffer a punishment for violating his ethos, particularly if he was remiss in investigating the stable master's background prior to his employment. As always, it's up to the DM to determine if an ethos violation has been committed.

**Henchmen.** A paladin accepts only lawful good characters as henchmen. As with a hireling, the paladin should make every effort to determine a potential henchman's alignment before an alliance develops. The paladin must immediately dismiss a henchman who commits an evil act.

**Good characters.** In an adventuring party, a paladin naturally gravitates to other lawful good player characters, making them his confidants and closest companions. Rarely, however, can a paladin choose the composition of his party, as fate often throws together characters of vastly different outlooks. A paladin cooperates with a party so long as the majority of the characters are good-aligned; a majority of neutral characters or the presence of even a single evil character may present problems.

A paladin can maintain a comfortable partnership with a neutral good characters, despite his reservations about the neutral good character's indifference to social structures. However, the neutral good character must be working strictly in the interests of good. A paladin is less at ease with chaotic good characters, owing to their independent nature and lack of respect for authority. But a paladin will work with chaotic good characters so long as their behavior complies with his goals.

**Neutral characters.** Next to good characters, some paladins feel most comfortable with lawful neutral characters, admiring them for their sense of duty and loyalty to their government. This, of course, presumes the lawful neutral characters serve reasonably benevolent governments, not despots or slave traders.

A paladin will cooperate with a party that contains a minority of lawful neutral or true neutral characters. But he most likely keeps neutral characters at arm's length, resisting their gestures of friendship. Instead, he tries to serve as an example to the neutral characters, hoping to convince them through words and deeds that a commitment to good results in a richer, fuller life. So long as neutral characters refrain from committing evil acts, a paladin continues to work with them.

A paladin won't join a party consisting entirely of neutral characters, unless the stakes are exceptionally high. He may, for instance, work with a neutral party to retrieve a holy artifact, rescue his king, or save his church from destruction. For less momentous undertakings, such as treasure hunts or reconnaissance expeditions, the paladin should excuse himself. (If a party mostly consists of neutral PCs, the DM should explain the

general nature of a new adventure to a player with a paladin PC. The player should have the option of gracefully bowing out of the adventure or choosing another character.)

**Evil characters.** Because he is duty-bound to suppress evil, a paladin won't tolerate an evil PC. He may take the evil PC into custody, physically restrain him, or demand his expulsion from the party. If all else fails, the paladin severs his ties with the party and go his own way. In any event, inaction is unacceptable.

A paladin finds it difficult, if not impossible, to avoid contact with evil NPCs. They're everywhere: walking down a street, dining at an inn, shopping at a bazaar. A paladin's ethos doesn't compel him to attack or even confront all evil NPCs; in many cases, hostile confrontations could be counterproductive, particularly if such an action distracts the paladin from a more important mission, or if it triggers retaliation from the NPC's companions against innocent bystanders.

Time and circumstances permitting, a paladin may question evil NPCs, follow them, or make inquiries about them. None of these actions violate a paladin's ethos when used in moderation. (However, spying and similar actions should be a last resort, because they connote deception). A paladin walks on shaky ground, however, the moment he begins an association with an evil NPC that could be perceived as friendly or compliant.

## Edicts

*Edicts* include commands, instructions, and traditions the paladin has pledged to obey, usually imposed by the paladin's patron. The paladin must follow his edicts to the letter; he takes them as seriously as any other element of his ethos.

A paladin doesn't choose which edicts to follow. Rather, he pledges to follow any and all edicts issued by specified sources. The paladin chooses his sources when he begins his career. Additionally, the DM may make recommendations or require specific sources.

Edict sources may be chosen from the list below. Usually, a paladin's background will suggest appropriate choices. For instance, a paladin whose parents expect him to adhere to their traditions may swear to follow all edicts from his father and mother.

The DM determines the nature of all edicts. He also decides how they apply and when they occur. At the DM's direction, a source may issue a set of edicts at the outset of a paladin's career. Alternately, a source may wait to issue edicts until a particular event occurs (such as the acquisition of a stronghold or a declaration of war). At any time, a source may issue new edicts, modify old edicts, or suspend standing edicts. It's possible that a source may *never* issue an edict. In any case, it's up to the paladin to keep track of his edicts and follow them exactly.

Occasionally, edicts from different sources may conflict. For instance, a paladin's church might issue an edict that clashes with an edict from his government. In most cases, religious edicts take priority over edicts from other sources. In *all* cases, **a paladin's strictures and core principles have priority over strictures issued by any social institution.** For more about conflicting edicts, see Chapter 8.

### Religion and Philosophy

If the paladin belongs to an organized religion, the church will probably be the major source of edicts. Church edicts encompass spiritual obligations, behavior restrictions, and

service requirements. Philosophies, too, may have their own edicts, imposed by the architects of the philosophy or by the paladin himself. A deity may also issue edicts to the paladin directly, appearing in a dream or as an avatar. Chapter 8 discusses religious and philosophic edicts in detail.

**Government**

A paladin who has pledged fealty to his government must follow its edicts. Some examples:

- Perform military service.
- Donate the use of his stronghold for any legitimate government purpose (housing soldiers, entertaining government guests, storing supplies, and so on).
- Pay a one-time tax or fee.
- Temporarily loan a stronghold hireling.
- Guard a particular item or person. The paladin assumes complete responsibility for the safety of the item or person.
- Undertake a *cavalcade*, a long journey for the purpose of escorting dignitaries, delivering messages, or scouting new territory.
- Represent the government in a jousting match or other contest of skill at a tournament.
- Appear at a state banquet or other ceremonial function.

**Mentor**

Paladins who have no ties to an organized religion often choose to follow the edicts of a mentor. A mentor can be any teacher, sage, or elder whom the paladin respects; often, the mentor is the paladin's ethical role model or the person who tutored him in philosophy. A group or organization can also qualify as a mentor. Possible edicts:

- Take regularly scheduled tests that measure intelligence or integrity. For instance, the mentor may engage the paladin in probing philosophic discussions on the nature of evil or the obligations of friendship.
- Care for the mentor in his old age.
- Pass along the mentor's ideas to a young acolyte of the mentor's choice. (In effect, the paladin becomes a mentor to someone else.)

**Culture**

Unless they contradict the principles of his government or religion, a paladin may choose to follow edicts from his culture. Cultural edicts arise from the long-standing traditions of a particular tribe, region, or race, and as such, they rarely change. Examples include:

- Marry by a certain age.
- Always bow from the waist or curtsy to strangers and elders.
- Hold the lives of animals to be equal to those of men. A paladin following this edict never eats meat, never hunts for sport or food, and only kills an animal to protect himself or those he's sworn to defend.

**Family**

Family edicts derive from tradition, obligations to relatives, and the wishes of

particular family members. Edicts may be issued by the paladin's parents or grandparents, or by a consensus of all living family members.

Won't all paladins automatically choose to follow the edicts of their families? Not necessarily. A paladin's family may not be of good alignment. The paladin may be an orphan and have no knowledge of his family. Sympathetic families may not wish to burden the paladin with their problems. If a paladin has not vowed to follow the edicts of his family, his obligations to them are no different from his obligations to anyone else. Typical family edicts include:

- Visit the family burial ground once per year on a designated day.
- Uphold a tradition never to harm a particular animal. (For example, if a bear sacrificed itself to save the paladin's infant sister from a dragon, the paladin may vow never to harm bears.)
- Donate a fixed percentage of all income to the family.

## Virtues

*Virtues* are traits exemplifying the highest standards of morality, decency, and duty. They comprise the paladin's personal code. Although not specifically detailed in the *PH* definition of a paladin, a paladin's virtues are implied by his strictures as well as his outlook, role, and personality. Just as a paladin must obey his strictures, he must also remain true to his virtues.

Though most paladins adhere to all of the virtues described below, exceptions are possible. For instance, a paladin from a primitive society may be so unfamiliar with civilized etiquette that including *courtesy* as part of his ethos would be unreasonable. All adjustments must be cleared by the DM at the outset of a paladin's career.

There are no rules for adjudicating virtue violations. The DM is advised to err in favor of the paladin when the player makes honest mistakes. Conversely, the player should graciously accept the DM's rulings and, in the spirit of the paladin, avoid looking for loopholes to take advantage of the DM's good will. The entries below include examples of how virtues might influence the paladin's behavior in the context of a game.

### Fealty

In feudal times, fealty referred to the relationship between a warrior and his lord. A warrior swore allegiance to a lord in exchange for protection, support, and property. The lord, in turn, could count on the warrior for military duty and other services. Both the lord and the warrior scrupulously honored this agreement. *Perfidy*, the breaking of the promise by either party, was considered a treacherous breach of faith.

This book takes a broader view of fealty, defining it as loyalty not only to a lord but to any lawful good government, religion, or philosophy. For convenience, we refer to the recipient of a paladin's loyalty as the *patron*.

Regardless of who—or what—functions as the patron, fealty gives the paladin a sense of belonging to something greater than himself. Fealty also sets the criteria for a paladin's moral code; in essence, the patron establishes the difference between right and wrong, good and evil. However, although the patron provides the basic moral code, it is ultimately the paladin who is responsible for and bears the consequences of his actions.

**About the Categories**

Let's take a closer look at the three categories of fealty patrons:

**Religion.** A religion is a set of beliefs centering on one or more omnipotent deities with supernatural powers. The patron is usually a church representing an established religion, but can be a deity.

**Government.** This can be any individual or governing body with the absolute power to make laws and declare war. In most campaigns, the patron is usually a monarch.

**Philosophy.** A philosophy is a system of ideas that explains the nature of the universe, exclusive of supernatural beings. The patron may be an established philosophy developed by scholars, or a unique philosophy developed by the paladin himself. (Chapter 8 discusses the definition of a philosophy in more detail, including the differences between philosophies and religions.) For the purposes of fealty, religion and philosophy are mutually exclusive; a paladin can't pledge fealty to both.

**Choices of Patrons**

Every paladin must pledge fealty to *something*. As a minimum, he must pledge fealty to either a religion or philosophy; this faith is what grants him the special powers described in Chapter 2. Beyond this requirement, patrons should derive logically from the paladin's background and outlook. In most campaigns, the proper patrons will be self-evident. For instance:

• If a paladin follows the tenets of a lawful good religion and serves in the military of a lawful good ruler, he probably swears fealty to both his church and government.

• If a paladin comes from a rigid theocratic culture (a society ruled exclusively by priests) or serves no feudal lord, he probably pledges fealty to the church alone.

• If a lawful good monarchy has no formal relationship with an established religion, the paladin might pledge fealty to a ruler and a philosophy, and not to a church.

• If a paladin operates independently and has no ties to a government or church, he'll probably pledge fealty to a philosophy.

For reference, Table 14 lists all possible fealty combinations. A paladin may pledge fealty to any of the Permitted combinations (assuming the DM approves). He may *not* pledge fealty to any of the Forbidden combinations. The ways in which governments, religions, and philosophies interact are discussed at length in Chapter 8.

**Table 14: Fealty Combinations**

| Combination | Permitted/Forbidden |
|---|---|
| Government, religion, and philosophy | Forbidden* |
| Government and religion | Permitted |
| Government and philosophy | Permitted |
| Religion and philosophy | Forbidden* |
| Government alone | Forbidden** |
| Religion alone | Permitted |
| Philosophy alone | Permitted |

* For the purposes of fealty, religion and philosophy are mutually exclusive.

** Every paladin must pledge fealty to either a religion or philosophy, which serves as the source of his special powers (described in Chapter 2).

**Obligations of Fealty**

Once a paladin pledges fealty to a particular patron, he's bound to that patron indefinitely. Should his king engage in evil activities, or his church become corrupt, the paladin may be forced to pledge fealty to another patron; the Expatriate kit (see Chapter 4) describes one possible consequence. Normally, however, a paladin's patrons never change.

The responsibilities associated with fealty vary with the patron. Monarchs, for instance, may require their paladins perform military service. Churches may expect their paladins to follow rigid rules of behavior. The "Edicts" section elsewhere in this chapter discuses such requirements in detail. In general, however, fealty requires the paladin to:

- Faithfully serve the patron regardless of personal adversity.
- Promote the principles and ideals of the patron.
- Honor and respect the representatives and symbols of the patron.
- Sacrifice his life for the patron if necessary.

Examples:

- *Sir Geffen, who has declared fealty to his king, learns that his homeland has declared war against Dryston, a neighboring state. Geffen is distressed by the news. Many of his schoolmates now live in Dryston, and so does his brother-in-law. Nevertheless, Geffen vows to engage all soldiers of Dryston as enemies, regardless of who they might be.*

- *In a distant village, Sir Geffen hovers on the edge of death, struggling to recover from serious wounds inflicted by a red dragon. A compassionate farmer offers to take Geffen to a medical specialist. Geffen accepts, and the farmer loads him in his wagon. An hour into their journey, the wagon passes a herald carrying the banner of Geffen's homeland. Geffen demands that the cart stop, then insists that the driver lift him to his feet. Reluctantly, the driver does as he's told. With his last ounce of strength, Geffen raises his hand to salute the flag.*

## Courtesy

To a paladin, courtesy involves more than merely following rules of etiquette. It's also an attitude, a way of presenting himself to the world. A paladin carries himself proudly, maintains self-control, and accepts ill-mannered behavior with grace. He follows social customs to the best of his ability. He is polite and deferential to friends and strangers alike.

Additionally, the paladin must:

- Consider the feelings of others and take care not to offend them. A paladin always demonstrates proper manners (shaking hands with friends, expressing gratitude for favors). He also keeps himself immaculately groomed (bathing regularly, wearing clean clothes).

- Speak tactfully and kindly. A paladin never knowingly insults or slanders another person, even his greatest enemy. If others engage in insults or slander, the paladin walks

away.

• Behave with dignity. A paladin refrains from emotional outbursts, excessive eating and drinking, foul language, and other boorish acts.

Examples:

• *Sir Geffen asks a grizzled innkeeper for directions. "My information ain't free," snarls the innkeeper. "Especially for the likes of you." The innkeeper spits in Sir Geffen's face, then glares at him, daring him to respond. Sir Geffen politely thanks the innkeeper for his time, discreetly wiping the spittle from his cheek as he turns to leave.*

• *After a long day spent slogging through a muddy swamp, Sir Geffen's companions can't wait to make camp and get to bed. Sir Geffen, however, stays up for hours, combing dried mud from his hair and cleaning the grime from his armor.*

## Honesty

A paladin always tells the truth as he knows it. He may decline to speak or choose to withhold information, but he will never intentionally mislead anyone, even his enemies. He may ask permission not to answer a direct question, but if pressed, he'll tell the truth (however, he may frame his answers in such a way as to withhold vital information). Though a paladin doesn't make promises lightly, once he gives his word, he always keeps it.

Examples:

• *Sir Geffen has been captured by an evil army. The commander demands to know the whereabouts of the paladin's companions. Sir Geffen says nothing.*

*"My spies inform me that your colleagues plan to arrive at King Relhane's castle by dawn tomorrow," says the commander. "Is this true?"*

*The commander's information is accurate, but Geffen remains silent.*

*"If you say nothing, I will conclude that I'm correct."*

*"You may conclude whatever you wish," says Geffen.*

• *Prevost, a young companion of Sir Geffen, asks about his performance on the battlefield yesterday. Sir Geffen believes that Prevost fought ineptly. "With your permission," says Geffen, "I prefer not to answer."*

*"Please," insists Prevost. "I want to know."*

*Geffen looks him in the eyes. "Very well. You allowed an opponent to escape. You dropped your sword at a crucial moment. Your performance was poor."*

*Prevost glowers at Geffen, then angrily stomps away.*

## Valor

A paladin demonstrates unyielding courage in the face of adversity. No danger is too great to prevent him from fulfilling a promise or completing a mission. His commitment is stronger than his fear of pain, hardship, or even death.

A paladin's valor is particularly evident on the battlefield. He regards war as a noble enterprise, and combat as an opportunity to glorify the institution he represents. A paladin attacks an enemy without hesitation, continuing to fight until the enemy withdraws or is defeated. Whenever possible, a paladin chooses the most formidable enemy—a powerful monster, a giant, a dragon, or the leader of an army—as his primary opponent. In general,

a paladin prefers melee to missile combat, so he can engage his opponent face to face.

Examples:

• *A moment ago, Sir Geffen and his companions were riding peacefully through a shaded valley when they were ambushed by a brutish hill giant. The giant snatched young Fredrin from his horse and is now waving him in the air like a trophy.*

*"I claim this youth as my slave!" thunders the giant. "If you want him back, send your best man to fight!"*

*Without hesitation, Sir Geffen rides forward.*

• *Locked in battle with an army of ogres, Sir Geffen's party is suffering mounting casualties. "Withdraw!" shouts Bordu, a friend of Geffen. "We will regroup and fight another day!"*

*Sir Geffen's companions scramble from the battlefield, but Geffen lingers behind. "Come with us!" cries Bordu. "You can't win!"*

*"Perhaps not," says Geffen, steeling himself for a phalanx of charging ogres. "But I shall cover your withdrawal as long as I can."*

At the DM's discretion, a paladin can withdraw with honor if outnumbered by more than 2:1 in hit dice. If the paladin belongs to an elite organization, the DM might allow the paladin to withdraw if he faces odds of more than 3:1. If the player suspects such a situation exists, he may ask the DM whether a withdrawal with honor is possible. With the DM's permission, the paladin may withdraw without violating his ethos.

## Honor

An honorable paladin conducts himself with integrity regardless of circumstance. He behaves in a morally sound manner even when he's by himself or when no one else will know of his actions. It's an admirable act to comfort a dying friend, but an act of honor to comfort a dying enemy.

Honor also involves respect, not just for the paladin's peers and superiors, but for anyone sharing the paladin's commitment to goodness and justice. The paladin shows mercy to the repentant, and refuses to inflict undue suffering even on the vilest evildoer.

Additionally, an honorable paladin:

• Defers to the judgment of all lawful good characters of superior social class, rank, and level.

• Acknowledges the dignity of all lawful good people, regardless of their race, class, or economic status, by treating them with courtesy and respect.

• Accepts all challenges to duel or fight given by those of comparable status and power. (A challenge from an arrogant youngster or a drunken warrior may go unheeded).

• Dies before compromising his principles, betraying his liege or faith, or abandoning a protected charge.

Examples:

• *After a lengthy battle, the king of the lizard men lies bleeding at Sir Geffen's feet. "I beg you," gasps the lizard king, "Let me live." Sir Geffen reflects. The lizard king is old and broken. He can no longer be considered a threat. And he has fought honorably.*

*Sir Geffen sheathes his sword. He motions for his aides to haul the lizard king away. The king will spend his remaining years in prison.*

• *Sir Geffen has been captured by a cult of evil clerics. Bound with chains, Sir Geffen stares into the eyes of a cleric who holds a blade to his throat. "Renounce your blasphemous faith," hisses the cleric, "and I will spare your life."*

*"Renounce yours, and I will spare you!" says Sir Geffen.*

### Other Virtues

Fealty, courtesy, honesty, valor, and honor will likely be a part of every paladin's ethos. Other virtues may also be added, subject to the DM's approval. Some possibilities:

**Humility.** The paladin remains humble in spirit and action. He rejects adulation and declines awards. Tributes embarrass him; the knowledge of a job well done suffices as thanks. He speaks modestly of his deeds, if at all, grateful for the opportunity to fulfill his moral obligations.

**Generosity.** The paladin gladly shares his meager funds and possessions with anyone in need. If he owns two swords and a elderly hunter has none, the paladin offers one as a gift. He will give his last crust of bread to a hungry child, even if he must go without food for the rest of the day. He is also generous of spirit, always willing to lend an ear to a troubled companion or acknowledge a friend's accomplishments with lavish praise.

**Chastity.** The paladin avoids even the appearance of impropriety, remaining pure in word, deed, and thought.

**Celibacy.** In addition to remaining chaste, the paladin vows never to marry.

**Industry.** The paladin engages in productive activity at all times. He works diligently and hard until he completes the job at hand. When not working, he studies, exercises, or practices his combat skills. He considers leisure activities, small talk, and vacations to be time-wasting folly.

## Code of Ennoblement

Feudal tradition required newly knighted soldiers to swear allegiance to a set of principles that embodied religious ideals and service to the king. The oath constituted a sacred promise, securing the knight's loyalty to church and state.

At the DM's option, a paladin may take a similar oath, swearing to a "Code of Ennoblement" that enumerates the strictures, virtues, and edicts he is obliged to uphold. The code defines the paladin's ethos, spelling out exactly what the patron expects of him.

The paladin swears to a Code of Ennoblement when he begins his career, usually as part of a formal ceremony (see the "Becoming a Paladin" section of Chapter 7 for suggestions). Typically, a monarch, church official, or mentor administers the code; the paladin candidate repeats the words as the official recites them. Alternately, the paladin can compose his own oath and recite it in private, addressing his words to a deity, an ancestor's memory ("I swear on the spirit of my father") or a universal force ("I pledge to the glory of the natural world").

Because different paladins may not adhere to precisely the same principles—they may, for instance, follow different edicts—each may swear to his own version of the code. Alternately, the DM may standardize the code for all paladins in the campaign. The exact wording of a code isn't important, so long as it includes these elements:

**Name and homeland.** The paladin should state his name and where he's from. He

may also mention any notable ancestors. ("I, Sharlyn of Northmoon, daughter of Princess Ahrilla, granddaughter of Parvis the Wanderer.")

**Strictures.** At the DM's option, or the player's insistence, the code may list every one of the paladin's strictures. However, because *all* paladins must follow *all* strictures, it's not necessary to recite them one by one. A general phrase ("I swear to uphold the sacred strictures") suffices.

**Fealty patron.** The code should indicate to whom (or what) the paladin has sworn allegiance, as explained in the Fealty section above.

**Virtues.** The five principal virtues—fealty, courtesy, honesty, valor, and honor—should be mentioned by name, unless the DM has a good reason for excluding one or more of them. Add any new virtues agreed upon by the DM and the player. It's not necessary to spell out the responsibilities of each virtue, so long as both the player and DM have read and understand the descriptions in this chapter. Any modifications to these descriptions should be made clear before the oath is administered.

**Edicts.** Recite the relevant sources of edicts, not the edicts themselves. Specific edicts may be mentioned at the player's request or the DM's option.

Ordinarily, the terms of a paladin's code never change. In extreme circumstances—for instance, if economic hardship makes it difficult for him to keep up his tithes—the paladin may petition his king or church for an exemption. The paladin must seek an audience with whoever originally administered the oath (or a suitable substitute), then plead his case.

Exemptions are rarely granted, unless new conditions make it impossible for the paladin to remain true to his ethos (if his church has become evil, the paladin can't be expected to continue his tithes). Officials may have severe misgivings about a paladin who even *requests* for an exemption, and may impose a modest penalty to encourage the paladin to stop whining and shape up. See the "Minor Violations" section below for suitable penalties.

## Sample Code

Here is a sample Code of Ennoblement to use as a template. Feel free to embellish and customize it as you see fit.

*I, *, do hereby pledge to honor the strictures of this sacred heritage ** and promise by my faith to be loyal to ***, maintaining my devotion against all persons without deception or forethought. Further, I vow to promote and uphold the principles of **** and to solemnly and faithfully follow the edicts of *****. I take this pledge freely, without coercion or expectation of reward, sworn by my hand on this saintly relic ****** and in blessed memory of those who have given their lives to this noble cause.*

* Insert the paladin's name and home ("Arlon of Shallowbrook.").

** This phrase implies allegiance to the strictures required of all paladins. It isn't necessary to recite them by name.

*** Insert the paladin's fealty patrons. In this example, Arlon swears fealty to his monarch and religion ("King Bronman of Entland and the Holy Church of Enlightenment.").

**** Insert the five principal virtues. (Arlon will adhere to them all, as outlined in this chapter. Because of his strict upbringing, he'll also follow the virtue of chastity: "Fealty, courtesy, honesty, valor, honor, and chastity.")

***** Insert the edict sources. (Arlon names his fealty patrons, and because he's promised to obey the edicts of his parents, he also mentions his family: "My king, my church, and my family.")

****** Some ceremonies require the paladin to place his hand on a sacred relic, such as a holy text or the monarch's sword. If relics aren't included in the paladin's ceremony, leave out this phrase.

## Violations and Penalties

When a paladin violates his ethos—that is, when he violates any stricture, virtue, or edict he has sworn to uphold—he suffers a penalty. This penalty is in addition to any punishments required by applicable laws or local customs. For instance, if a paladin robs a merchant, he suffers an ethos penalty *and* he may also be imprisoned.

Two methods are provided for determining ethos violations and penalties. The Standard Method, derived from a strict reading of the *Player's Handbook* rules, is the easiest to referee, but generates the harshest penalties. The Alternative Method is easier on the players, but requires more effort from the DM. Whichever method you prefer, it's best to stick with it throughout the entire campaign.

In all cases, the DM has the final word on whether a violation has occurred. At the DM's discretion, he may allow the paladin to appeal his decision. If the paladin argues convincingly that his actions didn't violate his ethos, the DM may suspend the penalty.

If the paladin's violation isn't especially severe, the DM has the option of letting him off with a warning. If the paladin picks up a new magical item and already has 10, the DM might remind him of the relevant stricture, giving him the chance to put the item down before he claims ownership. One warning, however, is plenty; if the paladin commits the same act a second time, a penalty should be applied immediately.

The DM may bypass both the Standard and Alternate Methods, instead considering each ethos violation on its own merits and assessing any penalty that seems appropriate. A willful and deliberate evil action results in the irrevocable loss of the paladin's status. Lesser violations should result in minor penalties, such as the temporary loss of one or more of the paladin's abilities. A suitable quest, the clerical *atonement* spell, or both may be used as penance for lesser violations.

### Standard Method

This method weighs the severity of an ethos violation purely in terms of alignment. The DM decides if a violation is chaotic or evil, and then applies the appropriate penalty.

#### Chaotic Violations

Chaotic acts include violations that are inadvertent, impulsive, and relatively benign. The violation cannot have directly or indirectly resulted in physical harm to any non-evil person. Examples:

- A moment of panic.

• Opposing the judgment of officials from his government or church. If the paladin refuses a just edict, the violation becomes evil.

• Failure to display proper courtesy to an elder or peer.

• Arrogance.

• Telling a "white lie" or couching the truth. If the lie results in harm to another person, the violation become evil.

**Penalty:** If a paladin knowingly commits any chaotic violation of his ethos, he must seek out a lawful good cleric of 9th level or higher. A cleric of the paladin's faith is preferable but not mandatory. The paladin must locate the cleric as soon as possible. An undue delay—say, of more than a few weeks—changes the violation to an evil one.

Once the paladin locates a cleric, he must make a full confession of his transgression and ask for forgiveness. The cleric will prescribe an appropriate penance. The paladin must execute the penance immediately; failure to do so constitutes a further violation. Typical penance's include:

• 1-4 weeks laboring at a monastery or church.

• A day or two in complete isolation, where the paladin does nothing but contemplate the wrongness of his action.

• Completion of a modest task (such as retrieving a medicinal herb from a mountain top or ridding the monastery basement of a snake infestation).

**Evil Violations**

Evil violations include intentional acts of theft, treason, cowardice, betrayal, greed, cheating, and blasphemy. Any ethos violation resulting in deliberate physical harm to a lawful good character is considered evil.

**Penalty:** Even a single evil violation results in the immediate and irrevocable loss of the paladin's status. He forfeits all benefits, powers, and privileges associated with the paladin class, none of which may be restored by magic or any other means. From that point on, the character exists as a fighter; he keeps the same level and adjusts his experience points as necessary. Because he wasn't a fighter at the beginning of his career, he isn't eligible for weapon specialization.

**Magically Influenced Actions**

The DM may excuse chaotic acts performed by an enchanted or magically controlled paladin. Optionally, he may impose a small penalty, such as those in "Self-Administered Penalties," on p. 43.

If a paladin commits an evil act while enchanted or controlled by magic, he immediately loses his paladin status and becomes a fighter as described above. However, because the evil act wasn't intentional, the status loss is temporary. To regain his status, the character must complete a dangerous quest or important mission on behalf of his government, church, or mentor. Possibilities include recovering an artifact in another plane of existence, accumulating enough treasure to build a spectacular monastery, or singlehandedly slaying an evil dragon. The character acquires no experience points as long as he remains a fighter. If the character completes his mission, he becomes a paladin again. He has the same level and number of experience points that he did when he lost his status.

A character who doesn't wish to undertake such a grueling mission may abandon his

paladinhood altogether and remain a fighter. From that point on, he acquires experience points and attains new levels the same as any other fighter. Once he abandons his paladinhood, he may never regain it.

## Alternate Method

This method gives the DM more latitude in determining the severity of ethos violations and also allows for a variety of penalties. To determine the severity of a violation, the DM must consider the paladin's intention, the consequences of the action, and who is affected.

Ethos violations fall into four general categories of increasing severity. Categories 1 and 2 include minor violations affecting non-evil characters other than the paladin's peers and superiors. Most violations belonging to Categories 1 and 2 are thoughtless, selfish, and insensitive actions which may not be evil in a strict sense. Deliberate or unambiguously evil actions belong in Categories 3 and 4. Additionally, *all* ethos violations involving an official of the paladin's government or church, or any organization or person to whom he's pledged fealty, belong to Category 3 or 4.

As these categories are necessarily broad, each includes several examples to help the DM make his decisions. Several possible penalties are also given. The DM should choose a penalty that fits the crime. He's also free to make up his own penalties based on these samples.

### Category 1: Incidental Violations

This category includes accidental, inadvertent, and careless violations with insignificant consequences. The paladin doesn't benefit from this type of violation in any way. Nor do these violations jeopardize the safety of any non-evil person, either directly or indirectly. Examples include:

• Hesitating before entering a dark room. If the paladin is too fearful to enter at all, this becomes at least at Category 2 violation (higher, if his reluctance results in harm to a companion).

• Failing to return a friendly stranger's greeting. If the paladin's indiscretion is due to arrogance rather than a simple mistake, this becomes a Category 2 violation. Likewise, this belongs to Category 2 if the stranger takes offense.

• Brushing against a stranger's dinner table and knocking a pitcher of ale into his lap.

Sample penalties include:

• Apologize to anyone slighted by his actions, as well as to anyone observing the indiscretion.

• Champion the slighted person in an upcoming tournament.

• Meditate for an hour each night for the next 1-2 weeks, contemplating the wrongness of the action.

### Category 2: Grave Violations

This category includes serious violations of trust and judgment, including accidental or careless acts that might jeopardize the safety of non-evil characters. It also includes intentional acts that offend, disappoint, or mislead non-evil characters, but don't jeopardize their safety. (Intentional acts that jeopardize the safety of others belong to

Category 3). Examples include:

• Failing to keep armor or weapons in optimum condition.

• Neglecting personal hygiene.

• Lying to a vendor about the quality of his merchandise. If the paladin lies to take advantage of the vendor—for instance, to make the vendor more cooperative or to get a better price—this becomes a Category 3 violation.

• Lose or misplace a small trinket carried for a companion.

Sample penalties include:

• Seek out a high-level lawful good cleric and complete a penance (as described in the "Chaotic Violations" section above).

• Forfeit a small sum to a charity (perhaps 2d10 gp or a day of work).

• Pay double or triple all tithes for the next 1d4 months.

• Temporarily lose the ability to cast spells, detect the presence of evil, remain immune to disease, radiate an aura of protection, or cure diseases. The loss persists for 1d4 weeks.

• Earn only half of the normal number of experience points for the next 1-10 weeks.

**Category 3: Extreme Violations**

This category covers acts that call into question the paladin's commitment to his ethos, such as intentional acts that jeopardize the safety of non-evil characters. Examples include:

• Delaying the execution of an edict, or failing to satisfactorily complete an edict.

• Informing travelers that the road ahead is safe, declining to mention the rumors of bandits.

• Inadvertently inflicting great harm on the patron's cause, such as failure to protect an artifact or important official.

• Avarice, usury, or preoccupation with worldly goods.

• Failing to aid a dying person.

• Panicking and retreating from a battle.

Sample penalties include:

• Forfeit his stronghold and all other property holdings.

• Permanently lose the ability to cast spells (or the spells of a particular sphere) until appropriate atonement is made.

• Permanently lose one of the following abilities: detect presence of evil, disease immunity, aura of protection, or laying on hands to cure disease until appropriate atonement is made.

• The bonded mount leaves, never to return. The paladin never acquires a replacement.

**Category 4: Execrable Violations**

This category includes the most intolerable and unforgivable ethos violations, the worst deeds a paladin can commit. Any direct violation of a stricture or edict belongs here, as do violations that result in physical harm to any lawful good character. This category also includes any violation affecting an official of the paladin's government or church. Examples include:

• Refusing or ignoring a just edict.

• Habitual cowardice.
• Committing an act of blasphemy.
• Betrayal of the patron.
• Concealing funds, hoarding more than 10 magical items, or purposely neglecting to tithe.

There is but one penalty here:

• The paladin immediately loses his status, as described in the "Evil Violations" section above. Heinous crimes against the monarch may merit execution. Crimes against the church may result in a vengeful deity striking the paladin dead with a lightning bolt or causing the earth to swallow him up. (If in doubt, roll 1d20. On a roll of 1, the deity kills the blasphemous paladin; otherwise he is just subject to institutional penalties.)

**Magically Influenced Actions**

If paladin commits an evil act while enchanted or controlled by magic or psionics, the DM determines the category of the violation, then applies a penalty from Table 15.

### Table 15: Penalties for Enchanted Paladins (Alternate Method)

| Violation Category | Penalty |
|---|---|
| 1 | Apply normal Category 1 penalty or forego penalty entirely |
| 2 | Apply Category 1 penalty |
| 3 | Apply Category 2 penalty |
| 4 | Paladin temporarily becomes a fighter (as described in the "Magically Influenced Actions" section of the Standard Method) |

### Ceremony of Disgrace

At the DM's option, a paladin guilty of an ethos violation may have to submit to a Ceremony of Disgrace in addition to a penalty. Usually, Ceremonies of Disgrace accompany punishments for heinous crimes involving government or church officials (defined as "Evil Violations" in the Standard Method, and Category 3 and 4 Violations in the Alternate Method), but they may be used for lesser violations as well.

A typical Ceremony of Disgrace requires the guilty paladin to appear before one or more representatives of his government or church. The more serious the crime, the higher the station of the presiding official; a low-level bureaucrat may suffice for a Category 2 violation, but the king himself may choose to oversee the ceremony for a Category 4 violation. To compound the paladin's shame, a Ceremony of Disgrace is often held before an audience in the town square or other public forum with the accused paladin standing on a raised platform for all to see.

The ceremony begins with the presiding official declaring the paladin's crime. The official chastises the paladin for betraying his Code of Ennoblement, then announces the penalty. For a minor violation, the paladin may ask for one of the paladin's non-magical weapons. The official destroys the weapon by throwing it into a fire or snapping off the blade.

For a heinous violation, more elaborate humiliations may be involved. In addition to destroying one of the paladin's weapons, the official may demand that the paladin hand over each piece of his armor. The official flings each piece into a fire or has an aide pound the pieces with a mallet, rendering them useless. The official may then slap the paladin's face, douse him with a bucket of offal, or roughly shear the hair from his head until only a stubble remains. Finally, the official strips the paladin of his name; the paladin must call himself by a new name from that point on.

Throughout the ceremony, the paladin must remain silent. Speaking during a Ceremony of Disgrace may be considered an ethos violation in itself, requiring an additional penalty.

### Self-Administered Penalties

Occasionally, a paladin may commit an ethos violation that the DM considers irrelevant. The paladin might think lustful thoughts about an attractive hireling, mutter an insult under his breath about a hated foe, or accidentally eat a soup containing chicken broth when he's vowed to be vegetarian. While all of these examples might technically be ethos violations, they're so trivial that the DM will probably overlook them (assuming he's aware of them in the first place).

But even when the DM overlooks a trivial violation, a truly conscientious paladin player may insist on a penalty anyway. In such cases, the paladin is free to punish himself and choose his own penalty; the DM may veto a penalty he deems too severe. Typical self-imposed penalties might include:

- Apologies to the affected parties, with assurances the offensive act will never be committed again.
- A vow of silence for the next 1-2 days.
- Becoming consumed with guilt and self-loathing for the next 1-2 days, during which time he makes all combat rolls and ability checks at a –1 penalty.
- A special tithing, donation, or service for which the paladin accepts no return.

### Anti-Paladins

What better nemesis for a paladin than his direct opposite, an "anti-paladin" that embodies the forces of evil? As the mirror image of a normal paladin, an anti-paladin might be able to detect the presence of good, generate a aura of protection against good creatures, and wield an "unholy" sword.

Though DMs may experiment with any type of character they like, we discourage the use of anti-paladins. Good and evil are not merely mirror images of each other. Just as the forces of evil have their unique champions, the paladin is intended as a unique champion of good. The paladin originates from a tradition of dynamic balance, in which the forces of good are few and elite and in which forces of evil are numerous and of lesser quality. Allowing anti-paladins blurs this basic relationship.

## Chapter 4: Paladin Kits

Kits are collections of proficiencies, benefits, and hindrances that distinguish one

character of the same class from another. A kit also provides information about the character's personality, background, and roles. It's not necessary to use kits, but they make characters more fun to play and add color and depth to a campaign.

## Acquiring Kits

A player chooses a kit for the paladin as part of the character creation process. A paladin may have only one kit.

To create a new paladin, begin by determining his ability scores (*PH*, Chapter 1). Then choose his character kit, recording the pertinent information on the character sheet. The sheets at the end of this book are designed for paladin character kits; permission is granted to copy these pages for personal use. Use the kit information to determine other aspects of the character, such as proficiencies (*PH*, Chapter 5, and Chapter 5 of this book) and equipment (*PH*, Chapter 6, and Chapter 6 of this book).

You can incorporate any character kit into an existing campaign, provided the DM approves. A kit should be compatible with the paladin's personal history, background, and established personality traits. For example, the Chevalier kit might be a logical choice for a paladin who has devoted himself to serving a monarch. However, the Skyrider kit would be a poor choice for a paladin who has a fear of flying.

## DM Decisions

Before players create their characters, the DM should examine each of the kits and consider the following questions:

**Is this kit appropriate to the campaign world?** The DM may exclude any kit that doesn't fit into the campaign. In a campaign world dominated by a single religion, the DM may deem the Votary kit inappropriate. The Militarist kit may not be relevant in a world with few organized armies. Before players create their characters, the DM should tell them which are forbidden.

**Do the players need additional information about the kit?** Any campaign details that may influence the choice of a kit should be revealed to the players. For example, if the local queen has canceled all privileges for diplomats, a player might avoid the Envoy kit.

**Are there changes in any kit?** The DM is free to make adjustments in the kit descriptions. He may decide, for example, that all Divinates must belong to a particular religion, or that all Wyrmslayers must take Blind-fighting as one of their initial proficiencies. All changes should be explained to the players before they create their characters.

## Kit Subsections

All paladin kits include the following:

**Description:** This section describes the duties, cultural background, manner, and appearance of characters associated with this kit.

**Requirements:** Ability score minimums and other special requirements are listed here. Characters can't take the kit if they don't meet these qualifications. "Standard"

means there are no special requirements.

**Ministration:** This identifies the paladin's immediate superiors. There are five possibilities:

*Church*. The paladin answers to the elders or dignitaries of an organized faith. Usually, the paladin's immediate superior is a high-ranking priest.

*Government*. The paladin works for a king, monarchy, or other government body or official. Usually, the paladin's immediate superior is a military officer, often another paladin of higher level.

*Mentor*. The paladin takes orders from a family member, teacher, elder, or any other individual not formally associated with a government or church.

*Independent*. The paladin makes his own decisions. He answers to his deity or to his own conscience. He may choose to follow the tenets of a church or promote the causes of a government, but since he doesn't work for them he isn't required to obey their edicts.

*Any*. There are no ministration recommendations for this kit. The paladin may take orders from whatever authority, if any, is appropriate to his culture and background.

**Role:** The character's function in society and in a campaign is detailed here. His motivations, personality, and beliefs are examined, along with his relationships with other people, his reasons for joining an adventuring party, and his function within a party. Note that the personality traits don't necessarily apply to every character associated with this kit. Players may shape the personalities of their characters based on these suggestions, or they may disregard them entirely and create their own personalities.

**Symbol:** This section suggests one or more symbols to represent members of this kit. Some governments or religions may require a character to display his symbol in a particular fashion, such as embroidering it on his clothing or inscribing it on his shield. Otherwise, a paladin may display his symbol as he wishes, or he may choose not to do so. Players are also free to use symbols other than those suggested.

**Secondary Skills:** If you use the rules for secondary skills from Chapter 5 of the *Player's Handbook*, the character is restricted to the choice of skills listed in this section.

**Weapon Proficiencies:** If you use the weapon proficiency rules, a kit may specify the character's options. *Any* means he can take any weapon proficiency he likes (most paladins, regardless of kit, will choose proficiencies in the lance and some type of sword). In other cases, he may choose from a *recommended* list. *Required* means that the character *must* take the indicated weapon.

**Nonweapon Proficiencies:** Although nonweapon proficiency rules are technically optional, they're strongly recommended when using the paladin kits. If you're using secondary skills, don't use nonweapon proficiencies, and vice versa.

Some nonweapon proficiencies are listed as *bonuses*. A character gets these proficiencies free of charge; they cost no proficiency slots.

The paladin must take any *required* proficiencies as soon as he can, spending the necessary slots. He may also choose from among a list of *recommended* proficiencies. If he takes a recommended proficiency, he spends the normal number of slots. It's a good idea for a beginning character to spend all or most of his initial slots on recommended proficiencies, though he's not required to do so.

The character is barred from taking any proficiencies listed as *forbidden*.

An asterisk (*) indicates a new proficiency described in Chapter 5.

**Armor/Equipment:** Equipment requirements and recommendations are given here.

Unless indicated otherwise, a character must buy the required equipment, including weapons, from his initial funds. *Standard* means that the character has no specific requirements; see Chapter 7 for suggestions.

Like all members of the warrior group, a paladin begins with 50-200 (5d4x10) gp. He may buy his equipment from these funds after he donates 10% to his religious institution. If he lacks the funds to buy all of his required equipment, he should buy as much as he can, then pick up the rest as soon as he gets the money. All subsequent income is subject to tithing before the remainder can be spent.

**Bonded Mount:** The suggested species of bonded mount is given here.

**Special Benefits:** Many kits grant special benefits. Typical benefits include improved abilities, rights in particular situations, and reaction bonuses. All benefits are received free of charge, and don't count against the normal limitations of the paladin class.

**Special Hindrances:** To balance their special benefits, kits also carry special hindrances. Hindrances include reaction penalties, cultural restrictions, or ability limitations. All special hindrances are in addition to disadvantages normally associated with the paladin class.

### Reaction Adjustment Reminder

Many of the special benefits and hindrances are given as reaction adjustments. A reaction bonus is expressed as a plus, such as +1. A reaction penalty is expressed as a minus, like –2. When rolling for encounter reactions (on Table 59 in the *DMG*), make sure to *subtract* the bonuses and *add* the penalties. For example, if a character has a +1 reaction bonus, *subtract* 1 from the 2d10 roll—don't add it.

## List of Kits

### True Paladin

**Description:** This is the typical paladin described in the *Player's Handbook*. An embodiment of lawful good, he represents the loftiest standards of heroism and righteousness. He is a superb rider, a master of mounted combat, and a fearless fighter. The True Paladin lives to promote his ideals; he seeks to join others who share his commitment to good.

*Note:* Because the True Paladin has few background requirements and special rules, this kit makes a good choice for players who want to create paladin characters with a minimum of fuss. The True Paladin can serve as a standard archetype for virtually any campaign.

**Requirements:** Standard.

**Ministration:** Any. To simplify the character creation process, it's recommended that a lawful good deity serve as patron, and that he has few, if any, formal ties to a government or organized church. The True Paladin may be an orphan whose abilities were granted by a benevolent deity. Alternately, he may be of humble origin, trained by a Mentor who later died or disappeared.

**Role:** The True Paladin is pious and forthright, sworn to uphold a just code of behavior and determined to rid the world of evil. He serves as the conscience of his party,

setting an example of high moral standards and nudging them back on track when they stray from their mission. He respects all lawful good authorities and defers to the elders of his faith.

**Symbol:** Any.

**Secondary Skills:** Armorer, Farmer, Groom, Hunter, Leather Worker, Scribe, Trapper/Furrier, Weaponsmith, Woodworker/Carpenter.

**Weapon Proficiencies:** *Required:* Lance (any). *Recommended:* Sword (any), dagger, battle axe, horseman's flail, horseman's mace, horseman's pick, war hammer.

**Nonweapon Proficiencies:** *Required:* The True Paladin must have the Land-based Riding proficiency by 4th level. *Recommended:* Armorer, Endurance, Etiquette, Heraldry, Jousting*, Law*, Local History, Oratory*, Weaponsmithing.

**Armor/Equipment:** *Required:* Weapon (any), shield (any), and armor (at least chain; must upgrade to plate as soon as he can afford it). A paladin without a horse and tack should acquire them as soon as is practical.

**Bonded Mount:** Any war horse.

**Special Benefits:** None.

**Special Hindrances:** None.

## Chevalier

**Description:** A gentleman warrior, the Chevalier epitomizes honor, courage, and loyalty. Modeled on the knights of the feudal age, the Chevalier serves his king (or other ruler) as a soldier in the royal military of a powerful kingdom. While primarily a fighting man, the Chevalier also performs ceremonial duties, household chores, and any other functions necessary to promote the liege's interests and secure the welfare of the state.

**Requirements:** In addition to the standard paladin qualifications, a Chevalier must meet at least one of the following requirements:

- He must be the son of a Chevalier, nobleman, or aristocrat.
- He must be wealthy enough to "buy" his way into paladinhood by turning over a valuable property or large treasure to his church or state.
- He must have an ability score of 15 or more in Strength, Constitution, or Wisdom.

**Ministration:** Government. In a theocracy, a Chevalier may take orders from the church.

**Role:** A Chevalier's training begins at childhood and continues throughout his career. He acquires new duties and responsibilities as he rises through the ranks. Typically, a Chevalier begins as an aide to a more experienced paladin, undertakes missions for his liege as he grows in stature, and eventually aquires a stronghold of his own.

Because Chevaliers of all ranks are considered part of the aristocracy, they command the respect afforded other members of the noble class. Tradition demands that Chevaliers remain apart from society; consequently, Chevaliers seldom socialize with anyone other than paladins. Fully aware of their privileged status, Chevaliers carry themselves with pride. They maintain an immaculate appearance, are unfailingly courteous, and behave with dignity in all situations.

A Chevalier of any level may join an adventuring party, assuming the party's goals agree with those of the state. The Chevalier's companions will find him the consummate professional. As a friend, however, he may leave much to be desired; a Chevalier often

impresses others as vain and pretentious. More comfortable with taking orders than giving them, a Chevalier rarely volunteers for leadership roles, though he dutifully assumes command if asked or assigned.

**Symbol:** The Chevalier employs the same symbol as his liege, often a crown, an animal associated with royalty (such as a lion or eagle), or a military emblem (crossed lances or a fist clutching a sword).

**Secondary Skills:** Armorer, Groom, Weaponsmith.

**Weapon Proficiencies:** *Required:* Sword (any) and lance (any). *Recommended:* Dagger, battle axe, horseman's flail, horseman's mace, horseman's pick, war hammer.

**Nonweapon Proficiencies:** *Recommended:* Armorer, Blind-fighting, Bureaucracy*, Etiquette, Heraldry, Jousting*, Languages (Ancient or Modern), Law*, Local History, Oratory*, Weaponsmithing.

**Armor/Equipment:** Usually, a Chevalier must buy his own equipment. At a minimum, he must purchase a mount (at least a riding horse, until he acquires a bonded mount), sword, lance, and armor (no less than chain mail). On occasion, a liege supplies this equipment for free; in such cases, the liege often charges a monthly maintenance fee (1-4 gp).

**Bonded Mount:** Any war horse. Airborne mounts are possible but uncommon.

**Special Benefits:**

*Chain of Command:* Chevaliers adhere to rigid chains of command. Any high-level Chevalier can give commands to lower-level Chevaliers from the same kingdom. The lower-level Chevaliers must follow these orders as if they were given by the liege. Typical commands include loaning weapons and mounts, delivering messages, and securing supplies.

*Sanctuary:* A Chevalier may request sanctuary in any stronghold in his kingdom, or in any lawful good kingdom with diplomatic or political ties to the Chevalier's kingdom. By custom, the owner of the stronghold must provide the Chevalier with shelter, food, and water for up to three days; the offer extends to a number of companions equal to the Chevalier's level (a 4th-level Chevalier may request sanctuary for himself and four others).

**Special Hindrances:**

*Chain of Command:* The chain of command works both ways. A low-level Chevalier must execute all of the commands of a higher-level Chevalier, as described in the Special Benefits section.

*Extra Responsibilities:* As part of a complex bureaucracy, the Chevalier has more responsibilities than most other paladins. He must attend state functions, participate in royal festivals, and represent his liege at tournaments. He may be required to train young warriors, file monthly reports of his activities, and officiate at dubbing ceremonies for new Chevaliers. In general, the larger the kingdom, the more demands on the Chevalier.

*State Enemies:* A liege makes many enemies over the course of his career. By definition, enemies of the liege are also enemies of his Chevaliers. A Chevalier may be subject to kidnapping and assassination attempts by foes he's never met, who attack the Chevalier to avenge themselves against the liege.

## Chevalier Ranks

Here is a typical career path for the Chevalier. The ranks are for game purposes only and don't necessary correspond to any historical definitions.

*Page.* At 0 level, a Chevalier candidate becomes a servant on his liege's staff. He lives in the liege's stronghold or the stronghold of a military officer or noble. The page learns academic fundamentals (including history, etiquette, and religion), along with basic hunting and riding skills.

*Valet.* At 1st level, the page becomes a valet, assigned as an apprentice to a high-ranking paladin (usually, a Chevalier of at least 5th level). The valet acts as personal aide both on the battlefield and at home. He studies combat techniques, advanced riding skills, and theology. Should he decide to permanently assume the role of an aide, he becomes a Squire (see the Squire kit for details).

*Stronghold Knight.* Also known as a household knight, the valet assumes this position at 2nd level. He works primarily in his liege's stronghold, performing guard duty, custodial chores, and occasional staff supervision. He may go to war or undertake quests and missions on his liege's behalf.

*Protector.* A Chevalier reaches this rank at 3rd level, when he gains the power to turn undead. The protector may be sent into the field more frequently, though he still lives in his liege's stronghold and his superiors still closely monitor his actions.

*Warder.* At 4th level, the Chevalier becomes a warder. His liege becomes increasingly comfortable sending him on missions to distant lands. Supervision continues to decrease.

*Guardian.* At 5th level, the Chevalier becomes a guardian, experienced enough to supervise a valet.

*Grand Knight.* A Chevalier attains this rank at 6th level and may represent his liege on diplomatic missions. While still technically a member of the liege's stronghold, a grand knight is routinely granted permission to leave the stronghold for long periods of time.

*Bachelor.* To qualify for this rank, the Chevalier must have reached 7th level *and* have acquired a plot of land large enough for a stronghold. At this rank, the Chevalier becomes eligible to maintain a small home outside his liege's stronghold. Usually, a Chevalier must be at bachelor level to receive permission to marry.

*Banneret.* The Chevalier must be at least 9th level *and* must have established his own stronghold. The stronghold serves as the banneret's home base. He may maintain a small staff of his own by this point.

*Lord.* This is a royal title awarded by the liege to a Chevalier of at least 10th level who has successfully maintained a stronghold for a long period (typically, 5-10 years). In most cases, the stronghold must be profitable (thus benefiting his liege through taxes or levies), have withstood at least one enemy assault (to demonstrate the Chevalier's leadership skills), and employ at least 10 staff members and soldiers (to demonstrate the Chevalier's management skills).

## Divinate

**Description:** Devoutly religious, Divinates serve as the military branch of their church and consider themselves soldiers of their gods. Their religious discipline imbues them with a clear sense of purpose; promoting the principles of their faith is not only

morally correct, but a sacred duty.

**Requirements:** Standard. A Divinate must be a member of an organized religion. Usually, the church elders raise and train the Divinate from childhood.

**Ministration:** Church.

**Role:** Divinates were originally responsible for accompanying disciples of the church on religious pilgrimages, fighting off bandits and monsters that lay in wait. In time, church elders decided that *all* evils were potential threats to their disciples, and sent Divinates into the world to eliminate them. To a Divinate, evil is an affront to his faith; destroying an agent of evil is a holy act.

Though the Divinate becomes a raging avenger when confronting evil, he is otherwise thoughtful and compassionate. He sees himself as an advocate of the common man, a source of solace to the downtrodden and disadvantaged. A Divinate may insist that the party share its treasure with destitute families and impoverished communities. He may offer temporary employment to a pauper too proud to accept charity. He conducts impromptu prayer services in makeshift chapels, and officiates at the christenings and burials of peasants. Though completely devoted to his faith, a Divinate respects all lawful good religions and has little interest in proselytizing.

**Symbol:** A Divinate proudly displays the symbol of his church on his shield, coat of arms, mount barding, and clothing. Typical symbols include a rising sun, holy symbol, blooming flower, star, or the like, often with weapons below or behind the symbol.

**Secondary Skills:** Leather Worker, Mason, Scribe Tailor/Weaver, Weaponsmith, Woodworker/Carver.

**Weapon Proficiencies:** Any.

**Nonweapon Proficiencies:** *Required:* Religion. *Recommended:* Artistic Ability, Etiquette, Healing, Languages (Ancient and Modern), Reading/Writing, Poetry.

**Armor/Equipment:** Standard.

**Bonded Mount:** Any.

**Special Benefits:**

*Extra Sphere:* In addition to the Combat, Divination, Healing, and Protective spheres, a Divinate may also learn spells from one of the following spheres: Charm, Guardian, or Sun. He chooses this sphere at 1st level; once chosen, the extra sphere never changes. The extra sphere has no effect on the number or level of spells he can learn.

*Religious Stronghold:* If a Divinate chooses to build a stronghold, it must be a monastery or other religious edifice. If the Divinate has faithfully served his church and has never committed a serious ethos violation, the church elders may officially sanction his stronghold, contributing resources and labor to reduce construction costs to half the normal price (the Divinate is still responsible for purchasing or otherwise obtaining the land). Typically, official sanction is not given to a Divinate until he reaches 12th level, so as not to offend the clerics who also seek sanctions for their strongholds.

**Special Hindrances:**

*Extra Tithes:* A Divinate must donate 20% of all income to his church. Additionally, his church requires a *minimum* monthly contribution, usually 1-10 gp (as determined by the DM). Therefore, every month he must donate either 20% of his income or his minimum contribution, whichever is greater. Failure to do so is considered an ethos violation of his tithing stricture.

*Meditation:* A Divinate must mediate for one full hour every day to cleanse his spirit,

preferably when he rises or just before he goes to sleep. If he is interrupted or distracted for more than two consecutive rounds, he must start over. A Divinate who neglects to meditate cannot cast spells the following day.

## Envoy

**Description:** Skilled in diplomacy as well as combat, an Envoy serves as an official representative of his government in other countries. Though he uses force when necessary to achieve his goals, he prefers compromise to hostility. He seeks friendly alliances with good-aligned governments, common ground with neutral societies, and a quick and efficient end to evil cultures.

**Requirements:** An Envoy must have a minimum Intelligence score of 12.

**Ministration:** Government.

**Role:** An envoy's duties range from the routine to the life-threatening. One month, he may be asked to deliver a banquet invitation to a friendly monarch. The next, he may be required to open hostage negotiations with a tribe of cannibals. He represents his country in treaty discussions, files reports about foreign military activities, and ventures into unexplored territories to scout for new trade routes. Although an Envoy rarely has the authority to make decisions on his own, his superiors take his recommendations seriously.

The Envoy prides himself on his sensible, practical approach to problems. He is thoughtful, analytical, and appeasing, the logical choice for negotiator in an adventuring party. He is the voice of reason, hesitant to engage in drawn-out, bloody wars before exploring less extreme options. Rather than engaging an evil regime on the battlefield, an Envoy prefers to work behind the scenes, perhaps engineering a political revolution or quietly dispatching the tyrannical leaders.

**Symbol:** Owl, raven, scales of justice, scepter.

**Secondary Skills:** Groom, Limner/Painter, Scribe, Trader/Barterer.

**Weapon Proficiencies:** An Envoy spends less time practicing weapons than he does learning other skills. He may have only *two* weapon proficiencies in his entire career. He acquires his proficiencies at 1st level, choosing any weapons he likes.

**Nonweapon Proficiencies:** *Bonus:* Etiquette. *Required:* Bureaucracy*. *Recommended:* Artistic Ability, Dancing, Gaming, Heraldry, Law*, Local History, Oratory*, Reading/Writing.

**Armor/Equipment:** Standard. Because an Envoy comes in regular contact with dignitaries and officials, it's important that he make a good impression. He must purchase all of the formal attire listed in the Clothing and Special Items section of Chapter 6 as soon as he can afford them.

**Bonded Mount:** Any.

**Special Benefits:**

*Reaction Bonus:* A master of persuasion, an Envoy receives a +2 modifier on reaction rolls from all NPCs, including those of evil alignment.

*Diplomatic Privileges:* An Envoy enjoys all of the following privileges in any country with which his government has established diplomatic relations:

• The host country must provide food and shelter for the Envoy as long as necessary for him to complete official business. The host country is *not* required to extend

this privilege to any of the Envoy's companions other than his immediate family, though many host countries will do so as a matter of courtesy. If the Envoy is merely passing through the host country and has no official business there, the host country is not obliged to provide food and shelter; but again, many will do so out of courtesy.

• The host country must guarantee the Envoy's safety in time of war, or provide a military escort to return the paladin to his homeland.

• The Envoy is usually immune to arrest and prosecution. However, should the paladin commit a crime, he may be asked to leave the host country. In extreme situations, the host country may sever diplomatic ties with the Envoy's homeland, likely resulting in dire consequences for the Envoy when he reports to his unhappy superiors.

• The Envoy may not be taxed by the host country, regardless of how long he stays.

• The Envoy has complete freedom to practice his religion.

• Officials of the host country may not demand to see the Envoy's private correspondence with his homeland.

**Special Hindrances:**

A Envoy's position and responsibilities often puts his life at risk. He makes a tempting target for assassins and kidnappers from rival governments, and a likely hostage in times of war. Even the most innocuous insult or slightest breach of protocol may be considered a grievous offense, punishable by both the affronted government and the Envoy's own superiors. As a gesture of good faith, an Envoy may be required to enter a hostile village alone and unarmed. Rather than eliminate an evil NPC, an Envoy may be asked to arrest him unharmed, then return him to the proper authorities for prosecution.

## Equerry

**Description:** The Equerry is a master horseman with a natural affinity for mounts of all species. She and her steed are inseparable companions, their special bond transcending mere friendship.

**Requirements:** An Equerry must have a minimum Wisdom score of 14.

**Ministration:** Any.

**Role:** An Equerry often serves as a cavalryman, scout, or guide. Whatever her duties, she remains with her mount; she's reluctant to enter underground passages or any other site that her mount can't easily traverse. She prefers to sleep near her mount, staying in an inn or hospice only if no alternative is available. The mount's life means more to the Equerry than her own; without a second thought, she would give the mount her last drop of water or her last crumbs of food.

Because an Equerry spends so much time with her mount, her companions may perceive her as shy or humorless. But an Equerry enjoys human company too; with a little coaxing, she's usually open to conversation and recreation. An aggressive fighter and shrewd tactician, the Equerry makes a valuable addition to any adventuring party.

**Symbol:** Any symbol suggesting a horse or other mount.

**Secondary Skills:** Groom, Hunter.

**Weapon Proficiencies:** An Equerry begins with only three weapon proficiency slots. One of these slots must be assigned to lance (any).

**Nonweapon Proficiencies:** *Required:* Riding (either Airborne or Land-based, depending on her choice of bonded mount). *Recommended:* Animal Handling, Animal

Training, Hunting.

**Armor/Equipment:** Standard. As soon as she can afford it, the Equerry should buy full barding for her mount (preferably leather).

**Bonded Mount:** An Equerry can choose the species of mount he prefers. Although a male Equerry can't choose a unicorn, he can choose virtually any other type of mount within reason.

Two options are open to the Equerry:

1. She may choose her mount at the beginning of her career, if the mount has 4 HD or less. She acquires the mount under the conditions described in Chapter 2; unlike other paladins, the Equerry may receive her bonded mount at 1st level.

2. If she prefers a mount with more than 4 HD, she may set aside up to half of her assigned experience points (XP) until she's saved a number of points equal to the amount required in Table 16. For instance, if the Equerry wants a griffon mount, she must set aside 64,000 XP. When she's saved 64,000 XP, she can seek or call for a griffon under the conditions described in Chapter 2.

### Table 16: XP for Equerry Bonded Mount

| Mount's Hit Dice | XP Equivalent | THAC0 |
|---|---|---|
| 1 | 0 | 19 |
| 2 | 2,000 | 19 |
| 3 | 4,000 | 17 |
| 4 | 8,000 | 17 |
| 5 | 16,000 | 15 |
| 6 | 32,000 | 15 |
| 7 | 64,000 | 13 |
| 8 | 125,000 | 13 |
| 9 | 250,000 | 11 |
| 10 | 500,000 | 11 |
| 11 | 750,000 | 9 |
| 12 | 1,000,000 | 9 |
| 13 | 1,250,000 | 7 |
| 14 | 1,500,000 | 7 |
| 15 | 1,750,000 | 5 |
| 16 | 2,000,000 | 5 |

*Improved Mount Abilities.* Regardless of the species of her mount, the Equerry can improve the mount's abilities by assigning it up to half of her earned experienced points. As shown on Table 16, as the mount receives XP from the Equerry, it gains new Hit Dice. For example, assume the Equerry has received a light war horse (2 HD) as her bonded mount. The first 2,000 XP added to the horse don't affect its abilities. When the total added reaches 4,000 XP, the horse gains an additional Hit Die, becoming, in effect, a 3 HD creature.

As a bonded mount's HD increase, its abilities improve in the following ways:

• When the mount gains its first bonus die, it becomes lawful good. Its Intelligence

score is also permanently boosted by +2.

• The mount fights on the Monster Attack Table as a monster equal to its Hit Dice. Table 16 reproduces this information from the *Dungeon Master's Guide*.

A mount can gain a total of 10 HD over its starting total, up to a maximum of 16 HD. Investing 1,000,000 XP in a light war horse raises it to a maximum of 12 HD; investing 2,000,000 XP in a griffon raises it to 16 HD. Should the mount be killed, the assigned XP are lost; note, however, that *wishes* and similar powerful magic can revive slain mounts.

*Saving Throw Bonus.* The mount makes saving throws as a fighter of a level equal to its current hit dice; that is, it uses the unmodified numbers on Table 5 in Chapter 1 of this book (a light war horse raised to 12 HD needs to roll a 7 or better to avoid the effects of paralyzation). When the Equerry rides the mount, however, the mount receives the paladin's standard +2 bonus (a mounted 12 HD war horse saves at 5 or better against paralyzation). Further, if a spell or other magical attack would affect both the mount and the Equerry, the mount automatically saves if the rider saves.

**Special Benefits:**

*Inspection.* An Equerry can recognize the relative value of all horses, pegasi, griffons, and other mounts. If an Equerry spends at least 5 rounds visually inspecting a mount and makes a successful Wisdom check, she can determine if it has low value (one-third or fewer than the mount's maximum possible hit points), average value (half the maximum possible hit points), or high value (two-thirds or better of the maximum possible hit points). Any mount an Equerry selects will have +2 hit points per hit die (up to the maximum number of hit points available).

**Special Hindrances:**

*Ethos Violations.* An Equerry violates her ethos if she allows mistreatment of any kind to befall a creature of the same species as her bonded mount.

The Equerry also violates her ethos if she becomes separated from her bonded mount, voluntarily or involuntarily, for more than a week. In addition to applicable ethos violation penalties, the Equerry suffers a –2 penalty to all of her attack rolls, saving throws, and proficiency checks until she reunites with her mount.

Selling or willfully slaying the bonded mount constitutes an evil act, resulting in the permanent loss of the Equerry status, along with all special kit and paladin abilities.

*Mourning.* If her mount dies for any reason other than natural causes, the Equerry suffers a –2 penalty to all attack rolls, saving throws, and proficiency checks for a minimum of one week. These penalties persist until the Equerry completes a quest (determined by the DM) to avenge the mount's death.

## Errant

**Description:** The Errant is an independent warrior who roams the countryside searching for adventure and offering his assistance to any good beings in need. Though he technically owes fealty to a government or church, he has few, if any, formal obligations. His superiors have granted him an indefinite leave of absence to pursue his own interests and make his own way.

An Errant may be granted independence because his government no longer has a need for a standing army, or because his church elders have encouraged him to explore the world outside their jurisdiction and report what he discovers. Most often, however,

governments and churches grant independence for economic reasons. An Errant assumes responsibility for his own equipment and funds, freeing official treasuries for more pressing expenditures.

**Requirements:** Standard.

**Ministration:** Although he may have pledged fealty to a government or a church, an Errant essentially functions as an independent fighter.

**Role:** An Errant is often amiable, cooperative, and eager to ally himself with any party or individual of lawful good intention. His destiny, he believes, is with the gods, and he readily agrees to undertake all good missions that come his way, providing they promise adventure and don't compromise his principles.

Between adventures, an Errant is preoccupied with earning a living. Tournaments provide the best opportunities for income. Because an Errant doesn't depend on government or church sponsorship, he can keep his winnings for training (aside from his tithe).

When tournaments are scarce, an Errant may work as a mercenary for any lawful good government or church. The Errant receives no benefits from this arrangement, other than those specified in his contract. A typical contract includes the following terms:

• *Length of service.* This is often defined in quarter-year periods. Typically, an Errant serves no less than six months, and no more than a year. The Errant pledges temporary fealty to his employer during this time; all obligations to the employer end when the contract expires.

• *Salary.* An Errant is usually paid every quarter-year period, with the first period's payment made in advance. He usually earns 30-50 gp per period, depending on his experience, reputation, and special skills. Without the backing of a government or church, an Errant commands less of a salary than other mercenary paladins (see Chapter 8).

• *Theater of operations.* An Errant is not required to fight for his employer outside of a specified area.

• *Financial obligations.* An Errant furnishes all of his own equipment and assumes responsibility for his own food and supplies. The employer arranges transportation to and from the battlefield if the Errant has no mount of his own. An Errant is *not* allowed to use a loaned mount in battle, unless he agrees in advance to make restitution in case the mount is wounded or killed.

• *Division of spoils.* All hostages, weapons, land, and other spoils of war claimed by the Errant become the property of the employer. A benevolent employer may give the Errant a monetary bonus for such spoils, though the employer is under no obligation to do so.

• *Loaning of services.* While under contract, the employer may loan the services of an Errant to another lawful good liege, a church, or an adventuring party. The employer claims 50% of all treasure or salary obtained by the loaned Errant (because the Errant must also tithe from this money, he forfeits a total of 60% of his income).

**Symbol:** An Errant displays the same symbol as his church or government, or he can design a unique, personal one. Personal symbols might include his initials, a profile of a favorite animal, or a numeral (the age a parent died, the number of siblings in his family, or the day of his birth).

**Secondary Skills:** Farmer, Fisher, Groom, Hunter, Trapper/Furrier.

**Weapon Proficiencies:** *Bonus:* The Errant receives a free specialization in the jousting lance. *Required:* Sword (any).

**Nonweapon Proficiencies:** *Bonus:* Jousting*. *Recommended:* Animal Handling, Bowyer/Fletcher, Endurance, Etiquette, Fire-building, Fishing, Hunting, Mountaineering, Riding (Airborne and Land-based), Survival.

**Armor/Equipment:** At the outset of his career, an Errant receives only 25-100 (5d4¥5) gp. In addition to his weapons, armor, and mount, an Errant must also buy a jousting lance or a lance cup (see Chapter 6) as soon as possible.

**Bonded Mount:** Any.

**Special Benefits:**

Usually, an Errant continues to follow the laws of his government and the tenets of his faith. However, his superiors rarely issue any direct edicts, allowing the Errant to choose his own allies, go where he pleases, and make his own decisions. He seldom has to fight wars, attend state functions, or train novice warriors.

An Errant's superiors expect him to make reports of his activities once a year or so, but this requirement is flexible. An Errant may miss his report date by several months before his superiors consider penalizing him, and even then, the penalty may be suspended if the Errant offers a reasonable excuse.

**Special Hindrances:**

Although an Errant has few of the responsibilities of fealty, neither does he have any of the advantages. He must be totally self-supporting, supplying his own mounts, weapons, shelter, and clothing. He can't count on his church or government for emergency funds, nor can he ask for bodyguards or troops. For a stronghold, he must acquire land through conquest or purchase, as grants, charters, and benefices aren't available.

## Expatriate

**Description:** Like the Errant, the Expatriate has no permanent home, wandering from place to place in search of adventure and acceptance. However, the Expatriate is a nomad by circumstance, not choice. A warrior in exile, the Expatriate has renounced his allegiance to the officials or institution that originally granted him his paladinhood. His government or church may have become corrupt, his superiors may have betrayed their commitment to lawful good principles, or he have may have been dismissed for political reasons. In any case, his disillusionment is complete. He now makes his own decisions.

There are two points in his career when a paladin may become an Expatriate:

1. He may become an Expatriate at 1st level, taking this kit just as he would any other. Presumably, the character was unaware of the corrupt nature of his government or church while being trained, discovering the truth shortly after taking his Oath of Ennoblement. Alternately, a political coup may have occurred early in the character's career, replacing a lawful good regime with an evil one.

2. A character with another paladin kit may abandon it when his superiors betray him or some other dramatic event occurs that prompts him to renounce his fealty. The character may either become a standard paladin (described in the "Abandoning Kits" section later in this chapter) or—with the DM's approval—he may become an Expatriate, retaining his current level (a 3rd-level Errant who renounces his fealty becomes a 3rd-

level Expatriate). The new Expatriate keeps all of his equipment and proficiencies, but drops the Special Benefits and Hindrances associated with his previous kit; he acquires the Special Benefits and Hindrances of the Expatriate kit instead.

**Requirements:** Standard.

**Ministration:** Independent.

**Role:** Though still lawful good, an Expatriate distrusts most formal institutions, including lawful good governments and organized religions. He obeys the dictates of his conscience and his deity only, remaining skeptical of all self-proclaimed and elected authorities. Though courteous and respectful, he no longer automatically follows the orders those holding positions of power. He weighs each request against his own principles, agreeing to a mission or favor only if completely convinced of its merit.

Expatriates are often moody, cynical, and bitter. An Expatriate may feel his good name has been permanently tarnished, a condition he struggles to correct by volunteering for demanding, even dangerous, missions. He remains loyal to his lawful good comrades but resists close friendships. He has little patience with most neutral characters, finding their lack of commitment insipid and contemptible. He crushes his enemies without remorse.

Few governments or churches trust Expatriates enough to hire them as mercenaries. Therefore, Expatriates must rely on treasure or tournament winnings to make a living.

**Symbol:** If an Expatriate carries a symbol of his former government or church, he defaces it with slashes or scratches to proclaim his independence.

**Secondary Skills:** Armorer, Farmer, Fisher, Forester, Groom, Hunter, Leather Worker, Miner, Scribe, Trapper/Furrier, Weaponsmith, Woodworker/Carver.

**Weapon Proficiencies:** Any.

**Nonweapon Proficiencies:** Any.

**Armor/Equipment:** Standard.

**Bonded Mount:** Any.

**Special Benefits:**

*Self-Reliance:* An Expatriate comes and goes as he pleases, subservient to no one. He has no edicts to follow, other than those imposed by his deity or his own principles.

*Reaction Bonus:* An Expatriate remains a hero to the peasants and other oppressed people of his homeland, who admire him for his integrity and sterling character; from all those not associated with the officials of his former government or church, he receives a +2 modifier to his reaction rolls. To commoners of other lands familiar with his reputation, he also receives a +2 reaction modifier. Additionally, he will be given food and shelter from all commoners whose modified reaction is Friendly. This courtesy extends to any companions, so long as he vouches for them.

**Special Hindrances:**

*Self-Reliance:* Independence also has its drawbacks. As with the Errant, the Expatriate has no government or church to provide loans, supplies, or support. He may build a stronghold if he saves enough money, but he isn't eligible for property grants, charters, or benefices.

*Reaction Penalty:* Elite NPCs are reluctant to associate too closely with an Expatriate, fearing they might invite the wrath of the Expatriate's former government or church. Therefore, sensing the Expatriate's discomfort and distrust, all characters in positions of power suffer a –2 modifier to their reaction rolls.

*Fugitive Status:* Officials of the Expatriate's original government or church consider him an embarrassment at best, a traitor at worst. An Expatriate is constantly hunted and harassed by his ex-employers, who may seek to punish, arrest, or even execute him.

## Ghosthunter

**Description:** The Ghosthunter is obsessed with finding and destroying evil undead, including ghosts, spectres, liches, and vampires. To further his goals, the Ghosthunter's deity has provided him with special powers to vanquish his nemeses and resist their evil magic.

**Requirements:** Standard.

**Ministration:** Any; Independent most common.

**Role:** A Ghosthunter allies with any acceptable adventuring party that seems likely to encounter his hated foes. Given the opportunity, a Ghosthunter will explore every crypt, cemetery, and abandoned castle to search for undead, attacking relentlessly until the last of them fall or the party leader orders him to withdraw. While a Ghosthunter shares all paladins' hatred of evil, destroying undead is his primary objective.

A singleminded Ghosthunter may try the patience of his most sympathetic companion. Often withdrawn and grim, he prefers solitude to socializing. His reticence makes him a poor leader, as he often has difficulty focusing on the party's overall mission. A Ghosthunter may resist following orders if he disagrees with his party's strategy (if he can so do without violating his ethos) and strike out on his own ceaseless hunt for undead.

**Symbol:** Gravestone, broken scythe.

**Secondary Skills:** Hunter, Mason, Miner, Scribe, Weaponsmith.

**Weapon Proficiencies:** Any.

**Nonweapon Proficiencies:** *Recommended:* Ancient History, Blind-fighting, Languages (Ancient), Local History, Spellcraft, Tracking.

**Armor/Equipment:** Standard.

**Bonded Mount:** Any.

**Special Benefits:**

*Dispel Evil:* At 5th level, a Ghosthunter acquires the innate ability to cast *dispel evil* once per day. The spell requires no components, but otherwise operates the same as the 5th-level priest spell of that name. The number of times he can cast this spell increases as he advances in level (see Table 17).

*Paralysis Immunity:* Ghosthunters of all levels have a 95% immunity to paralysis caused by undead. Additionally, all Ghosthunters have the innate ability to cast *remove paralysis*. The spell requires no components, but is otherwise identical to the 3rd-level priest spell of the same name. The number of times he can cast this spell increases as he advances in level (see Table 17).

### Table 17: Ghosthunter Abilities

| Level | Dispel Evil* | Remove Paralysis* |
|---|---|---|
| 1-4 | - | 3 |
| 5-9 | 1 | 4 |

| | | |
|---|---|---|
| 10-14 | 2 | 5 |
| 15-19 | 3 | 6 |
| 20+ | 4 | 7 |

* Times per day.

*Improved Ability to Turn Undead:* A Ghosthunter turns undead as a cleric of the same level (as shown in Table 18).

*Holy Sword Availability:* The Ghosthunter's deity might give the Ghosthunter an opportunity to acquire a *sword +3 Purifier* (see Chapter 6) at some point before he reaches 6th level. The DM determines the circumstances, as per the guidelines in Chapter 2; remember that availability does *not* guarantee acquisition.

**Special Hindrances:**

The Ghosthunter has fewer of the special abilities normally associated with paladins (described in Chapter 2):

- He can't restore hit points by laying on hands.
- He can't learn or cast priest spells.
- He has no magical immunity to diseases.
- He can't cure diseases in others.

### Table 18: Turning Undead (Ghosthunter)

| Ghosthunter | Category of Undead | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Level** | **1** | **2** | **3** | **4** | **5** | **6** | **7** | **8** | **9** | **10** | **11** | **12** | **13** |
| 1 | 10 | 13 | 16 | 19 | 20 | - | - | - | - | - | - | - | - |
| 2 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - | - | - | - | - |
| 3 | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - | - | - | - |
| 4 | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - | - | - |
| 5 | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - | - |
| 6 | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - | - |
| 7 | D | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - | - |
| 8 | D* | D | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 | - |
| 9 | D* | D* | D | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 | 20 |
| 10-11 | D* | D* | D* | D | D | T | T | 4 | 7 | 10 | 13 | 16 | 19 |
| 12-13 | D* | D* | D* | D* | D | D | T | T | 4 | 7 | 10 | 13 | 16 |
| 14+ | D* | D* | D* | D* | D* | D | D | T | T | 4 | 7 | 10 | 13 |

**Key to Undead Categories**

1: Skeleton (or 1 HD undead)
2: Zombie
3: Ghoul (or 2 HD undead)
4: Shadow (or 4 HD undead)
5: Wight (or 5 HD undead)
6: Ghast
7: Wraith (or 6 HD undead)
8: Mummy (or 7 HD undead)
9: Spectre (or 8 HD undead)

10: Vampire (or 9 HD undead)
11: Ghost (or 10 HD undead)
12: Lich (or 11+ HD undead)
13: Special undead, including one-of-a-kind creatures, free-willed undead of the Negative Plane, outer planes undead, and certain Greater and Lesser powers (baatezu, tanar'ri, etc.).

* An additional 2d4 creatures of this type are turned.

## Inquisitor

**Description:** The Inquisitor has devoted his life to finding and eliminating practitioners of evil magic. A scholar as well as a warrior, he is unyielding in his efforts to thwart the clerics and wizards who have aligned with the forces of darkness.

**Requirements:** An Inquisitor must have a minimum Intelligence score of 11.

**Ministration:** Any.

**Role:** To an Inquisitor, magic is a sacred force, and he detests those who use it for evil. An evil spellcaster who refuses to renounce his corrupt ways invites the Inquisitor's wrath.

The typical Inquisitor is intense and analytical, more interested in quiet reflection than small talk. Though private by nature, an Inquisitor establishes deep friendship in those he comes to trust, particularly good-aligned wizards and clerics.

**Symbol:** Open book, candle, flaming brazier.

**Secondary Skills:** Groom, Limner/Painter, Scribe, Weaponsmith, Woodworker/Carpenter.

**Weapon Proficiencies:** Any.

**Nonweapon Proficiencies:** *Required:* Spellcraft, Religion. *Recommended:* Astrology, Languages (Ancient and Modern), Reading/Writing.

**Armor/Equipment:** Standard.

**Bonded Mount:** Any.

**Special Benefits:**

*Detect Evil Magic:* An Inquisitor can detect magic radiating from any being, object, or location enchanted by an evil being. This ability functions at will, subject to the same limitations and restrictions as his ability to *detect evil intent*, described in Chapter 2. He may also perceive the intensity of the magic (faint, moderate, strong, overwhelming); the sensations are like those listed in Table 11 in Chapter 2. A protective spell cast by an evil necromancer upon himself could be detected in this manner, as could a magical trap set by an evil priest.

*Dispel Evil Magic:* At 3rd level, an Inquisitor acquires the ability to cast *dispel magic*. The spell requires no verbal or somatic components, but affects only evil spells and spell-like effects. The spell has a base success chance of 100% and is cast at the level of the Inquisitor. Aside from these qualifications, it operates exactly like the third-level priest spell. The number of times he can cast this spell increases as he advances in level (see Table 19).

*Immunity to Illusions:* An Inquisitor has an 80% plus 1%/level immunity to illusion spells of all levels. This immunity has a limit of 95%. (A 12th-level Inquisitor as a 92% immunity; a 16th-level Inquisitor has a 95% immunity.)

### Table 19: Frequency of Dispel Evil Magic

| Level | Dispel Evil Magic* |
|---|---|
| 1-2 | - |
| 3-5 | 1 |
| 6-8 | 2 |
| 9-11 | 3 |
| 12-14 | 4 |
| 15-17 | 5 |
| 18+ | 6 |

* Times per day.

*Immunity to Possession and Mental Control:* Inquisitors of all levels have a 90% immunity to all possession and mental-control spells, including *charm, domination, hold person, hypnotism, magic jar*, and *suggestion.*

**Special Hindrances:**

An Inquisitor has fewer of the special abilities normally associated with paladins (described in Chapter 2):

- He can't restore hit points by laying on hands.
- He can't ever learn or cast priest spells.
- He can't turn undead.
- He can't cure diseases in others, though he himself is immune to all forms of disease.

## Medician

**Description:** The Medician seeks to treat the sick, alleviate suffering, and save lives. Much of her training has been devoted to medical arts, and she follows a religion whose deities promote healing and compassion. On the battlefield, she is as likely to be found comforting a wounded comrade as engaging an enemy in swordplay. Though as much an enemy of evil as any paladin, the Medician has decided that she can best uphold her principles by fighting injury and disease.

**Requirements:** The Medician must have an Intelligence score of at least 10.

**Ministration:** Any.

**Role:** A Medician candidate undergoes rigorous training in a variety of demanding courses, including herbalism, anatomy, and diagnostics. After completing her academic studies, she must spend at least a year as an apprentice to an experienced medical practitioner. Because of the length of her training, a candidate rarely becomes a 1st-level Medician before she reaches her early-to-mid twenties.

A Medician assumes the role of healer whether at home or in the field with an adventuring party. She brews antidotes for poisons, sets broken bones, applies poultices to festering wounds, and stays up all night with ailing mounts. In her free time, the Medician experiments with new treatments, develops new diagnostic techniques, and compiles notes of past cases to share with other healers.

A Medician will never abandon or neglect wounded, diseased, or suffering lawful good characters (or creatures). Should no lawful good patients require attention, most Medicians will apply their skills to neutral characters and creatures. However, only in extraordinary circumstances will a Medician knowingly treat an evil character or creature.

**Symbol:** A holy symbol with a heart, open hand, silhouette of an infant, cross, or drop of blood.

**Secondary Skills:** Farmer, Groom, Scribe.

**Weapon Proficiencies:** The Medician spends so much time with academic studies that her combat skills invariably suffer. Therefore, the Medician has only *one* weapon proficiency at 1st level; this slot must be spent on either lance (any), battle axe, or sword (any). She receives a second weapon proficiency at 3rd level and a third at 6th level; she receives a total of three weapon proficiencies for her entire career. She may chose any weapon to fill her second and third slots.

**Nonweapon Proficiencies:** *Bonus:* Diagnostics*, Healing. *Limit:* Because her mastery of the healing arts comes at the expense of other skills, a Medician may acquire no more than three proficiencies beyond her bonuses. She has only a single proficiency slot to spend at 1st level, another at 3rd level, and a final slot at 6th level. *Recommended:* Ancient History, Animal Handling, Animal Lore, Animal Training, Heraldry, Herbalism, Languages (Ancient or Modern), Reading/Writing, Religion, Riding (Airborne or Land-based). *Forbidden:* Blind-fighting, Bowyer/Fletcher, Jousting*, Weaponsmithing.

**Armor/Equipment:** In addition to her standard equipment, the Medician must purchase and maintain a set of healing equipment. A typical set includes needles for stitching wounds, cloth bandages, tourniquets, splints, sterilizing ointments, and a selection of non-magical potions and herbs (for soothing headaches, settling stomachs, and reducing fevers; these items don't heal damage). The initial cost of a kit is 50 gp. At least once a month, the Medician must replenish her kit either by buying new supplies (1-4 gp) or scavenging them (which takes 1-4 days). Until the Medician replenishes her kit, she can't take advantage of any of the proficiency bonuses listed in the Special Benefits section. The kit weighs 1 lb.

**Bonded Mount:** Any.

**Special Benefits:**

A Medician has all of the following proficiency bonuses:

• A +1 bonus to all Diagnostics proficiency checks. (If the Medician acquires the Herbalism proficiency, she has an additional +3 bonus; this brings the total Diagnostics bonus to +4. See Chapter 5 for the Diagnostics proficiency.)

• A +1 bonus for all Healing proficiency checks. A successful check enables her to restore 1d4 points of damage if applied within three rounds of wounding (instead of 1-3 points within one round).

• If under the care of a Medician, a patient recovers 1 additional hit point per day (2 points per day if the patient travels, and 4 points per day if the patient rests).

• If a Medician spends five consecutive rounds caring for a poisoned patient, the patient receives a +4 bonus to his saving throw (made at the end of five rounds). If the care is interrupted, the patient saves normally.

**Special Hindrances:**

Once per year, a Medician must suspend all normal activities and spend 2-5 (1d4+1)

consecutive weeks at a university, hospital, monastery, or any other lawful good institution that offers both religious and medical training. During this period, the Medician refreshes her skills through prayer and study. Failure to comply results in the loss of all proficiency bonuses listed in the Special Benefits section. As a punishment from her deity, the Medician also loses her disease immunity and the ability to heal by laying on hands. She regains all benefits and special abilities as soon as she completes a 2-5 week stay.

## Militarist

**Description:** The Militarist is a battlefield virtuoso. War is a sacred act, he believes, and a chance for spiritual redemption. By defeating enemies in combat, he pays tribute to his gods and secures his place in the afterlife.

**Requirements:** A Militarist must have a minimum score of 12 in both Dexterity and Constitution.

**Ministration:** Government or Church.

**Role:** Typically, a Militarist serves as an officer in an army or other military organization. In wartime, he commands forces in the field, or engages in specialized operations, involving reconnaissance, rescue, or sabotage. He works alone or with a select group of elite soldiers. In peacetime, he protects his liege's stronghold, supervises training of recruits, and sharpens his fighting skills. He stands ready to travel to any part of the world to defend the interests of his government or church.

A Militarist commands the respect of nobles and peasants alike. Often, his reputation approaches legendary status; citizens line the streets and cheer when a renowned Militarist passes through their village. Militarists tend to bask in such adulation, pausing to exchange a few words with starstruck adolescents or kiss the hands of swooning maidens. They also enjoy the trappings of their station, eager to accept awards for military excellence and rarely refusing invitations to royal affairs.

In combat, the Militarist naturally assumes a leadership role. His companions will find him to be a shrewd and fearless commander who relishes every opportunity to engage the enemy. Off the battlefield, the Militarist tends to withdraw, maintaining a professional but distant relationship with his comrades. He has little interest in non-military activities, spending most of his free time discussing strategy and tactics with like-minded warriors, or brushing up on his combat techniques.

**Symbol:** Any symbol with military connotations, such as a weapon or a clenched fist.

**Secondary Skills:** Armorer, Weaponsmith.

**Weapon Proficiencies:** The Militarist must select one of the following to be called his *preferred weapon:* sword (any), lance (any), battle axe, horseman's flail, horseman's mace, horseman's pick. *Recommended:* Any sword, any lance, battle axe, dagger, horseman's flail, horseman's mace, horseman's pick. Because Militarists prefer mounted combat, they rarely become proficient with bows, slings, and other missile weapons difficult to use on horseback.

**Nonweapon Proficiencies:** Because the Militarist concentrates on military skills, he can substitute weapon proficiencies for nonweapon proficiencies (but not vice versa). He must expend half of his nonweapon proficiencies in this fashion. *Bonus:* Land-based Riding. *Recommended:* Armorer, Blind-fighting, Endurance, Jousting*, Weaponsmithing.

**Armor/Equipment:** Standard. A Militarist prefers plate armor, but will settle for chain mail if that's all he can afford. However, as soon as his economic condition improves, he *must* buy plate armor. A Militarist proudly displays all military ribbons, medals, and commendations on his clothing and shield.

**Bonded Mount:** Any war horse.

**Special Benefits:**

*Mounted Combat Bonus:* A superb rider, a mounted Militarist makes attacks as if he were one level higher; a 3rd-level Militarist, for instance, attacks as if he were 4th level. He attacks as if two levels higher when riding his bonded mount. At 19th level, he attacks at one level higher regardless of his mount. A 20th-level Militarist isn't eligible for these bonuses.

When making an attack with his preferred weapon, the Militarist has a +1 damage bonus. Damage bonuses don't apply in jousts or other tournament competitions where the intent is to dismount or disarm, not inflict damage. They do apply to nonlethal attempts to subdue an opponent.

*Reaction Bonus:* The Militarist receives a +2 reaction roll from all good and neutral characters of his own culture. Evil characters respond normally.

*Honors:* As he advances in level, the Militarist receives the honors listed in Table 20. The honors presume loyal service and no significant ethos violations. The DM may withhold any honor he feels the Militarist doesn't deserve.

### Table 20: Militarist Honors

| Level | Honor |
|---|---|
| 2 | Ceremonial banquet in Militarist's honor |
| 3 | Receives a special crest for his helmet (see Chapter 6) |
| 5 | Receives a ceremonial coif (see Chapter 6) |
| 7 | Eligible to receive interest-free loans of up to 500 gp from his government or church (the DM may adjust the loan amount) |
| 9 | Land grant from his church of government (size and location determined by the DM) |
| 10 | Church or government officials screen Militarist's potential hirelings; all such employees are guaranteed lawful good (the Militarist retains the option to hire; he must also negotiate salaries and other conditions of employment) |

**Special Hindrances:**

*Regular Training:* The Militarist must spend at least one hour per day practicing his combat and riding skills. If he neglects to practice, he loses his mounted combat bonuses (see Special Benefits) for the following day. The DM may exempt the Militarist from this training requirement if he's spent an hour that day (60 rounds) in actual combat.

*Regular Reports.* A Militarist must return to his home base at least once every six months to report to his government or church officials. The report includes the status of current military operations, observations of enemy activity, and any information requested by his superiors. The Militarist may be excused from making a report if he makes prior arrangements. Otherwise, failure to report constitutes an ethos violation.

## Skyrider

**Description:** The Skyrider is a warrior of the air. Carried by his airborne mount, he soars through the clouds with the grace of an eagle and the precision of an arrow in flight. He serves as a defender of both the skyways and the earth.

The Skyrider owes his skills to his unusual relationship with his mount. In certain wilderness societies, tribal elders select the brightest and strongest children to be Skyrider candidates. The elders match each child with a young flying mount. The child and mount are encouraged to share much time training, playing, even sleeping together. Within a few years, their bond is so strong that the mount responds to the rider almost intuitively.

**Requirements:** Standard. Most Skyriders come from wilderness areas where flying mounts are more practical than land mounts. Flying mounts can monitor stretches of open countryside easier than ground mounts, and have less trouble navigating mountains and other hostile terrain.

**Ministration:** Any, with Mentor and Independent the most common.

**Role:** Though Skyriders make excellent scouts and explorers, they're particularly useful as soldiers. Their flying mounts enable them to move quickly to distant locations, irrespective of rivers, chasms, or other obstacles. They can target enemies on the ground, breech stronghold walls, and swoop around enemy forces to attack from behind. They can undertake reconnaissance missions to determine the size of enemy armies and monitor their movement.

In peacetime, a Skyrider can take advantage of his bird's-eye view to look for virgin farmland and new trade routes. He can also watch for natural disasters, such as forest fires and floods. Some teach themselves to track tornadoes and hurricanes, warning those in a storm's path to take shelter. A Skyrider can deliver supplies to isolated villages, rescue trapped explorers, and visit distant islands without a ship.

A Skyrider fulfills many of these same functions in an adventuring party, scouting ahead for signs of trouble, attacking enemies from the air, and crossing hostile terrain to deliver messages and goods. Because a Skyrider often prefers the company of his mount to that of other people, his companions may find him cold and aloof.

**Symbol:** Any symbol that suggests flight, such as a pair of wings or the profile of a bird.

**Secondary Skills:** Farmer, Forester, Hunter.

**Weapon Proficiencies:** Any. Because Skyriders don't suffer the normal mounted missile fire penalties (see the Special Benefits section below), many choose proficiencies in the longbow, crossbow, or sling.

**Nonweapon Proficiencies:** *Bonus:* Airborne Riding. *Recommended:* Direction Sense, Hunting, Tracking, Weather Sense. *Forbidden:* Jousting*.

**Armor/Equipment:** Standard. Usually, the Skyrider must purchase high-quality, customized tack for his flying mount to ensure maximum comfort and maneuverability. Depending on the size and species of the mount, customized tack (including bit, bridle, halter, and saddles) costs 20-40 gp. The Skyrider should also consider full barding for his mount (preferably leather).

**Bonded Mount:** Griffon, giant eagle, pegasus, hippogriff, or any other type of flying mount indigenous to the Skyrider's homeland. The Skyrider acquires his bonded mount at 1st level.

**Special Benefits:**

*Combat and Proficiency Bonuses:* When airborne, all nonmissile attacks made by either the bonded mount or the Skyrider receive a +1 modifier to hit. This includes attacks made against ground or airborne targets, along with all situations covered in the Aerial Combat rules in Chapter 9 of the *DMG*. For missile combat, use the modifiers in Table 21.

### Table 21: Skyrider Mounted Missile Fire

| Mount's Current Movement | Modifier |
|---|---|
| Hovering, less than 1/2 normal rate | +1 |
| 1/2 to 3/4 normal rate | 0 |
| Greater than 3/4 normal rate | –2 |

Additionally, the Skyrider receives a +2 bonus to Airborne Riding proficiency checks for feats involving his bonded mount.

*Longer Relationship:* Under normal conditions, a bonded mount remains with its Skyrider for 15 years.

*Faster Training:* The Skyrider can teach his bonded mount a trick in 2-5 (1d4+1) days, a task in 1-2 weeks. Like other bonded mounts, the Skyrider's mount can learn 9-20 tricks and tasks, in any combination.

*Telepathic Communication:* When the Skyrider reaches 12th level, he gains the ability to communicate telepathically with his bonded mount, sending and receiving mental messages at will. This ability's range is 10 times the Skyrider's level, in feet.

**Special Hindrances:**

*Mourning:* When the Skyrider loses his bonded mount, he feels the loss intensely. If the bonded mount was lost because of the Skyrider's actions—for instance, the Skyrider's carelessness resulted in the mount's death, or the mount left because the Skyrider was stripped of his paladinhood—the Skyrider mourns for 2-5 (1d4+1) months. If the bonded mount served its full 15 years, or the Skyrider voluntarily releases it, the Skyrider mourns for 2d4 weeks. During the mourning period, the Skyrider suffers a –2 penalty to all attack, ability, and proficiency rolls.

## Squire

**Description:** Historically, a Squire functioned as an apprentice, serving his master both at home and on the battlefield while honing his skills. When his training ended, the Squire became a paladin himself, sometimes continuing the cycle by taking on a Squire of his own.

Occasionally, however, Squires made a career of service. By choice or circumstance, the Squire has spent his life as an aide to a high-ranking paladin, an elder of his church, or a government official. Although never quite attaining the status of other paladins, the career Squire—the type described in this kit—commands respect for his loyalty and devotion to duty.

**Requirements:** There are no rigid requirements for a Squire, but the player should consider why the character would opt for this kit, which offers less status than a full

paladin but demands the same adherence to an ethos. Some possibilities include:

• The character doesn't want all the responsibilities associated with a full paladin.

• The character lacks the noble blood required of full paladins in his culture.

• The character's paladin ancestor committed an ethos violation so severe that his descendants were forbidden to become full paladins.

The player may also name the master his Squire will serve. The master is usually a high-level paladin, but can also be an aristocrat, a military officer, or a church dignitary. The master may be another PC, but this isn't recommended, as complications may arise if the PC master is unavailable for a particular adventure or drops out of the campaign.

Preferably, the player should select an NPC paladin to be the Squire's master, approved of and controlled by the DM. For convenience and expediency, the NPC operates "offstage"—that is, he rarely, if ever, makes an actual appearance in the campaign. The master may be infirm, permanently confined to bed in his stronghold, or perhaps his duties have indefinitely taken him to the other side of the world. Squire and master communicate through messengers or intermediaries, or they may arrange meetings between adventures. Alternately, the master may be dead; rather than finding a new master, the Squire dedicates the rest of his career to the master's memory. In any case, the Squire carries out the master's wishes, looks after his interests, and represents him in quests and adventures.

**Ministration:** A Squire takes orders from his master. If the master is dead, the Squire obeys the master's heir.

**Role:** A Squire performs household chores, cares for horses, and maintains weapons. If he has the appropriate skills, he may also cook meals, repair clothing, or do leatherwork. These functions may be part of his regular duties, or he may take it upon himself to help out; Squires are eager to pitch in when there's work to be done.

Despite their reputation for dedication and hard work, Squires lack the stature of other paladins. They are rarely invited to state banquets or other formal functions, except as waiters or chefs. They never become high-ranking military officers, nor are they eligible for the honors available to other paladins. (If a Chevalier and a Squire are equally responsible for defeating an enemy army, the Chevalier may receive a festival in his honor and a gift of a golden spurs; the Squire may have to settle for a pat on the back.) While commoners respect the Squire, open admiration is rare; unfairly or not, many believe that career Squires have some deficiency that prevents them from becoming full-fledged paladins.

A Squire's party finds him a tireless worker and supportive companion. He graciously volunteers his aid to whomever needs it; he's always willing to repair a torn tunic for a comrade who can't sew, groom the horse of a friend who's too tired to do it himself, or teach a novice the way to hold a shield. He avoids leadership roles, deferring to those in authority positions, but follows orders to the letter. No job is too menial, no request too trivial.

**Symbol:** The Squire adopts the same symbol as his master.

**Secondary Skills:** Armorer, Groom, Tailor/Weaver, Weaponsmith, Woodworker/Carpenter.

**Weapon Proficiencies:** Any.

**Nonweapon Proficiencies:** *Recommended:* Armorer, Blacksmithing, Brewing, Carpentry, Cobbling, Cooking, Etiquette, Leatherworking, Seamstress/Tailor,

Weaponsmithing, Weaving.

**Armor/Equipment:** Standard. The master will usually supply all basic equipment at no charge, including a suit of chain mail, a short sword, a lance, a dagger, a mount (usually a riding horse or light war horse), and tack. Unless the Squire loses equipment through carelessness or ineptitude, the master will also supply replacements.

**Bonded Mount:** Mounts of higher intelligence, such as unicorns or pegasi, are rarely drawn to Squires, nor are unusually strong war horses, such as greater or standard paladin mounts. Medium war horses, light war horses, and riding horses are the most likely mounts.

**Special Benefits:**

*Punishment Buffer:* Technically, the master is responsible for the Squire's actions. Therefore, if a Squire commits a crime or some other indiscretion, the master may share the punishment or speak on the Squire's behalf to have the punishment suspended. In game terms, the DM has the option of reducing or setting aside punishments when the Squire commits minor ethos violations. For instance, if the Squire accidently insults an aristocrat, the DM may let him off with a warning rather than have him perform a penance (offstage, the master has taken the punishment for the Squire, apologized on his behalf, or bargained for a reduced punishment). The Squire takes full responsibility for all serious ethos violations; the master can't—or won't—help him.

*Economic Advantages:* The master not only supplies his Squire with basic equipment, he also pays him a regular stipend, typically 5-10 gp per month. (The Squire must tithe from this stipend as he would any other income.) The master may also be able to supply other needed equipment for free or at a reduced cost, and loan money with little or no interest.

**Special Hindrances:**

*No Privileged Relationships.* A Squire has no special access to officials, sages, and other elite characters, unless his master paves the way.

*Subservience:* A Squire can't marry, undertake a long trip, or make any other major decision without his master's permission. The master decides where the Squire's tithes go, how much treasure he may keep, and if a particular mission is worth the Squire's time. If the master is dead, the Squire must pray to the master's spirit; the master's answer will come in a dream, or as decided by the DM.

The Squire may also be required to meet regularly with the master—say, at least once a year. Failure to show up constitutes an ethos violation. If the master is dead, the Squire must visit his grave and commune with his spirit.

Additionally, a Squire must obey the orders of *all* paladins, not just his master, including those whose levels are lower than his.

*No Strongholds.* In most cultures, law and tradition prevent Squires from building strongholds or holding real estate. The DM may make an exception for a high-level Squire (at least 15th level) who demonstrates outstanding service (he saves the king's life or rescues a kidnapped prince). Even then, a Squire is most likely to be a trustee or regent.

## Votary

**Description:** Like Divinates, the devoutly religious Votaries function as soldiers of

their church. But Votaries are far more militant, considering devotees of "false" religions as the epitome of evil. Additionally, Votaries follow an unusually strict ethos that includes vows of poverty and chastity.

**Requirements:** Standard.

**Ministration:** Church. A Votary rarely pledges fealty to a government, unless the government is subservient to her church.

**Role:** The typical Votary is grim, self-obsessed, and quick to judge. She believes her church is the only true one and is suspicious of all other religions. She behaves with stony civility to priests of other lawful faiths and open skepticism to priests of neutral faiths. Followers of evil faiths, she believes fervently, deserve nothing less than death.

The Votary maintains an ascetic, ordered life. She owns few personal possessions, avoids strong drink, and even declines to eat heavily seasoned food. She disapproves of gaming, dancing, and other entertainment as childish distractions. Concern for personal grooming is a distasteful affectation (and not a requirement of the Votary's ethos). Some votaries leave their hair uncombed and beards shaggy "as the deity intended," devoting only as much effort to personal hygiene as necessary for good health and minimal courtesy. Whereas a Votary is as susceptible to courtly love as any other paladin (see Chapter 7), she would *never* consider approaching the person she desires; her passion would likely manifest as guilt and shame.

Many commoners admire the Votary for her dedication and discipline, but some see her as an intimidating, even frightening, fanatic. Her humorless outlook and self-righteousness attitude tend to discourage close friendships.

**Symbol:** A Votary displays the holy symbol of her church *only* on her shield. She never carries a flag or banner except on official business, nor will she attach her symbol to her armor, mount barding, or other possessions; she considers such displays gaudy and vulgar.

**Secondary Skills:** Groom, Hunter, Scribe.

**Weapon Proficiencies:** Any.

**Nonweapon Proficiencies:** *Recommended:* Ancient History, Endurance, Healing, Languages (Ancient and Modern), Religion, Tracking. *Forbidden:* Brewing, Cooking, Dancing, Etiquette*, Gaming, Jousting*, Musical Instrument, Poetry*, Pottery, Singing.

**Armor/Equipment:** A Votary owns no possessions aside from her weapons, armor, and the minimal gear and supplies necessary to carry out her missions. She never purchases the formal attire described in the Clothing and Special Items section of Chapter 6, nor will she decorate her armor or clothing with jewels, gold trim, or ornaments.

**Bonded Mount:** Any.

**Special Benefits:**

*More Spells:* Because of her intense devotion to his deity, the Votary has more spells than other paladins and learns them when she reaches 6th level. Table 22 details the spell progression.

### Table 22 : Votary Spell Progression

| Votary | Casting | Priest Spell Levels | | | |
|---|---|---|---|---|---|
| Level | Level | 1 | 2 | 3 | 4 |
| 6 | 1 | 1 | - | - | - |
| 7 | 2 | 2 | - | - | - |

| | | | | | |
|---|---|---|---|---|---|
| 8 | 3 | 2 | 1 | - | - |
| 9 | 4 | 3 | 2 | - | - |
| 10 | 5 | 3 | 2 | 1 | - |
| 11 | 6 | 4 | 2 | 1 | - |
| 12 | 7 | 4 | 2 | 2 | - |
| 13 | 8 | 4 | 2 | 2 | 1 |
| 14 | 9 | 4 | 3 | 2 | 1 |
| 15 | 9 | 4 | 4 | 2 | 1 |
| 16 | 9 | 4 | 4 | 3 | 1 |
| 17 | 9 | 4 | 4 | 3 | 2 |
| 18 | 9 | 4 | 4 | 3 | 3 |
| 19 | 9 | 4 | 4 | 4 | 3 |
| 20 | 9 | 4 | 4 | 4 | 4 |

*Hated Faith:* The Votary earns a combat bonus when fighting enemies of a particular evil faith. The evil faith must be designated at the outset of her career; only a single faith may designated, and once chosen it will never change. Acceptable choices include faiths of a particular being (such as an ogre religion) or region (a religion indigenous to a particular jungle or mountain range). A Votary earn a +4 bonus to her attack rolls when fighting priests or followers of the hated faith. The Votary must recognize the priests and followers of the hated faith in order to receive the bonus, identifying them by symbols, gestures, garb, or rituals.

**Special Hindrances:**

*Reaction Penalty:* A Votary displays obvious enmity toward priests of other faiths. Lawful good priests of faiths other than the Votary's suffer a –2 penalty to their reaction rolls; their reaction can be no better than Indifferent. Neutral priests suffer a –4 penalty; their reaction can be no better than Cautious.

*Extra Tithes:* A Votary must donate 50% of all income to her church.

*Celibacy:* The Votary must incorporate a vow of celibacy into her ethos.

*No Strongholds or Hirelings:* By choice, a Votary never builds a stronghold; instead, she lives in a church, monastery, or temple. Nor does she hire henchmen or other hirelings, a wasteful expense.

## Wyrmslayer

**Description:** The Wyrmslayer is the sworn enemy of evil dragons and has devoted his life to their destruction. Battle-hardened and fiercely determined, the Wyrmslayer roams the world in search of the hated creatures. Even the mightiest evil dragons tremble at the approach of a Wyrmslayer, as few humans pose a greater threat.

Only a select few qualify to become Wyrmslayers, with the final choice up to the gods. If a candidate meets the basic physical requirements, he declares his intention to become a Wyrmslayer before he takes his Oath of Ennoblement. As part of his oath, he pledges to destroy all evil dragons, singling out a particular species as his *principal foe*. The principal foe can be a black, blue, green, red, white, or any other evil species prominent in the campaign world. Once a candidate names his principal foe, it remains the same for the rest of his career.

After completing his oath, the candidate becomes a standard 1st-level paladin (as described in the *PH*). That night, a lawful good deity appears to him in a vision, giving him a quest to demonstrate his courage. Typical quests include:

- Retrieving an egg from the nest of a principal foe.
- Finding and destroying the lair of a principal foe.
- Singlehandedly defending a village from an attack by a principal foe.

The quest must be completed within a specified time limit, usually 1-2 years. If the paladin fails to complete the quest, he remains a standard paladin forever after; he can never become a Wyrmslayer, nor may he choose another kit. If he completes the quest, the deity grants him the special attributes described below; the paladin is then a Wyrmslayer. The Wyrmslayer retains the same level he had as a standard paladin; that is, if the paladin had risen to 2nd level before completing his quest, he becomes a 2nd-level Wyrmslayer.

**Requirements:** A Wyrmslayer must have a minimum Strength of 14, Dexterity of 10, and Constitution of 10.

**Ministration:** Any.

**Role:** Just as the Ghosthunter is obsessed with destroying undead, so is the Wyrmslayer obsessed with killing evil dragons. Nomadic and restless, the Wyrmslayer spends most of his time searching for his nemeses. Even Wyrmslayers formally affiliated with governments or churches have unusual freedom of movement; their superiors know that Wyrmslayers function best when left alone.

Though preferring to operate by themselves, Wyrmslayers will join adventuring parties if their travels take them through dragon territory. A Wyrmslayer fulfills his fealty obligations as well as any paladin, yet he may withdraw and brood if he goes too long without engaging his principal enemy. His eagerness to battle evil dragons impresses some as courageous, others as foolhardy. No one, however, doubts his resolve.

**Symbol:** Dragon profile, skull, claw, or wing; crossed lances.

**Secondary Skills:** Armorer, Forester, Hunter, Weaponsmith.

**Weapon Proficiencies:** *Bonus:* Any one of the weapons from the restricted list. *Restricted:* A Wyrmslayer may be proficient in the following weapons only, all of which inflict high damage to large targets: heavy horse lance, medium horse lance, awl pike, bardiche, glaive-guisarme, spetum, long sword, two-handed sword, trident.

**Nonweapon Proficiencies:** *Bonus:* Animal Lore (only as applied to his principal foe; he cannot imitate its call; if the Wyrmslayer spends a slot, he acquires the Animal Lore proficiency described in the *PH*). *Recommended:* Armorer, Direction Sense, Endurance, Healing, Hunting, Mountaineering, Riding (Airborne or Land-based), Survival, Tracking, Weaponsmithing.

**Armor/Equipment:** A Wyrmslayer must have at least plate mail armor, preferably full plate. He must also have a shield, at least medium in size.

When a paladin completes his quest and becomes a full-fledged Wyrmslayer, his deity enchants his shield to magically protect the Wyrmslayer against dragon breath. If the Wyrmslayer makes a successful saving throw vs. breath weapon, the breath weapon causes no damage. If the throw fails, the Wyrmslayer suffers half damage. The magic functions *only* when the Wyrmslayer wields that shield; it functions as a normal shield when wielded by other characters. The enchanted shield counts against the Wyrmslayer's magical item limit.

**Bonded Mount:** Either a standard paladin war horse or a flying mount.

**Special Benefits:**

*Dragon Languages:* A Wyrmslayer can speak and understand the languages of all evil dragons.

*Fear Immunity:* A Wyrmslayer is immune to the fear aura of his principal foe. He gains a +4 bonus to his saving throws to avoid the effects of fear from all other species of evil dragons. His bonded mount shares this immunity, but normal mounts do not.

*Damage Bonus:* When a Wyrmslayer makes a successful weapon attack against his principal foe, he receives a damage bonus equal to his level. For example, if a 6th-level Wyrmslayer hits his principal foe with a long sword, the foe suffers 1d12+6 points of damage. If a Wyrmslayer makes a successful attack against an evil dragon other than his principal foe, he receives a +1 damage bonus. A bonded mount inflicts double damage against the Wyrmslayer's principal foe and receives a +1 damage bonus against evil dragons other than the principal foe.

*Special Reward:* If the Wyrmslayer is primarily responsible for killing, banishing, or otherwise eliminating a principal foe of Wyrm or Greater Wyrm level, his deity arranges for him to receive a special reward. The DM determines if the Wyrmslayer is eligible for the reward; for instance, the Wyrmslayer may earn the reward if he inflicted most of the damage leading to the foe's death, or if he tricked the foe into entering another plane of existence from which return is impossible. Typical rewards:

1. A grant of land large enough for a stronghold.

2. Donation of all labor and materials to build a stronghold.

3. Revelation of the principal foe's secret treasure horde, containing a fortune in gold and gems (which, of course, the Wyrmslayer donates to a charitable institution).

4. A magical gift, such as:

• Immunity to the spells of his principal foe. If the Wyrmslayer makes a successful saving throw, he suffers no damage from these spells. If he fails his throw, he suffers half damage.

• Transformation of a normal sword into a *holy sword*.

• Permanent access to an extra priest spell sphere. The Wyrmslayer picks the sphere of his choice, or the DM provides options. The extra access doesn't affect the number or level of spells the Wyrmslayer can learn.

• Permanent transformation of the bonded mount into a young silver dragon (or any lawful good dragon of the DM's choice; the DM may also determine the dragon's age). The silver dragon serves out the rest of the mount's term; if the original mount had served seven years, the dragon will serve three more. The dragon follows all the rules for bonded mounts described in Chapter 2. However, it's not necessary to train the dragon, as it carries out instructions with the same facility as any loyal, intelligent follower.

**Special Hindrances:**

*Reaction Penalty.* Because he is unable to conceal his hatred, the Wyrmslayer suffers a –4 penalty to all encounter reactions with his principal foe.

*Combat Compulsion.* The Wyrmslayer seeks out his principal foe in combat situations, choosing it as the target of his attacks in preference all other potential opponents. If the party encounters a horde of goblins and a black dragon, and the dragon is the Wyrmslayer's principal foe, the Wyrmslayer attacks the dragon and leaves the

goblins to his comrades. If the Wyrmslayer spots his foe's prints in the mud or hears rumors of his foe in a nearby forest, he feels compelled to track it down unless his companions forcibly restrain him or convince him of the inappropriateness of his actions.

The Wyrmslayer's compulsion doesn't necessarily interfere with his good judgment or responsibilities to his companions. If his principal foe tumbles into a fiery chasm, the Wyrmslayer won't leap in. If a comrade needs him, the Wyrmslayer interrupts his combat with the principal foe to help out, resuming his attacks against the principal foe when his comrade is safe.

*Inability to Turn Undead.* The Wyrmslayer has no power over any undead beings.

## Abandoning Kits

A character must stay with the same kit for his entire career; he can't exchange it for a different one. However, he can abandon the kit at any time, continuing as a standard paladin described in the *PH* without any of the benefits or hindrances associated with a particular kit.

There are many reasons why a player might want to abandon a kit. Maybe he feels limited by the kit restrictions (he wants more freedom than is allowed by the Squire). Or perhaps recent campaign events make the kit less fun to play (the king wants all his Chevaliers to stay home for the rest of the year to guard the castle). Whatever the reason, the DM should honor a player's request to abandon his kit. If the DM wants to work the abandonment into an adventure, the change may occur gradually. If the change doesn't significantly affect the campaign's storyline, the change may occur immediately.

When a character abandons a kit, he loses all of the kit's bonuses, benefits, penalties, and hindrances. The nonweapon proficiencies associated with the kit, including requirements and recommendations, no longer apply. Bonus proficiencies, however, aren't forfeited. Instead, they are set aside (written down but not used) until the character acquires new nonweapon proficiency slots. The new slots must be spent paying for the former bonus proficiencies; the player may buy these proficiencies in any order. The player must pay for all former bonus proficiencies before he can choose any new nonweapon proficiencies.

Should the character acquire new weapon proficiency slots, they may be spent on weapon proficiencies of the player's choice. The character may use any weapons normally available to the paladin.

## Creating New Kits

Ambitious players may design entirely new kits, using the examples in this chapter as guidelines. Before going to the trouble of designing a kit from scratch, check the exiting kits and see if any can be modified to fit the type you have in mind. If not, copy the Paladin Kit Record Sheet in the back of this book, fill out the description, then write down all the information needed in each section. Refer to the Kit Subsections descriptions at the beginning of this chapter if necessary.

When you've finished with the Record Sheet, let your DM look it over. He may veto some ideas or suggest different ones to make sure that characters taking the new kit aren't too powerful or that the kit doesn't duplicate concepts from existing kits. The DM may

make additional adjustments after he sees how the kit works in the context of a campaign.

Need some ideas? Consider these:

**Almsman.** A treasure hunter and philanthropist, he acquires money for needy charities and distributes funds to the underprivileged.

**Cursed Paladin.** This unfortunate must wrestle with the consequences of a vile curse or hex placed upon his family, ever seeking a way to break it with the least harm to others.

**Elemental Paladin.** Instead of acquiring a bonded mount, he can summon a free-willed elemental once per week for an hour.

**Foreteller.** He has an uncanny knack of seeing into the future and better access to spells of the Divination Sphere.

**Gallant.** A charming aesthete who finds truth and beauty in poetry, art, and romance.

**Outlander.** One of the few surviving paladins of a lost kingdom, he attempts to pursue a life of service in a world that neither understands nor trusts him.

**Pacifist.** He opposes war and violence in all forms, and advocates peaceful solutions to conflicts. He seeks alternatives to killing evil characters and creatures.

**Seaguard.** A ship-riding paladin, he is a defender of the sea and all its inhabitants. Seaguards often lead units of marines.

## Demihumans as Demipaladins

According to the *PH*, only humans can be paladins. But, using the rules in this book, a DM may allow paladin-like characters of other races in an AD&D® campaign. Lacking the necessary qualities to become paladins in the truest sense, these other races are subject to specific limitations and are known as demipaladins.

A demipaladin is a fighter/cleric who gains paladin-like powers from his deity after completing special quests for his church. A demipaladin may be a dwarf, gnome, elf, half-elf, or halfling. Any character desiring to become a demipaladin must be lawful good from the character's generation and have all the ability-score requirements of paladins. The character is allowed to gain a 10% bonus on experience in his fighter or cleric class if his Strength or Wisdom score (respectively) is 16 or better (Charisma, of course, must be 17 or better). The character must also adhere to all ethos requirements, such as strictures, edicts, and so on, from the start of play.

The character attacks as per his fighter level, makes saving throws as either a fighter or cleric (whichever class produces the better score), and gains weapon and nonweapon proficiency slots for both of his classes as he gains levels. Experience is divided between the fighter and cleric classes as per the usual rules. Cleric spells are gained as normal, though the spells the demipaladin may use are restricted to those listed in this supplement. A demipaladin turns undead as per his cleric level. The level limits for demihuman fighter and cleric classes are as given in the *DMG*, pages 14-15 (see Table 7 therein), so a demipaladin has definite disadvantages at higher levels compared to a human paladin.

Each demipaladin must take a kit as described in this text. The DM should rule on the appropriateness of each kit to the campaign setting and available equipment and mounts (e.g., a halfling could be a skyrider if a very small pegasus is found, but not a wyrmslayer if no dragons are in the area). New kits, as noted later, may be created and taken.

The power-gaining quests given to the demipaladin must be undertaken immediately whenever the character gains the ability to cast spells from a clerical level above the first—e.g., at 3rd level when second-level spells are gained, at 5th level when third-level spells are gained, etc. The nature of each quest must be determined by the DM, but each should be challenging and full of peril. Some quests may require the demipaladin to complete the tasks unaided or else assume a major leadership or combat role if helped by other adventuring companions. Such companions must be lawful good, though not necessarily of the demipaladin's race and religion.

If a quest is successfully completed, the demipaladin gains a single paladin-like power of the DM's choice, taken from the following: ability to use paladin magical items (such as *holy swords*); detection of evil intent; +2 saving-throw bonus; immunity to disease; ability to cure disease; ability to lay on hands; aura of protection; bonded mount. Racial level limits will restrict the number of special powers gained; e.g., halfling demipaladins, who can achieve only the 8th level of ability as clerics, would thus gain only three such special powers (at 3rd, 5th, and 7th levels).

New demipaladin kits, specifically tailored to the natures of demihumans, may be designed. Some suggestions include:

**Elven Trooper:** A mounted guardsman, the trooper accompanies elven royalty on fairy rides—solemn processions made through elven territory—as well as patrolling the kingdom's boundaries by himself or undertaking royal quests.

**Half-Elven Herald:** This is the official messenger of a human or elven government (often to a country of the other race), usually delivering documents to dignitaries, issuing public decrees, and locating recruits for royal quests.

**Halfling Sheriff:** The sheriff is a law-enforcement agent with authority to make arrests, pass sentences, and otherwise ensure the safety of a halfling settlement.

**Dwarven Forgelighter:** A forgelighter devotes his life to taking back dwarven kingdoms and cities that were lost to other races (e.g., humans, orcs, derro, etc.) by warfare or treachery, re-establishing the colonies and defending them until they are self-sustaining again.

## Dual-Classed Paladins

Paladins may be dual-classed. They have access to any character kit the DM allows in the campaign. To change from a paladin to another class, the paladin must have a minimum score of 15 in Strength, Constitution, and Wisdom (he already has an acceptably high Charisma score). He must have a score of 17 or better in the prime requisites of the new class.

Note that a paladin wishing to become dual-classed can't dual-class with any of the warrior classes, nor with thieves (due to alignment restrictions) or wizards (wizards can't wear armor). In most cases, the cleric is the only viable option for a dual-classed paladin.

A character from another class who wants to convert to a paladin must have a minimum score of 15 in the prime requisites and a score of 17 or better in Strength, Dexterity, Wisdom, and Charisma. A character of any lawful good class other than a warrior may convert to a paladin.

# Chapter 5: Proficiencies

We strongly recommend using nonweapon proficiencies in your campaign, particularly if you're incorporating the character kits from Chapter 4. This chapter lists all of the paladin's nonweapon proficiencies from the *PH*, describes a few new proficiencies, and clarifies some old ones.

## Compiled Proficiencies

All of the nonweapon proficiencies associated with the Warrior, Priest, and General groups are available to the paladin. Table 23 compiles these proficiencies, along with the new paladin proficiencies discussed in this chapter. Table 23 also lists the slot costs for each proficiency. Paladins may acquire proficiencies from the Wizard and Rogue groups by spending one slot beyond the listed cost.

### Table 23: Nonweapon Proficiencies

| Proficiency | Slots | Rel. Ability | Mod. |
|---|---|---|---|
| Agriculture | 1 | Int | 0 |
| *Ancient History* | 1 | Int | –1 |
| Animal Handling* | 1 | Wis | –1 |

| Weaving | 1 | Int | –1 |

* These proficiencies have special applications for paladins, explained in the "Clarifications and Modifications" section.

**Bold-faced** entries indicate new proficiencies.

*Italicized* proficiencies require the player to select a specific area of specialization. For instance, a character with the Musical Instrument proficiency must specialize in one particular instrument. Each additional slot spent enables him to specialize in another instrument.

NA = Not applicable.

## Clarifications and Modifications

The following information supplements the proficiency descriptions given in Chapter 5 of the *PH*. Whenever a proficiency bonus is indicated, the bonus is added to the normal

check modifier. For example, when a paladin receives a +2 bonus for using the animal training proficiency to train his bonded mount, the modifier is increased from the normal 0 to +2.

**Animal Handling:** As explained in Chapter 2, a paladin can soothe his bonded mount automatically; the Animal Handling proficiency isn't necessary. The proficiency may be used normally to calm other animals of the same species as the bonded mount, as well as other pack animals and beasts of burden.

**Animal Lore:** Although this proficiency allows a character to imitate animal sounds, this ability neither helps nor hinders the paladin when summoning his bonded mount.

**Animal Training:** A paladin doesn't need the Animal Training proficiency to teach tricks and tasks to his bonded mount. However, if he has this proficiency in the same species as the bonded mount, he earns a +2 bonus to his checks when training the bonded mount. The bonus applies to the bonded mount only, not to other animals of the same species. Should the paladin acquire a different bonded mount, he earns the bonus only if he has the Animal Training proficiency in the same species as the new mount.

**Armorer:** This proficiency also allows characters to construct barding for mounts, presuming the availability of materials and facilities. Table 24 gives the time required to make barding for war horses, and mounts of comparable size. For smaller or larger mounts, the DM should adjust the times accordingly. Elephant barding might require an extra week or two; barding for a small mule might take a week less. Subtract two weeks for all types of half barding.

### Table 24:
### Barding Construction Times

| Barding Type | AC | Time (weeks)* |
|---|---|---|
| Leather, Padded | 6 | 4 |
| Scale, Brigandine, Ring, Studded Leather | 5 | 8 |
| Chain | 4 | 10 |
| Banded, Splint | 3 | 14 |
| Plate | 2 | 16 |
| Field Plate | 1 | 18 |
| Full Plate | 0 | 20 |

As with character armor, barding may be flawed. After creating the barding, the DM secretly makes a proficiency check. If the check fails but is within 4 of a successful result, the character believes the armor is normal, until in combat it functions as 1 AC worse (flawed chain barding has an effective AC of 5). Flawed armor breaks on a natural roll of 19 or 20 in melee combat; the animal's AC then worsens by 4, though it can't be reduced below AC 10 (if flawed leather barding breaks, it has an effective AC of 9). As long as a mount wears broken armor, its movement rate is halved, and it suffers a –4 penalty to its attack rolls. A character can remove broken armor from a mount in 2-8 (2d4) rounds.

Because barding must be fitted exactly, a set of barding styled for one mount won't work for any other animal, even of the same species.

**Brewing:** A paladin whose ethos forbids partaking of strong drink isn't likely to have

this proficiency. A paladin with a more liberal ethos may use this proficiency to prepare drinks for others, even if he declines to partake himself.

**Fishing:** A paladin whose ethos demands reverence for life in all forms should refrain from fishing for recreation. However, he may still fish for food.

**Healing:** A paladin's ability to heal by laying on hands (see Chapter 2) operates independently of this proficiency. A paladin with the Healing proficiency may use it instead of or in addition to laying hands on a damaged character. For example, a 2nd-level paladin with the healing proficiency could lay on hands to heal 4 points of damage, then use his healing proficiency to heal an additional 1d3 points.

**Hunting:** A paladin whose ethos restricts any type of unnecessary killing will refuse to hunt merely for sport. Unless he has religious or cultural objections to eating meat, he hunts for food. Further, he stalks and kills dangerous animals that pose a threat to himself, his companions, or other innocent people.

**Gaming:** A paladin whose ethos includes moral objections to gambling will not engage in games of chance. Using this proficiency to cheat is a serious ethos violation.

**Riding, Airborne and Land-based:** When riding his bonded mount, a paladin automatically has all of the benefits of the relevant Riding proficiency; he doesn't need the proficiency itself (see Chapter 3). But if he *has* the Riding proficiency, he gains a +2 bonus when making all associated checks with his mount. For instance, if he has a war horse bonded mount and the Land-based Riding proficiency, he earns a +2 bonus when attempting to vault into the saddle when the mount is moving. If he has a pegasus bonded mount and the Airborne Riding proficiency, he suffers a –2 penalty (instead of –4) when making checks to see if he falls from his saddle after suffering damage. The bonuses apply only when riding the bonded mount. When riding a creature of the same species as the bonded mount, use the normal Riding proficiency rules.

## New Proficiencies

All paladins are eligible to acquire these proficiencies, regardless of their character kits, providing they spend the points listed on Table 23. Characters belonging to the Crossover Groups listed at the end of each description may buy the proficiency at the indicated cost. Groups not listed may buy the proficiency by spending one additional point beyond the listed cost. All of these are nonweapon proficiencies except Jousting.

### Bureaucracy

This proficiency encompasses a working knowledge of governmental protocol and the skills necessary to navigate bureaucratic organizations. A character with this proficiency knows which official to approach and the best time to approach him (a tax collector's aide may have better access to information than the tax collector himself; a city clerk may be less harried and more helpful at the beginning of the month than at the end). He knows where government records are kept and the procedures for examining them. He knows how to circumvent sluggish or uncooperative bureaucrats. He obtains permits and other government documentation in half the normal time. No proficiency checks are needed for any of these functions.

A character can also use Bureaucracy to turn the system against someone else. A

successful proficiency check doubles the amount of time to make a government decision, causes a permit to be issued under the wrong name, or temporary misplaces an important document. A paladin must be careful with this ability, to avoid breaking the law and violating his ethos.

The Bureaucracy proficiency covers the governmental organizations in a particular region, usually the character's homeland. He may spend additional slots to expand the proficiency to other regions. Official organizations include government councils, regulatory boards, and church hierarchies. The proficiency is only effective when dealing with organizations of 10 or more members.

*Crossover Groups:* Priest, Rogue.

## Diagnostics

Both the Healing and Diagnostics proficiencies aid victims of trauma and disease. But while the Healing proficiency can be used to restore lost hit points, Diagnostics is mainly concerned with determining the cause of the damage and the prognosis; Diagnostics alone will *not* heal damage.

With a successful proficiency check, a character becomes aware all of the following information applicable to a particular patient:

• If the patient has suffered physical damage, the character can determine the extent of the damage, though he may not be able to ascertain the exact cause (if a victim was attacked by a tiger, the character will know that the victim was clawed by a large animal, but not necessarily the species). The character can recommend treatments and offer prognoses, as with victims of diseases.

• If the patient has been poisoned, the character knows the antidote (if one exists) and how to prepare it. Note that even if the character knows how to prepare an antidote, he may not have access to the necessary ingredients.

• The character knows the name of the disease, its cause, how long the patient has had it, and the optimum treatment. If the patient is treated as specified, he suffers the mildest form of the disease and its shortest duration. If the patient declines treatment, or the treatment doesn't work, the character can determine the patient's prognosis with reasonable accuracy. ("The patient will recover by the end of the month." "The patient will become permanently blind if not treated within a year.") The character may diagnose both natural and magical diseases.

• When examining a corpse, the character can determine how the victim died and approximately how long it's been dead. If the victim died of unnatural causes, the character will only be able to determine the general circumstances of the death. For example, if an evil wizard incinerated the victim with a *fireball*, a successful diagnostics check might reveal that the victim burned to death very rapidly as a result of some type of magic, but not that it was affected by a *fireball*.

A character with this proficiency may diagnose himself or any other character, or animals, except for supernatural creatures (such as a ghost or skeleton) and creatures from another plane of existence (like a xorn or aerial servant). He may attempt to diagnose an individual or creature only once.

If a character also has the Healing proficiency, he may modify all Diagnostic checks by +1.

*Crossover Groups:* Priest.

## Jousting

This proficiency includes the combat skills necessary for a successful joust, as well as the manners, behavior, and flair needed to impress an audience. To take this proficiency, a character must first have a weapon specialization in the jousting lance.

A character with this proficiency modifies his attack rolls in a jousting match by +2 (see the "Routine Activities" section of Chapter 7 for jousting rules). The use of this proficiency presumes that the character has an adequate lance, shield, and mount.

Should a character win a match, his stylish performance favorably impresses the audience. Audience members with a special interest in the match (such as royalty, gamblers, or potential paramours) who later encounter the jouster modify their reaction rolls by +2. If he wins several matches in a tournament, the bonus doesn't rise above +2. If he later loses a match or two in the same tournament, he still earns the bonus. However, if the jouster has an especially disastrous day—say, if he follows a winning joust with a long string of losses—the audience may dismiss the win as a fluke, and the DM may cancel the bonus.

*Crossover Groups:* Warrior.

## Law

A character with this proficiency is thoroughly familiar with the legal system of his homeland (or any other region of his choice). He knows which laws are rigorously enforced (illegal gambling may be tolerated in one region, aggressively prosecuted in another), and routine legal procedures (such as how to file suit against a debtor). Understanding nuances of the law, such as interpreting fine points of a contract, require proficiency checks.

A successful proficiency check also allows the character to conduct a strong defense when he or a companion stands accused of a crime. If the judge is fair-minded and the evidence of the crime is ambiguous, a successful check will sway the verdict in the defendant's favor; either he receives the smallest possible sentence or fine, or is completely vindicated. However, if the evidence clearly calls for a conviction or the judge is corrupt, a successful proficiency check won't help.

A character may spend additional slots to know the legal systems of other regions. Alternately, he may spend slots to acquire expertise in a particular area of the law, such as tax codes or property rights. Expertise assumes a broad understanding of the chosen area, requiring checks only in extreme instances.

*Crossover Groups:* Warrior, Priest.

## Law and Paladins

A paladin with the Law proficiency won't defend anyone he believes to be guilty, including his own companions. Though a paladin won't knowingly break the law, he may take advantage of this proficiency to defend himself if wrongly accused of a crime; a failed defense may result in his conviction.

## Oratory

Through inspiring speech and sheer force of personality, a character with this proficiency can influence the opinion of a crowd. Any size crowd may be influenced, so long as they speak the same language as the orator, and can see and hear him clearly.

To use this proficiency, the orator must address the crowd on one specific topic. For instance, he may attempt to persuade them to rise up against a local despot, leave town because of an impending danger (a monster on the outskirts of town, an advancing evil army), or help search for a missing child.

Before the orator speaks, the DM must determine the size of the crowd, their level, and their general attitude toward the orator and the topic he's addressing. For small crowds—say, less than five members—determine levels and attitudes individually. Break larger crowds into groups; decide an average level and attitude for each group. Use Table 59 in Chapter 11 of the *DMG* to access attitudes about the topic; the crowd may be Friendly, Indifferent, Cautious, Threatened, or Hostile.

Before any rolls are made, or the orator begins speaking, the player tells the DM if the orator will be attempting to adjust the crowd's opinion one level up or down on Table 59. The orator then speaks to the crowd; he must speak uninterrupted for at least 10 rounds.

When the orator finishes speaking, roll the Oratory proficiency check. If the check succeeds, make an Intelligence check for each individual in a small crowd, or for each small group in a large crowd. Modify these rolls by a –1 penalty for each 1 by which the orator made the Oratory check. For instance, if the Orator needed a 10 to succeed and rolled a 5, each Intelligence check takes a –5 penalty.

Individuals or small groups who fail their throws have their opinions about the topic adjusted one level on Table 59 in the *DMG*. An Indifferent opinion may become Friendly or Cautious, a Cautious opinion may become Indifferent or Threatening. However, all audience members who fail their rolls have their opinions adjusted the same way. The opinions of those who succeed in their rolls remain unchanged by the character's Oratory; however, practically speaking, peer pressure can produce the same results. The DM may override any die roll that produces inappropriate results; for example, an NPC in the crowd who has a long-standing feud with the orator may be unswayed, regardless of the orator's eloquence.

A character may use this proficiency only once on a given crowd. Should the composition of the crowd change to include many new members, the character may make another oratory attempt, providing he speaks on a different topic.

Note that this proficiency elicits only modest changes in attitude. If a crowd feels Indifferent towards a despot, an orator may be able to stir up some ambiguous feelings about him, but he won't be able to convince them to immediately storm the despot's castle. If the crowd is suspicious of a particular religion, the orator may persuade them to be more tolerant, but he shouldn't expect any spontaneous conversions.

*Crossover Groups:* Warrior, Priest.

## Poetry

A character taking this proficiency specializes in either lyric or narrative poetry. Lyric

poetry expresses thoughts and feelings, and includes ballads, sonnets, odes, and hymns. Narrative poetry tells stories in verse, some true, some fictional. A character spending two slots may specialize in both forms.

The proficiency enables the character to judge the quality of poetry in his specialty. He also knows a sizeable repertoire of poems and can recite them with spellbinding skill. No proficiency checks are required for these applications.

The character can also compose poems in his speciality; a successful check means the poem is of exceptional quality. If the character has the Reading/Writing proficiency, he can record his poems.

*Crossover Groups:* General.

### Poetry for Paladins

With permission from the DM, a paladin with the Poetry proficiency may offer a composition to his church (or other designated recipient) instead of a tithe. The paladin must inform the church a month in advance if he intends to offer a composition; either lyric or narrative poetry is acceptable. If the church (that is, the DM) disapproves, the paladin must pay his normal tithe. If the church approves, the paladin may present a composition when his tithe is normally due.

The composition must be presented at the church or to a church official at a pre-arranged location. The paladin then makes a Poetry proficiency check. If the check fails, the composition is deemed unworthy; the normal tithe must be paid immediately. If the check succeeds, the DM determines the value of the composition; the value is equal to 3d20 gp. If the value is greater than or equal to the normal tithe, no tithe is required that month. The paladin doesn't receive any "change" if the value is more than his tithe; the excess value is forfeited.

If the value is less than the tithe, the paladin subtracts the value from the tithe, then pays the difference (if the paladin owes 20 gp and the value of the composition is 15 gp, he must pay
5 gp). A paladin may exercise this option as often as he likes.

# Chapter 6: Equipment

Paladins take their equipment seriously, and seek to own the best that money can buy. Not only does their equipment reflect the honor of their station; for some it symbolizes their principles.

• The shield represents the paladin's vow to uphold his ethos.

• The sword represents the two constituencies he's sworn to defend—one edge of the sword represents the privileged class, the other the common people.

• Armor represents loyalty to the state. Just as his armor protects his body, so must he protect his monarch.

• The helmet represents loyalty to the religion. Just as his helmet protects his head, so must he protect his church.

• Clothing, well-crafted and immaculately clean, represents purity of spirit.

## Standard Equipment

Following is a list of standard equipment owned (or at least desired) by most paladins. Usually, paladins purchase this equipment with their own funds. A frugal paladin tries to maintain his possessions in top condition so he seldom has to invest in replacements.

## Armor

All types of armor are available to the paladin. Given a choice, most prefer the protection and prestige of full plate. However, because of the expense of plate armor, some opt for banded or splint, while others settle for the cheaper and readily available chain mail. Leather, studded leather, and padded—including magical versions—are generally avoided, as these armor types tend to be associated with characters of lesser status. A discriminating paladin may prefer to wear ordinary scale mail rather *studded leather +2*.

In a typical medieval campaign world, paladins favor three armor types: hauberk/helmet combinations, chain, and plate.

**Hauberk and helmet.** Destitute paladins, those from primitive cultures, or those just beginning their careers sometimes wear only a chain mail hauberk (a single piece that covers the chest) and a helmet. The paladin often supervises the construction of the hauberk or makes it himself, coiling wire around a rod, then cutting it down the side to make rings. He flattens the rings with a hammer, them rivets them together in the shape of a knee-length coat with a hood to cover the head. The helmet is usually round or cone-shaped, open in the front. The hauberk-helmet combination is cheaper than chain mail, but less protective, with an Armor Class of 7.

**Chain mail.** A hauberk supplemented with leggings and arm coverings becomes a complete set of chain mail (AC 5). A visor may be added to the helmet to protect the face. While inexpensive and relatively light, chain mail has its drawbacks. The weight of chain mail is distributed unevenly on the body, straining the shoulders in particular. Even the strongest paladin will feel fatigued after wearing chain mail for more than a day. At the DM's option, any character wearing chain mail for more than 24 hours straight suffers a –2 penalty to all attack rolls until he removes it and rests for a few hours.

At least once a week, iron chain mail must be oiled and polished, a process that can take the better part of an afternoon. Failure to properly care for chain mail results in rust (and a reduction of one level of AC for each month of neglect).

**Plate.** Plate mail (AC 3) adds a breast plate, back plate, and strips of metal to areas of the body underprotected by chain mail, such as the knees and elbows. Metal sheets called *pauldrons* protect the spaces between the arms and the chest. *Epaulieres* (shoulder guards) protect the upper body; *gauntlets* (metal gloves) protect the hands.

High-level paladins occasionally decorate plate mail with gold or silver trim and fasten small jewels to the helmet or the backs of the gauntlets. These extravagances are generally compatible with the paladin's ethos, so long as they're intended to reflect the paladin's station and aren't used to flaunt wealth. Heraldic symbols may be etched or painted on any section of the armor.

Plate mail requires polishing and oiling, but because it consists of solid sections rather than tiny rings, it's more resistant to rust. Though heavier than chain mail, plate mail fits

better and is more comfortable, making fatigue less a factor. The illustration in this chapter identifies various pieces of a paladin's plate mail armor, along with the basic pieces of mount barding.

## Shield

Most paladins carry medium shields, which offer maximum protection against front and flank attacks and are light enough to be carried on horseback. Made of wood and covered in thick leather, the shield is shaped like a triangle with a round top and pointed bottom. Its surface curves inward. The shield extends about 4-5 feet from top to bottom and hangs from the paladin's neck by a strap. He grips it in his left hand (or right hand, if he's left-handed) with a second strap secured to the shield's inner surface.

Some paladins carry oblong, rectangular, round or even pentagonal shields. Shields may be decorated with gold or silver trim, dotted with precious jewels, emblazoned with heraldic symbols, or painted in bright colors.

## Weapons

A paladin may master any weapon, but most feel unarmed without a sword (long, two-handed, bastard, or short, in that order of preference), a lance (medium or heavy, depending on the size of the mount), and a dagger. A paladin typically keeps his sword in a wooden scabbard covered in leather, strapped to the left side of his belt (or to the right side if left-handed). The dagger hangs from his belt on the opposite side of his scabbard.

Other weapons favored by paladins include the horseman's flail, horseman's mace, horseman's pick, battle axe, and scimitar. Paladins tend to avoid using missile weapons, as they're difficult to use effectively on horseback.

A jousting lance, though desirable, may be too expensive. Instead, a paladin may opt for a lance cup, a blunted cap of wood that fits over the end of an ordinary lance, making it suitable for tournaments. Lance cups, however, are notoriously undependable; there is a 5% chance per joust (roll 1 on 1d20) that the cup will detach and fall off. When this occurs, the officials interrupt the joust and the contestants must start over. A jouster who repeatedly loses his lance cup may risk disqualification from the tournament.

## Clothing and Special Items

When choosing clothes, the paladin strives for both utility and elegance. He favors bold colors (blue, red, green and violet) and, when he can afford them, rich fabrics (silk and velvet in particular). Because a paladin is often judged by his appearance, spending money on formal attire usually isn't considered an ethos violation.

An ideal wardrobe, which may be acquired a piece at a time over the course of a paladin's career, consists of the following:

- Two loose-fitting silk or linen shirts with full sleeves.
- Two pairs breeches or trousers, made of wool, cotton, or linen, tailored to fit tightly to the legs (loose-fitting breeches tend to be associated with peasants and commoners). The breeches are usually ankle-length and brightly colored.
- Armor lining (made of soft leather or padded fabric, worn beneath chain mail to

prevent chafing.

• Two pairs of cotton undergarments.

• Two pairs of silken hose and garters.

• A pair of riding boots.

• A pair of leather shoes, usually pointed at the toes and fastened at the ankle with straps and buckles.

• Two knee-length tunics, usually sleeveless, slipped over the head. Tunics may be decorated with colorful patterns of stripes and circles, and possibly feathers or small gems.

• A surcoat (outer tunic), either sleeveless or head. The surcoat is usually lined with rabbit, squirrel, or other light fur, and padded at the shoulders. Tassels, ribbons, and brocade are common.

• A lightweight mantle (a sleeveless coat made from an oval piece of cloth) for the spring and summer, made of cotton or silk. The garment is rectangular or semicircular in shape, wrapped around the body, and secured at the neck with a chain or buckle.

• A heavy winter mantle lined with beaver, fox, or other thick fur.

• A full cape made of wool, cotton, or lambskin, fastened around the neck with a chain or leather strap. High-level paladins may prefer a silken cape in black, blue, red, or violet, lined with red or black velvet.

• A wide leather belt with a metal buckle.

• A wool, cotton, or felt cap.

• A ceremonial coif (a tight-fitting cap covering the hair and ears, tied beneath the chin) made of linen or silk, and decorated with embroidery, feathers, or golden lace. A ceremonial coif is often required for state banquets and other formal occasions. The equivalent for females is called a *wimple*.

A conscientious paladin should also consider including the following items as part of his standard gear. These are in addition to lanterns, rope, and other equipment necessary for long trips or specific quests.

• Two cotton or woolen towels (one for washing, one to use as a mat for eating).

• Formal dinnerware, including eating utensils, a cup, a plate, and a goblet. Because paladins may have to furnish their own service at formal events, they should buy quality items made of silver, crystal, and porcelain.

• Complete tack for the mount, including bit, bridle, harness, horseshoes, saddle, and full barding.

• Two heavy blankets, one used for a bed, the other to cover the mount at night.

• A mirror (necessary for grooming).

### Formal Attire for Female Paladins

Female paladins are free to wear all of the above clothing (assuming no cultural reasons to the contrary). For formal occasions, a female paladin may instead wear a floor-length tunic called a *kirtle*, which fits snugly above the hips and billows around the legs. A surcoat and cloak may be worn as outer garments. Females may also wear hose above the knee, secured by garters or tied with ribbons. Footwear is similar for males and females, though the kirtles conceal all but the toes.

### Badges, Standards, and Crests

Paladins often embellish their armor, clothing, weapons, and shields to identify them on the battlefield, indicate rank, or symbolize allegiance to a king or church. Monarchs sometime present embellishments to recognize outstanding military service. Embellishments representing the family name may be handed down from parent to child. As a rule, embellishments can't be purchased; they must be awarded or earned. Some examples:

**Badge.** This is an emblem representing the paladin's homeland, family, or order (see Chapter 9). A badge may be a physical object, such as pin or a medal, or it may be a small design embroidered in a tunic or engraved on a shield. Typical badge symbols include humans with animal heads, a flower or plant with a crown, or a weapon with wings.

**Standard.** A standard is a flag with a Y-shaped end, attached to a pole or staff. The standard bears the colors, heraldic symbols, or insignia of the paladin's government or church. A standard becomes a *banner* when the end is cut off to form a square. A smaller version of the standard, called a *pennon*, may be attached to the end of a lance.

**Crest.** A crest may be a bundle of short leather strips, one or more feathers, a wooden carving, a tassel, or any other small object attached to a paladin's helmet. The crest is usually the same color as the paladin's shield. Crests are often worn in tournaments to help observers tell one paladin from another, though many paladins wear their crests all the time. A crest may also be added to the halter of a war horse. An abstraction of the crest may be displayed on a shield or standard.

## Additional Equipment

**Canon.** The canon is the sacred text of the character's faith. It included prayers, guidelines for behavior, historical summaries, expectations of the deity, and other theological material. A canon is *not* a spell book, nor does it possess any magical qualities.

Because a canon can be very expensive, characters can sometimes make arrangements with their church to purchase a copy on installment, adding a few extra gold pieces to their monthly tithe to pay it off. Generous churches may loan their followers a copy of the canon indefinitely. However, should the canon become lost or destroyed, the character may be responsible for the replacement cost.

**Coat of arms.** This term usually refers to the shield bearing the paladin's heraldic symbols, or to the symbols alone. But it's also the name for a specific article of clothing. A coat of arms is a white tunic worn over the armor, emblazoned with the paladin's insignia. The coat identifies the paladin and also protects him from the heat of the sun, which can be unbearable when wearing uncovered armor.

**Cosmetic kit.** Helpful when preparing for formal affairs, a typical cosmetic kit includes a vial of sheep fat to make the skin glisten, powdered rouges to tint the cheeks white or pink, lightly perfumed talc for the body, and a depilatory salve to smooth the face.

**Horse grooming kit.** For efficient and thorough horse grooming, the kit includes a currycomb (a brush with stiff bristles to remove dirt from the coat), a shedding blade (a

flexible, serrated blade to remove loose body hair), a body brush (for dirt removal from the legs, fetlocks, and other areas where a currycomb is inappropriate), hoof picks (to remove pebbles and debris from the hooves), and a mane and tail comb (to clean and tease the hair).

Similar kits exist for griffons and other mounts.

**Mantling.** Resembling tufts of feathers or fans of leaves, mantling consists of cotton or linen strips lined with thin layers of metal. Mantling attaches to the sides of a helmet and shields the wearer's eyes from the bright sun. It also prevents rust and helps deflect weapon attacks. (If an opponent attempts a called shot against a character wearing a mantling, he suffers a –5 penalty to his attack roll instead of a –4 penalty; see Chapter 9 in the *DMG* for more about called shots.) Mantling is often painted the same color as the wearer's shield.

**Sachet.** This is a small bag containing a mixture of flower petals, herbs, and spices that adds a pleasant scent to a character's clothing (nice when no deodorant is around). A sachet can be placed in a closet or trunk, or carried in a pocket.

**Spurs.** With spurs, the rider can control his mount with less effort and give commands with a slight motion of his foot. The best spurs—those that avoid damage to the horse—have blunt, wheel-shaped *rowels* instead of points. *Dressage spurs* have sharp, curved points, slightly angled toward the rider to prevent accidental scrapes. Spurs with gold or silver plating are available at 5-10 times the listed price.

### Table 25: Miscellaneous Equipment

| Item | Cost | Weight (lb.) |
|---|---|---|
| Armor lining | 5 gp | 5 |
| Canon* | 50-500 gp | 1-5 |
| Cape | | |
| Wool | 7 sp | 4 |
| Silk and velvet | 50 gp | 2 |
| Chain mail (hauberk and helmet only) | 50 gp | 35 |
| Coat of arms | 8 sp | ** |
| Coif, ceremonial | 2 gp | ** |
| Cosmetics kit | 7 sp | ** |
| Dinnerware, formal*** | 15 gp | 1 |
| Horse grooming kit | 1 gp | 1 |
| Mantle | | |
| Spring | 1 gp | ** |
| Winter* | 10-30 gp | 1-5 |
| Mantling | 2 sp | ** |
| Lance cup | 1 sp | ** |
| Sachet* | 1-3 gp | ** |
| Spurs | 1 gp | ** |
| Surcoat, fur* | 20-40 gp | 5-10 |

* Canon prices and weights depend on the book's size and binding. Garment prices and

weights vary according to the type of fur used. Sachet prices depend on the contents; exotic mixtures are more expensive.

** Weight is inconsequential (a few ounces).

*** Includes silver-plated utensils, a crystal goblet, and a porcelain plate with gold trim.

## New Magical Equipment

**Barding of aerial excellence:** This resembles a normal set of chain barding for a horse, elephant, or other species of land mount. When worn by a bonded mount, the *barding* sprouts metallic wings approximately twice as long as the length of the mount; a command word from the bonded mount's paladin triggers this effect. The metal wings enable the mount to fly at a speed equal to its normal ground speed, at Maneuverability Class C. Further, the *barding of aerial excellence* imbues the mount with the necessary flying skill; it can fly as if the wings were part of its body.

A paladin without the airborne riding proficiency makes attacks at a –2 penalty when riding a mount with the *barding of aerial excellence*. To avoid being unseated, he must make Dexterity checks as determined by the DM. A paladin with the airborne riding proficiency makes normal attacks.

The wings last for 1-4 hours; the mount senses when the wings are about to disappear, giving it time to safely land. The *barding of aerial excellence* can sprout wings once per day; otherwise, it functions as normal barding. It also functions as normal barding on animals other than bonded mounts.

**Bridle of calming:** This leather bridle, designed to fit a specific species of mount, makes the mount immune to all types of magical *fear*. For morale purposes, the *bridle of calming* gives the mount a effective moral rating of Fearless (19-20). A *bridle of calming* may be used on both bonded and normal mounts.

**Crest of summoning:** When attached to the paladin's helmet. the *crest of summoning* enables the paladin to mentally summon his bonded mount at a radius equal to 10 miles per level of the paladin (a 6th-level paladin can summon his bonded mount within a 60-mile radius). If the bonded mount has been captured or is disabled, the *crest* causes a dull throb behind the paladin's eyes, indicating that the mount is unable to respond; however, the crest won't indicate the location of the mount.

**Oil of tempering:** When this oil is applied to entire suit of chain or other metallic armor, the armor's AC is improved by 1 for 24 hours; for example, chain mail armor (AC 5) will have an effective AC of 4. The AC can't be improved beyond AC 0. It takes 1-2 hours to completely coat a suit of armor with *oil of tempering*.

**Sheath of security:** Less than a foot long, this leather sheath appears to the perfect size for a dagger. In fact, a pointed weapon of any size—such as sword, spear, or lance—may be carried in the *sheath of security*. When the tip of the weapon is placed in the sheath, the entire weapon shrinks to the size of a normal dagger. The sheath holds the shrunken weapon tightly; the weapon can only be removed when a command word is spoken, or when affected by *knock* or a similar spell. The weapon retains its shrunken size until the tip leaves the sheath. It then expands to its normal size.

**Tithing bag:** This is a small purse made of black velvet, closed with a drawstring. Any coins, gems, or treasure placed in the bag are instantaneously teleported to the character's church or other charitable institution. The character keeps a small chip of

stone, wood, or glass from the designated institution in the bottom of the bag to indicate the destination. It otherwise has a capacity of 20 gp. A *tithing bag* functions for lawful good characters only.

**Tunic of comfort:** This light cloth garment may be worn over chain mail or other uncomfortable armor. The *tunic of comfort* distributes the weight of the armor evenly over the body, enabling the character to wear his armor indefinitely without chafing or fatigue.

### Holy Swords

Each of these *holy swords* has all the special characteristics discussed in Chapter 2, in addition to the specific benefits given in their individual descriptions. The bonuses (+3, +4, and so on) apply to both attack and damage rolls. In the hands of any character other than a paladin, all of these *holy swords* perform as *swords +2*.

**Sword +3 purifier.** When a paladin holds this weapon in front of him, he turns undead as a cleric of equal level; a 3rd-level paladin turns undead with the same effectiveness as a 3rd-level cleric (use Table 19 in Chapter 4). The paladin must be of 3rd level or higher to turn undead, with or without this sword. Ghosthunters receive no turning bonus.

The sword provides two benefits to paladins of all levels: a +5 bonus against all undead; and +2 bonus to saving throws against undead magical attacks, including a ghoul's paralyzing touch and a vampire's *charm*.

**Sword +4 divine protector.** This sword alerts the paladin to the presence of evil by generating a soft hum that only he can hear. The sword detects evil within a 60-foot-radius of the paladin, but does not indicate the direction or intensity of the source. The hum is automatic, so long as the sword remains on the paladin's person. The hum is loud enough to awaken the paladin from a normal sleep, alert him to an ambush, or warn him of an evil character behind his back. Otherwise, the sword has all of the benefits and limitations of the paladin's detect evil intent ability, described in Chapter 2.

Additionally, if the paladin spends one full round swinging this sword over his head, all evil creatures and characters within a 60-foot-radius hear a disturbing sirenlike sound, audible only to them. Any affected creature or character who fails to save vs. paralyzation will continue to hear the siren ringing in his ears for the next 2-5 (1d4+1) rounds, with similar effects as a *deafness* spell (unable to hear any sounds, –1 penalty to surprise rolls, and a 20% chance of miscasting spells with verbal components).

**Sword +4 invigorator.** If the paladin heals a damaged creature or character by laying on hands, then touches him with this sword, the amount of recovered hit points increases by half. For instance, if a 6th-level paladin has just restored 12 hit points by laying on hands, the sword restores an additional 6 points.

**Sword +5 hallowed redeemer.** Not only does this sword project a 10-foot-diameter circle of power, it also causes all evil characters and creatures within the area of effect to succumb to the effects of a *fear* spell. The *fear* effects may be avoided by a successful saving throw vs. spell.

# Chapter 7: Role-Playing

What is a paladin like as a person? His statistics and special abilities distinguish him from other characters, but are his feelings and motivations different? What does he do with his time? Where does he get his money? And how do you get to *be* a paladin, anyway?

Because no two paladins are alike, there are no fixed answers to these questions, just as there are no fixed rules for designing personalities. As you look over the topics in this chapter, consider how they apply to your paladin character. Think about where he came from and what he wants from life, what makes him happy or miserable. Focus on the basics, and don't worry too much about details. Remember that a paladin's personality isn't set in concrete, but will grow and change as he responds to new experiences.

## Demographics

It's fair to say that most campaigns have fewer paladins than any other character class. In part, this is due to the character generation rules. Unless the DM allows players to use Table 2 in Chapter 1, it's difficult to roll up the ability requirement numbers in the first place; it's hard enough to roll a 17 for Charisma, let alone the minimums for Strength, Constitution, and Wisdom. But remember, there's a reason for those numbers. Only the strongest, wisest, and most committed persons meet the demands of paladinhood, and the dice automatically weed out unqualified candidates.

The paladin's rigid ethos also keeps the population down. Where other characters may commit questionable acts without penalty, even a single violation of his ethos can cost the paladin his identity; one careless act, and he's back to fighter status. (To emphasize this point, the DM might arrange for a novice paladin to meet a fighter NPC who's suffered just such an indignity.) And let's not forget paladins' high mortality rate. Any character whose morals compel him to accept all challenges, fight to the last opponent, and die for a principle is unlikely to live to a ripe old age. In fact, many regard an elderly paladin as a curiosity; either he's an exceptionally skilled warrior or he's been extremely lucky.

A conscientious DM, then, should restrict the number of paladins in his campaign, both as PCs and NPCs. Most parties can handle one or two paladins without compromising realism or play balance. Encounters with NPC paladins will probably be rare, limited to tournaments, royal gatherings, and war zones in most adventures. If the party regularly meets, say, twice as many paladins as rangers or druids, reconsider the cast of characters.

Parties comprised of nothing but paladins are possible if the DM is comfortable with high-level encounters (with so many special abilities, a party of paladins requires tougher-than-usual challenges), and if he comes up with a plausible reason for bringing so many PC paladins together. An emergency meeting of The Most Ancient and Revered Order of the Thorn or some other order (see Chapter 9) makes a good starting point for an all-paladin campaign and may also suggest springboards for adventures. (An order member has committed an evil act and the PC paladins must bring him to justice; the order sends the PCs to a distant land to retrieve medicinal herbs for an dying High Officer.)

### Homeland

Most paladins come from urban areas large enough to sustain an organized military, support a large church, or serve as a government base. As a matter of convenience, governments and churches seeking new paladins tend to draw from the immediate area rather than recruit in the hinterlands.

A candidate with an outstanding reputation inevitably comes to the attention of a recruiter, regardless of where he lives. Still, unfamiliarity with government protocol and discomfort in formal situations generally excludes candidates from rural areas. More likely, residents of remote areas who wish to become paladins will seek out mentors or small independent churches, often becoming Errants or Skyriders instead of Chevaliers or Divinates.

Once a character becomes a paladin, he won't necessarily remain in his own country. Unless he's assigned to the kingdom's standing army or appointed to a permanent bureaucratic position, he probably spends a good deal of his time in distant lands, representing his superiors on various quests and missions. A paladin's ties to his homeland may diminish as his career progresses; as he increases in level and experience, his superiors feel less of a need to monitor his activities. Paladins able to build strongholds often declare their independence by settling far from their old homes.

## Age

Paladins have a lot to learn. They usually begin to train in childhood, well before age 10. A typical 1st-level paladin is 16-18 years old (see, however, the Medician, page 58).

Because their ethos requirements channel them into lives of conflict and danger, paladins die young. Paladins over 30 are rare, and it's nearly impossible to find one in his 40s. Paladins who reach 50 or 60 usually retire—some because of family obligations, others to attend to their strongholds. Often they retire at the insistence of their superiors, who find aging paladins more useful as teachers or administrators than soldiers.

## Social Background

Most paladins have an aristocratic or noble background, coming from the upper ranks of their homeland's social class. A paladin's parents tend to be accomplished scholars, decorated soldiers, or respected bureaucrats, usually well-connected and affluent. Because of their educational and cultural advantages, children of privileged citizens best represent their government and church.

In practical terms, upper class candidates can better meet the economic demands of paladinhood. In many cases, new paladins must provide their own horses, armor, and weapons. These expenses, added to maintenance costs and tithing requirements, are often beyond the means of middle and lower class candidates. Would-be paladins of lesser resources must usually find patrons to foot the bills, or secure sponsorship from their governments or churches.

Regardless of his background, a candidate is typically treated as a member of the nobility once he becomes a paladin. The general populace respects him as a symbol of society's highest ideals. The aristocracy regards him as an honored colleague, if not quite an equal.

## Women as Paladins

Even in the historical feudal era, women fulfilled some of the knight's military functions (see p. 86). In service of their king or church, women often donned armor and wielded swords. They fought with the skill of the best male soldiers, defending their strongholds from siege, even leading troops on the battlefield. Female paladins may be uncommon, but they're not unknown.

## Marriage

Relatively few paladins marry. Because of their fealty responsibilities, most postpone marriage until their mid-to-late 20s, an age few of them actually reach. Financial obligations also make them hesitate. It's difficult to raise a family with so many demands on their already meager resources; how can a paladin choose between tithing and feeding a hungry child? Finally, some religions forbid marriage outright, demanding that celibacy be included as part of their paladins' ethos. For these reasons, rarely do more than 10-20% of the paladins in any campaign world ever take a spouse.

Though paladins are generally free to choose their mates from any social class, there are advantages to marrying into the aristocracy. A mate from the upper class solidifies the paladin's reputation in the eyes of both the general public and the power elite. A privileged marriage increases the paladin's access to rulers and officials, making them more likely to lend money and grant favors. A marriage of partners from different countries can strengthen the political bonds between their governments. And there may be practical advantages—an affluent spouse often comes with a sizeable dowry, which can give a considerable boost to the paladin's stronghold fund.

Marrying an aristocrat, however, is not without drawbacks. The paladin may be obligated to his spouse's family in addition to his own. Periodically, he may have to serve in the military of his spouse's government. Many times, a paladin is required to turn over a dower to his spouse, amounting to a third or more of his holdings. Though the spouse doesn't formally acquire the dower until the paladin's death, the spouse still claims it; the paladin can't sell, rent or improve any part of the dower without the spouse's permission.

Because a marriage vow is a promise, a paladin won't consider divorce, nor will most churches consider granting one. However, if the spouse is guilty of committing evil acts, the spouse is usually *required* to divorce, as associating with an evil character—even a husband or wife—is an ethos violation.

## Historical Role of Women

Women had it rough in feudal times. They could own land and hold administrative positions, but for the most part women lived in total subservience to men. Unmarried women were not allowed to travel without their fathers' permissions, and were chaperoned even on routine shopping trips. If an unmarried woman's father died, she often became a ward of the state. Her legal guardian, appointed by the king, assumed control of the woman's property, using her livestock and other personal possessions as he saw fit until she married.

Custom demanded that married women remain submissive to their husbands, with their responsibilities confined to household supervision and raising children. A married woman could not sell property without her husband's consent, nor could she be heard in a court of law unless her husband accompanied her. Widows were often required to return home and live with their parents. In especially harsh monarchies, a widow could be forced to remarry, with the king's court choosing the groom.

Though upper-class women had about the same access to education as men, the subject matter differed significantly. Where men received training in hunting, economics, and horsemanship, women studied poetry, languages, and needlework. Daughters of high-ranking officials were often sent to convents for their education, remaining there for the rest of their lives if they didn't marry.

Most women, regardless of class or status, married in their early teens. They had children as soon and as often as possible, irrespective of the considerable risk associated with childbirth. Women were often grandmothers by age 30.

Women married to knights had more authority and a bit more respect than most of their peers, particularly if their husbands owned strongholds. When duty called the knight away, his wife took over the daily operations of the stronghold, making all decisions regarding finances, staff, and maintenance. A knight's wife could also petition to speak to the highest officials of the government or church. An audience was usually granted, if only as a courtesy to the husband. Tradition and law limited the wife's influence, however, and she was rarely taken as seriously as a man.

## Becoming a Paladin

Becoming a paladin requires intense training, strict discipline, and total commitment. Though most paladins acquire their skills under the auspices of their government or church, there are no established career paths or mandatory instructional techniques. Following are some of the most common ways to become a paladin, along with a few kits typically associated with them.

### Religious Patronage

Churches secure paladin candidates at an early age, usually 8-10 years old. High-level clerics, trained as recruiters, quietly observe their congregations, looking for vigorous and intelligent children from pious families. When the recruiters agree on a potential candidate, they approach the parents and request that they relinquish custody of their child to the church. If the parents decline, the recruiters pass on the candidate and continue their search. While some churches may override the parents' decision, most abide by the family's wishes, believing that effective training is impossible without the parents' support.

If the family agrees—most do, as they consider the offer a high honor—the child becomes a ward of the church. The candidate moves into a dormitory of a church-operated school, frequently located in a distant, isolated region to minimize distraction. Paladin candidates are often taught side by side with clerical acolytes, studying religious history, and ethical philosophy along with such fundamentals as reading, writing, and etiquette. Candidates also engage in rigorous exercise and weapon practice.

Within a few years, the students are separated, with paladin candidates focusing on horsemanship and combat skills, and the clerical acolytes concentrating on spellcasting and church doctrine. Paladin candidates may also receive advanced training in medicine, language, and other academic subjects. Somewhere between the age of 15 and 17, depending on his progress and aptitude, a candidate is subjected to a series of tests, ranging from oral exams to evaluate his understanding of the paladin's ethos, to confrontations with undead opponents to display his courage and combat skills. A candidate who passes all his tests is then eligible to become a full paladin.

*Suggested Kits:* Divinate, Inquisitor, Medician, Votary.

### Divine Intervention

The gods may choose a mortal to become a paladin for reasons of their own. Alternately, a qualified mortal may petition the gods for paladin status. A suitable candidate must meet all of the physical and mental requirements for paladinhood, and must also demonstrate unshakable faith. Neither age nor social status is critical, though younger candidates of underprivileged classes are generally preferred. The gods will guide the candidate through a long series of quests and training exercises to ensure that he develops the necessary skills. On occasion, the gods may grant paladin powers to the candidate directly, foregoing training of any kind.

*Suggested Kits:* Errant, Ghosthunter, Inquisitor, Wyrmslayer.

### Government Sponsorship

Recruiters representing large monarchies are constantly on the lookout for young paladin candidates, needed to replace retiring paladins or paladins killed in action. The recruiters largely depend on referrals from their contacts in the aristocracy, but also consider petitions from upper and middle class families without formal ties to the government. Because recruits must begin their training at an early age, candidates may be as young as five or six years old.

The recruiters thoroughly investigate the background of all potential candidates, conducting extensive interviews with the candidates' friends and family, and observing the candidates at work and play. Candidates must be physically sound, emotionally stable, intuitive, and well-behaved, qualities that an experienced recruiter can recognize even in the youngest child. For every hundred candidates evaluated, no more than two or three make the grade.

A candidate's initial training begins at home. With supervision and support from government tutors, the candidate learns to read and write, and receives basic instruction in etiquette and religion. He exercises for several hours each day, and learns to ride and care for a small horse.

At age 7 or 8, the candidate moves into the household of a nobleman, lord, or retired paladin where his training proceeds in earnest. He perfects his riding skills, learns to use weapons (practicing with undersized wooden replicas), and plays chess and other simple war games that teach strategy. He attends formal state functions to learn protocol, and is taught to respect and obey his superiors. Occasionally he joins soldiers on routine military excursions, helping to care for their horses and observing how they conduct

themselves in the field.

In his early teenage years, the candidate becomes a full-time squire to a practicing paladin. To mark the occasion, the candidate is sometimes awarded spurs in the same design as the master's; the candidate's spurs are silver, the master's are plated in gold. Under the master's supervision, the candidate learns swordsmanship and mounted combat techniques. The master provides daily instruction on ethics and philosophy, detailing every nuance of the paladin's ethos. He may also send the candidate on a quest to test his character, such as plucking a feather from a harpy or retrieving a scale from a dragon turtle.

Most importantly, the candidate accompanies his master on the battlefield and fights at his side. Despite his inexperience, a candidate is expected to hold to the same standards as a regular paladin, sacrificing his life if necessary to protect his master or defend his monarch. Consequently, many candidates fail to survive their apprenticeship. Those who persevere for three to five years are eligible to become full paladins.

*Suggested Kits:* Chevalier, Envoy, Militarist, Squire.

### Supportive Mentor

Characters without connections to churches or governments may seek out mentors to teach them the skills of a paladin. Suitable mentors include benevolent sages, reclusive clerics, and elderly paladins. Most live solitary lives on the fringes of society, free of obligations to the church or state. Many have devised unique philosophies that substitute for formal religions. A potential student is probably expected to learn and follow the mentor's faith, no matter how arcane.

Because a mentor seldom accepts more than one student at a time, the neophyte paladin benefits from individualized attention, often completing training within four or five years. Despite its brevity, the training period is intense and demanding, concentrating on weapon mastery, horsemanship, and ethics. The student must also swear allegiance to the mentor's values, which duplicate the essential components of a paladin's ethos. The mentor declares the student ready for paladinhood when he completes a final test, which may require the student to defeat the mentor in mock combat or fulfill a quest that the mentor himself was never able to complete.

*Suggested Kits:* Errant, Inquisitor, Skyrider, Wyrmslayer.

### Inherited Title

In some cultures, a lawful good child of a paladin is automatically eligible to become a paladin himself. The child's consent is usually irrelevant; a dutiful offspring follows his parent's wishes without much fuss. The parent oversees the child's training, which begins in the family stronghold. The child learns manners and discipline by tending to livestock, serving meals, and assisting the staff. Later, the parent teaches the child to ride and wield a lance, with supplementary instruction in swordsmanship, etiquette, and religion. He may also enroll the child at a royal academy or church school to complete his education. Should the parent die before the child becomes eligible for paladinhood, the church or government assumes responsibility for continuing the child's training, a gesture made in appreciation of the parent's lifetime of service.

*Suggested Kits:* Chevalier, Divinate, Squire, Votary.

## Confirmation Ceremony

When a candidate is ready to assume the role of a paladin, the momentous occasion is usually marked by a formal ceremony. The administering official may be a government representative, a church dignitary, the candidate's mentor or parent, or an avatar of the gods. As dictated by tradition and the paladin's preference, a ceremony may be public, held before a large audience in the town square, or private, performed in an official's chamber or a remote outdoor locale. Most ceremonies incorporate the paladin's Code of Ennoblement, discussed in Chapter 3. Other details are up to the DM; he is free to adapt or modify any of the ceremonies described below, or make up his own.

Confirmation ceremonies can also make good springboards for adventures. The DM might consider enlivening a ceremony with one or more of the following events:

- The administering official fails to show up. (Has he been kidnapped or worse?)
- An evil wizard stages a destructive intrusion.
- An old friend of the candidate makes a surprise appearance, bringing an urgent message (an uprising in a neighboring kingdom, the discovery of an ancient civilization).
- A cleric's incantation, the manipulation of an ancient artifact, or the shadow of an eclipse opens a portal to another plane of existence.

**Ordainment by Dubbing:** The simplest confirmation ceremony requires the candidate to kneel before the administering official, who holds a ceremonial sword over the candidate's head. After the candidate recites his Code of Ennoblement, the official taps the sword on the candidate's neck or shoulders, then pronounces him a paladin. The new paladin rises, embraces the official, then quietly departs.

**Sacrament of the Sword:** On the day of the ceremony, the candidate rises before dawn and bathes in a stream, cleansing his body and, symbolically, his spirit. He dons a white robe, representing his piousness, tied tightly at the waste with a thin sash, a reminder of the discomfort all agents of faith must endure. Surrounded by his family, invited guests, and representatives of his church and government, the candidate faces the rising sun and recites his Code of Ennoblement. The administering official presents him with a sword made of crystal or glass, symbolizing the fragile boundary separating good from evil. The official then slaps the new paladin on both sides of his face or strikes a blow against his chest, an emphatic reminder always to follow his oath.

**Feast Day:** Associated with paladins who are trained by the church, the Feast Day ceremony begins two days before the actual confirmation. The candidate spends 48 hours alone in a dark chapel, offering prayers to her deity and subsisting on nothing but bread and water. At the end of this period, the administering official opens the doors and windows to bathe the chapel in sunshine.

One by one, the candidate's teachers, family members, and guests file inside. The candidate greets them individually, thanking them for their support during her training. After all have arrived, the candidate takes a seat in front of the congregation. The official gives a sermon about the significance of this great day, then the candidate kneels before him and swears to the Code of Ennoblement. The official touches the candidate's shoulders with a ceremonial sword and kisses her forehead. The new paladin leaves the

church to the sound of applause, then rides through the town so that everyone can see her. The day climaxes with a great feast, filled with songs, dances, and games.

**Rite of the Seven Lambs:** The candidate joins six paladins in an open meadow. The paladins bring seven lambs, all of them sick or wounded through natural causes. One of the paladins, serving as the administering official, reads prayers and leads the candidate through his Code of Ennoblement. Each paladin then lays hands on one of the lambs, healing it. The new paladin lays hands on the final lamb. Clippings from the healthy lambs are placed in a cloth bag, which is given to the new paladin to commemorate the occasion.

**Convocation of the Blessed Waters:** Prior to the ceremony, the administrating official obtains a suit of armor from a paladin who died in battle. The official retains the helmet, then submerges the rest of the armor into a stream or lake, symbolically imbuing the water with the spirit of the deceased paladin. The candidate washes her ceremonial costume in the blessed stream; a typical costume consists of a linen shirt, a crimson or purple tunic, silk stockings, leather shoes with silver ornaments, and a golden robe embroidered with images of eagles and lions. The candidate allows the wet costume to dry in the sun.

On the day of the ceremony, the candidate dons the costume and meets the official near the blessed stream. The official and the candidate stand on a velvet carpet, surrounded by dignitaries and invited guests. After reciting the Oath of Ennoblement, the candidate kneels and drinks from the stream. The official presents the candidate with the helmet of the deceased paladin, completing the ceremony. The new paladin joins her guests for a modest meal under the open sky.

## Routine Activities

Even when a paladin isn't fulfilling an edict, waging war, or embarking on a quest, he still has plenty to keep him busy. Some common activities are described below. Of course, not all paladins engage in all of these activities. A Chevalier probably spends more time enforcing laws than an Errant. A Votary may set aside several days a week to recruit new members to his church, whereas Divinates may be forbidden by their faith to engage in *any* type of proselytizing.

Although neither the player nor the DM is obliged to keep track of a paladin's activities between campaigns, some of his routine duties may lead to adventures. While on a reconnaissance patrol, the paladin might discover a meeting of ogres, preparing to join forces to storm the king's stronghold. A paladin's desire to improve his riding skills could lead to a search for a legendary horseman. A proselytizing expedition may stir up trouble with a rival church. Victory at a tournament could result in the defeated opponent seeking a deadly revenge.

### Enforce Laws

Obliged to eliminate evil, a paladin is always on the lookout for lawbreakers, intervening whenever he sees a crime in progress. Overtly evil acts often meet with swift retribution; the paladin simply slays the culprit outright. In societies where even the vilest crimes must be tried in a court of law, paladins refrain from taking justice into their own

hands, instead turning the suspect over to the proper authorities for prosecution.

Law enforcement involves more than thwarting criminals. A paladin breaks up rowdy crowds before riots ensue and escorts drunks to their homes. She disposes of illegal weapons and other contraband. She intercepts spooked horses, treats accident victims, and reunites lost children with their parents. She may even clean up illegally dumped trash.

While most paladins enforce the law as a matter of principle, some are formally deputized by their lieges to serve as local police. Deputized paladins are assigned regular patrol hours, usually after dark when most crimes occur. The paladins patrol designated areas on foot or horseback, monitoring strangers, questioning suspicious characters, and keeping an eye out for trouble. They may be authorized to make arrests, levy fines, or even perform on-the-spot executions. Deputized paladins usually have jurisdiction only within the borders of their community or kingdom, though they may demand extradition of wanted criminals who have sought refuge in other lands.

### Encourage Morality

A paladin takes advantage of every opportunity to encourage and promote ethical behavior. He reinforces lawful good behavior by acknowledging the good deeds of ordinary citizens, expressing his appreciation in private meetings or public ceremonies. He gives lectures, participates in debates, and organizes discussion groups, all meant to persuade others of the benefits of a moral life. He presents himself as a role model to youngsters, dazzling them with stories of his exploits and expounding on the glories of a career spent in service to the government or church. A paladin also makes himself available for counseling, offering advice to the troubled and guidance to the confused.

### Training

A paladin continuously trains his mind and body, focusing on military skills. He jousts against stuffed dummies using a technique called *quintain* (see the illustration on page 92). He duels against multiple opponents with swords wrapped in cloth. He familiarizes himself with all types of weapons, including those improvised from rocks, branches, and other natural items; with practice, a paladin can construct a usable sling from a length of cloth and a leather strip in a matter of minutes.

Most paladins undergo a daily routine of physical exercise. Wearing full armor, a paladin may hike up a mountainside while carrying a sheep or calf. With a weight secured to his back, he may attempt to swim the length of a lake. He scales walls, climbs ropes, wrestles other warriors, and stages cross-country races.

His regimen also includes mental exercise. He may memorize lengthy passages from sacred scriptures or translate poetry into different languages. He may dissect animal cadavers to study anatomy or raise a garden to learn botany. A friendly ranger may teach him how to track animal; an experienced seaman may teach him how to navigate a ship.

### Maintenance

A paladin maintains her equipment in first-class condition. She keeps her shield and

armor polished and free of corrosion. Dents are tapped out, scratches are buffed clean, tarnishes are refinished. Blades are straightened, hardened by fire, then resharpened on grindstones. Clothing, too, receives meticulous attention. A paladin usually hand-washes her garments in cold water, squeezing (rather than wringing) them out before hanging them in the sun to dry. She soaks her undergarments and shirts in a barrel filled with soda and wood ash, then pounds them on a rock. Coats and capes may be freshened with steam by placing them in an enclosed room containing a pot of boiling water. Saddles, boots, belts, and other leather items must be oiled and polished.

## Courtly Duties

A paladin's impeccable manners, striking appearance, and sterling reputation makes him a highly desirable guest for banquets, receptions, and other formal functions. Some accept as many invitations as their schedules allow, particularly those from colleagues and dignitaries. Refusal might be interpreted as an insult.

Often, his attendance amounts to little more than window dressing, his superiors taking advantage of the occasion to display him like a trophy. A paladin endures these events with grace, retelling his war stories to pampered lords and ladies while listening to their dreary comments.

A paladin often represents his superiors at functions in other lands. He gives eulogies at funerals and witnesses christenings. He attends the weddings, birthday parties, and confirmation ceremonies of foreign aristocrats. He may also deliver documents and messages that are too important to trust to heralds.

## Military Duties

Even when not at war, a paladin with military responsibilities has a lot to do. If occupying a stronghold, he must prepare for enemy attacks by fortifying the walls with metal braces, widening moats, and digging trenches. Ample supplies of food, water, ammunition, and medicine must be secured. He may conduct drills to ensure that his troops respond swiftly and in a coordinated fashion to surprise assaults. He consults with engineers and tacticians to determine which sides of the stronghold are most vulnerable. He rehearses bowmen to fire arrows blindly, in case of an attack made under cover of fog or during a moonless night.

In the field, the paladin conducts reconnaissance patrols into enemy territory to gather information. He leads his troops on practice exercises to get them used to moving through swamps, deserts, and other hostile terrain. He may also conduct military experiments with animals, using cooperative elephants as pack animals, trained banderlogs as infantrymen, and *charmed* bulettes as assault weapons.

## Tournaments

A tournament a series of formal games that gives paladins and other warriors the chance to practice their combat skills, impress the citizenry (therby boosting their reputation), and perhaps even earn a little money. Though designed as entertainment, tournaments are not without risk. A bad performance may cost the paladin her honor. A

disastrous performance may cost her life.

Rulers and affluent landowners sponsor tournaments to amuse their colleagues and raise community morale. Tournaments also give them the chance to flaunt their wealth in a socially acceptable manner. Messengers and heralds are hired to spread the word about upcoming tournaments, which often attract participants from hundreds of miles away.

A carnival-like atmosphere prevails on the day of a tournament. Colorful banners flutter over sprawling bleachers packed with spectators. Soldiers stroll the grounds in gleaming armor. The aroma of roast pork and steaming vegetables wafts through the air. Merchants peddle paladin dolls and other gaudy mementos. Grandmothers gossip, children frolic, and gamblers place discrete wagers.

Tournament events include sword duels, archery contests, and—always of primary interest—jousting matches. In a typical joust, two paladins mount their horses on opposite ends of an open field, then raise their shields and lances. On a trumpet blast from the referee, they charge. Each attempts to dislodge the other from his horse. If neither succeeds, they return to their starting positions and try again. The winner faces another opponent in the next round. Whoever fells the most opponents during the day wins the contest.

Victory brings honor to both the paladin and the liege he represents. The paladin may also win a modest prize. Defeat, however, means disgrace, and a deliberately poor performance is considered an ethos violation. If the paladin has chosen a lady or other person to champion, victory ensures a favorable impression (modify the reaction roll by at least +1). Defeat brings humiliation, and the championed person may shun the paladin forever after (modify the reaction roll by at least –1; in any case, the reaction won't be better than Indifferent). If a poor performance insults the championed person, this might be considered an ethos violation.

Though contestants use blunted lances and are advised to behave like gentlemen, jousts often result in serious and sometimes fatal damage. Even a blunted lance can strike a deadly blow, particularly when delivered by a paladin on a war horse charging at top speed. Occasionally, a paladin knocked from his mount will catch his spur in a stirrup; the confused mount may drag the hapless paladin to his death. A losing contestant may not take defeat gracefully, attacking the winner with a sword or club. Such attacks have been known to trigger full-scale riots, resulting in dozens of casualties before soldiers manage to disperse the crowd.

## A Day in the Life

Here's what a typical day might be like for two different paladins: a Chevalier named Sir Jounville, who works in his king's stronghold, and Madeline of Blackfern, a Divinate who lives in a monastery.

### Sir Jounville (Stronghold Paladin)

Sir Jounville rises about an hour before dawn, awakening in his private quarters in the stronghold cellar. He washes in a ceramic basin of cold water, then dresses in a waist-length tunic with full sleeves, a short-sleeved tunic lined with fox fur, a loose mantle secured at the neck with a silver chain, linen hosiery, and leather boots. He visits the

stronghold chapel for the morning prayer, then stops at the kitchen for a quick breakfast of bread and ale.

Jounville reports to the steward's quarters for a brief meeting to review the events of the day ahead. The steward reminds him of an important banquet that evening, a birthday celebration for the king's niece. Jounville assures the steward that he'll be prompt.

Jounville joins three companions in the bailey for morning exercise, focusing today on weight lifting and archery practice. Meanwhile, other residents of the stronghold have risen and are beginning to fill the bailey. Maidens embroider tablecloths for the royal family, cooks roast mutton for the evening feast, and children play noisily with horseshoes and tops.

After two hours of exercise, Jounville walks to the stables to see if the groomsman has fitted his horse with new shoes. With winter approaching, Jounville wants to make sure the shoes have *calkins*, metallic points that enable the horse to grip the frozen ground. The groomsman has finished the work, and Jounville examines each shoe carefully, checking for rough edges, proper weight, and tight nail heads. Satisfied, Jounville thanks the groomsman for a job well done.

The time approaches for Jounville's guard duty. He returns to his quarters to don his chain mail armor and retrieve his shield, sword, longbow, and arrows. At the kitchen, he picks up a herring pie flavored with pepper and cinnamon that he'll eat later.

He climbs the ladder to the bastion tower and settles behind a narrow arrow slit. He peers through the slit, surveying the wide field that borders the stronghold's north wall. All is quiet. Sir Northram, whom Jounville is relieving, reports no disturbances on his watch.

For the next eight hours, Jounville stares silently through the slit, bow in hand, pausing only briefly in mid-afternoon to eat his herring pie. His watch is uneventful.

At five o'clock, Sir Inniss arrives to relieve Jounville. Jounville visits the chapel for an afternoon prayer, then goes back to his quarters to prepare for the banquet. He puts on fresh tunics and hosiery, powders his mantle with talc, and buffs his shoes. He also polishes his shield and sword; the king likes for his paladins to bring their combat gear to impress the guests.

The banquet begins exactly at seven. About 70 guests are present, including the king and his retinue, various aristocrats and clergymen, and six of the king's paladins, including Jounville. Jounville takes his seat at the furthest end of the table; guests of high status, such as the king's family and church dignitaries, sit near the center. A servant brings Jounville his table service, consisting of iron tableware, a *manchet* (a slab of stale bread, used as a plate), a glass goblet, and a *mazer* (a soup bowl trimmed in silver).

Following a benediction and introduction of the guests of honor, servants bring platters heaped with food. The main course includes *blankmanger* (chicken and rice seasoned with sugar and almonds), *mortrews* (dumplings made of fish, bread crumbs, and eggs), glazed onions and peas, mustard and wine sauces, and stewed fruit. Jounville follows meticulous rules of etiquette, careful to wipe his spoon after each use and to take small portions.

The meal lasts for two hours. Servants bring water bowls for the guests to wash their hands, then clear the tables. The guests retire to the ballroom for entertainment. Bards and jesters sing songs and tell stories, while the younger guests join hands and dance in a circle. Elder guests play backgammon or chess and catch up on local gossip. Jounville

circulates, engaging in polite small talk. Near the end of the evening, Jounville recites a poem composed especially for the occasion, accompanied by a bard who plays the lute.

The entertainment will last until the early hours of the morning. But at 11 o'clock, Jounville approaches an aide and requests permission to be excused. Jounville retires to his quarters, offering a final evening prayer before settling into bed.

### Madeline of Blackfern (Church Paladin)

Madeline of Blackfern, a paladin-in-residence at the Heart's Hope Monastery, begins her daily routine at midnight when she's awakened by the peal of bells from the prayer tower. Madeline rises, puts on a cloth mantle, leather slippers, and a prayer cap, then joins her fellow paladins in the chapel. Madeline recites a long prayer, then goes to the stables to feed and water the monastery's horses, part of her assigned duties. Except for the prayer, Madeline is expected to observe total silence.

Her chores complete, Madeline returns to bed. The bells awaken her again at five. She dresses again, walks silently to the chapel, and listens to the morning sermon. She fills the next two hours with exercise, meditation, and household tasks. A bell signals breakfast, the main meal of the day. Madeline provides her own dishes and tableware, as do all residents of the monastery. Breakfast consists of beef, mutton, bread, and fruit, simply prepared. Leftovers are distributed to poor families in the area.

After breakfast, Madeline receives her orders for the day. Madeline will spend two hours kneading bread dough in the main kitchen, two hours assisting the monastery's blacksmith to forge horseshoes, and the remaining daylight hours patrolling the grounds on foot. Prayer services will be given approximately every three hours, as signaled by the bells. Except for emergencies or pre-approved communications, Madeline is expected to remain silent all day.

At eight o'clock, Madeline eats an evening meal of bread and vegetables in the dining hall. She feeds and waters the horses again, then meets with her superior to confess any sins she may have committed during the previous 24 hours. She admits to coveting her friend's new sandals. For penance, the superior orders her to help her friend sweep the stables. Madeline returns to her quarters, kneels at her bed for a final prayer, then catches a few hours of sleep before the bells awaken her at midnight.

## Courtly Love

Some poets and philosophers of the feudal era believed that true romance (or "courtly love") could only exist outside the bonds of matrimony. Marriage, they felt, substituted obligation and duty for honest emotion. (A DM's campaign, however, can allow for romance and marriage to go hand-in-hand.) For the paladin, courtly love may be defined as a yearning of the spirit, a passion that is never fulfilled.

The object of a paladin's courtly love (whom we'll call the beloved) represents all that is good and pure. She is less a person than a romantic ideal, like a character in a poem or a dream. Often, the beloved is an unobtainable, unapproachable person, such as the spouse of a friend or the offspring of a monarch. The paladin may have never even met her, merely watched her from afar.

Whether the beloved returns the paladin's affection, or even knows of it, is irrelevant.

Often, the paladin keeps his feelings a secret, believing himself spiritually inferior to his beloved and unwilling to burden her with his wretched attentions. In any case, the paladin remains utterly devoted to the beloved, pledging eternal fidelity and shunning all others.

### Rules for Courtly Love

A DM may permit PC paladins to experience courtly love. Courtly love adds a dimension of romantic tragedy to the paladin's life, consuming him with the exquisite agony of unfulfilled passion.

Any paladin PC may succumb to courtly love. A paladin typically fixates on his beloved early in his career, say, any time before he reaches 5th level. He usually remains true to his beloved for the rest of his life.

Courtly love persists regardless of changes in the paladin's circumstances or those of the beloved. He stays in love with her even if he marries (if courtly love transcends marriage, which might otherwise be seen as an ethos violation), the beloved marries (which can actually enhance courtly love's tragic overtones), or the beloved dies (courtly love for the truly inaccessible is perhaps the "purest" love of all). A paladin will never have more than a single beloved at the same time, nor will he ever abandon one beloved for another.

The paladin's beloved can be any attractive NPC of the opposite gender, preferably of high Charisma (at least 15 or so) and lawful good alignment. Ideal beloveds include characters of high social or economic status (aristocrats, government officials, high-level paladins, and affluent landowners), princes and princesses, celebrities (renowned poets, scholars, and mages), and the spouses of kings and queens (a situation not without peril, as Sir Galahad learned too late).

Courtly love should arise naturally from the events in the campaign. The paladin may first lay eyes on his beloved across the room at a formal banquet or spot her in the audience at a jousting tournament. She may be among the survivors he rescues from a sinking ship. Or she may simply approach him for directions to the nearest inn, smile in thanks, then mount her horse and ride away. A fleeting glance or a chance meeting is all that's required for the paladin to become hopelessly smitten.

A paladin himself may choose his own beloved and declare his love. This declaration is equivalent to an ethos vow; the paladin must remain true to his beloved from that moment onward. Alternately, the DM may force the issue by observing the paladin's behavior. If the paladin seems unusually attracted to a particular NPC—asking about her, staring longingly at her, fawning over her—the DM should point out that the paladin is exhibiting early signs of courtly love. If the paladin persists, the DM may declare that the NPC has become the paladin's beloved. If he likes, the DM may require the paladin to make a Charisma check. If the check fails, courtly love exists. If the check succeeds, the paladin has resisted courtly love for the time being. If the paladin continues to fawn over the NPC, the DM may require another Charisma check at a later time.

**Behavior:** Courtly love involves the beloved only indirectly. Rarely will a paladin confront his beloved with his feelings. For the most part, he keeps his obsession to himself, resigned to worshipping his beloved from afar. He expresses his devotion symbolically, tries to learn as much about her as he can, and luxuriates in any opportunity to bask in her presence. In a campaign, a paladin might demonstrate courtly love in any

of the following ways:

• He composes songs and poems in the beloved's honor.

• He champions the beloved at a tournament.

• He arranges for anonymous gifts to be delivered to the beloved.

• He attaches a lock of the beloved's hair to his shield, or places a scrap of material from her dress under his armor, next to his heart.

• If he hears anyone speak dishonorably about his beloved, he challenges them to retract the statement or fight a duel to the death.

• He arranges for an invitation to a banquet or party where his beloved will be. (And most likely, he spends the night on the opposite side of the room, too embarrassed to speak to her or even go near her.)

• He interviews at length anyone who has information about his beloved, no matter how trivial.

• He goes out of his way to visit places of significance to his beloved (the town of her birth, her school, a favorite lake).

**Penalties and bonuses:** Although expressions of courtly love mainly involve role-playing, the DM may wish to impose penalties and bonuses in certain situations. For instance, any of the following circumstance may fuel the paladin with so much joy that he benefits from a +1 or +2 bonus to ability checks, attack rolls, or damage rolls, for anywhere from a few hours to a few days. The DM decides the nature of the bonuses and their duration, depending on the intensity of the circumstance that triggered them.

• The beloved innocently smiles at the paladin from across a room.

• The beloved sends a thank-you note for a gift.

• The beloved congratulates the paladin on an outstanding performance at a tournament.

• At a party or banquet, the beloved approaches the paladin and engages him in a brief conversation about nothing in particular.

• The beloved gives the paladin her handkerchief or glove.

Conversely, a painful experience may result in overwhelming heartbreak, longing, or despair, persisting for a few hours or several days, as determined by the DM. During that time, the paladin may suffer penalties of –1 or –2 to ability checks, attack rolls, or damage rolls. Triggering situations may include:

• A lock of hair, a scrap of cloth, or other memento of the beloved is lost or stolen.

• The beloved spurns or ignores the paladin at a banquet or party.

• The paladin champions the beloved at a tournament, but loses his match.

• The beloved announces her engagement to someone else.

• The beloved is injured or becomes ill.

**Ethos penalties:** A vow of courtly love is as binding as any component of a paladin's ethos. Should a paladin betray his beloved by speaking badly of her, breaking a promise to her, snubbing her gestures of friendship, or—worst of all—succumbing to the charms of another, he has committed an ethos violation. The DM should select an appropriate punishment from the suggestions in Chapter 3.

**Covert romance:** On occasion, the beloved may reciprocate the paladin's affections. If so, the couple may embark on a romance. They may express their love openly, but more likely, they'll choose to keep their relationship secret. Covert lovers take pains to arrange clandestine meetings, avoid signing letters to each other, and exchange

nondescript gifts so as not to attract attention.

The discovery of an illicit romance may result in severe consequences for both the beloved and the paladin. The beloved's family might object to their affair, or differences in their status make their romance socially unacceptable. To keep the couple apart, the beloved's family may relocate to a distant land. The family may demand restitution to compensate for their humiliation. A secret affair may constitute an ethos violation for the paladin, particularly if he's covering up his activities or romancing a person engaged to someone else (the paladin's feelings may be so strong that he's willing to suffer an ethos penalty just to be near his beloved).

Should the paladin wed his beloved, all benefits, penalties, and other conditions associated with courtly love will gradually disappear, replaced with the more stable and less volatile feelings associated with marriage. The reappearance of courtly love for a married paladin can be considered a major ethos violation.

## Economics

Many paladins live in a state of near poverty. Their ethos limits the amount of money they can save, while living expenses, church tithings, and stronghold costs put heavy demands on whatever meager funds they manage to acquire. Most paladins have neither the time, resources, nor aptitude to make a living as craftsmen or merchants. Business ventures, other than those associated with their strongholds, are often impractical or forbidden. Paladins from affluent backgrounds rarely benefit from their families' wealth; their ethos restricts them from accepting large allowances or handouts, and strict inheritance laws usually turn most of the holdings over to the state when the parents die. Adding to their difficulties, most governments and churches require paladins to buy and maintain their own mounts and equipment, believing they'll take better care of these items if they owns them outright.

So where does a paladin get his money? Aside from treasure and rewards, here are a few of the most common sources:

### Stipend

Though paladins are expected to serve their government out of loyalty rather than an expectation of financial reward, many monarchies give their paladins a small monthly stipend, rarely exceeding 10 gp per month. The paladin is expected to buy all of his equipment, clothing, and supplies, though the government may provide him food and a place to live. As the paladin becomes more experienced, the stipend may increase modestly, perhaps 1-2 gp per level. In most cases, the stipend ends when the paladin builds his own stronghold.

Stipends generally aren't available to free-lance paladins, paladins who have pledged fealty to mentors instead of governments, or paladins who work primarily or exclusively for churches. Churches may provide room and board, but give cash only in emergencies. Cash given by a church usually works as a loan, which the paladin is expected to repay as soon as possible.

### Mercenary

When his government or church is at peace, a paladin may hire out as a mercenary to friendly monarchies or other employers. The paladin's superiors negotiate the terms, including the length of service, expected duties, and remuneration. Ironically, a paladin can earn much more as a mercenary than as a soldier on salary to his government; monthly wages in excess of 100 gp are common. However, the paladin may be obliged to pay as much as 90% of his wage to his superiors, in recompense for the loan of his services.

### Mortgage

A paladin may raise money by securing a loan from his government or church, using his stronghold or other property as collateral. Collateral requirements and repayment terms are usually strict. The required collateral may be as much as 100 times the amount of the loan. Monthly payments may be equal to 10-20% of the amount loaned, paid for a minimum of one year. A paladin may also secure a loan based on a pledge of future service as a soldier, teacher, or laborer. Moneylenders are usually agreeable to such arrangements, knowing that a paladin always keeps his word.

### Hostage Ransom

In times of war, a paladin may capture enemy soldiers or dignitaries, then demand ransom for their return. Hostage footsoldiers or household staff seldom bring high ransoms—if any—but a dignitary or other important person can command a fortune (a "king's ransom"). If he works for a government or church, the paladin's superiors usually demand a large portion of all ransoms. Ransoming prisoners is not considered an ethos violation, so long as the prisoners are of good or neutral alignment; evil-aligned prisoners are usually slain or turned over to the authorities for disposition.

### Tournament Ransom

In addition to winning small monetary awards in tournaments, paladins may earn money by ransoming their opponents. Certain tournaments require defeated opponents to flee the field, taking refuge in nearby forests or mountains. The victors may pursue. If the victors locate and capture the losers within an allotted time period (say, by sunset), the losers must pay the victors a ransom for their release. A typical ransom ranges from 1-10 gp, though ransoms for high-level opponents may be two or three times that amount. A paladin's superiors usually skim off a high percentage of all ransoms.

## The Paladin's Personality

The defining characteristic, a single word that summarizes a character's personality, describes the essential nature of the character and how he comes across to others. A character's personality comprises many elements, but the defining characteristic is the dominant trait from which all other personality components arise. A defining characteristic can be chosen for paladins (or any other character, for that matter). Several

possibilities listed below should get you started.

How to choose a defining characteristic? There's no best way, but you'll know you're on the right track if a particular characteristic fits your conception of the character. For instance, if you picture your paladin charging boldly into battle, slaughtering his enemies without remorse, his defining characteristic could be Vengeful. If you see him as withdrawn and brooding, he might be Tormented. The descriptions below are intentionally vague to encourage personal interpretation.

You may also select secondary traits to compliment the defining characteristic. Each entry below lists a number of options. Choose one or two that appeal to you, or make up your own. Any secondary traits are fine, so long as they don't contradict the defining characteristic; a Vengeful paladin might be Brutal but he's unlikely to be Shy.

Defining characteristics work with some kits better than others. Each entry lists a few suggestions, but don't feel restricted by them. Use any defining characteristic with any kit that feels right to you. You can also mix and match the various corollary characteristics, or ignore them altogether.

Previous volumes in the *Complete Handbook* series include lists of archetypes drawn from literature, film, and other fictional and mythological sources. Many of these archetypes can be adapted to paladin characters. *The Complete Bard's Handbook* features a series of tables to determine personality traits randomly for bards or any other character.

## Defining Characteristics

### Aggressive

The aggressive paladin speaks with his sword. Uneasy in social situations and impatient with negotiation, he is most comfortable on the battlefield. He relishes combat, particularly hand-to-hand encounters with enemies formidable enough to put up a good fight. A forceful personality who often wears his emotions on his sleeve, he makes a spirited companion and a dangerous opponent.

*Secondary Traits:* Heroic, impulsive, haughty, wise-cracking, abrasive, inspiring.
*Suggested Kits:* Chevalier, Inquisitor, Militarist, Wyrmslayer.

### Cynical

While as devoted to her ethos as any other paladin, the cynical paladin sees the pursuit of justice as admirable but ultimately futile. Greed, selfishness, and hatred seem to predominate in the world. Compassion and selflessness are hard to find. Advocates of good are hopelessly outnumbered. The cynical paladin fights tirelessly for her principles, but can't shake the feeling that her work may be in vain. To her, optimism is touching but naive, despondency a perfectly understandable reaction to a callous world.

*Secondary Traits:* Angry, quick-witted, reflective, soft-hearted, brooding, helpful.
*Suggested Kits:* Expatriate, Ghosthunter, Votary, Wyrmslayer.

### Genteel

The genteel paladin is a man of taste, more at home at a formal ball than a bloody battlefield. While his military skills are has finely honed as those of any paladin, he views combat as an unpleasant necessity; enemies should be dispatched as quickly as possible,

preferably with flair and style. He owns the finest clothes and equipment he can afford, and spends as much time on personal grooming as others do practicing weapon skills. He is preoccupied with courtly etiquette and elegant living, looking forward to the day when he can retire to his stronghold and live out the remainder of his life as a proper gentleman.

*Secondary Traits:* Conceited, prudish, romantic, intellectual, precise, opinionated.

*Suggested Kits:* Chevalier, Envoy, Equerry, Squire.

**Inquisitive**

The inquisitive paladin has an unquenchable thirst for knowledge. Outgoing and amiable, his interests know no limits; he's as fascinated by the rice-growing techniques of elven farmers as the mating rituals of ankhegs. His curiosity often frustrates his companions, who may be eager to resume their travels while he lingers behind, discussing doctrine with a local priest or engrossed by a newborn bluebird pecking its way from its shell.

*Secondary Traits:* Carefree, shallow, talkative, wise, distracted, warm, studious.

*Suggested Kits:* Divinate, Envoy, Errant, Squire.

**Optimistic**

Relentlessly cheerful and unflaggingly confident, the optimistic paladin could not imagine a better life for herself. She is utterly convinced of the righteousness of her cause, and looks forward to each day as a new opportunity to bring more goodness into the world. She delights in the companionship of others. Her comrades find her a source of inspiration and a beacon of hope in times of despair.

*Secondary Traits:* Nurturing, compassionate, extroverted, compliant, humorous, relaxed, warm.

*Suggested Kits:* Errant, Inquisitor, Skyrider, Squire.

**Philosophic**

The philosophic paladin is drawn to the pleasures of the mind, preferring a poetry reading to a jousting match, a science text to a glass of fine wine. He enjoys scholarly debates on religion and history, and is fascinated by new cultures. His aptitude for intellectual analysis makes him an excellent tactician and valued advisor. Rarely impulsive, his actions are measured and deliberate, born of logic rather than emotion.

*Secondary Traits:* Thoughtful, cold, hesitant, dispassionate, meticulous, curious.

*Suggested Kits:* Chevalier, Divinate, Errant, Medician.

**Prudent**

The prudent paladin acts with deliberation and foresight, believing that fortune smiles on the cautious. He weighs his words before speaking and is loathe to undertake a mission without careful planning. He is impressed by logic, unmoved by emotion. His rational, dispassionate approach to problem-solving makes him a superb tactician and arbitrator, though some find him cold, even calculating. His level head tempers his private affairs; he manages his stronghold well, avoids debt, and rarely succumbs to temptation.

*Secondary Traits:* Shrewd, insightful, unfriendly, arrogant, keen-witted, reflective.

*Suggested Kits:* Ghosthunter, Inquisitor, Militarist, Wyrmslayer.

**Secretive**

For reasons of his own, the secretive paladin reveals little about his background, motivations, or personality, even to his closest companions. He may wear a hood or visor at all times to conceal his features, dress in black or other dark colors, and cover or remove any heraldic symbols from his equipment. He keeps to himself, seldom speaking unless absolutely necessary; he may even wear a scarf around his mouth to muffle his voice. Though he faithfully fulfills his obligations to his party, he keeps his companions at arm's length. There are many possible reasons for his behavior. He may be a fugitive from the law, unjustly accused of a crime, or a renegade from a government allied with evil. He may be doing penance for an ethos violation. Or "he" may be a woman, compelled to hide her sex because of social customs that restrict females from becoming paladins.

*Secondary Traits:* Quiet, studious, eccentric, impulsive, threatening, nervous.

*Suggested Kits:* Expatriate, Ghosthunter, Inquisitor, Wyrmslayer.

**Tormented**

The tormented paladin lives in the shadow of insecurity and self-doubt. She holds herself to impossibly high standards, sometimes measuring her deeds against those of renowned paladins of history or legend, never considering that those deeds may have been fictional or exaggerated. At her core, the tormented paladin feels unworthy to serve her government or church, this despite her unimpeachable ethics and flawless performance on the battlefield. She scoffs at praise, resists assurance from her friends, and continually berates herself for perceived mistakes.

*Secondary Traits:* Kind, sullen, analytical, shy, humble, sorrowful

*Suggested Kits:* Chevalier, Divinate, Expatriate, Divinate, Squire.

**Vengeful**

A passionate hatred of evil fuels the vengeful paladin, who crushes his opponents with savage fury. Often, he's motivated by revenge; perhaps he saw his parents slaughtered by drunken ogres, or his village burned to the ground by an evil warlord. In any case, he seems intent on singlehandedly eliminating evil from the face of the planet.

*Secondary Traits:* Unapproachable, moody, bitter, bold, inspiring, violent.

*Suggested Kits:* Chevalier, Expatriate, Ghosthunter, Skyrider, Wyrmslayer.

## Training Rules for Paladins

A paladin may seek training from a lawful good cleric or another paladin. The instructor must be at least one level higher the trainee, and skilled in the area he's attempting to teach. The instructor must also pass a Wisdom and Charisma check to verify his patience, insight, and authority.

The paladin must pay for his training. The DM determines the fee, based on the difficulty of the subject and the instructor's reputation. Fees of 50-100 gp per week are typical, but may be raised or lowed as the DM sees fit. If the instructor has been furnished by the paladin's government or church, the paladin may be eligible for a

reduced fee. In some cases, the fee may be waived, or exchanged for a promise of service.

To determine the training time, subtract the instructor's Wisdom from 19; the result is the minimum number of weeks required. At the end of this period, the paladin makes an Intelligence or Wisdom check (whichever is higher). If he passes the check, the training has been successful. If he fails the check, he must spend another week training. He then makes another check, with a –1 bonus. He may continue to make checks, with each additional week resulting in an additional –1 bonus.

## Strongholds

Like fighters and rangers, paladins may establish and maintain castles, forts, temples, and other types of strongholds. But a paladin's stronghold is more than a residence. It serves as a monument to his principles, a tribute to his deity, and a symbol of his lifetime of service. It can function as a military base, administrative office, religious sanctuary, prison, treasure house, or training center. It may also generate a modest income from agricultural products, taxes, or rents.

A paladin may acquire land at any point in his career, but he must be at least 9th level before he can establish a stronghold. Paladins of lower levels lack reputation and contacts, and rarely have the monetary resources needed for construction costs and upkeep.

Even at 9th level, however, a paladin should proceed with caution. A stronghold requires an enormous commitment of time and money. Often, a paladin must oversee a staff of workers and a garrison of soldiers, most of them expecting regular salaries. A paladin may face staggering costs for routine maintenance, which he dare not neglect—a shabby building reflects badly on his reputation and may also be a punishable violation of his ethos (see Chapter 3).

If a paladin decides to take the plunge, he must determine the location of his intended stronghold, its size and design, and its purpose. Will it be his main home or an occasional residence? Is the generation of income a primary consideration? Will the general public have access, or will it be open only to a select few? How much can he afford to invest? Are the officials of his government and church supportive or discouraging? Will they help with manpower, loans, or supplies?

There is no fixed procedure for establishing a stronghold, but the following steps are usually involved. For more information, particularly regarding costs and layouts, consult DMGR2 *The Castle Guide*.

### Permission

If a paladin has strong ties to a government or church, he must petition the proper officials for permission to build a stronghold. In most cases, the officials want to know the paladin's plans in detail, particularly the proposed stronghold's size, design, and function. The officials may demand an accounting of the paladin's economic status, including his net worth, projected income, and current debts.

If the paladin has a solid reputation and answers their questions satisfactorily, the officials usually grant permission, contingent on a few conditions. For instance, the

paladin may have to agree to live in the stronghold for a minimum number of months per year or pay an annual maintenance tax (in addition to his normal tithing requirements). He may be held personally responsible for the debts of all workers in his employ. Further, the officials may demand the right to use his stronghold for military purposes in times of war. Finally, they may insist on a signed statement that permanently turns the stronghold over to them should the paladin violate the conditions of their agreement.

## Land Acquisition

Paladins usually acquire the land for their strongholds through grants or charters awarded by government or church officials. A *charter* allows the paladin to administer the land more or less as he sees fit, with the officials retaining ownership. Chartered land often lies outside the jurisdiction of the government or church, meaning that the paladin may have to defend against ownership challenges from other claimants.

Monarchs sometimes award property in the form of a *benefice*; that is, the paladin manages the property as he sees fit in exchange for a promise of military service. Though the monarchy technically retains ownership of the property, the paladin keeps all the money from farming and other profit-making endeavors. The charter remains valid as long as the paladin meets his military obligations. Additionally, the monarchy agrees to provide soldiers to help defend the stronghold, and to refrain from interfering in the paladin's management decisions.

A *grant* transfers legal ownership directly and unequivocally to the paladin. The best grant is an outright gift, given to recognize a noteworthy career, or as a reward for a military victory or some other act of exceptional service. A *homestead grant* gives ownership of a piece of land to the paladin after he's lived and worked there for a predetermined period (typically, 5-10 years). When a monarch awards a grant, he also specifies what will happen to the land when the paladin dies. A *reversion* arrangement returns the property to the king (or to whomever the land previously belonged). A *perpetuity grant* entitles the paladin to name an heir to inherit his land, usually his successor.

In the case of charters and grants, a paladin usually takes whatever land he can get. A paladin wanting more say in the type and size of his land should consider other options. He may, for instance, petition his liege for ownership of a conquered land; that is, a portion of a territory confiscated from an enemy army or a property liberated from a heretical priesthood. Affluent or well-connected paladins may buy their land or negotiate a lease, paying a fixed sum each month that goes toward the purchase price. Land values vary wildly, but a paladin can expect to pay from 50-200 gold pieces per acre for undeveloped property in a good climate within reasonable distance of a civilized community.

A paladin may also be responsible for a *regency* or *trust*, a locale that he neither owns nor occupies. As directed by his government or church, the paladin oversees the locale and makes all management decisions, including hiring employees and maintaining defenses.

## Site Location

Paladins should choose the site of their strongholds with an eye towards defensive advantages, convenience, and hidden costs. A stronghold in a valley is more difficult to defend that one at the top of a hill. Access to a river makes a moat easier to fill. Forests provide lumber for buildings and fruit for nourishment. Land in a city may be more expensive than in a small village, but labor and materials may be easier to procure. If the paladin wants to farm, or if he eventually plans to expand, he should buy as much land as he needs at the outset, rather than waiting until he builds his stronghold and drives up the value of the adjacent property.

Paladins lacking the resources to buy land or the patience to wait for a grant may wish to settle in an unclaimed wilderness. If the paladin has strong ties to a government or church, he may be required to claim such land for his superiors. However, if the land is sufficiently remote and has no obvious military or economic value, the claim may just be a formality; his superiors may let him have it without any conditions. Of course, if the paladin has no ties to a government or church, he may be eligible to claim the land for himself.

Though wilderness strongholds bring independence, they also bring problems. Should an enemy army lay siege, the paladin can't turn to his government for help. He's on his own to defend against monsters and claim-jumpers. He may have a hard time finding medicine, food, and other supplies. Damage from forest fires and other natural disasters may be difficult to contain.

## Design

Stronghold designs range from small fortresses (essentially, fortified houses) to ornate castles with multiple buildings and elaborate defenses. Budgetary and ethical considerations, however, usually restrict paladins to modest layouts. If a paladin wants to spend more than 150,000 gp or so on a stronghold (see "Time and Money" below), he must petition his deity for permission. If the paladin's intentions are honorable—for instance, if the stronghold is intended to honor the deity or to provide jobs for destitute peasants—permission will probably be granted. Because of his commitment to austerity (discussed in Chapter 3), a paladin will *never* establish a dominion or empire.

Whenever practical, a paladin's stronghold includes the following components:

**Bailey.** This is an open courtyard surrounded by a protective wall. The bailey is usually circular or rectangular, although the exact shape depends on the terrain.

**Keep.** The stronghold's primary structure, a keep is a rectangular or cylindrical building with thick stone walls, rising 50-80 feet high. The keep is the main residence of the paladin, his family, and his closest aides. It also serves as a storage area and as emergency housing for workers and soldiers should intruders breech the stronghold wall.

Other stronghold buildings may include warehouses, barracks, barns, and workshops. These buildings are made of wood or stone, ranging in size from 20 feet ¥ 20 feet to 40 feet ¥ 80 feet. Most are ground level; a few may have two stories. The buildings may be arranged in small clusters or linked by covered passageways to form one continuous structure.

**Moat.** This is a ditch filled with water or mud that encircles the stronghold wall. To deter intruders, a moat should be at least 10 feet wide and 10 feet deep.

**Protective Wall.** Typically, the outer wall of the stronghold is 15-50 feet tall and at

least 10 feet thick. The wall is made of stone, often reinforced with sections of metal or wood. A protruding entryway, called a *barbican*, consists of two stone towers, about 20-30 feet high and spaced 20-40 feet apart. A wooden gate reinforced with metal bars sits between the towers. A small building called a *gatehouse* may be positioned next to the gate; gatehouse guards monitor the comings and goings of stronghold visitors. To allow passage over the moat, the guards lower a drawbridge, consisting of a broad wooden platform connected by chains to a crank. The entry may be further protected by a sliding metal lattice called a *portcullis*, raised and lowered by pulleys and ropes.

An open parapet called a *battlement* rises from the outer wall. Defenders of the stronghold stand behind the battlement to protect themselves from enemy missiles. Some battlements extend over the protective wall, allowing defenders to hurl stones or splash hot oil on invaders through holes in the floor.

**Temple.** Next to the keep, the temple (or shrine, cathedral, or church, as appropriate to the paladin's faith) is the stronghold's most imposing structure. The temple is usually made of stone, cylindrical or rectangular in shape, and adjacent or directly attached to the keep. Paladins prefer ornate temples, and any surplus funds in the budget usually go towards additional furnishings, decorations, and architectural flourishes. Rock gardens and friezes are typical; statuary, fountains, and ornamental roofs are less common but highly desirable.

**Towers.** Several stone towers stand along the walls, each about 30 feet or so tall. Square towers are less sturdy and more costly than round towers, but are easier to build. Soldiers stand on the tower roofs, protected by parapets, and throw spears and rocks at invaders. From inside the tower, they fire arrows through narrow slits in the walls.

## Time and Money

Paladin strongholds aren't cheap. The costs of three configurations are listed below; the prices include labor but exclude the land.

**Small.** A fortified tower (which serves as a keep) enclosed by a protective wall, along with one or two small storage buildings and worker dormitories. Cost: 40,000-60,000 gp.

**Medium.** A modest villa or fort consisting of a 50-foot keep, surrounded by a moat and a protective wall, with a small temple, one or two stone towers, and a few auxiliary buildings. Cost: 80,000-120,000 gp.

**Large.** A modest castle, including an 80-foot keep, an attached temple, a 50-foot protective wall (with a battlement), a moat, three or more towers, and several auxiliary buildings (barns, worker dormitories, storehouses). Cost: 130,000-170,000 gp.

Ornate designs (including high-quality materials or works of art), difficult working conditions (a lack of adequate workers or excessive rain), and unexpected setbacks (a wall collapses or a rot mold infects the local lumber supply) can increase the price from 50-100%. On the other hand, a good break can lower costs. For instance, a sympathetic monarch may donate labor, or a mine owner may make a deal on stone purchased in quantity. In any case, the DM has the final say on construction costs, as well as any circumstances that affect the final price.

To estimate the number of days required to build a stronghold, divide the total cost of the stronghold by 1,000 and multiply the result by 1d4. For example, building a castle costing 100,000 gp takes 100-400 days. Keep in mind, however, that a production

schedule seldom proceeds without interruption. Supply shortages, bad weather, sick and injured workers, and monster attacks can double or even triple the time required. Even a modest castle may take several years to complete.

## Staff

Running even the smallest stronghold requires more attention than the paladin alone can supply. A loyal staff—composed of workers, soldiers, and a few trained specialists—is necessary to handle the stronghold's day-to-day operations and provide a strong defense.

Securing a staff is especially complicated for a paladin, since he doesn't attract a body of followers like other fighters. Further, a paladin may hire only persons of lawful good alignment, limiting the pool of potential hirelings.

Because of these restrictions, a paladin may be tempted to skimp on his staff. But he does so at great risk. The stronghold may fall into disrepair without a sufficient number of workers, devaluing the property and inviting reprimands from the paladin's liege or church. An inadequate defense encourages raids from bandits, monsters, and hostile armies. Without a skilled steward, the paladin must supervise the stronghold's daily routines.

A paladin may begin his search for employees by making inquiries in local inns, posting notices, and asking for referrals from other landlords. Though interest may be limited at first, the number of applicants is likely to increase as word spreads of the paladin's reputation for honesty and generosity. In general, a suitable candidate for a particular job may show up every week or so; a paladin can expect to spend at least two or three months to hire a staff of 12.

It's up to the paladin to screen all applicants, weeding out incompetent workers and potential troublemakers. Most important, he must ascertain each applicant's alignment by asking pointed questions (Have you ever been arrested? Have you ever been reprimanded by your church?), requesting references (military service records and recommendations from previous employers), and conducting simple tests of honesty (the paladin leaves a gold coin on the floor, then leaves the room; will the applicant pocket the coin or return it?). If the paladin doubts the applicant's alignment for any reason, it's in his best interests to reject the applicant on the spot. If an employee later reveals an alignment other than lawful good, the paladin must dismiss him; additionally, the paladin may face penalties for violating his ethos (see Chapter 3).

If convinced of the applicant's integrity and skills, the paladin then makes a formal offer, spelling out the duties of the job, the salary, all benefits, opportunities for promotion, and the term of employment. If the terms are agreeable to the applicant, he accepts the job. Alternately, the DM may roll secretly for the applicant's reaction on Table 26. If the interview went exceptionally well for both parties, modify the roll by +1. If the paladin made an unusually generous offer, modify the roll by another +1.

### Table 26: Job Applicant's Reaction

| D10 Roll | Reaction |
|---|---|

| | |
|---|---|
| 1 | The applicant flatly refuses the offer. |
| 2 | The applicant asks for a 1d10 x 10% increase in the offered salary (or asks for a comparable perk). If the paladin declines, the applicant turns down the job. If the paladin agrees, roll again. |
| 3 | The applicant asks for a 1d10 x 10% increase in the offered salary (or asks for a comparable perk). If the paladin refuses, the applicant accepts the job anyway. |
| 4-5 | The applicant asks for 1-2 weeks to consider the offer. If the job remains open after this time, roll again. |
| 6-10 | The applicant accepts the offer. |

How big a staff is needed? That depends on the size of the stronghold, the type of operation (farm workers are needed if the stronghold produces crops), and its location (more soldiers may be necessary in hostile territory). The paladin must also consider his financial health; workers won't stick around if he can't meet the monthly payroll. It may take a bit of trial and error before the paladin settles on the optimum size and composition of his staff. Table 27 lists suggested staff sizes for small, medium, and large strongholds.

### Table 27: Staff Sizes for Strongholds

| Position | Small | Medium | Large |
|---|---|---|---|
| Chaplain | 1 | 1-2 | 1-3 |
| Engineer | - | 1 | 1-2 |
| Guard Captain | - | 1 | 1-3 |
| Soldiers | 2-10 | 10-50 | 50-70 |
| Stable Master | - | 1 | 1-3 |
| Steward | 1 | 1 | 1-2 |
| Laborers | 2-10 | 10-20 | 10-50 |
| Artillerist | - | - | 1-2 |
| Chamberlain | - | 1 | 1-4 |
| Physician | - | - | 1-2 |
| Scribe | - | - | 1-2 |
| Weaponsmith | - | 1 | 1-4 |

Following are descriptions for the positions listed in Table 27, along with class and level recommendations. A suggested monthly salary is also given; the paladin must also supply room and board.

**Chaplain.** A cleric who shares the paladin's faith, the chaplain takes responsibility for the stronghold's religious needs. He conducts church services, consoles the ailing and the distraught, and provides spiritual guidance. Some chaplains ensure that tithings are collected and properly distributed. (3rd- to 5th-level cleric; 100-500 gp, depending on experience and duties.)

**Engineer.** The engineer handles repairs, supervises new construction, and maintains equipment. He anticipates structural problems and suggests ways the paladin might improve his property. In time, a good engineer should pay for himself. (2nd- to 4th-level wizard with Engineering proficiency; 100-200 gp.)

**Guard captain.** This is the commander of the paladin's armed forces, usually a combat veteran with some administrative experience. Generally, it's to the paladin's advantage to hire the highest-level captain he can afford. However, a paladin with a small contingent of soldiers may not need an exceptionally experienced (and expensive) guard captain. (3rd- to 5th-level fighter; 300-500 gp.)

**Soldiers.** These include archers (0- to 1st-level fighters; 4 gp), cavalry men (1st- to 2nd-level fighters; 5-10 gp), and foot soldiers (0- to 1st-level fighters; 1-2 gp). Typically, soldiers comprise the bulk of a paladin's paid staff; a minimum of 50 soldiers is usually necessary to defend a large castle.

**Stable master.** The caretaker of the paladin's horses and stable. He sees that the animals are fed, watered, groomed, and exercised. He also cares for sick and injured mounts. The paladin still cares for his bonded mount personally. (1st- to 2nd-level fighter; 10-30 gp.)

**Steward.** This is an administrator in charge of food preparation, cleaning, and general household management. (Wizard, warrior, or cleric of at least 1st level; 100-200 gp.)

**Laborers.** These are workers trained as harvesters, herdsmen, gardeners, stonecutters, cooks, seamstresses, and groundskeepers. (0-level fighters; 1-4 gp.)

The paladin may also wish to consider filling the following positions. None of these are vital for small strongholds, but may be necessary if the paladin operates a large castle or if his holdings expand.

**Artillerist.** If the stronghold uses siege weapons or similarly complex devices for defense, the artillerist is responsible for their maintenance and operation. (2nd- to 5th-level fighter; 100-400 gp)

**Chamberlain.** An assistant to the steward, the chamberlain cares for the wardrobe and living quarters of the paladin and his closest aides. He also sees to the needs of guests and may assist with cleaning and food preparation. (0- to 1st-level fighter or cleric; 5-20 gp.)

**Physician.** A medical practitioner who cares for wounded and sick employees. (1st- to 3rd-level cleric; 100-200 gp.)

**Scribe.** A clerk in charge of the stronghold's bookwork, including accounting and tax logs, tithing records, inventories, payrolls, and official communications. (1st- or 2nd-level cleric with the Reading/Writing proficiency; 10-50 gp.)

**Weaponsmith.** This person is responsible for the repair and upkeep of the stronghold's weaponry. If the paladin furnishes the necessary materials, a weaponsmith can often design and forge weapons from scratch. (1st- or 2nd-level warrior; 100-200 gp.)

## Privileged Relationships

Because of their sterling reputations, paladins can often get an audience with officials of their government and church. Affluent citizens, renowned sages, and other influential nonplayer characters in the paladin's territory also extend this courtesy, as do elite NPCs the paladin meets on his travels. As soon as the paladin requests to see him, the influential character usually arranges a meeting as soon as possible. A meeting doesn't guarantee that the NPC will help the paladin or even be sympathetic to his plight. However, the paladin can reasonably expect a fair hearing.

If the paladin is sincere and convincing, an elite NPC is inclined to respond

positively. At the DM's discretion, paladins earn a +2 bonus when encountering good or neutral elite NPCs with whom they have an established relationship, and a +1 bonus for good and neutral elite NPCs the paladin is meeting for the first time. Evil NPCs, likely to be unmoved, receive no special bonuses to their reaction rolls.

## Experience

Chapter 2 of the *DMG* explains how paladins gain experience. Table 28 summarizes these standard experience awards. If you'd like experience awards to better reflect the guidelines in this book, use Table 29 instead.

### Table 28: Paladin Experience

| Action | XP |
|---|---|
| Per hit die of creatures defeated | 10/level |
| Monster experience | Typ* |
| Other group experience | Typ* |

* Typ = Typical share of experience, as described in the *DMG*.

### Table 29: Optional Experience Awards

| Action | XP |
|---|---|
| Per spell level cast to overcome foes or problems | 25 |
| Per character changed to lawful good alignment by paladin's direct influence* | 50/level |
| Per hit die of creatures defeated | 10/level |
| Per spell level cast to further ethos** | 50 |
| Monster experience | Typ*** |
| Other group experience | Typ*** |
| Accepted as member of an order | 500**** |
| Becomes High Officer of an order | 500**** |

* The changed character must have originally been lawful neutral, neutral good, true neutral, or chaotic good. The paladin must be the primary factor in the change. The award for a 0-level character is 25 XP.

** Paladins gain experience for using spells to promote their philosophies and principles, just like priests. Therefore, a paladin who uses *spiritual hammer* to destroy an ogre would gain this experience bonus because he eliminated a source of evil.

*** Typ = Typical share of experience, as described in the *DMG*, pp. 45-48.

**** See Chapter 9, p. 116. These are minimum awards, which may be significantly increased for membership in high-status orders.'

# Chapter 8: Faith

All paladins have an abiding faith that serves as a moral compass and foundation for their ethical principles. Although most follow established religions, others draw spiritual sustenance from non-traditional philosophies and even natural forces. All paladins, however, believe in something: Their faith provides them with not only their spells, but also their special powers.

This chapter looks at the medieval relationship between paladins and the church, as well as some alternatives to the historical model. It also examines the paladin's duties and responsibilities to his faith, along with the penalties imposed for violating religious edicts.

## Campaign Models

In an AD&D® campaign, virtually any type of relationship between church and state is permitted. One kingdom may adhere to the feudal model. In another, the church may claim exclusive sovereignty. It's important for all characters to understand the balance of power in their world, but it's absolutely vital to the paladin, as it affects his behavior, loyalty, and ethos.

Following are three general types of church-state relationships. Each describes the roles of religion and government; specifically, who makes and enforces the laws of the land, and what role the paladin assumes in the official hierarchy. The "Fealty Notes" section suggests answers to these questions:

• If a paladin comes from this type of society, to whom does he pledge fealty? (Chapter 3 discusses the general responsibilities of fealty.)

• If the paladin has pledged fealty to both the church and state, whom does he obey when religious and secular laws conflict?

The DM has the final decision about which avenues of faith are open to the paladin, as well as the relationship between the paladin's faith and his government. Some, all, or none of these examples may work in a campaign; the DM may develop other models equally valid and useful.

### Co-Dominant Rule

A co-dominant society more or less follows the feudal model, where government and religion share the burden of law enforcement and administrative duties. The government handles matters pertaining to foreign affairs, economics, and property rights, while the church regulates morality and social law. In all cases, however, the monarchy and church leaders work closely together to protect their mutual interests. Neither institutes a new policy without consulting the other. Consequently, government and church laws rarely conflict.

The government reinforces the authority of the church by declaring it the official state religion. Other faiths may be tolerated, but not sanctioned; only the state religion has the power to shape government policy. The monarchy seeks the opinion of the church in all critical decisions, including diplomatic appointments, declarations of war, and territorial annexations. A high-ranking priest of the state church always serves as an official advisor, usually in the capacity of Lord Chaplain, Curate, or High Patriarch.

The church, in turn, reinforces the authority of the state by promoting the concept of

divine right. Essentially, this doctrine declares that monarches serve at the pleasure of the gods; neither the approval nor consent of the citizenry is required. Because the monarch in effect answers only to the gods, divine right virtually guarantees the loyalty of his subjects.

The church can remove a monarch at will, merely by rescinding divine approval. Rescission may result from a major policy disagreement, immoral behavior, or unlawful activities. Divine approval may also be withdrawn to punish an arrogant, ailing, or uncooperative king. However, the church uses this power only as a last resort. Because disruptions often trigger social unrest, even civil wars, it is in the best interests of both the government and state church to cooperate and maintain continuity.

A paladin from a co-dominant society usually serves in the military branch of either the government or church, depending on where he was trained and who most needs his services. In the government military, he answers to a ranking officer, usually a high-level warrior (who may be another paladin). In a church military, he usually follows the orders of a high-level priest, or a higher-level paladin entrusted with the prosecution of military affairs. In societies where the church and government share a military, a paladin typically serves under a high-level warrior, who in turn may answer to an administrative board containing both government and church representatives.

**Fealty notes:** A paladin who serves in a co-dominant society probably pledges fealty to both government and church. Because religious and secular laws are compatible, he should experience few problems with conflicting edicts. A church official will never intentionally issue an edict that conflicts with government policy, nor will a government official purposely give an order that violates church doctrine.

If edicts inadvertently conflict, the paladin can usually avoid violating his ethos if he obeys his church, even if he declines an order from his government. For instance, if a government official orders a paladin to undertake a military exercise on a day the church has set aside for meditation and prayer, the paladin may decline the official's order without fear of retribution.

### Secularism

A secular society maintains a strict separation between church and state. While religious practices may be tolerated, even encouraged, church officials have no direct say in government policy. The church may serve as an informal advisor to the government in matters pertaining to morality and behavior, but the government is under no obligation to pass such recommendations into law. Because a secular government doesn't need endorsement from the church, rulers don't depend on divine right for authority. Secular governments range from totalitarianism, where the state exerts total control over its people, to democracies, where the people elect their representatives.

Although the church may issue its own edicts, these edicts apply only the followers of that particular faith. The church may punish its followers for violating religions edicts, but only if the punishments don't interfere with the rights guaranteed to all citizens under the laws of the state. A church, for instance, may excommunicate a blasphemous follower, but it may not imprison or execute him (unless the state has sanctioned such punishments).

In some secular societies, the government refuses to recognize the church's power of

excommunication. If the gods want to excommunicate somebody, they do it themselves instead of relying on human intermediaries. A man lives as moral a life as he can; after he dies, the gods pass judgment on the fate of his spirit. Membership in a church has little bearing on the gods' decision.

A paladin serving a secular government likely works in a military or diplomatic capacity, and adheres to a rigid command hierarchy. A high-ranking warrior or paladin serves as his immediate commander. But as a good soldier and loyal citizen, he is expected to follow the orders of all superior officers and government officials.

**Fealty notes:** A paladin from a secular society probably pledges fealty to his government. He may also pledge fealty to a church if he likes. However, when government and religious policies conflict, he is expected to follow the edicts of his government, even if it means disobeying an edict from his church. (With two exceptions—a direct command from a deity *always* overrides orders from a government; further, a paladin will never follow a government edict that conflicts with his core principles—his principles always take priority over social institutions.).

If a paladin doesn't pledge fealty to a church, he *must* pledge fealty to a philosophy or force (see "Alternatives to Churches" below). If a command from a teacher or mentor conflicts with government policy, he must give priority to the edicts from his government. However, a direct command from a deity always take precedence over government obligations.

## Theocracy

In a theocratic society, the clergy assumes all leadership roles. In essence, the church functions as the government, claiming absolute authority in all civil, legal, and ethical matters. Laws come directly from the gods, interpreted and regulated by the priesthood. To maintain order and ensure continuity, a theocracy recognizes only the state religion. Other religions may be driven underground at best, declared blasphemous and illegal at worst.

As in a secular government, paladins serving a theocracy probably work as soldiers, though some may function as ambassadors, diplomats, or evangelists. Most theocratic hierarchies consider paladins to be lay brethren or acolytes, minor religious dignitaries with formal responsibilities to the church but without the status or authority of official clergymen.

A paladin serving a theocracy always answers to a priest. A novice paladin may be assigned a "shepherd," a priest of 1st or 2nd level who constantly shadows the paladin, monitoring his activities, and reporting any discrepancies to his superiors. A *curate* (an administrator of at least 5th level in charge of several congregations in a small town or city district) oversees low-level paladins, whereas a *primate* (a priest of at least 10th level, responsible for a city or section of a kingdom) may supervise high-level paladins.

**Fealty notes:** A paladin from a theocratic society need only pledge fealty to the church; pledging fealty to the government isn't necessary, because the church is the government. Pledging fealty to his family, a mentor, or other source is allowable, but edicts of the church always take priority. (Again, direct commands from a deity override orders from church officials.)

### Additional Considerations

The three relationships described above presume that both the church and government are of lawful good alignment. In *no* case will a paladin pledge fealty to a neutral or evil organization or individual. In a secular society with an evil government, he may pledge fealty to a lawful good religion, but not to the government itself. In a neutral theocracy, he must either pledge fealty to an underground or illegal lawful good religion—one independent of the theocratic rulers—or he must separate from his society, looking elsewhere for a government to serve.

Keep in mind, too, that many variants are possible within these broad descriptions. While a secular government may not officially recognize a church, a secular ruler may maintain an informal relationship with a powerful or highly charismatic religious leader. Through friendly persuasion or sheer force of personality, the religious leader may coerce the secular ruler into passing laws promoting religious doctrine. Although the government and state church may theoretically exert equal influence in a co-dominant society, power struggles among the religious elite may render the church impotent, letting government leaders do as they please.

A wise paladin keeps abreast of changes in the political landscape, lest he inadvertently find himself serving a neutral or evil master. A corrupt official may take over the government of a co-dominant society; while the state church may remain lawful good, the government may become neutral or worse. An Errant returning to his theocratic homeland from the field may discover that a cadre of evil clerics has replaced the lawful good hierarchy of the state church.

### Renouncing Fealty

Once a paladin discovers that his church or government has become neutral or evil, he may immediately renounce his pledge of fealty without penalty. From that point on, he is not obligated to follow their edicts. He must discard symbols representing a renounced church or government. He must also give up equipment that the church or government has loaned or given to him.

A paladin who renounces his church must *immediately* pledge fealty to one of the following:

- A new lawful good church.
- A lawful good philosophy.
- The set of principles represented by the renounced church before it became neutral or evil.

A paladin who renounces his government has several options:

- He may continue serving in the same society. However, he is now obligated to obey only the edicts of his faith (and any other nongovernmental individuals or institutions to which he has pledged fealty).
- He may relocate to a different land, pledging fealty to a new lawful good government.
- He may become an Expatriate (see Chapter 4).

## Alternatives to Churches

Whereas most paladins pledge fealty to churches, others may opt to serve a *sect*. Like churches, sects are religious organizations that worship one or more gods, but they tend to be smaller and more secretive.

Most sects usually begin as an outgrowth of an established church. A sect leader and his followers separate from the church due to disagreements with church leaders or because of a contradictory interpretation of religion doctrine. If a sect flourishes and grows, it may eventually become a church itself.

Some sects organize themselves around a single leader who has developed his own set of religious principles. These may not have any formal ties to an organized faith; in fact, some do not recognize the authority of other religious leaders. They often spring up spontaneously, lasting no more than a single generation.

Some paladins avoid associations with any type of organized religion, instead choosing to venerate a philosophy, a belief system based on intellectual concepts rather than supernatural entities. Any philosophy serves as an acceptable alternative to an organized religion, so long as it meets these qualifications:

- It presents a logical and self-consistent interpretation of the universe.
- It demands lawful good behavior of followers.
- It's broad enough to form the basis of the paladin's ethos.

Paladins who follow a philosophy may worship privately or in small sects. Meditation may substitute for prayer. A hill blanketed in violets may function as a shrine. A book of poetry may take the place of a holy text.

Regardless of whether a paladin has faith in a religion or philosophy all work the same way in the context of the game. A paladin's devotion is sufficiently intense to attract the magical energy necessary to cast spells and give him his special powers. As with a lawful good religion, a lawful good philosophy requires strict adherence to a set of lawful good principles, characterized by the strictures and virtues of the paladin's ethos.

## Guidelines for Religious Edicts

Generally, a paladin's religion (or philosophy) imposes more edicts than his government, family, or any other sources discussed in Chapter 3. Whereas a government may be concerned with defense, economics, and order, a religion may be concerned with all of these things, *plus* morality, worship, and spiritual salvation.

To remain true to his ethos, a paladin may have to juggle edicts from a variety of sources. Generally, edicts from his religion and government take precedence over those from his family and culture. When governmental and religious edicts conflict, use "Campaign Models" in this chapter to help prioritize them.

Because faith takes many forms, there are no fixed rules for determining which religious edicts are appropriate for a particular paladin. It's up to DM to make these decisions, based on the prevalence of religion in his campaign, the paladin's background, and the paladin's kit.

The DM may use the following guidelines to help decide the type, number, and severity of religious edicts. Remember, these are generalizations. They may not apply to every campaign nor to every paladin.

- More edicts are associated with an organized religion than a philosophy.

• A theocracy issues more religious edicts than a co-dominant society.

• The larger the organization, the more edicts it issues. A large church may have officials who do nothing but amend old edicts and draft new ones. Large churches have more interests to protect, more disciples to regulate, and more enemies to fear.

• A paladin who lives in a monastery or other church-owned building has more edicts to follow than a paladin who lives in his monarch's castle or his own stronghold.

## Types of Edicts

Below are three categories of religious edicts, along with several representative examples. The DM is encouraged to supplement these lists with edicts of his own. Though the number of edicts varies according to doctrine and circumstance, it's a rare paladin who isn't required to follow at least one or two edicts from *each* category.

### Expressions of Faith

Most paladins, regardless of whether they follow a religion or philosophy, must perform certain rites to affirm their faith. Church officials may establish some of them; for instance, a paladin may be required to pray before every meal. Others may be self-imposed; for instance, a paladin may dedicate each battle to the spirit of his murdered brother. Other examples:

**Prayer:** The most common type of religious expression, prayer takes many forms. A prayer may be a verbal recitation from a sacred text, several minutes of silent meditation, or a fresh verse composed anew each morning. A paladin may be required to pray at a particular time every day (at sunrise or before bed), whenever he gets a chance (such as once a week), or only when a certain event occurs (the death of a companion or a falling star).

**Rituals:** A ritual comprises a fixed sequence of actions, performed at a specific time (the first day of spring, the paladin's birthday) or to recognize a particular event (the defeat of an enemy, the acquisition of a bonded mount). An endless variety of rituals is possible: tossing a gem into a volcano, building a shrine with a specific number of stones, bathing in a stream with a perfumed soap, immersing a sword in an enemy's ashes.

**Proselytizing:** Some churches require their paladins to proselytize, spreading the word about their faith and recruiting new converts (an especially strict church might impose a recruitment quota, requiring a paladin to bring in a minimum number of converts every year). Alternately, the paladin may invite curious agnostics to attend religious services or engage skeptics in philosophic dialogues. He may also (in the absence of suitable clerics) give religious instruction to acolytes, lead prayer services, and assist with sermons.

**Symbol:** To demonstrate his devotion, the paladin may be obliged to display the symbol of his faith on his shield, armor, or banner. He may also wear a piece of jewelry, such as a ring or pendant, inscribed with the symbol.

**Pilgrimage:** The paladin may have to make pilgrimages to a temple, saint's tomb, mountain peak, cemetery, or other sacred location. Once he arrives, he may be required to say a prayer, present an offering, or spend the night in meditation. A pilgrimage may be made on a specific date (a holy holiday or the date of a founder's death) or within a

particular period (once a year or any time before he attains a new level).

## Service

The paladin may be expected to perform a variety of military, ceremonial, and household duties. These duties supplement the routine responsibilities required of all paladins, as described in Chapter 7. Examples:

**Eliminate enemies of the faith:** All paladins are expected to defend their faith against the forces of evil. As a minimum, the paladin must protect his church, monastery, or temple from enemy attacks, and must also seek out and destroy all evil characters and creatures.

Beyond these basic requirements, the paladin's responsibilities depend on exactly how his faith defines evil. While most faiths accept the standard definition (that is, the definition in the *PH*), some define evil more narrowly. It's possible, for instance, for a church to condemn a particular neutral religion as blasphemous, in which case a paladin may be obliged to destroy the followers of the neutral religion as if they were evil (the Votary, described in Chapter 4, is one example). Conversely, a liberal church may require its paladins to eliminate only chaotic evil characters and creatures; other evil adversaries may be destroyed, imprisoned, or even tolerated, as decided by the individual paladin.

**Healing:** In many religions, a paladin's extraordinary healing powers are valued not only for their practical applications, but also for their sacred implications. Each healing may be a holy sacrament, proof of the deity's compassion.

As a requirement of such a faith, a paladin may have to perform elaborate healing ceremonies. For example, the paladin may don a golden ritual gown, then lay hands on an ailing peasant while priestly acolytes chant and sing.

In certain primitive religions, priests believe that evil spirits cause illness. The mere presence of a paladin helps frighten the spirits away. In practice, a paladin may stay with an infirm patient for days, even weeks, until the illness passes.

A paladin may also be obliged to assist at the beginning and end of life when a cleric isn't available. During the delivery of a child, a paladin's words comfort the mother while his touch blesses the new baby with good health. When a high-ranking priest or important member of the congregation nears death, the paladin remains at his bedside, acting as a symbolic escort into the next world.

## Behavior

Faiths impose behavioral edicts to instill discipline, address the perceived desires of a deity, or keep their followers submissive. Some behavioral edicts persist merely as tradition, their meaning no longer understood. Examples include:

- No facial hair. Heads must be shaven bald (females included) or tonsured.
- Fast for 1–4 days per month. (The DM may impose a –1 penalty on all ability checks or combat rolls during this time.)
- Must wear certain clothing (a cap or other head covering, sandals instead of boots, a knotted belt, a particular color).
- No violent acts in a church burial ground.
- Must leave a portion of food remaining on his plate and a sip of drink in his cup at

the end of a meal (to symbolize temperance).

- May not touch a corpse.
- Must always sleep in a particular way.
- May not use curative powers on animals.
- May fight on a holy day only in self-defense.

## Historical Role of the Church

Compared to his medieval counterpart, the knight of the 10th century was almost unrecognizable. More outlaw than hero, the pre-feudal knight gloried in barbarism, ignoring written law in favor of vigilantism. The monarchy, weakened by infighting and indifference, could do little to control them. While peasants came to resent and even fear the knights, they lacked the resources to impose order. Anarchy loomed.

Uneasy about the knights' increasing power, the church abdicated its passive status and resolved to take action. This decision was made for two reasons. First, the church stood for peace and order, principles the knights openly mocked. To live up to these sacred ideals, the church had no choice but to assert its authority. Second were practical considerations. The church depended on peasant tithes and rental property for income. For its economic survival, the church had to find a way to suppress knightly greed.

The church initiated its ambitious campaign in the late 10th century by proclaiming the "Peace of God." Taken literally, the Peace of God renewed the church's commitment to protecting the lives and property of all people. Implicit in the proclamation, however, was the notion that those who threatened to disrupt the social order were enemies not only of the state, but of God himself. Although no enemies were identified, the proclamation was obviously aimed at the knights.

To enforce the Peace of God, church dignitaries organized a series of ceremonial affirmations. Held in public forums to guarantee large audiences and maximum exposure, the dignitaries invited nobles, aristocrats, military officials, and the knights themselves to pledge a peace-keeping oath. The ceremonies were conducted with much pomp and solemnity, including the presentation of sacred relics and special prayers to reaffirm God's omnipotence. Further, the church warned that anyone who failed to uphold the Peace of God would be excommunicated. It was a threat not taken lightly. Even the most seditious knights feared an afterlife in Purgatory—or worse.

The church undertook the second phase of its campaign in the early 11th century by issuing the "Truce of God." Unlike the previous proclamation, the Truce was specifically directed to the knights, spelling out in no uncertain terms the behavior expected of them in order to remain true to their faith. Knights were forbidden to attack the clergy under any circumstances, nor were they allowed to commit violent acts against peasants. They were required to fast on holy days and refrain from fighting on the weekends. Fearing divine retribution, the knights grudgingly complied.

By the middle 11th century, the church had succeeded in convincing the knights that they were soldiers of God. As such, they were duty-bound to defend the church and promote its interests. Reluctantly but irrevocably, the knights adjusted, abandoning their independence for their new role as divine servants. They accepted special blessings, participated in sacred rituals, and distinguished themselves on the field of battle. Once scorned, knights were now respected and admired.

But the benefits gained by the knights paled before those acquired by the church. Not only had the church built an army of loyal warriors, it had become a formidable political force. As the church grew in wealth and power, the distinctions between religion and government gradually blurred. Clerical leaders came to influence every facet of government. This uneasy alliance persisted for much of the Middle Ages.

# Chapter 9: Orders

Orders are honorary organizations whose members are distinguished by careers of exceptional service. As invitations to join are extended only to a select few, most paladins view membership as a profound privilege and great accolades.

Whereas some orders exist merely as social clubs, providing fellowship in an informal atmosphere, others perform a variety of civic activities, such as charity drives and educational programs. Regardless of its function, each order maintains its own membership qualifications, hierarchies, and bylaws.

Orders are entirely optional. A DM is never required to include a particular order in his campaign, nor is a paladin character ever obligated to join. In any case, treat an invitation as a major event. The DM should not devalue the prestige of membership by offering invitations casually or as prizes for routine performance; typically, a paladin receives an invitation only once in his life.

Several sample orders are described below. A campaign may include any, all, or just one of them. The DM is free to modify or adapt the descriptions as he sees fit, or invent new orders of his own.

The standard information below applies to all orders; the individual entries that follow include supplemental material. Additionally, each entry lists an emblem and a motto. A candidate repeats the motto when he accepts membership; most orders recite the motto to open and close their meetings.

## Standard Information

### Requirements

Generally, a paladin is eligible to become a member of an order regardless of his religion, homeland, or kit. However, an order rarely offers membership to paladins lower than 9th level (with the exception of the Radiant Heart Auxiliary, on page 117). The higher the level, the better the chance for an invitation.

A paladin may petition a particular order for membership, or a current member may extend an invitation. In either case, an active member of the order must agree to sponsor the candidate. The sponsor must be at least one level higher than the candidate and must be familiar with the candidate's reputation and achievements. The sponsor formally presents the candidate to a meeting of the entire membership, who will spend the next full year mulling over his petition. During that time, active members may observe the candidate in the field and interview his superiors.

At the next annual meeting, the membership votes on the candidate. If a majority prevail, he's invited to join. Following an initiation ceremony—which may include prayer services, feasts, and contests—the candidate vows fealty to the order. The candidate

promises:

• To uphold the laws of the order and obey the dictates of the High Officers.

• To attend all meetings, unless unavoidably detained or his absences are excused in advance. Except for emergencies, meetings are held no more than once or twice a year, usually in a High Officer's stronghold, a building loaned by a friendly monarch, or an open field.

• To provide aid to any member who asks.

• To display the order's emblem on his coat of arms, shield, or banner, as determined by the order.

## Organization

An order consists of a variable number of chapters. Each chapter elects its own officials (called High Officers), sets its own meetings, and establishes its own bylaws. The High Officers of all chapters hold a special meeting once every two or three years to exchange information and review policy. The number and titles of the High Officers vary from order to order, as do the qualifications for holding office.

## Benefits

When accepted as a member of any order, a paladin earns a bonus of 500 experience points. This is a one-time bonus; should he become a member of another order, he doesn't get an extra 500 points. If he becomes a High Officer, he earns another 500 points (another one-time bonus).

A member of any order may add an honorific title before his name. The DM should choose titles appropriate to his campaign world. Typical titles include Sir or Lady, His or Her Excellency, Master or Mistress, the Most Worthy, and the Most Revered. A High Officer may also add the title of his office after his name. For instance, a High Officer of the Most Noble Order of the Radiant Heart might be called Sir Terran of Homewood, Prelate of the Radiant Heart.

When displaying his emblem, a member receives a +1 bonus to his reaction rolls from all lawful and neutral NPCs, familiar with his order.

## Dismissal

A paladin who violates any of the conditions of his vow to the order is immediately and permanently dismissed. He loses all benefits of the order, must turn in his emblem, and may never again become a member of that or any other order. At the DM's option, any ethos violation may also qualify as grounds for dismissal.

A paladin may appeal his dismissal to the High Officers. If the paladin committed a minor or inadvertent violation, the High Officers may overturn the dismissal or suspend his membership for a year or two; he loses all benefits of the order during that time. When his suspension ends, the High Officers review his performance, then submit his application to the entire membership. On a majority vote, the paladin again becomes an active member.

## Most Noble Order of the Radiant Heart

The most prestigious of all orders, the Radiant Heart commands respect from the highest ranks of the aristocracy, who regard its members regarded as dignitaries in their own right. The Radiant Heart honors not only distinguished service, but what is perhaps the most remarkable accomplishment of any paladin—a long life. Primarily a social organization, the Radiant Heart holds a lavish feast every spring, held in the castle of a grateful monarch who donates both the labor and the food. In their free time, members counsel younger paladins, serve as government advisors, and officiate at tournaments.

**Requirements:** A candidate must be at least 40 years old and have the Etiquette proficiency. He must have two sponsors: a member of the royalty of his homeland and an active member of the order.

**Organization:** A chapter has 25 members. The order considers a new candidate only when one of the members dies or voluntarily steps down.

A chapter's High Officers consist of three Prelates, each of 15th level or higher. A Prelate must also have been a member in good standing for no less than 10 years. The Prelates make decisions by consensus, with suggestions from a lieutenant called the Chancellor (a paladin of at least 12th level, also considered a High Officer). When a Prelate dies or retires, the Chancellor takes his place. The Prelates then appoint a new Chancellor. All High Officers wear a tattoo of the order's emblem on their left wrist.

**Emblem:** A stylized outline of a heart.

**Motto:** "The courage of one can change the destiny of many."

**Benefits:** A Radiant Heart member has unlimited access to all lawful good government and church officials, as well as all lawful good aristocrats, land owners, and other elite characters. He receives a +3 bonus to his reaction rolls from all lawful and neutral NPCs instead of the normal +1 bonus. When he dies, the order assumes financial responsibility for his survivors, assuring them a comfortable income for the rest of their lives. The order supplies these funds from their personal treasuries, or makes arrangements with sympathetic monarchs.

**Dismissal:** A member who violates his vow to the order, or commits an act heinous enough to cost him his paladinhood, is beheaded. Should the member flee, the order hunts him down.

## Radiant Heart Auxiliary

This is the junior wing of the Most Noble Order of the Radiant Heart, organized to honor outstanding young paladins. Like the Most Noble Order, the Auxiliary is a social organization, though its members may occasionally be called upon to serve or assist their sponsors.

**Requirements:** A candidate must be at least 4th level. He must be sponsored by an active member of the Most Noble Order. Two Prelates must approve his membership.

**Organization:** Each Most Noble Order chapter has its own Auxiliary, consisting of no more than 40 members (15-20 is typical). A Chairman, elected from the ranks, conducts the Auxiliary's meetings; the Chairman is not considered a High Officer.

A paladin serves as a member of the Auxiliary for a five-year term. At the end of that

period, he may renew his membership for another five years with the unanimous vote of all current Auxiliary members and the approval of two Prelates. Alternately, he may voluntarily retire to make himself eligible for another order. If he has achieved 9th level and meets the eligibility requirements, he may be considered for full membership in the Most Noble Order. A paladin is not eligible for membership in any order so long as he is an active member of the Auxiliary.

**Emblem:** A heart symbol, similar to that of the Most Noble Order, enclosed in a circle. The symbol is embroidered on a sash or painted on a shield.

**Motto:** "A loyal heart and a faithful spirit."

**Benefits:** An Auxiliary member does *not* receive the 500 experience point bonus, nor is he allowed to add an honorific title before his name; these benefits are reserved for order members only. However, he does receive the +1 bonus to his reaction rolls when he displays his emblem.

**Dismissal:** Standard.

## Ancient and Revered Order of the Thorn

Second in prestige only to the Order of the Radiant Heart, the Order of the Thorn recognizes service to a church. Membership is extended to those demonstrating exemplary courage in defense of religious principles or church property. Largely an honorary organization, members have no responsibilities other than counseling their congregations and helping church leaders interpret religious doctrine.

**Requirements:** A candidate must have two sponsors: an official of his church (a priest of 8th level or higher), and an active member of the order. Once accepted into the order, a member must tithe an extra 10% of his income to the church that sponsored him. This in addition to his normal tithe.

**Organization:** Each chapter has 12 members, and will consider new candidates only when an active member dies or steps down. A chapter has a single High Officer, called a Rector, nominated by a committee of church leaders, then approved by a vote of the membership. To acknowledge his position, the Rector wears a velvet sash around his neck bearing the order's symbol.

**Emblem:** A long-stemmed rose.

**Motto:** "Faith is the mother of duty and the father of truth."

**Benefits:** A Thorn member receives a +2 bonus to his reaction rolls from all lawful and neutral NPCs instead of the normal +1 bonus. Each member has a private prayer cell in his church, used for reflection and meditation. When he dies, his helmet, sword, and coat of arms are placed in the cell as a memorial.

**Dismissal:** Standard.

## Distinguished Order of the Crystal Dawn

An elite organization of land-owners, the Order of Crystal Dawn recognizes business acumen and successful resource management. It provides investment advice and low-interest loans to its members, and serves the community with charity drives and financial counseling.

Members of the order, having demonstrated financial responsibility throughout their careers, are no longer bound by the paladin's stricture that forbids the accumulation of wealth. However, members are still expected to use their wealth for lawful good purposes, and are not allowed to acquire material possessions merely for the pleasure of ownership.

**Requirements:** A candidate must have a minimum Intelligence score of 10. He must also have built a stronghold and held it for a decade; the stronghold must have generated a profit for no less than seven of the 10 years. The value of his stronghold and property must be at least 200,000 gp. Finally, he must pay an initiation fee of at least 5,000 gp; he may pay a higher fee if he likes (the higher the fee, the higher his endowment; see "Benefits"). A paladin may save money for the fee without violating his ethos.

**Organization:** A chapter, consisting of 20 to 40 members, is governed by seven High Officers known as Regents. Replacement Regents come from the rank and file, elected by a vote of the active Regents. To qualify as a Regent, a member must have the Law proficiency, and the net worth of his stronghold and property must have doubled since he joined the order. The oldest Regent, called the Senior Regent, chairs the meetings.

The Regents handle the investment of the initiation funds and distribute endowment income to eligible members. They also provide counseling, at no charge, to any lawful good person in financial trouble. Though Regents are forbidden to make loans to anyone other than members of the order, they may arrange loans with established moneylenders and negotiate repayment plans with creditors.

The Regents also mediate in legal disputes among paladins. Any paladin may petition the Regents for a hearing, regardless of whether he's a member of the order. The disputing parties must agree in advance to abide by the Regents' decision. The Regents' decisions are considered legally binding by most lawful good governments.

All Regents have their names inscribed on a commemorative plaque, prominently displayed on the stronghold wall of the order's Senior Regent.

**Emblem:** A golden rising sun.

**Motto:** "Peace from prosperity."

**Benefits:** By exchanging contacts and information, members can usually find sources of goods and services costing 10-50% less than normal. After five years in the order, a member becomes eligible for an annual endowment, generated from the investments of his initiation fee made by the Regents. The endowment ranges from 20-50% of the fee (1d4+1 times 10%), paid every year. For instance, if a member paid a 5,000 gp initiation fee, he earns an annual endowment ranging from 1,000 to 2,500 gp. The member must tithe from his endowment. Most members use the remainder to improve their strongholds, add to their property, or make charitable donations.

**Dismissal:** A paladin dismissed from the order loses his endowment and forfeits his initiation fee.

## Righteous Order of the Iron Dragon

This order honors outstanding military service. Its members have distinguished themselves through heroism in combat and gallantry on the battlefield. While members have no formal responsibilities, the High Officers occasionally rally them to fight as an

elite force in emergencies.

**Requirements:** Paladins of the Militarist kit are automatically eligible for membership when they reach 9th level. Otherwise. a paladin must have demonstrated meritorious military achievement beyond the call of duty, such as:

• Serving in an organized military for at least 10 consecutive years, fighting in at least two major wars during that period.

• Being responsible for routing or defeating an enemy army.

• Rescuing a hostage king or noble.

• Dying in battle (membership is awarded posthumously unless *raise dead* was used).

**Organization:** A chapter consists of 15 to 50 members, averaging about 30. One Grand Commander and three Lieutenant Commanders serve as the High Officers. Any member of the chapter can become a Lieutenant Commander by issuing a formal challenge to a current Lieutenant Commander. A Lieutenant Commander must accept all such challenges. A member can make one challenge each year or at each meeting (whichever occurs more frequently).

The challenge consists of a series of contests, pitting the Lieutenant against the challenging member. The specifics of a challenge vary from chapter to chapter, but usually include a jousting match, a riding competition (including stunts and races), and a duel with blunted swords. If the Lieutenant wins the majority of the contests, he retains his position; the defeated member can never again make a challenge to any Lieutenant. If the challenger wins, he becomes a Lieutenant; the Lieutenant becomes a regular member of the order. A defeated Lieutenant can never again seek an office.

The Grand Commander selects his own successor from among his Lieutenants. Should the Grand Commander die unexpectedly, the Lieutenants engage in a series of round-robin contests to decide who becomes the replacement. To replace the promoted Lieutenant—or to replace a Lieutenant who dies or steps down—the Grand Commander promotes a member from the rank and file, usually the eldest or the most experienced member.

The Grand Commander wears a golden bracelet with the order's emblem. The Lieutenant Commanders wear similar bracelets made of silver. All members wear blue ribbons emblazoned with the emblem. For each year of membership, a red band is added to the ribbon. When a member has earned 10 red bands, a white ribbon replaces the blue ribbon. Thereafter, a member earns a golden band for every year of service. If he receives 10 golden bands, the Grand Commander presents him with a copper bracelet with the order's emblem, proclaiming him a Senior Member (an honorary title, not a High Officer).

**Emblem:** The silhouette of a dragon's head, colored dark gray, on a field of red.

**Motto:** "Peace through strength."

**Benefits:** The order provides its members with personal armor, weapons, and equipment at no charge. The order also supplies war horses if necessary. The DM may veto any excessive requests. Magical items usually aren't available.

**Dismissal:** In addition to the standard grounds for dismissal, even a single instance of cowardice in battle results in immediate expulsion.

## Order of the Divine Hand

This order recognizes excellence in the medical arts. It members are dedicated healers who exploit their order's prestige to elicit contributions from wealthy patrons. The members use the funds to build and staff hospitals throughout the world, particularly in rural areas otherwise lacking in medical care. Members oversee these hospitals, priding themselves on offering free services to all, regardless of social rank or religious orientation. The only patients turned away are those of evil alignment.

**Requirements:** All paladins of the Medician kit are automatically eligible for membership when they reach 9th level. Paladins of other kits are eligible once they reach 9th level and have acquired both the Healing and Diagnostics proficiencies.

**Organization:** Chapters include anywhere from 20 to 80 members, with most having about 30. Each chapter has a single High Officer, called the Registrar, usually the oldest or most experienced member. The entire membership votes on a new Register when the old one retires or dies.

The Registrar's primary responsibility is assigning members to the order's various hospitals and strongholds. A member must serve as a consultant to a hospital for at least one month a year; failure or refusal constitutes grounds for dismissal. A typical hospital consists of an administrator (usually a priest or paladin of levels 3-5) and 6-20 healers, nurses, technicians, and attendants (an assortment of priests, fighters, and wizards of lawful good alignment, usually of levels 1-3). The Registrar also oversees the financial affairs of the hospitals, soliciting funds as necessary from benevolent patrons. The Registrar wears a white cloak with the order's emblem.

**Emblem:** A serpent coiled around a staff.

**Motto:** "There is no kindness more pure than the touch of a healer's hand."

**Benefits:** A member receives all non-magical medical supplies (bandages, salves, and so on) at no charge. A member also has open access to any of the order's hospitals. Drawing on the hospital's resources and the expertise of other members, he has a base 70% chance of finding an antidote for any natural poison, providing he spends at least 2-5 (1d4+1) days doing research. The DM may adjust the chance up to 95% or down to 10%, depending on the severity of the affliction and skill of the researcher.

**Dismissal:** Standard.

# Appendix: Bibliography

Although not all characters in the following works exactly fit the description of the paladin given in this supplement, all of these works provide much of interest to those role-playing paladin characters in the AD&D® game.

### Traditional Stories

Bulfinch, Thomas. *The Age of Chivalry*. See especially the stories of Sir Galahad in the King Arthur stories, and those of Roland, Oliver, and Olgier the Dane.

Other tales of interest include *Sir Gawaine and the Green Knight* and the legends of Joan of Arc and El Cid.

### Fiction Sources

Anderson, Poul. *Three Hearts and Three Lions*. This book contains the best model for the paladin class, retelling the story of Olgier the Dane (as Holger Carlson), and including a classic battle with a troll.

Cooper, James Fenimore. *The Deerslayer*. The hero, Natty Bumppo, is an excellent role model for paladins.

Moon, Elizabeth. Deed of Paksenarrion trilogy (*Sheepfarmer's Daughter, Divided Alliance, Oath of Gold*). This presents a fine treatment of the making of a paladin-like heroine named Paksenarrion.

Moorcock, Michael. *The Eternal Champion* and the Runestaff cycle (*The Jewel in the Skull, The Mad God's Amulet, Sword of the Dawn, The Runestaff*). Some of the characters in these books serve admirably well as paladins, particularly Jonathan Daker, Dorian Hawkmoon, and the Knight of Jet and Gold.

Mundy, Talbot. Tros of Samothrace series (*Lud of London, Avenging Liafall, The Praetor's Dungeon*) and its sequels (*The Purple Pirate, Queen Cleopatra*). This series presents an excellent example of a lawful good hero in a Roman world that is neutral at best.

Novak, Kate, and Jeff Grubb. Finder's Stone trilogy (*Azure Bonds, The Wyvern's Spur, Song of the Saurials*). Dragonbait, the paladin hero of this AD&D® game-based series, is nonhuman, a lizardlike being called a saurial.

Scott, Sir Walter. *Ivanhoe*. This is a classic story of knighthood.

Weis, Margaret, and Tracy Hickman. DRAGONLANCE® Chronicles (*Dragons of Autumn Twilight, Dragons of Winter Night, Dragons of Spring Dawning*). Though not a true paladin, the hero Sturm in this AD&D game-based series had strong paladin-like beliefs and characteristics.

### Film and Video

Among the best movies to watch for information on role-playing paladins are the following:

*El Cid* (1961), with Charleton Heston and Sophia Loren.
*Excalibur* (1981), with Nicol Williamson and Nigel Terry.
*Joan of Arc* (1948), with Ingrid Bergman and Jose Ferrer.
*Ivanhoe* (1952), with Robert Taylor and Elizabeth Taylor.
*The Magic Sword* (1962), with Gary Lockwood and Basil Rathbone.
*Sleeping Beauty* (1959), animated, Walt Disney.

# Appendix: Original AD&D Game Paladin

## Class Description

A paladin character is a fighter sub-class, but unlike normal fighters, all paladins must begin as lawful good in alignment and always remain lawful good or absolutely lose all of the special powers given them. They have both fighting abilities and limited spell powers (at high levels). To become a paladin, a character must be human, have a Strength score of at least 12, Intelligence of at least 9, Wisdom of at least 13, Constitution of at least 9, and Charisma of at least 17. If a paladin has both Strength and Wisdom in excess

of 15, he or she adds 10% to the experience points awarded by the DM.

Law and good deeds are the meat and drink of paladins. If they ever knowingly perform an act which is chaotic in nature, they must seek a high-level (7th or above) cleric of lawful good alignment, confess the sin, and do penance as prescribed by the cleric. If a paladin should ever knowingly and willingly perform an evil act, he or she loses the status of paladinhood immediately and irrevocably. All benefits are then lost, and no deed or magic can restore the character to paladinhood. He or she is forever after a fighter.

Table 30 shows the experience points needed for each level, along with the associated titles. Table 31 lists the number of attacks per round a paladin can make at various levels.

### Table 30: Experience Levels

| Level | XP Needed | Hit Dice (d10) | Level Title |
|---|---|---|---|
| 1 | 0 | 1 | Gallant |
| 2 | 2,751 | 2 | Keeper |
| 3 | 5,501 | 3 | Protector |
| 4 | 12,001 | 4 | Defender |
| 5 | 24,001 | 5 | Warder |
| 6 | 45,001 | 6 | Guardian |
| 7 | 95,001 | 7 | Chevalier |
| 8 | 175,001 | 8 | Justiciar |
| 9* | 350,001 | 9 | Paladin |
| 10 | 700,001 | 9+3 | Paladin (10th level) |
| 11** | 1,050,001 | 9+6 | Paladin (11th level) |

* Paladins gain 3 hit points per level after the 10th.

** 350,000 experience points per level for each additional level above 11th.

### Table 31: Attacks Per Round

| Level | Attacks/Round* |
|---|---|
| 1-6 | 1/1 round |
| 7-12 | 3/2 rounds |
| 13+ | 2/1 round |

* This applies to any thrusting or striking weapon. It excludes melee combat with monsters of less than one hit die (d8) and unexceptional (0-level) humans and semi-humans—i.e., all creatures with less than one eight-sided hit die. All of these creatures entitle a fighter to attack once for each of his or her experience levels.

## Special Benefits

A paladin can *detect evil* at up to 60 feet distant, as often as desired, but only when he is concentrating on determining the presence of evil and seeking to detect it in the right

general direction.

A paladin makes all saving throws with a +2 bonus.

A paladin has immunity to all forms of disease.

By laying on hands, a paladin can *heal wounds* on himself or another character. This ability heals 2 points of damage per level of experience the paladin has obtained. Laying on hands can performed once per day.

A paladin can *cure diseases* of any sort. This can be done once per week for each five levels of experience the paladin has attained, i.e. at levels 1-5 one disease per week, at levels 6-10 two diseases, at levels 11-15 three diseases, etc.

*Protection from evil* continually emanates in a 10-foot radius around the paladin.

At 3rd level, the paladin gains the power to affect undead and devils and demons as if he were a 1st-level cleric. This power goes upwards with each level of experience the paladin gains; so at 4th level the effect is that of a 2nd-level cleric, at 5th it is that of a 3rd-level cleric, etc.

At 4th level, or at any time thereafter, the paladin may call for his war horse. This creature is an intelligent heavy war horse, with 5+5 hit dice (5d8 plus 5 hit points), AC 5, and the speed of a medium war horse (18"). It will magically appear, but only one such animal is available every 10 years. If the first is lost, the paladin must wait until the end of the period for another.

If a paladin has a "holy sword" (a special magical sword which your referee is aware of and will explain if the opportunity arises), he or she projects a circle of power 10 feet in diameter when the weapon is unsheathed and held. This power *dispels magic* at the level of magic use equal to the experience level of the paladin.

At 9th level paladins gain the ability to employ cleric spells (see Table 32). They many never use scrolls of spells, however, except those normally usable by fighters.

### Table 32: Spell Progression (1st Edition)

| Paladin | Clerical Spell Level | | | |
|---|---|---|---|---|
| **Level** | **1** | **2** | **3** | **4** |
| 9 | 1 | - | - | - |
| 10 | 2 | - | - | - |
| 11 | 2 | 1 | - | - |
| 12 | 2 | 2 | - | - |
| 13 | 2 | 2 | 1 | - |
| 14 | 3 | 2 | 1 | - |
| 15 | 3 | 2 | 1 | 1 |
| 16 | 3 | 3 | 1 | 1 |
| 17 | 3 | 3 | 2 | 1 |
| 18 | 3 | 3 | 3 | 1 |
| 19 | 3 | 3 | 3 | 2 |
| 20* | 3 | 3 | 3 | 3 |

* Maximum spell ability

## Special Restrictions

A paladin may never retain more than 10 magical items. These may never exceed one suit of armor, one shield, four weapons (including daggers, swords, etc.; such items as magical bows and arrows are considered one weapon), and four miscellaneous items.

A paladin will never retain wealth, keeping only sufficient treasures to support himself in a modest manner, pay henchmen, men-at-arms, and servitors, and to construct or maintain a small castle. Excess wealth is given away.

An immediate tithe (10%) of all income—treasure, wages, or whatever—must be given to a charitable religious institution (not a clerical player character) of lawful good alignment selected by the paladin.

A paladin will have henchmen of lawful good alignment and none other. He will associate only with characters and creatures of good alignment. A paladin may join a company of adventurers that contains non-evil neutrals only on a single expedition basis, and only if some end which will further the cause of good is undertaken.

If possible, a paladin takes service or form an alliance with lawful good characters, whether player characters or not, who are clerics or fighters of noble status.

A paladin does not attract a body of men-at-arms to service as do regular fighters.

# Introduction

No concept is more fundamental to the ADVANCED DUNGEONS & DRAGONS® 2nd Edition game than magic. And no character class better personifies the art of magic than its primary practitioner, the wizard. No class is more challenging, few are as elegant, and in the hands of a creative player, none is as fascinating. The AD&D® 2nd Edition *Player's Handbook* and *DUNGEON MASTER® Guide* explained all of the basic information necessary for playing wizard characters. In this book, we'll expand on that information, adding more details and options and offering a few new variations. For instance, we'll be taking a close look at all the schools of magic, examining their advantages and disadvantages, their requirements and benefits, and the types of characters that are best suited for particular specializations. Since the schools of magic aren't limited to those presented in the *Player's Handbook*, we'll show you how to create your own schools from scratch.

We'll discuss ways to personalize your wizard characters and describe entire campaigns centered on wizardly concerns. If you've been bemoaning the lack of spells for certain specialists, such as diviners and necromancers, worry no more -- we've added plenty of new spells just for them.

For the Dungeon Master, we'll offer some tips to help fine-tune his skills as a referee, covering such topics as the adjudication of illusions and how to establish guidelines for magical research. We'll explain how spells are cast underwater and in other planes of existence. And for players and DMs alike, we'll take a close look at combat and how it relates to wizards.

Think of this book as a smorgasbord of ideas. Everything here is optional. Pick and choose whatever's most appealing, make changes to suit your campaign, and experiment with variations of your own design. It's your game and your world -- we're here to help you make it as entertaining as it can be.

Throughout this book, we've used male pronouns as a matter of convenience. This is not intended to exclude females -- in all cases, read "his" as "his or her," and "he" as "he or she. " For those of you using *The Complete Wizard* in conjunction with the original AD&D game instead of the AD&D 2nd Edition game, this supplement mentions many page numbers from the *Player's Handbook* and the *DUNGEON MASTER Guide*. The page numbers cited refer to the AD&D 2nd Edition books. Those players using the old books will have to ignore these page references, but in most cases, you can find the relevant material by consulting the indexes or contents pages of the original books.

# Chapter 1: Schools of Magic

In this chapter, we'll take a close look at the various schools of magic, analyzing their strengths and weaknesses, examining their spells, and sizing up their specialists. We'll also look at the minor schools and explore the implications of abandoning a school. The schools of magic add many interesting possibilities to a campaign. But not every wizard

is destined to be a specialist, and not every player wants to play a specialist character. So let's begin with a basic question

## To Specialize or Not to Specialize?

The most crucial decision a beginning wizard must make is whether to specialize in a school of magic or instead opt for the life of a mage. Each has its advantages and disadvantages. For instance, the mage has a chance to learn any new spell he encounters, but the specialist's opportunities are more limited -- he cannot learn spells from schools that are in opposition to his own. The specialist has stricter racial and ability requirements than the mage, but he also has better saving throw bonuses.

The choice to specialize can have profound effects on a wizard's role in the game, and players should think carefully before committing their characters to a school of magic. Following are a few points to consider.

### Ability Scores

A wizard must meet certain ability requirements to become a specialist. For instance, a wizard with a Dexterity of 15 can't become an illusionist. But even if low ability scores haven't eliminated all of the specialization choices, the player should still look at his character's Intelligence score and see how it affects his chance of learning spells. An Intelligence of 9 means that the character will have a 50 percent chance to learn spells of his speciality based on the normal 35 percent chance to learn a new spell for an Intelligence of 9 (Table 4 on page 16 of the *Player's Handbook* ) plus a 15 percent bonus for being a specialist.

An Intelligence of 17 means that the character will have a 90 percent chance to learn spells of his specialty (the normal 75 percent chance for an Intelligence of 17 plus a 15 percent bonus for being a specialist). Notice that the 15 percent bonus helps the character with the lower Intelligence more than it does the character with the higher Intelligence; the bonus boosts the Intelligence 9 character's chance from 35 to 50, an increase of more than 40 percent, while the Intelligence 17 character's chance is increased from 75 to 90, which is a boost of only 20 percent.

Clearly, the lower the Intelligence of a wizard, the more specialization helps to increase his chance of learning spells. This is somewhat offset by the specialist's limitations to which spells he can learn (he can't learn spells from oppositional schools), but over the course of a campaign, a low Intelligence wizard stands a good chance of learning more spells by specializing

### 1st-Level Bonus Spell

A 1st-level specialist begins with two spells, but a 1st-level mage begins with only one. This difference is inconsequential over the course of a long campaign, but it can be significant if playing a short adventure with low-level characters

### Personality and Background of the Player Character

Some aspect of the player character's personality might suggest whether he's best suited for the life of a mage or that of a specialist. An impulsive, overeager character might lack the patience for the studious life of a specialist. Conversely, a thoughtful, scholarly character might find the life of a mage too confining. A character who comes from a long line of mages might want to continue the family tradition. A character whose brother was killed by an evil specialist NPC might want to study the same school to prepare himself for a confrontation with the murderer

### Access to Mentors

Does the wizard character have easy access to a mentor of his preferred school? Is the mentor in ill health, is his city under siege, or is his future otherwise in question? Although there are ways to learn spells without a mentor (or magic academy), the wizard may want to think carefully before committing to a specialization if he can't depend on the availability of his mentor (or academy) for consultation and further training.

### Party Composition

If the character's party already includes one or more mages, the wizard might choose a specialization to give the party a wider variety of character types. If the party is small, it might be less risky to become a mage so that the character has access to spells of all the schools. Are there other player-character wizards with spell books they'd be willing to share? Would a specialist or a mage have a better chance of learning those spells? (If one PC wizard is a conjurer, his spell book probably won't be useful to a PC wizard who wants to be a diviner.)

### Player Preference

A player might want to run a wizard of a particular specialty just because he's never tried it before, and that's as good a reason as any to choose a specialist over a mage

### Chance to Learn Spells

Consider the opportunities that mages and specialists have to learn new spells, perhaps the most compelling difference between them. As illustration, compare a mage with an Intelligence of 9 and an illusionist with an Intelligence of 9. The mage has a 35 percent chance of learning each new spell he encounters, regardless of its school. The illusionist has a 50 percent chance of learning illusionist spells, a 20 percent chance of learning alteration, divination, enchantment/charm, and conjuration/summoning spells (this percentage reflects the 15 percent penalty for learning spells from other schools). The illusionist has no chance of learning spells from the schools of invocation/evocation, abjuration, or necromancy, since these schools are in opposition to the school of illusion.

Assume that in a typical adventure, the mage and the illusionist each have the opportunity to learn 16 new spells from discovered spell books, NPC wizards, and other sources. Also assume that of these 16 spells, two are from each of the eight schools. The mage has a 35 percent chance of learning each of these spells, meaning that he is likely to

learn five or six of them. The illusionist is denied the chance to learn six of them (from the oppositional schools); he has a 50 percent chance of learning two of them (meaning he is likely to learn one of the two), and a 20 percent chance of learning eight of them (meaning he is likely to learn two spells). In this example, the mage learns six spells, while the illusionist learns only three.

It doesn't improve for specialists with higher Intelligence scores; at Intelligence 16, for instance, a mage will learn about 12 of the 16 spells, while the illusionist will learn approximately eight of them.

Of course, the specialist receives a bonus spell when he advances a level, and the differences are less severe for certain specialties (diviners, for instance, are denied access to only one school). But over the course of a typical campaign, a mage will likely learn far more spells than a specialist

## Short Adventure vs. Long Campaign

Since there is no meaningful difference between a mage and a specialist in their abilities to cast the spells they know, wouldn't the wise player always choose to play a mage? Not necessarily. In the long run, the specialist's experience bonus, saving throw bonuses, and acquired powers (see the listings in the school descriptions below) make him a far more formidable opponent than the mage. Additionally, the limits on the number of spells a wizard can use and know mean that the specialist will eventually catch up to the mage in these areas.

One guideline for deciding between a mage and a specialist might be to consider a mage if playing a short adventure. But for a lengthy campaign, a specialist is probably the best bet; not only will he prove to be a more effective party member, but a character with focused goals and aptitudes will be more interesting to play

## About the Schools

Following are details about specialists for each school of magic. Each includes the following information:

**Description:** This section explains the general effects created by spells from the school, along with how the magical energy is channelled.

**Specialist Name:** The common name for a specialist of this school.

**Allowed Races:** Only humans, gnomes, elves, and half-elves can be specialists, and not all races are able to specialize in every school. This entry indicates which races are eligible to specialize in a particular school.

**Ability Requirements:** Though all schools require a minimum Intelligence of 9, each has an additional minimum requirement in another ability and is listed here.

**Saving Throw Modifiers:** Because of their familiarity with the arcane arts, specialists are able to resist the effects of certain forms of magic. Additionally, their opponents are less able to resist certain spells cast by specialists rather than non-specialists. These are listed here.

**Bonus Spells and Acquired Powers:** These are the special abilities and extra spells that specialists automatically receive when they reach high levels. (The use of acquired powers is an option only; at the DM's discretion, he can eliminate them from his

campaign, or even develop others for high-level specialists. )

**Oppositional Schools:** The specialist is unable to learn spells from these schools. He is also forbidden to use magical items that duplicate the effects of schools in opposition to his own school.

**Spell Analysis:** This section discusses the spells available to the school, including their general types and their overall usefulness to the wizard. For convenience, spells are divided into three categories: Low (1st-3rd level), Medium (4th-6th level), and High (7th-9th level). The most versatile and powerful spells are designated as the "Most Desirable" for each of these categories.

**Ethos:** This section details the wizard's relationship to society, his goals and values, his overall philosophy, how he spends his time, and his likely role in an adventuring party. Since certain types of people tend to veer toward the same fields of study, some personality descriptions common to specialists of the school are also included.

Note that these are general guidelines only, and any number of exceptions are possible, but they can be used to help the player shape his character's personality or help him decide which school seems most appropriate for the character he has in mind

## Abjuration

**Description:** Spells of this school focus magical energies to provide protection. This protection can take a number of forms, including warding off specific types of weapons or creatures and discouraging or dispelling enemies. The school also includes a variety of spells involving avoidance and repellence. Abjuration spells concentrate on eliminating or hindering sources of potential harm rather than repairing damage.

**Specialist Name:** Abjurer.

**Allowed Races:** Only humans can be abjurers. It's speculated that the natural magical resistance of elves, half-elves, and gnomes prevents them from mastering abjuration spells.

**Ability Requirements:** A wizard must have strong intuition and exceptional willpower to master abjuration spells as reflected in a high Wisdom score. Specialists in this school must have a minimum Wisdom of 15.

**Saving Throw Modifiers:** All opponents modify their saving throws by -1 when attempting to save against an abjuration spell cast by an abjurer. An abjurer adds a +1 bonus when saving against abjuration spells.

**Bonus Spells and Acquired Powers:** An abjurer can memorize an extra spell at each spell level, providing that at least one of the memorized spells is from the school of abjuration; thus, a 1st-level abjurer can memorize two spells. When an abjurer reaches 17th level, he acquires immunity to all forms of *hold* spells and adds a +1 bonus when saving against poison, paralyzation, and death magic. When an abjurer reaches 20th level, his mastery of magical protective forces has become so powerful that his Armor Class is raised from 10 to 9. He is still forbidden to wear armor.

**Oppositional Schools:** An abjurer cannot learn spells from the schools of alteration and illusion.

**Spell Analysis:** The abjurer has a limited number of spells from which to choose, particularly in the lower levels. This lack of options makes low-level abjurers among the weakest of beginning wizards. To compensate, he should acquire a few low-level spells

from other available schools as early in his career as possible. Offensive spells-- that is, spells that inflict damage-- from the school of alteration are especially good choices, such as *burning hands*, *shocking grasp*, *strength*, and *Melf's minute meteors*. As he reaches higher levels of ability and is able to take advantage of the more powerful abjuration spells available to him, an abjurer should become less dependent on spells from other schools.

There are three general types of abjuration spells: protective, dispelling, and dismissal. Protective spells include those that offer protection from creatures (such as *protection from evil*), those that protect against weapons (such as *protection from normal missiles*), and those that protect against certain types of magic (such as *minor globe of invulnerability*). Dispelling spells cause the elimination of specific magical effects, such as *dispel magic* and *remove curse*. Dismissal spells cause the removal of certain creatures, such as *dismissal* and *banishment*.

Since the most effective abjurations are those offering the greatest protection, it seems that the dismissal spells are the most desirable-- after all, they get rid of the attacker altogether. However, dismissal spells are effective only against very specific types of attackers, such as *banishment 's* dismissal of extraplanar creatures. Unless the wizard anticipates encountering the type of creature affected, a *dismissal* spell won't be helpful. Since protection spells usually affect only a single individual, the best all-purpose abjurations are the dispelling spells; *dispel magic* for instance, employed against a magic-wielding enemy protects not only the caster, but the entire party.

The abjurer is at a disadvantage when attacking. There are very few abjuration spells that inflict damage either directly or indirectly. But in terms of defensive capabilities, the abjurer is second to none. When a party is exploring potentially dangerous territory, the abjurer makes an ideal point man, placing him in an excellent position to create defenses against attackers. The abjurer, like all wizards, has a poor Armor Class, making him extremely vulnerable to damage. A comrade with a lot of hit points and a low AC should accompany the abjurer near the front of the party, ready to intercept attacks and act as the abjurer's bodyguard.

Abjurers also operate well in conjunction with other wizards. While the abjurer casts magical defenses, a fellow wizard can concentrate on creating magical offenses. When traveling, abjurers make good guards for helpless NPCs, such as small children and elderly citizens. Does the party have a treasure map, a valuable gem, or other prized possession? With his repertoire of protective spells, the abjurer may be the best person to carry them.

**Most Desirable Spells:** Low-Level: *Dispel magic* is not only the best of the low-level abjuration spells, it should be a part of any wizard's arsenal (excluding, of course, those specialists to whom abjuration is forbidden). *Dispel magic* can effectively disarm many opponents, and it can also negate harmful or potentially harmful magical devices. Abjurers would do well to acquire this spell early in their careers. *Protection from evil* is another useful spell, considering how often a typical party encounters evil creatures and evil NPCs. Of the two 3rd-level protection spells, an abjurer will likely find *protection from evil, 10' radius* to be more helpful than *protection from normal missiles*, since he will probably have more opportunities to use the former than the latter. Note that *protection from normal missiles* can be extremely helpful when traveling through primitive areas where the inhabitants are more likely to use rocks and spears than swords

and maces.

Medium-Level: *Fire trap* not only offers superb protection, it's one of the few abjuration spells capable of inflicting damage. Avoidance has the twin advantages of being reversible and permanent. *Anti-magic shell* is generally preferable to *globe of invulnerability*; not only does it last longer, it's stronger and takes less time to cast.

High-Level: *Spell turning* and *Serten's spell immunity* are extremely powerful spells that should be useful in any hostile environment. In most situations, *prismatic sphere* is the best high-level abjuration spell; it not only provides a variety of defenses, it is also capable of blinding most opponents and inflicting a sizeable amount of damage.

**Ethos:** Concerned with protection, abjurists have a deep reverence for life and are attracted to philosophies stressing compassion and selflessness. Accordingly, most abjurers are of good alignment. Evil-aligned abjurers are often toadies of an intimidating evil warrior or in the service of a more powerful wizard of another school. Abjurers tend to be thoughtful, orderly, gentle-natured, and soft-spoken, going out of their way not to attract attention.

Of all the wizards, abjurers seem to have the strongest family ties. Abjurers take comfort in the security of marriage and often choose their mates at an early age; many abjurers have ten or more offspring. Owing to their mastery of protective forces, abjurers tend to live to a ripe old age; it's not unusual to find abjurers well into their eighties in adventuring parties.

Abjurers make their homes anywhere, but prefer small villages to large cities. Because of their kind hearts and generous spirits, abjurers are held in high esteem by society in general. Abjurers commonly earn a living as guides, bodyguards, merchants, and teachers

## Alteration

**Description:** Spells of this school enable the caster to channel magical energies to cause direct and specific change in an existing object, creature, or condition. Alterations can affect a subject's form (*polymorph other*), weight (*feather fall*), abilities (*strength*), location (*teleport without error*), or even his physical well-being (*death fog*).

**Specialist Name:** Transmuter.

**Allowed Races:** Only a caster with human blood can channel the magical energies necessary for alteration spells. Hence, only humans and half-elves can become transmuters.

**Ability Requirements:** Because alteration spells have somewhat more complex somatic components than spells from other schools, a wizard needs a Dexterity score of at least 15 to become a transmuter.

**Saving Throw Modifiers:** All opponents modify their saving throws by -1 when attempting to save against an alteration spell cast by a transmuter. A transmuter adds a +1 bonus when saving against alteration spells cast by others.

**Bonus Spells and Acquired Powers:** A transmuter can memorize an extra spell at each spell level, providing that at least one of the memorized spells is from the school of alteration. When a transmuter reaches 17th level, he receives one extra non- weapon wizard proficiency of his choice; this is in addition to the number of non-weapon proficiencies he is normally allowed. When he reaches 20th level, he receives another extra non-weapon wizard proficiency. If the wizard already has all of the non-weapon

wizard proficiencies available to him when he reaches level 17 (or level 20), he may take a general non-weapon proficiency instead.

**Oppositional Schools:** A transmuter can't learn spells from the schools of abjuration and necromancy.

**Spell Analysis:** No school has a wider variety of spells than the school of alteration, making the transmuter the most versatile of all the specialists. The available spells can be assigned to six general groups:

1. Defensive Spells. This group of protective spells offers defensive capabilities rivaling those of the abjuration school. This group includes spells that limit an opponent's ability to attack, such as *fog cloud, solid fog, slow,* and *darkness, 15' radius,* and also spells that provide direct protection to the caster and his party, such as *stoneskin* and *Leomund's tiny hut*.

2. Offensive Spells. This group includes spells such as *strength* and *haste* which increase the party's chance to inflict damage, and spells such as *Melf's minute meteors* and *death fog* which inflict damage directly.

3. Mobility Spells. This group includes *fly, blink, passwall,* and *teleport* and other spells that improve the caster's ability to move from place to place.

4. Security Spells. This group enables the caster to protect objects and places, and includes spells such as *wizard lock, guards and wards,* and *Leomund's secret chest*.

5. Talent Spells. This group gives the caster (or a person of the caster's choice) a temporary talent, usually one that duplicates a special ability of another creature or race. Such spells include *infravision, water breathing,* and *tongues*.

6. Special Spells. This group encompasses a wide range of spells that don't fit into into any of the previous categories, such as *magic mouth, mending, message,* and *fool's gold*.

Because of the variety of spells available, a transmuter can assume a number of different roles in an adventuring party. For instance, a transmuter who knows a number of offensive spells can battle effectively alongside a party's warriors. A transmuter who knows a few mobility spells in addition to some offensive spells makes an especially impressive combatant (imagine a *flying* transmuter soaring to the top of a tree, then casting *Melf's minute meteors* at an unsuspecting enemy). With a supply of defensive spells, a transmuter can assume many of the functions of an abjurer. A transmuter with *spider climb, deeppockets,* and *knock* is a good substitution for a thief; add *polymorph self* and *passwall,* and you'd be hard-pressed to find a better spy. The transmuter always runs the risk of being overwhelmed by the sheer volume of available spells and making haphazard or ill-informed decisions about which spells he learns and memorizes. Therefore, he must take care to balance his spell choices with the needs of his party.

**Most Desirable Spells:**

Low-Level: Of the 1st-level spells, *burning hands* is a nice choice for an offensive spell since it has a longer range than *shocking grasp* and does more damage at higher levels. *Chromatic orb* is a better choice yet. With its reversible option, *enlarge* gives the transmuter a wealth of options and is particularly useful in combat since it affects damage rolls. *Fog cloud* and *pyrotechnics* both have two different forms, essentially giving the transmuter two spells for the price of one. *Fly* expands the transmuter's strategic options and is perhaps the best all-around low-level alteration spell. Both *slow* and *haste* can influence melee combat dramatically, since a number of subjects are affected at the same time.

Medium-Level: *Polymorph self* and *polymorph other* can disguise friendly characters, intimidate enemies, and in the case of *polymorph other*, greatly enhance the party's chance of combat success, since the subject's Armor Class and attack routines can be improved by the spell. *Death fog* and *disintegrate* are powerful offensive spells, and *teleport* is a first-rate mobility spell. Of the medium-level spells, there are none better than *Tenser's transformation*, assuming the transmuter has a dagger or staff at hand to take advantage of his increased attack effectiveness, and *Mordenkainen's lucubration*, which gives the transmuter access to any 1st-level through 5th-level spell used in the previous 24 hours.

High-Level: *Incendiary cloud* is a terrific offensive spell, and *shape change* and *time stop* are both helpful in a variety of situations. The most useful high- level spell is probably *polymorph any object*, since it can duplicate the effects of many other spells, including *polymorph other, transmute rock to mud,* and *stone to flesh*.

**Ethos:** Wizards drawn to the specialty of alteration are typically curious, sharp-minded, and deeply analytical. Fascinated by putting things together and taking them apart again, they are natural tinkerers, more interested in objects than in people.

Transmuters generally aren't prone to profound philosophic insights, as their minds are more attuned to how things work than how a society functions. To a transmuter, a person is essentially a complicated, difficult-to-understand machine. They are obsessive collectors, excellent scholars, and clear thinkers. According to a transmuter, the only constant in the universe is change; concepts of good and evil are relative, dependent on existing conditions, and seldom permanent. Forces of good and evil are constantly at work on neutrality, but since good causes less disruption than evil, good is preferable. Consequently, many transmuters are of good alignments.

Eager to explore the world around them, transmuters are willing members of adventuring parties. They are loyal followers but reluctant leaders, since they have trouble making decisions based on instinct alone. Although loyal to their friends, they seldom establish close relationships. Married transmuters are few.

Transmuters are most comfortable in large cities where they have access to a variety of supplies, consultants, and other resources for their studies. Most societies welcome transmuters, generally considering them to be emotionally distant but harmless eccentrics. Transmuters commonly earn their livings as teachers, advisors, inventors, and manufacturers of medicines, potions, and other preparations

## Conjuration/Summoning

**Description:** This school includes two different types of magic, though both involve bringing in matter from another place. Conjuration spells produce various forms of non-living matter. Summoning spells entice or compel creatures to come to the caster, as well as allowing the caster to channel forces from other planes. Since the casting techniques and ability requirements are the same for both types of magic, conjuration and summoning are considered two parts of the same school.

**Specialist Name:** Conjurer. A specialist who has learned only summoning spells sometimes calls himself a summoner, but this is merely a matter of semantics and has no bearing on the specialist's abilities, restrictions, or effectiveness.

**Allowed Races:** A wizard must have human blood to be a conjurer. Therefore,

humans and half-elves can specialize in this school, but elves cannnot.

**Ability Requirements:** A wizard must have exceptional stamina to spend a lifetime casting conjuration and summoning spells, since he is at times tapping into his own life force in order to create conjured matter or lure summoned creatures. Therefore, a wizard must have a Constitution score of at least 15 to specialize in this school.

**Saving Throw Modifiers:** All opponents modify their saving throws by -1 when attempting to save against a conjuration or summoning spell cast by a conjurer. A conjurer adds a +1 bonus when saving against conjuration spells or attacks from creatures or forces created by summoning spells.

**Bonus Spells and Acquired Powers:** A conjurer can memorize an extra spell at each spell level, providing that at least one of the memorized spells is from the school of conjuration/summoning. When a conjurer reaches 17th level, he no longer requires any material components to cast conjuration and summoning spells. When a conjurer reaches 20th level, he gains the ability to instantly dispel creatures conjured by an opponent who has used a *monster summoning* spell or its equivalent. The conjurer can dispel up to 10 Hit Dice worth of creatures with this ability; only creatures with 5 HD or fewer are affected (therefore, the conjurer could dispel two 5 HD creatures or ten 1 HD creatures, but not a 6 HD creature). The conjurer can use this ability up to three times per day by pointing at the creatures to be affected and concentrating.

**Oppositional Schools:** A conjurer cannot learn spells from the schools of greater divination and invocation/evocation.

**Spell Analysis:** Although the conjurer doesn't have an excessive number of specialty spells from which to choose, spells of the conjuration/summoning school are among the most potent of all, comparable only to the school of necromancy in sheer power.

Though useful in a wide variety of situations, conjuration/summoning spells are particularly effective in combat, since the majority of them are capable of inflicting damage.

Generally, conjuration spells such as *Melf's acid arrow* inflict damage directly, while summoning spells, such as *monster summoning*, use an intermediary force or monster to attack opponents. Direct attacks have the advantage of immediacy; *Melf's acid arrow,* for instance, is sent directly at its target. Indirect attacks using an intermediary have the advantage of versatility; giant rats summoned by *monster summoning I* can be directed to attack the stationary Opponent No. 1, then can be ordered to run down the fleeing Opponent No. 2.

Many summoning attacks require the continual participation of the conjurer; he can't control his summoned creatures if he can't communicate with them. This is especially crucial with spells such as *conjure elemental,* where the summoned creature will turn on the conjurer if the conjurer breaks his concentration.

Conjurers who learn a large number of spells to summon creatures are better in large parties; the more companions he has, the more protection he has available if a need arises for his comrades to run interference, helping to ensure that his concentration remains unbroken. When traveling, such conjurers should remain in the center of the party, traditionally the safest spot. As members of smaller parties, conjurers are more effective knowing a variety of conjuration/summoning spells, particularly those that inflict damage directly; a conjurer with only one or two companions may find it difficult-- and dangerous-- to cast *conjure elemental*.

**Most Desirable Spells:**

Low-Level: *Melf's acid arrow, summon swarm*, and *flame arrow* are excellent offensive spells, but *monster summoning I* is the prize -- a clever conjurer should find numerous uses for, say, eight giant rats.

Medium-Level: The monster summoning spells are the best. *Conjure elemental, Mordenkainen's faithful hound*, and *summon shadow* can turn the tide in just about any battle with low or medium level opponents.

High-Level: This group includes what most wizards consider to be the most prized spell of any school, *wish*. *Limited wish* is nearly as potent.

Because DMs vary widely in how they handle wishes, players with conjurer characters might want to discuss with their DM his parameters for adjudicating these types of spells. (See the Spell Commentary section in Chapter 7 for more about *wishes*.) In addition to wishes, high-level conjuration/summoning spells offer the conjurer some extremely powerful offensive spells. The all-around best in combat are *power word, kill; prismatic sphere*; and the *monster summoning* spells.

**Ethos:** Because of the great power they wield, most conjurers are utterly convinced that their specialty is superior to all others. Illusion and divination are trivial, alteration and invocation are inconsequential, abjuration and enchantment are too weak, and necromancy is too repulsive. Though tending toward smugness and arrogance, conjurers are also confident, courageous, and bright.

Conjurers tend to rely on summoned creatures to perform difficult tasks for them; hence, many conjurers grow flabby as the years pass. Many consider conjurers to be downright lazy.

Conjurers recognize the importance of keeping evil in check, and most are of good alignment. Evil conjurers flourish, however, particularly those who maintain contact with evil entities summoned from other planes of existence.

Conjurers speak their minds freely and have little patience for the opinions of those they consider to be inferior; it takes a leader of proven worth and unyielding strength to earn the respect of a conjurer. In an adventuring party, conjurers tend to prefer action to discussion, and attacking to negotiating. Conjurers relish every opportunity for combat in order to demonstrate their power.

Since conjurers have little interest in associating with common people, they prefer to live in isolated areas of the countryside. Most consider children a nuisance, so even the few conjurers who marry typically remain childless by choice.

Aside from magical research, conjurers shun all activities that would normally constitute a career or occupation. When funds are low, conjurers can always summon creatures to fetch treasure for them

## Enchantment/Charm

**Description:** Similar to the school of conjuration/summoning, this school encompasses two general types of spells. Both types imbue their subjects with magical energy to create specific effects. *Charm* spells induce changes or influence the behavior of creatures, usually altering their subject's mental or emotional states. Enchantment spells invest non-living objects with magical powers. Neither *charm* nor *enchantment* spells have any effect on their subject's physical form.

**Specialist Name:** Enchanter.

**Allowed Races:** Humans, half-elves, and elves can all become enchanters.

**Ability Requirements:** Since influencing the will of others is in part a manifestation of the caster's personal charm, a wizard must have a Charisma of at least 16 to specialize as an enchanter.

**Saving Throw Modifiers:** All opponents modify their saving throws by -1 when attempting to save against an enchantment/charm spell cast by an enchanter. An enchanter adds a +1 bonus when saving against enchantment/charm spells.

**Bonus Spells and Acquired Powers:** An enchanter can memorize an extra spell at each spell level, providing that at least one of the memorized spells is from the school of enchantment/charm. When an enchanter reaches 17th level, he acquires immunity to all forms of *charm* spells. When an enchanter reaches 20th level, he gains the ability to cast a special free action spell once per day. The enchanter can cast this spell on himself or any creature he touches. No material components are required for this spell and the casting time is 1; the enchanter merely touches the subject to be affected and concentrates. When enchanted with *free action*, the subject is able to move and attack normally for one hour, even under the influence of a spell that impedes movement such as *web* or *slow*. The spell negates the effects of *hold* spells. Underwater, the subject moves at normal surface speed and inflicts full damage with weapons, provided that the weapon is wielded and not hurled.

**Oppositional Schools:** An enchanter cannot learn spells from the schools of invocation/evocation and necromancy.

**Spell Analysis:** The enchanter has a moderate number of spells from which to choose, most of them emphasizing defensive rather than offensive effects. Not only can this school of spells be divided into charms and enchantments, the spells can also be divided into those that affect only a single person or object, and those capable of affecting a group.

Generally, the group-affecting spells are more useful to the enchanter, but he must consider their ranges and durations when deciding which spells to learn and memorize. For instance, both *ray of enfeeblement* and *Tasha's uncontrollable hideous laughter* are 2nd-level enchantment/charm spells that inflict penalties on the attack and damage rolls of opponents. *Ray of enfeeblement* affects only one creature, while *Tasha's laughter* affects all those within a 30-foot cube. But note that even though *Tasha's laughter* inflicts a higher damage penalty, it lasts only a single round (although the effects essentially carry over into the next round). *Ray of enfeeblement* lasts 1 round/level; when cast at higher levels, this spell can be extremely debilitating. And though the 60-yard range of *Tasha's laughter* makes the range of ray of enfeeblement look dismal by comparison (10 yards + 5 yards/level), note that at higher levels, the range of *ray of enfeeblement* increases dramatically, while the range of *Tasha's laughter* stays the same.

The shortcoming of the enchantment/charm catalog is the lack of offensive spells. Only a handful of them are capable of inflicting damage. This usually defines the enchanter's role in an adventuring party as defensive. As with the abjurer, it should be noted that with his low AC, the enchanter is extremely vulnerable to attacks. A bodyguard with a high AC or a lot of hit points is more of a necessity than a luxury for an enchanter. Unlike an abjurer, whose defensive spells operate more or less automatically, the enchanter's defensive spells often require him to take an additional action after they

are successfully cast. A *hypnotized* victim, for instance, needs to be told what to do, as does a subject affected by *suggestion*. *Charmed* creatures may simply stand and stare unless directed otherwise by the caster. Clearly, the most effective enchanters are those who are creative, quick-thinking, and vigilant.

**Most Desirable Spells:**

Low-Level: Nearly all of the low- level enchantment/charm spells are defensive. The best are those that allow the enchanter the most latitude in the number of creatures he can affect, such as *hypnotism, sleep, scare,* and *Tasha's uncontrollable hideous laughter*. Though it affects only one creature, *suggestion* can be an extremely useful spell in the hands of a creative caster; with a duration of 1 hour + 1 hour/level, it's also among the longest-lasting low-level spells. Medium-Level: *Enchanted weapon* is one of the few offensive spells available in this school, a valuable addition to any enchanter's repertoire. *Charm monster* and *hold monster* have the advantage of being able to affect a variety of opponents. *Magic mirror* effectively substitutes for a *crystal ball* and other scrying devices. *Mass suggestion* and *eyebite* have the most possibilities of all the medium-level spells in the hands of a creative caster.

High-Level: Unfortunately, few high-level enchantment/charm spells are available to the enchanter. For their variety of uses, *antipathy-sympathy, binding*, and *mass charm* are the best all-purpose spells. In lieu of a conjurer, *demand* essentially functions as a conjuration spell.

**Ethos:** With their high Charisma, enchanters tend to be the most physically attractive and personable of all the specialists. They are sensitive, passionate, and caring. They believe in the sanctity of life and share the druid's love of nature. Most enchanters see themselves as protectors of the helpless and advocates of the weak, but there are some who see their mastery of enchantment magic as evidence of their inevitable ascendance in the world. Notably, there are ample numbers of good and evil enchanters, but few neutral ones.

Enchanters are commonly the voice of reason in adventuring parties. They are often able to devise options and solutions that have eluded their companions. They are excellent team-players, superb negotiators, and shrewd bargainers. They enjoy fine arts and good conversation, and are fascinated by magic in all its forms. It is not unusual for an enchanter to acquire dozens of close friends. Though deeply romantic, enchanters often marry late in life, as they are reluctant to settle down with just one person.

Fond of the simple life, enchanters usually live in modest homes in small villages. They spend much of their time tinkering with magical potions and devices, commonly earning money as counselors, teachers, and farmers

## Greater Divination

**Description:** This school includes a variety of spells that reveal information that would otherwise remain hidden or secret. Greater divination spells reveal the existence of specific items, creatures, or conditions, as well as information about the past, present, and future. This school also includes spells that contact creatures from other planes of existence, but do not induce direct action from those creatures.

**Specialist Name:** Diviner.

**Allowed Races:** Elves, half-elves, and humans are all eligible to specialize as diviners.

(Note that Table 22 on page 31 of the *Player's Handbook* is incorrect-- gnomes cannot be diviners.)

**Ability Requirements:** A wizard must have a strong intuition and exceptional willpower to master divination spells, reflected in a high Wisdom score. Specialists in this school must have a minimum Wisdom score of 16.

**Saving Throw Modifiers:** All opponents modify their saving throws by -1 when attempting to save against a divination spell cast by a diviner. A diviner adds a +1 bonus when saving against divination spells or any magical devices that duplicate these effects.

**Bonus Spells and Acquired Powers:** A diviner can memorize an extra spell at each spell level, providing that at least one of the memorized spells is from the school of divination.

When a diviner reaches 17th level, he acquires immunity to all forms of scrying spells, such as *ESP* and *know alignment*, as well as immunity against magical items that duplicate these effects. An opponent using *ESP* on a 17th level diviner has no more success than if he were attempting to read the mind of a stone. An opponent using *clairaudience* on an unseen 17th level diviner neither receives information nor becomes aware of the diviner's presence.

When a diviner reaches 19th level, he receives the ability to cast a special *find traps* spell three times per day. The spell has an area of effect equal to a 10-foot-path up to a range of 30 yards. To cast the spell, the diviner must merely point in the desired direction and concentrate; no verbal or material components are required. Similar to the 2nd-level priest spell, *find traps* reveals the existence of all normally concealed magical and mechanical traps, including alarms, glyphs, and similar spells and devices. The diviner learns the general nature of the trap (magical or mechanical) but not its exact effect or how to disarm it.

When a diviner reaches 20th level, he receives the ability to cast a special *divination* spell once per day. To cast the spell, the diviner must concentrate for one full turn; no verbal or material components are required. Similar to the 4th-level priest spell, *divination* reveals a useful piece of advice concerning a specific goal, event, or activity that will occur within the next seven days. The revelation may take the form of an omen, a short phrase, or a cryptic verse, but it always reveals specific advice. In all cases, the DM controls the type of information revealed and whether additional *divinations* will supply additional information. The base chance for a correct *divination* is 80 percent, adjusted by the DM for unusual circumstances or extreme requests (such as a diviner trying to learn the exact location of a powerful artifact). If the dice roll fails, the diviner knows that the spell failed, unless specific magic yielding false information is at work.

**Oppositional Schools:** The diviner is denied access to the school of conjuration/summoning.

**Spell Analysis:** The variety of spells available to the diviner is more restricted than any other school or specialist. Offensive spells -- that is, those that inflict damage on opponents either directly or indirectly -- are nonexistent for this school. Defensive spells that either inhibit an enemy's attack ability or provide direct protection for the diviner and his companions are likewise unavailable. This doesn't mean that the diviner is useless on the battlefield; it means that his strength lies elsewhere.

As a gatherer of information, the diviner is without peer. A diviner can anticipate unexpected dangers, can separate the truth from lies, and is exceptionally effective as a

spy. He can bolster his party's defenses by alerting them to the presence of normally undetectable opponents. Although the repertoire of divination spells is relatively small, the diviner has access to more schools than any other specialist.

There are two general groups of greater divination spells. One group includes spells that reveal information about a specific object or creature, such as *ESP* and *locate object*. A second group reveals information about any type of object or creature within the range of the spell; this group includes *detect invisibility* and *clairvoyance*.

**Most Desirable Spells:**

Low-Level: All 1st-level through 4th-level divination spells are part of the lesser divination school, and are available to all schools. These are discussed in more detail in the Lesser Divination section below. However, a well-rounded diviner will have *detect magic, read magic,* and *ESP* included in his repertoire; *know alignment* and *clairvoyance* are also important basic divination spells.

Medium-Level: All of the medium-level divination spells are strong, with *legend lore* and *true seeing* likely to get the most use. *Contact other plane* is a valuable spell if the diviner's party lacks a conjurer or other wizard capable of contacting extraplanar creatures.

High-Level: With only a handful of high-level greater divination spells, the diviner has few choices. Note that *foresight* is one of the few divination spells that offers the diviner protection from harm.

**Ethos:** Diviners are perhaps the wisest of all wizards. Their investigations into the world around them and their perusal of events of the past and the future empower them with a base of knowledge and insight rivaled only by the most learned scholars. A diviner typically possesses a striking insight into the workings of men's minds; few are better judges of character than diviners.

Diviners tend to be cautious and deliberate in their actions. Because their divinations have taught them that men are prone to hiding their true feelings and motivations, many diviners are suspicious and distrustful, sometimes to the point of cynicism. Those diviners who allow distrust and cynicism to overwhelm them tend to be of evil alignment. Those who accept man's ambiguous character as a part of the natural order tend to be of neutral alignment. Those who maintain faith in man's innate goodness tend to be of good alignment.

Diviners are not predisposed to the adventuring life, and accept such a career only reluctantly. They are not natural combatants; in fact, wizards lacking in physical prowess are drawn to divination more than any other specialty. Still, diviners make valuable additions to adventuring parties; their judgement, cunning, and plain common sense are welcome commodities. A party must take care to provide protection for diviners since they usually lack any significant ability to defend themselves.

Diviners are loners at heart and do not make close friends easily. They rarely raise large families. Diviners of good alignment generally harbor no ill feelings against other people, and will usually assist them when asked. Still, they prefer to live alone in remote areas where they can conduct their research and investigation undisturbed. Stone towers on cliff sides or atop high hills are ideal residences for diviners. Though they show little interest in material possessions, diviners earn money by charging for their services as seers, fortune-tellers, and finders of lost objects and persons

## Illusion

**Description:** Spells from the school of illusion bend reality to create apparent changes in the environment, in the caster, or in other persons or creatures. These spells do not cause real changes as alteration spells do, but instead alter the way that creatures and persons perceive reality. This school includes both illusion and phantasm spells (the differences are discussed in the Spell Analysis section below).

**Specialist Name:** Illusionist.

**Allowed Races:** Humans and gnomes are eligible to become illusionists. It's not clear why elves and half-elves are unable to specialize in this school, though some speculate that the same inborn magical resistance that helps make them immune to charm spells also limits their ability to focus the magical energy needed to create illusions.

**Ability Requirements:** The somatic components of most medium-level and high-level illusions require precise physical manipulations. Therefore, to specialize as an illusionist, a wizard must have a minimum Dexterity score of 16.

**Saving Throw Modifiers:** Illusionists add a +1 bonus when rolling saving throws against any type of illusion. Opponents suffer a -1 penalty when rolling saving throws against illusion/phantasm spells cast by an illusionist. These modifiers are only used against illusions where saving throws are applicable.

**Bonus Spells and Acquired Powers:** An illusionist can memorize an extra spell at each spell level, providing that at least one of the memorized spells is from the school of illusion.

When an illusionist reaches 18th level, he adds a +1 bonus when saving against illusions cast by non-illusionists. (Since this is in addition to his natural +1 modifier, his saving throw bonus against these attack forms effectively becomes +2.)

When an illusionist reaches 20th level, he acquires the ability to cast a special *dispel illusion* spell three times per day. The spell has a range of 30 yards and a casting time of 1. To cast this spell, the illusionist merely points at the subject and concentrates; no somatic or material components are required. This spell enables the illusionist to dispel any type of *phantasmal force*, including those augmented by *audible glamer*; however, *dispel illusion* is effective only on *phantasmal force* spells cast by non-illusionists.

*Dispel illusion* has a base chance of success of 50 percent. For each level of experience that the illusionist exceeds the caster of the *phantasmal force*, the chance of success is increased by 5 percent. For each level the caster exceeds the illusionist, the chance is reduced by 5 percent. (For instance, if a 20th-level illusionist attempts to dispel a *phantasmal force* created by a 15th-level mage, the illusionist's chance of success is 75 percent.) If an illusionist casts *dispel illusion* at a subject that isn't an illusion, there is no effect, but the attempt counts against the illusionist's daily limit of *dispel illusion* spells.

**Oppositional Schools:** An illusionist cannot learn spells from the schools of necromancy, invocation/evocation, and abjuration.

**Spell Analysis:** Spells of this school can be grouped into two general categories: illusions and phantasms. Illusions are spells that simulate reality, creating artificial conditions of light, color, sound, and scent. *Audible glamer* is an example of an illusion that simulates sound. In general, the lower-level illusions are of limited use in combat situations, providing neither direct protection from damage nor the ability to inflict damage on opponents. Though most illusions create only the appearance of reality, some

high-level spells tap extradimensional forces to create illusions with physical substance, capable of inflicting damage and otherwise interacting with the real world. Shadow monsters is an example of a quasi-real illusion. These are the most useful types of illusion spells in combat, as they can create illusionary creatures to attack opponents and execute an assortment of other tactical actions. Another type of illusion focuses extradimensional forces to alter the physical form of the caster. *Wraithform* is an example. These are especially good defensive spells, as they protect the caster from a variety of attack forms.

Phantasms are the second general group of illusion spells. Phantasms directly manipulate the perception of their victims. Phantasms do not create images, they induce responses. *Spook* is an example of a phantasm that induces the response of fear. Phantasms are also good defensive spells, more so than illusions that alter the caster's form, since they can affect a number of opponents within a given range.

Because spells from the school of illusion are mainly concerned with the creation of images and are of limited use on the battlefield, many feel that illusionists are the weakest of all the specialists. In a broad sense, however, no school provides a wizard with more options, since in most cases, illusion spells are limited only by the caster's imagination. For instance, consider the 1st-level illusion spell *phantasmal force*. A dull-witted wizard might consider this a useless spell; after all, its illusions have only visual components. A silent monster might scare away a nervous bandit, but what else can you do with it? Plenty, answers the creative illusionist, and the effects aren't confined to the battlefield. Here are some examples:

- The party is being pursued by a hoard of orcs. The wizard uses *phantasmal force* to create the illusion of a wall of bramble bushes behind the party to slow down the pursuers. Alternately, he creates a swarm of wasps, a cloud of ominous green gas, or a pool of quicksand to slow them down.
- The hungry party wants to catch some fish for the evening meal. They have lines and hooks, but no bait. The wizard uses *phantasmal force* to create a colorful, sparkling lure.
- The party wishes to lure an enemy into a cave for an ambush. The wizard uses *phantasmal force* to create the illusion of great treasure just inside the cave and -- in goes the greedy enemy.
- The wizard has met a beautiful damsel whom he wishes to impress. He takes her to a secluded woodland and uses *phantasmal force* to create the illusion of a patch of beautiful wild flowers.

**Most Desirable Spells:**

Low-Level: *Phantasmal force, ventriloquism, improved phantasmal force,* and *spectral force* are the most versatile low- level illusionist spells when wielded by a creative caster. *Spook, invisibility, wraithform,* and *invisibility, 10' radius* are excellent defensive spells.

Medium-Level: With access to 4th-level and higher spells, the illusionist becomes a strong combatant, as he can take advantage of powerful, quasi-real illusions such as *phantasmal killer, shadow monsters, demi-shadow monsters, shadow magic, demi-shadow magic,* and *shades*. The options for the creative illusionist also expand, with access to the complex creations possible with *minor creation, advanced illusion, major creation, permanent illusion,* and *programmed illusion*.

High-Level: Unfortunately, the number of spells available to the illusionist drops

dramatically at higher levels. *Shadow walk* is invaluable if the wizard anticipates travel to the plane of shadow; in certain situations, it also functions as an effective banishment spell. *Mass invisibility* can mean the difference between victory and defeat in combat involving a large number of participants. *Simulacrum* has the most possibilities of all the creation illusions, while *weird* can be the most deadly of all the offensive illusion spells.

**Ethos:** Illusionists tend to be flamboyant, outgoing, and self-assured. Remarkably creative, they enjoy art, literature, poetry, and music, and many are accomplished artists in their own rights. Though their aptitude for scholarly pursuits is as high as any other specialist, illusionists tend to spend less time involved in research, preferring the company of people to the isolation of the laboratory.

Illusionists have sharp minds, but they are not particularly deep thinkers. Pragmatic by nature, they accept the impermanence of all things, believing that any attempt at developing an all- encompassing philosophy to explain the meaning of existence is ultimately futile and therefore a waste of time. Illusionists tend to be of good and neutral alignments, since wizards inclined toward evil usually opt for a specialization they perceive as being more powerful.

Because of their forceful personalities and sharp minds, illusionists make good leaders of an adventuring party, but they also make equally good lieutenants and strategists. Because low-level and medium-level illusionists usually lack defensive spells, a party must provide bodyguards or other protection to keep them healthy; such illusionists are best kept in the center of the party when traveling.

Illusionists enjoy the hustle and bustle of urban life, and usually maintain well-furnished homes in the heart of a city. They usually have a host of friends and acquaintances, and are loyal and loving spouses. Illusionists earn a living as entertainers, artists, mercenaries, teachers, and shopkeepers

## Invocation/Evocation

**Description:** This school includes two types of spells, both of which use magical energy to create specific effects by bringing forth special forces that the caster shapes into constructs of energy or constructs of matter. Evocation spells use the natural magical forces of the planes. Invocation spells call on the intervention of powerful extradimensional beings.

**Specialist Name:** Invoker.

**Allowed Races:** Only humans are able to incorporate the complimentary energies necessary to master the spells of this school. Therefore, only humans are eligible to become invokers.

**Ability Requirements:** Because of the powerful energies involved, a lifetime of casting invocation/evocation spells is extremely stressful to a wizard's health. A minimum Constitution of 16 is necessary to specialize as an invoker.

**Saving Throw Modifiers:** All opponents modify their saving throws by -1 when attempting to save against an invocation/evocation spell cast by an invoker. An invoker adds a +1 bonus when saving against invocation/evocation spells.

**Bonus Spells and Acquired Powers:** An invoker can memorize an extra spell at each spell level, providing that at least one of the memorized spells is from the school of invocation/evocation. When an invoker reaches 17th level, he gains an additional +1

bonus when saving against invocation/evocation spells or against magical devices duplicating the effects of these spells. With his natural saving throw modifier, this effectively raises his bonus to +2. When an invoker reaches 20th level, he gains another +1 bonus when saving against invocation/evocation spells, effectively raising his bonus to +3.

**Oppositional Schools:** The invoker is denied access to spells from the schools of enchantment/charm and conjuration/summoning.

**Spell Analysis:** This school offers the specialist a range of spells of staggering power. In fact, no school has a wider variety of offensive spells available at all levels.

The high-level offensive evocation spells are nothing short of devastating; a single *meteor swarm* for instance, can inflict up to 160 hit points of damage. Accordingly, an invoker can be thought of as the wizardly equivalent of the mightiest fighter; when armed with a repertoire of invocation/evocation spells, the invoker is easily among the game's most powerful characters.

The invoker also has access to a number of potent defensive spells. Some of these provide protection against specific types of attacks, such as *shield* and *fire shield*, while others offer protection by hindering the actions of all enemies within the range of the spell, such as *wall of fog* and *shout*. Generally, the spells hindering enemy actions will prove to be more useful than spells protecting against a specific type of attack, unless the invoker suspects that he will be encountering specific types of monsters. For instance, if fire lizards roam the land, it's prudent to memorize *fire shield.*

A wise invoker realizes that the strongest spells are not necessarily the best ones. For instance, assume that a 10th-level invoker and his party are about to venture into an unknown area where large numbers of hostile creatures are rumored to live. Though the creatures are numerous, they're also rumored to be low-level, perhaps no more than 3 HD each. The invoker has both *lightning bolt* and *Melf's minute meteors* in his spell book -- which of the two will be the most helpful? The damage caused by a single *lightning bolt* exceeds that of *minute meteors*, but the *lightning bolt* can be used only once, while *minute meteors* enables the invoker to make up to ten attacks. A typical 3 HD monster has about 12 hit points. Undoubtedly, the lightning bolt will wipe out a 3 HD monster, but much of the lightning bolt's power is likely to wasted. With luck, the minute meteors will disable numerous 3 HD monsters.

It is wise to memorize powerful single-shot offensive spells (such as *lightning bolt* and *fireball*) when the party expects to encounter high-level monsters, and to memorize multiple-shot spells (such as *chain lightning* and *Melf's minute meteors*) capable of disabling a number of opponents when low-level monsters are expected.

Though the invoker wields great power, it's important to remember that his Armor Class is no better than that of any other specialist. An invoker armed with *lightning bolt, fireball,* and a range of other formidable offensive spells is still vulnerable to attacks. A party who repeatedly sends their invoker on dangerous assignments alone or an invoker who consistently volunteers for such assignments is tempting fate; a single trap or successfully executed ambush can easily mean the end of his life.

**Most Desirable Spells:**

Low-Level: *Magic missile* is the most potent 1st-level offensive spell. *Fireball, lightning bolt,* and *Melf's minute meteors* are killers, perhaps the best low-level offensive spells of any school. *Wall of fog* and *web* are the best low-level offensive spells.

Medium-Level: There are three medium-level spells whose multiple forms make them particularly attractive; interestingly, they all are all cold-based spells. These include *ice storms* (two forms), *wall of ice* (three forms), and *Otiluke's freezing sphere* (three forms). *Dream* is a similarly attractive spell, since the invoker also gains access to its reverse, *nightmare*. *Shout, wall of iron,* and *Tenser's transformation* are all effective as both offensive and defensive spells. *Cloudkill* and *chain lightning* are excellent additions to any invoker's arsenal.

High-Level: *Limited wish* is limited only by the imagination of the caster and the parameters set by the DM (see the discussion of wish spells in Chapter 7 for more information). *Binding,* with its six different forms, is a terrific defensive spell. All but the mightiest of opponents will yield to an invoker armed with one or more of the following: *Bigby's clenched fist, incendiary cloud, Bigby's crushing hand, energy drain,* and *meteor swarm*.

**Ethos:** The school of evocation/invocation attracts the most serious-minded, intense, and determined wizards. Most are single-mindedly devoted to the mastery of their craft. Invokers of good alignment devote themselves to using their skills to promote goodness and eliminate evil, willing to sacrifice their lives if necessary. For evil-aligned invokers, the magic of invocation is the key to their ascendancy; to them, good is weakness and evil is strength. Because specialists of this school are men and women of extreme philosophies, invokers of neutral alignment are rare.

Invokers are natural leaders: fearless, inspiring, and authoritative. Their courage on the battlefield is without peer, and they perform as aggressors alongside the most able fighters. Since they are introspective, soft-spoken, and emotionally distant, invokers seldom establish strong personal relationships.

Invokers will live anywhere they can maintain their privacy. Common people willingly leave them alone, fearing their power and even regarding them as dangerous, and invokers do little to dispel this reputation. They shun material possessions, needing only enough funds to finance their research. They primarily earn money as teachers, though they will occasionally sign on as members of adventuring parties in order to find treasure

## Necromancy

**Description:** This powerful school involves spells dealing with death and the dead. These spells drain vitality from living creatures and restore life functions to unliving creatures. Bones, blood, spirits, and apparitions are all associated with the magical energies shaped and controlled by the specialists of this school.

**Specialist Name:** Necromancer.

**Allowed Races:** As in the school of invocation/evocation, only the spirits of humans incorporate the energies necessary to master the spells of necromancy. Therefore, only humans are eligible to become necromancers.

**Ability Requirements:** Since only the most enlightened, strong-willed, and intuitive wizards can become specialists of this school, necromancers must have a minimum Wisdom of 16.

**Saving Throw Modifiers:** All opponents modify their saving throws by -1 when attempting to save against a necromancy spell cast by a necromancer, or against an attack

from an undead creature either created or controlled by a necromancer. A necromancer adds a +1 bonus when saving against necromancy spells, or against any attacks made by undead creatures.

**Bonus Spells and Acquired Powers:** A necromancer can memorize an extra spell at each spell level, providing that at least one of the memorized spells is from the school of necromancy. When a necromancer reaches 17th level, he adds another +1 bonus when saving against necromancy spells or against any attacks made by undead creatures. With his natural +1 bonus, this effectively raises his saving throw bonus to +2.

When a necromancer reaches 20th level, he gains the ability to cast a special form of *speak with dead* once per day. To cast the spell, the necromancer must merely point to the subject and concentrate for one round; no verbal or material components are necessary. The spell enables the necromancer to ask questions of a single dead creature and receive answers according to the knowledge of that creature. The creature can not have died more than 100 years ago, and the caster must be able to converse in a language that the dead creature formerly used. The necromancer can converse with the dead creature for one full turn and can ask up to four questions.

Regardless of the creature's level or alignment, it receives no saving throw against this spell. However, the creature will be as evasive as possible, tending to give brief and sometimes cryptic answers.

Additionally, the creature's knowledge is usually confined to what it knew in life (it cannot convey information about what may have happened to it after its death).

**Oppositional Schools:** The necromancer cannot learn spells from the schools of illusion and enchantment/charm.

**Spell Analysis:** Though the school of necromancy has a relatively small number of spells, they are among the most potent available to any of the specialists. In terms of sheer power, the necromantic spells compare to those from the school of invocation/evocation.

Necromantic spells can be sorted into three general groups. One group includes spells that imbue the caster or a person of the caster's choice with special abilities similar to the effects of certain enchantment and alteration spells. *Chill touch, enervation, death spell,* and *finger of death* are examples of this type of spell. The majority of this group are extremely powerful offensive spells; *death spell* and *finger of death* in particular are effective against a wide range of opponents. A necromancer armed with a repertoire of these spells bolsters his party's offensive capabilities considerably. *Reincarnation* can be considered part of this group, since it imbues the subject with a special ability; namely, a second chance at life.

A second group of necromancy spells includes those that create creatures or physical forces to fight on the caster's behalf. *Spectral hand* and *animate dead* are examples. *Summon shadow* is also included in this group, although in this case, an actual creature is summoned rather than created. Since these spells enhance the caster's ability to inflict damage on opponents, they can be considered offensive spells.

A third group of necromancy spells enables the caster to affect the actions of other creatures, usually undead. *Hold undead, contagion,* and *control undead* are examples. Since these spells inhibit the attack capabilities of the affected creatures, they can be considered defensive spells, although in the case of *control undead*, the affected creatures can also be used to attack enemies.

The majority of the necromancer's spells probably won't come from just one of these groups. More likely, he will acquire a number of spells from each of these groups over the course of his career. Though all of the necromancy spells are extremely powerful, in most cases, the offensive spells are his best choices, since their power has no parallel in spells from other schools (for instance, it would probably take a 9th-level wish to duplicate the effects of a 6th-level *death spell*).

The necromancer doesn't exhibit much magical strength until he reaches the higher levels. A low-level necromancer of 6th level or lower might contribute little to a party's defensive or offensive capabilities. A low-level necromancer requires extra protection from his companions; he must also adopt a realistic attitude about his effectiveness in combat and avoid taking unnecessary risks. However, once the necromancer gains access to the middle-level and higher-level spells (at 6th-level and above), his capabilities increase at a rapid rate. He needs only to live long enough to get there.

**Most Desirable Spells:**

Low-Level: The low-level spells are somewhat weak, although *chill touch, spectral hand,* and *vampiric touch* are all good offensive spells. *Hold undead* and *detect undead* will be invaluable if the wizard or his party will be venturing into catacombs, burial grounds, or other places where such creatures are likely to be encountered.

Medium-Level: All of the spells in this group are exceptionally strong. *Magic jar* and *reincarnation* are unique in their utilities, their powers comparable only to that of a *wish*. *Death spell, enervation, summon shadow, animate dead,* and *contagion* all have a variety of uses on the battlefield.

High-Level: There are only a few high-level necromancy spells, but all of them are extremely potent. *Control undead, finger of death,* and *energy drain* can make the mightiest opponents tremble. Wizards planning to employ *clone* should carefully consider the time it takes to use; though the casting time is only a single turn, it can take up to eight months for the clone to grow.

**Ethos:** The necromancer exhibits a fascination with life and death that borders on the obsessive. He is typically brooding, humorless, and withdrawn. Casual acquaintances consider him to be cold and hostile, but those who befriend the necromancer may come to know him as a caring, complex individual whose emotions run deep. The necromancer can be a valued and trustworthy companion, but he is also prone to bouts of depression so extreme that it becomes difficult for him to interact with others to any meaningful degree.

Continual exposure to forces associated with undead creatures can have a corrupting effect on wizards with even the slightest inclinations toward evil. Consequently, the number of evil-aligned necromancers is rumored to far outweigh the number of those of good alignment. Neutral necromancers are virtually non-existent; in general, a necromancer either has a will strong enough to resist the lure of darkness, or he submits to the corruption and devotes himself to a life of evil.

Befriending a necromancer will try the patience of even the most understanding character. Since necromancers prefer solitude to companionship, and silence to conversation, it is little wonder that few of them have spouses; the best mate for a necromancer is another necromancer.

In spite of their reticence, most good- aligned necromancers are unshakable in their determination to confront and extinguish evil and will join like-minded individuals to undertake these types of missions. Understandably, necromancers make poor leaders, but

they are valuable additions to adventuring parties. Not only do necromancers wield unmatched power, their familiarity with the world's dark forces makes them virtually fearless. On the other hand, much to a leader's chagrin, a necromancer does not always follow orders automatically; a necromancer who disagrees with his party's strategy may simply strike out on his own.

Necromancers live as far from civilized regions as they can, establishing residences in ancient castles, deep caverns, or even abandoned crypts. They spend most of their time engaged in arcane research, reading, studying, and writing.

Necromancers seldom have careers, though they occasionally earn money as teachers and mercenaries. High-level necromancers simply order undead creatures to fetch them treasure when funds are low

## Abandoning a School

With the DM's permission, it is possible for a wizard to abandon a specialty, but the restrictions and penalties for doing so are severe

### Mages

Mages cannot abandon their careers to become specialists. Once a wizard decides to become a mage, he must remain so for the duration of his career

### Specialists

Any specialist can abandon his school, but only to become a mage. A specialist cannot become a specialist from a different school. A specialist's decision to abandon his school to become a mage is permanent -- under no circumstances can he again become a specialist of his original school. A specialist keeps all of the spell bonuses that he had prior to his conversion, but receives no more bonus spells after he abandons his school to become a mage. He loses all saving throw bonuses at the time of his conversion (for instance, he no longer receives a +1 bonus when making saving throws against spells of his former specialty that are cast by other wizards).

Once he abandons his school, a former specialist's chances of learning new spells are affected as follows:

- When attempting to learn a spell of his former specialty, he no longer receives a bonus (e.g., an illusionist who abandons his school no longer receives a +15 percent bonus when attempting to learn illusion spells).
- When attempting to learn spells from other schools, he still suffers a penalty (e.g., an illusionist who abandons his school still has a -15 percent penalty when attempting to learn spells from the schools of alteration, greater divination, enchantment/charm, and conjuration/summoning).
- When attempting to learn spells from schools in opposition to his former specialty, his chance is computed according to the following formula:

Percent chance = 1/2 (base chance to learn a spell -15 percent)

For instance, a former necromancer with an Intelligence of 13 wants to learn an illusion spell. Since necromancy is one of the schools that was in opposition to his former school, his chance to learn the spell is 1/2 (55-15), which equals 20 percent.

## A Word About Minor Schools

### Lesser Divination

The divination spells of 4th-level and below are collectively known as the school of lesser divination. Lesser divination is considered to be a minor school of magic; that is, wizards can't become specialists in lesser divination.

The term "minor" is used informally in this context. It means that specialists from any school are allowed to learn and use these spells. Many of the lesser divination spells, such as *detect magic* and *read magic* are basic to the practice of magic. Others, such as *identify, ESP*, and *know alignment* are vital to the basic repertoire of any specialist. Without access to the spells of lesser divination, a wizard's ability to function would be frustratingly limited, particularly at the lower levels.

At first glance, the existence of the school of lesser divination would seem to reduce the role of the diviner; after all, no other school allows all specialists such easy access to their low-level spells. However, an examination of the requirements for all schools shows that only the conjurer has greater divination as an opposition school; every other specialist has access to the low-level divination spells. In practice, the existence of the minor school of lesser divination serves only to give the conjurer access to the low-level divination spells.

Although all specialists can learn lesser divination spells, they cannot learn them any more easily or effectively than they can learn spells from schools other than their own. All non-diviners learn lesser divination spells at a penalty of -15 percent on the Intelligence Table (Table 4, page 16 *PHB*); for instance, either a conjurer or an illusionist with an Intelligence of 15 has a 50 percent chance of learning any given lesser divination spell.

All lesser divination spells are also considered to be part of the school of greater divination. Therefore, a diviner has a 15 percent bonus on the Intelligence Table to learn lesser divination spells; for instance, a diviner with an Intelligence of 15 has an 80 percent chance of learning any lesser divination spell.

### New Minor Schools

Do other minor schools of magic exist? That's a decision for the DM. Depending on the DM's style and the parameters of his campaign, he could select a small group of spells and assign them to a minor school. For instance, a minor school of lesser illusions could include all illusions of 1st-level through 3rd-level. A minor school of lesser abjuration/necromancy could include all abjuration and necromancy spells of 1st level.

To add color to the campaign rule, the DM might want to create a historical explanation for the existence of any new minor schools. It's possible, for instance, that the minor school of lesser illusions was created by the administration of an academy of magic to accommodate students who lacked the aptitude to become full-fledged

illusionists. The minor school of abjuration/necromancy might have been developed by an ancient clan of good-aligned wizards to help protect them from attacks by a rival band of abjurers allied with a force of undead.

All wizards, regardless of their specialty, should have access to the spells of any minor school. If he wishes, the DM may assign bonuses and penalties to the various specialists' chances of learning the spells of a related minor school. Some possibilities follow.

- A specialist has a 15 percent (or 30 percent) bonus, a non-specialist has a 15 percent (or 30 percent) penalty.
- A specialist has a 30 percent bonus, a non-specialist has a 30 percent penalty.
- Both the specialist and the non-specialist have 15 percent (or 30 percent) bonuses.

Careful judgement should always be exercised when adding new minor schools. Remember that the more access characters have to magic, the more powerful they become. And the more powerful the characters are, the harder it is for the DM to maintain play balance. In general, the following two guidelines should apply:

- A minor school should include only a handful of low-level spells, none of them higher than 4th-level. Four or five 1st-level spells, two or three 2nd-level spells, one or two 3rd-level spells, and one or two 4th-level spells are sufficient.
- A campaign should include no more than two minor schools. (Note than in almost every campaign, one of the two minor schools will be lesser divination.)

# Chapter 2: Creating New Schools

The *Player's Handbook* lists eight different greater schools of magic, but more are possible. Additional schools can expand a player's options, add color to the campaign, and allow the DM to put his own mark on the game. Designing new magic schools is one of the DM's toughest jobs, but it can also be one of the most rewarding.

This chapter presents a step-by-step procedure for creating schools of magic from scratch. We'll demonstrate the process by creating a brand new school right before your eyes the school of metamorphics.

At the end of this book is a blank planning sheet. This may be copied to help you design your own new schools

## The Basics of Creating Schools

Before creating a school, following are a few general guidelines to keep in mind.

*New schools should be unique.* A new magic school should not overlap any of the existing schools. Since the eight major schools cover a lot of ground and there are already hundreds of spells in the AD&D® game, this is not as easy as it sounds. Not only should the DM avoid new magic schools whose spells duplicate the effects of existing spells, he should also avoid trespassing on the priest's territory. For instance, a school of magic focusing on healing spells isn't a good idea, since it conflicts with one of the priest's special areas.

*A new school shouldn't be too powerful.* The existence of a school whose spells can destroy dragons, level cities, and render the caster invulnerable makes it extremely difficult for the DM to maintain play balance. It's next to impossible for the DM to invent

suitable challenges for wizards wielding that much power, ultimately making the game boring for all. The school of necromancy is about as powerful as any school should be.

*A new school shouldn't be too weak.* On the other hand, players won't be interested in a school that doesn't offer them a measure of power comparable to what's available in the existing schools. The school of greater divination is about as weak as any school should be.

*A new school must be described precisely.* Magical effects are difficult enough to adjudicate when their definitions are detailed and specific. When they're indefinite and ambiguous, it's nearly impossible to make consistent rulings and avoid frustrating players

## Type of Magic

The first step in designing a new school is to decide what type of magical energy will be wielded by the specialist and how that energy will manifest itself. The type of magic must be general enough to encompass a variety of spells and effects, but it also must be specific enough to differentiate it from existing schools.

Before examining the specifics, consider the differences between the magic of wizards and the magic of priests. Though some duplication exists-- both have access to necromantic and summoning spells, for instance-- the way they acquire spells is strikingly different

### Priests vs. Wizards

Priests are granted the use of spells by deities of specific mythoi. Each deity has authority over particular groups of concepts, forces, and things, and these groups are called spheres. A priest's allegiance to his deity gives him access to certain spheres of magic that reflect the deity's special interests. Consequently, the magic of each sphere tends to be quite specific; spells from the sun sphere, for instance, deal primarily with light and darkness, while spells from the healing sphere deal primarily with curing.

Unlike the priest, a wizard isn't bound to a particular deity, and therefore does not depend on a deity for his magical abilities. A wizard learns and masters his spells in much the same way that a professor learns and masters a particular science. This is why the wizard class is a function of Intelligence. Wizardly schools focus on general categories of magical energy and effects and encompass a wide variety of spells.

To preserve the integrity of these differences between wizard magic and priest magic, any new wizard school should avoid focusing on magical effects stemming from one particular condition or thing. Instead, the school should be concerned with the manipulation of general energies and forces

### Categories of Effects

Confused? Consider the following.

Just as electrical energy or mechanical energy can be harnessed to accomplish specific tasks, it is also possible to channel magical energy to accomplish specific results. But while electrical and mechanical energies are limited by physics and other natural sciences, magical energy knows no such mundane boundaries. Magical energies can be

channeled to produce any of the following list of effects.

**Transformation:** When this type of effect is produced, an object or condition is changed to give it different physical properties or new special abilities.

**Creation:** When this type of effect is produced, an object or condition is created that did not previously exist.

**Requisitioning:** When this type of effect is produced, an existing object or condition is summoned from a different location.

**Paranaturalism:** This type of effect involves the manipulation of forces and phenomena that exist beyond the confines of the material world and the laws governing it. (This can also be considered a catch-all category that includes effects not covered in other categories.)

All of the existing schools of magic can be assigned to these categories.

The schools of alteration, enchantment/charm, and abjuration all involve Transformation.

The schools of illusion and invocation/evocation involve Creation.

Conjuration/summoning involves Requisitioning.

Divination and necromancy involve Paranaturalism.

Although some overlapping occurs (for instance, magical energies that Requisition existing objects may Transform them as well), all magic schools channel magical energies to produce the effects defined in these four categories.

What differentiates one school from another is the type of effects produced. For example, both illusion and invocation/evocation channel magical energy for Creation. However, illusions create unreal objects and conditions; invocations create objects and conditions that cause direct physical effects

## Defining the Effects of a New School

To begin the design of a new school, the DM must first define the type of effects it produces. Any definition is likely to be vague. But at this stage, it should be. Unlike the intentionally specific priestly sphere, a wizardly school must be general enough to accommodate a large variety of spells.

Use the steps that follow.

1. Choose one type of channelled magical energy from the four categories described above: Transformation, Creation, Requisitioning, or Paranaturalism. If you know what type of school you plan to design, the choice of category probably will be obvious. If you do not yet have any ideas about your school, pick any of the categories-- it's a good place to start. (If your choice of categories seems less appropriate as your school develops, you can always pick another.)

2. Define what specific type of effects these channelled energies will produce. If it is a Transformation school, what types of things or conditions will be transformed? If it is a Paranaturalism school, what type of paranatural energies or forces will be involved.

3. Ensure that the definition of the new school does not resemble the definitions of existing schools too closely. Compare them with the school descriptions in Chapter 1.

## How It All Works

To illustrate this procedure, a new school is created here. First, one of the categories of channelled energy is chosen. The school will involve changing one type of item into another, so the choice is the Transformation category.

Next, we define the type of Transformation effects the school will produce. This definition needs to be as clear as possible; writing down the definition in a sentence or two will put it on the right track. Our school will feature spells that cause an object or condition to change into a different but related object or condition. That description is vague, but good enough to get started.

Is this school sufficiently different from existing schools? Our school sounds very similar to the school of alteration, so it needs some adjustments. Since many of the alteration spells imbue a creature with special abilities, such as *water breathing* and *fly*, we can decide that the spells from our school will deal with physical transformations only. Further, all of our physical transformations will be permanent (subject to the usual limitations, such as cancellation by *dispel magic*).

Throughout the remainder of this chapter, we'll continue to develop this school as a demonstration

## Name of the School

Once you have an idea for a school, it needs a name. If an obvious name doesn't suggest itself, as it did for the school of illusion, check a thesaurus for synonymous words or evocative phrases. Fantasy literature is another good source for names.

Since our new school deals with change, we checked the thesaurus for synonyms and found *metamorphosis*, a word that is descriptive, has a nice scholarly ring to it, and even sounds a little mystical. We'll christen it the school of *metamorphics*.

## Name of the Specialist

Specialists usually derive their names from the names of their schools by changing the suffix. Thus, from *abjuration* comes the *abjurer*, and from *illusion* comes the *illusionist*. Most of the time, this technique is satisfactory.

However, some schools simply do not lend themselves to wizardly-sounding names. For instance, the word *alterer* is clumsy, so the school of alteration has opted for the less awkward *transmuter* for the name of their specialist. We have a similar problem with our school of metamorphics-- both *metamorphist* and *metamorpher* are clumsy. Returning to the thesaurus, we find the word *transfigure*. We can call our specialist a *transfigurist*.

## Spells

The most important part of creating a new school is designing new spells that are different enough to set it apart from existing schools. There must be enough new spells to provide the user a reasonable variety of options. At the same time, duplication of existing spells should be avoided. Minor variations of existing spells should also be avoided. The spell selection should be attractive enough so that novice wizards will consider specializing in it, but not so powerful that the school overwhelms all others

## Basic Spells

A new school does not need an extensive number of spells immediately. Beginning with a core of basic spells is best, adding new spells as required by the campaign and the players.

An acceptable core of basic spells includes the number of spells for each level given in Table 1. Note that this is approximately the number of spells for the schools of greater divination and necromancy given in the *Player's Handbook*. If the DM is unable to invent this number of spells, he should concentrate on designing spells to fill the lower levels (levels 1-3) so his lower-level specialists can begin their careers

### Table 1: Minimum Spells for A New School

| Level | No. of Spells |
|---|---|
| 1st | 3 |
| 2nd | 3 |
| 3rd | 2 |
| 4th | 2 |
| 5th | 2 |
| 6th | 2 |
| 7th | 1 |
| 8th | 1 |
| 9th | 1 |

## Adapting Existing Spells

Before attempting to design new spells, first look at the existing spells for other schools. Notice that a number of spells listed in the *Player's Handbook* belong to more than one school; *rainbow pattern*, for instance, belongs to the schools of alteration and illusion, while *limited wish* belongs to conjuration/summoning and invocation/evocation. Do any of the *PH* spells (or any of the new spells listed in Chapter 8 of this book) seem appropriate for your new school? The alteration spells *transmute rock to mud* and *transmute water to dust* are perfect for our school of metamorphics-- they both cause one substance to change to another, they both cause physical changes, and in both cases the effects are permanent.

There are other likely candidates from the *PH* spells for our school, but using an excessive number of duplicate spells (more than two or three) compromises the individuality of a new school.

## Ideas for New Spells

The DM and players will need to brainstorm for ideas that will eventually be developed to fill in the basic spell list. Although the DM makes the final decisions when designing spells for a new school, the contributions and ideas of the players are important. Fantasy literature is another good source of ideas, as are the abilities of

magical monsters and functions of magical devices. The DM and his players might also discuss encounters or battles from previous adventures and decide what types of spells would have been useful for the wizards.

The DM (with the assistance of the players) should then assign a spell name to each idea and decide the general effects of the potential spells. The names of the spells should be brief and descriptive. The effects can be approximate at this point-- they'll be refined later. We do not have the space here to develop a full range of spells for our metamorphics school, but here are three potential spells we'll use as examples:

*Evaporate:* This spell changes liquids into gases.

*Blood to dust:* This spell changes an opponent's blood to dust, instantly killing him.

*Improved armor:* This spell changes a companion's armor to a better Armor Class

## Checking for Duplication

Each potential spell should be checked against the spells in the *Player's Handbook* to see if it already exists. Considering that the *PH* lists hundreds of spells, re-inventing an existing spell is easy. A DM need not be obsessive about this; a large number of existing spells inflict damage or add bonuses and penalties to saving throws. As long as the new spell has a unique twist of its own, it can be deemed acceptable.

Of our examples, we notice that *blood to dust* is superficially similar to the 7th-level *finger of death* spell, since they both instantly take a victim's life. But the methods of achieving this effect are distinctly different; *blood to dust* changes the victim's blood to an inert substance, while *finger of death* snuffs out the victim's life force. Further, *blood to dust* is only effective on victims with blood in their veins. *Blood to dust* is different enough to stand on its own.

## Checking for Play Balance

After checking them against existing spells, all potential spells of a new school must be considered for play balance. Imagine that the wizard employs a particular spell every day-- will constant use have any significant long-term effects on the balance of the game?

Consider our potential metamorphic spells. *Evaporate* won't have any profound effects on the game, assuming it has reasonable limitations (for instance, evaporating an entire ocean should be prohibited). At best, *blood to dust* means one less opponent per day.

But *improved armor* presents a problem. Since our metamorphic spells are permanent, wouldn't a transfigurist immediately improve all of his party's armor as much as he could? Is this fair? We can't make the effects temporary, or we're violating the definition of our school. Let's throw out *improved armor* and invent another spell later.

## Determining Effects and Levels

Once the inappropriate spells have been discarded, we need to define and describe the specific effects of the remaining spells, then assign them to levels. The description of a spell should cover its typical uses, but it is unnecessary-- and realistically, impossible-- to deal with every possible application. More importantly, the description should cover the spell's limitations in detail; not only do precise limitations make spells easier to

adjudicate, they are easier to assign to levels.

Here are some points to consider when assigning limitations to spells:

*How many subjects can be affected by the spell?* Generally, the more subjects affected, the higher the level of the spell (compare *invisibility* to *mass invisibility*, and *charm person* to *mass charm*).

*What type of subjects can be affected by the spell?* Subjects can be low-level or high-level (or low HD and high HD). They can also have specific characteristics (such as the subjects of *detect invisibility*), or they can be general types with no specific characteristics (such as the subjects of *charm monster*). Usually, higher-level spells are able to affect high-level (or high HD) subjects that have no specific characteristics--*finger of death* is a good example.

*Are victims allowed a saving throw to avoid the effects of the spell?* Disallowing a saving throw for a spell that would normally have one usually boosts it to a higher level. For instance, the 5th-level *cone of cold* allows a saving throw to reduce a victim's damage by half. If such a throw were not allowed, the spell would be significantly more dangerous and would belong in a higher level.

*If the spell causes damage, what is the maximum?* It would be grossly inappropriate for any 1st-level spell to inflict 100 hit points of damage. Similarly, a 9th-level spell should be capable of inflicting a significant amount of damage. Table 2 suggests the maximum amount of damage a spell of a particular level should be allowed to inflict on a single enemy. These figures are general guidelines only, and can be altered by any number of variables. For instance, if a hypothetical 3rd-level *flying sword* spell has only a 10 percent chance of hitting its target, its maximum amount of damage could be justifiably higher than 3-18 hit points.

Remember that the inflicted damage of certain spells may vary according to the caster's level; for instance, fireball causes 1d6 hit points of damage per level of the caster. (Table 2 gives the damage for a spell cast at its base level; if our hypothetical *flying sword* spell is 3rd-level, but can be cast at higher levels to inflict more damage, Table 2 indicates the maximum amount of damage it can cause when cast at its lowest level. )

**Table 2: Suggested Maximum Damage of Spells by Level**

| Level | Maximum Damage of Spell (in hp) |
|---|---|
| 1st | 2-5 (1d4 +1) |
| 2nd | 2-8 (2d4) |
| 3rd | 3-18 (3d6) |
| 4th | 8-20 (4d4 +4) |
| 5th | 10-25 (5d4 +5) |
| 6th | 6-36 (6d6) |
| 7th | 10-60 (10d6) * |
| 8th-9th | 10-80 (10d8) * |

* Spells of 7th-level through 9th- level are differentiated by the number of subjects destroyed and special restrictions on death. For instance, a 7th-level spell might destroy

only a single subject, while a 9th-level spell could destroy several. A 7th-level spell might allow a saving throw, while a 9th-level spell might not. A 7th-level spell might allow *resurrection* attempts, a 9th-level spell might not.

*If the spell causes damage, do victims get a saving throw?* Of the spells in the *Player's Handbook*, many of them allow the victim to make a saving throw in order to reduce or eliminate the potential damage. Though it is unnecessary to allow saving throws in every case, this is a good way to add balance to what otherwise might be an especially dangerous spell. There are three options to consider.

**1. No saving throw.** This option maximizes a spell's lethality.

**2. Half damage.** This option means that the character suffers half-damage if his saving throw is successful. This is less lethal than a spell with no saving throw, but more lethal than the following option.

**3. Negate.** This option means that the character suffers no damage if his saving throw is successful. This is the least lethal option of all.

Note that saving throws need not always be saving throws vs. spells; consider different types of saving throws for spells of higher levels (in every case, however, only one type of saving throw should be allowed). A saving throw vs. spells is always an option, no matter what the level of spell, but here are some alternatives:

- For spells of 3rd-level and 4th-level, use save vs. rods.
- For spells of 5th-level and 6th-level, use save vs. paralyzation.
- For spells of 7th-level, 8th-level, and 9th-level, use save vs. death.

*If the spell is defensive, does it inhibit the enemy's ability to attack, or does it offer direct protection from damage?* Generally, spells that defend against a specific type of damage (such as *protection from normal missiles*) are less powerful than spells that protect against a general category of damage (such as *minor globe of invulnerability*), and spells that protect the caster or subjects of the caster's choice (such as *protection from evil*) are less powerful than spells that inhibit the enemy's ability to attack (such as *wall of fog*). The highest-level defensive spells tend to be those that get rid of the attacker (such as *dismissal* and *imprisonment*.)

If a DM has designed a defensive spell that he wants to modify so he can assign it to a higher level, he can do one or more of the following:

- Increase the types of damage against which it protects. (To assign the spell to a lower level, decrease the types of damage.)
- Increase the number of subjects the spell protects, usually by increasing the area of effect. (For a lower level, decrease the area of effect, or have the spell provide protection for only the caster.)
- Increase the number of opponents whose attack abilities are reduced. Again, this is usually accomplished by increasing the area of effect. (For a lower level, decrease the area of effect.)
- Increase the power of the spell so it eliminates the attacker altogether.

*Does the spell increase or decrease a subject's saving throw modifier?* Penalties and bonuses to the subject's saving throw alter the effectiveness of a spell. Consider again our hypothetical 3rd-level *flying sword* spell. Assume that it inflicts 1-10 hit points of damage

on subjects when used at night, and that a saving throw negates the damage. If the subject is allowed a +2 bonus, it might be more appropriate to assign *flying sword* to 2nd-level. Conversely, if no saving throw is allowed at all, the spell might belong at 4th-level.

*Is the effect of the spell permanent?* Spells whose effects are temporary are less powerful than those whose effects are permanent. (Remember that few spells are literally permanent, since *dispel magic* negates their effects in most cases. A *limited wish* or *wish* can negate almost any spell. )

*What are the spell's duration, range, and area of effect?* Longer durations, ranges, and areas of effect translate into more powerful spells. Adjusting these elements is a good way to modify a spell to assign it to a higher or lower level. For instance, if *flying sword* persists for only one round/level and has a range of 30 yards, it belongs in a lower level than if it persisted for one turn/level and had a range of 100 yards.

There are no minimum or maximum requirements for durations, ranges, or areas of effect, as long as the DM stays within the bounds of reason. For instance, a range of 1 mile/level sounds ridiculously high for *any* 1st-level spell. A good place to start for establishing durations, ranges, and areas of effect is 1 round/level (duration), 10 yards/level (range), and a 10-foot cube or one creature/level (area of effect). Remember that these are general guidelines only, and are not appropriate for every type of spell. Many spells have an effective range of 0, meaning they affect only the caster. Others affect only a touched subject. Those spells whose effects are permanent until negated have no set duration. For some spells, such as *extension*, area of effect is irrelevant.

When the DM has finished defining the effects of a new spell and has assigned it to a level, the spell should be compared to the existing spells of that level. If the new spell is clearly weaker or excessively more powerful than spells from the same level, the DM should either assign it to a different level or make adjustments as suggested above to make it comparable. In general, the illusion and divination spells are the least powerful, and the necromancy and invocation spells are the most powerful; a new spell should be checked against these first.

Let's return to our two new spells for the school of metamorphics. *Evaporation* causes a quantity of water or other inorganic liquid to instantly turn to vapor, just as if the sun had evaporated it. It will not inflict any direct damage (evaporating the blood or other organic liquids of a creature is forbidden). *Evaporation* is difficult to perceive as providing meaningful defense for a party. Evaporation is destined to be a low-level spell, probably 1st-level.

Range? Most 1st-level spells have a range of 30-60 yards; since evaporation is relatively weak, we will give it a higher range of 60 yards.

Area of effect? Most 1st-level spells affect an area of 10-30 yards (or 10-30 foot-radius, or 10-30 foot cube). In this case, we will give *evaporation* an area of effect of a 20-foot cube + 10-foot cube/level. (This makes the spell more powerful as the wizard increases in level.)

Checking our 1st-level evaporation spell against the existing 1st-level spells in the *PH* shows no major discrepancies. The definition of evaporation still needs more tightening.

We need to determine whether it affects liquids concealed in containers, rain, quicksand, and lava, and other limitations it has.

Looking at *blood to dust*, it belongs in a higher level because it causes death. We will decide that blood to dust causes all of the blood of a single victim to turn to dust, instantly killing it. It is certainly not as powerful as a 9th-level spell (the 9th-level *power word, kill* can destroy several creatures at once); let's place it at 7th level and give it a range of 60 yards (comparable to other 7th-level spells). Checking the existing 7th-level spells, we discover *finger of death*, a spell not unlike *blood to dust*. *Finger of death* is more powerful, since it can destroy any creature, even those without blood, but it also allows a saving throw. To balance *blood to dust* against other 7th-level spells, let's say that victims of *blood to dust* are not allowed saving throws. Further, undead, monsters from other planes, and monsters with more than 4 HD will be immune to *blood to dust*. With further adjustments (Can the affected subject be resurrected or raised? Can the corpse be animated to become a zombie?), we'll have a powerful but balanced 7th-level spell for the school of metamorphics

## Casting Times

All spells must state their casting times. A guideline is to make the casting time equal to the level of the spell (a 7th-level spell has a casting time of 7), but casting times of one or more rounds are also common. Complex spells might have casting times of one or more turns. Avoid short casting times for high-level spells and excessively long casting times for all but the most powerful spells.

We'll give our 1st-level evaporation spell a casting time of 1 and our 7th-level *blood to dust* a casting time of 1 round

## Components

Every spell has one or more components. There are two ways to determine the components for a new spell:

1. Locate existing spells from the *Player's Handbook* that are similar to the new spell and assign similar components. For instance, *finger of death* is similar to our new *blood to dust* spell, so we'll decide that *blood to dust* has verbal and somatic components.
2. Assign the components randomly. If this sounds too arbitrary, consider that the components of a particular spell were likely determined by the wizard who originally researched it. A common assumption is that two wizards working independently could discover the same spell; it is unlikely that they used exactly the same components. For our *evaporation* spell, we'll use verbal, somatic, and material components, the most common combination.

Instead of choosing a specific set of components for a new spell, you can determine them randomly by rolling 1d20 on Table 3. If you get a result that contradicts the conditions under which the spell is cast, roll again

**Table 3:**
**Random Determination of Spell Components**

| d20 Roll | Components |
|---|---|
| 1-14 | V, S, M |
| 15-17 | V, S |
| 18-19 | V, M |
| 20 | V |

3. Consider the level of the spell and assign components accordingly. Requiring all three components makes a spell harder to cast. Reducing a spell's components to make it easier to cast might be a reason to create a higher level version of a low level spell.

4. Still can't decide? When in doubt, require all three components; most existing spells use all of them.

As for the precise nature of these components, be guided by common sense and imagination. Material components should relate to the effect of the spell. Check existing spells for component ideas and comparisons. We'll decide our *evaporation* spell's material component will be a drop of water

## Allowed Races

Not all races can become specialists of all schools. Usually, these limitations are due to a particular race's body chemistry, mental or emotional predisposition, magical resistance, or cultural restrictions. The history of the DM's campaign world might also suggest limitations.

If the DM imposes racial restrictions on a new school, he should present justification for them. For instance, gnomes are restricted from specializing in our school of metamorphics. The reason? A thousand years ago in our campaign world, a brotherhood of transfigurist gnomes accidently developed a metamorphics spell that permanently transformed a city of gnomes into a field weeds. The gods were so upset by this carelessness that the transfigurist specialty has been forbidden to gnomes ever since.

## Ability Requirements

All characters must have an Intelligence score of at least 9 to become a wizard. A new school might require a higher Intelligence score for specialization, but only in the rarest circumstances should it be higher than 13.

All specializations require a minimum score in a secondary ability. This minimum score should be at least 12, but no higher than 16. Wisdom, Constitution, and Dexterity are the most common secondary ability requirements, but Charisma and Strength are also possible. Remember that setting the ability requirements high will keep the number of specialists low, and vice versa.

Because some of the somatic components for metamorphic spells require precise execution, we will set a minimum Dexterity score of 15 for specialists in the school of metamorphics

## Clothing

Though none of the schools described in Chapter 1 have any specific dress requirements, a new school might require (or strongly suggest) that its specialists wear distinctive garb to indicate their status.

Not all specialists of a school would necessarily adhere to this dress code. Perhaps only graduates of a particular academy would wear distinctive garb. Perhaps only 1st-level specialists would wear it. Perhaps it is worn only by high level specialists as a symbol of achievement. All such distinctions are the decision of the DM. Caution is advised-- obvious identifying garb can be a red flag to enemies who wish to wipe out the members of a particular school.

Dress requirements are not restricted to items of clothing. Rings, pendants, anklets, and bracelets are all possibilities. Likewise, certain colors might symbolize graduates of a school, while other colors might be forbidden.

For our metamorphics school, we will require that 1st-level transfigurists wear a red arm band to identify them as beginners. When a transfigurist reaches 10th level, he is allowed-- but not required-- to wear a red cloak to symbolize his competence

### Table 4: Magic Schools and Types of Effects

| School | Type of Effect |
|---|---|
| Alteration | Transformation |
| Enchantment/Charm | Transformation |
| Abjuration | Transformation |
| Illusion | Creation |
| Invocation/Evocation | Creation |
| Conjuration/Summoning | Requisitioning |
| Divination | Paranaturalism |
| Necromany | Paranaturalism |

## Experience Levels and Spell Progression

All existing schools use the experience level progression and spell progression given on Tables 20 and 21 on page 30 of the *Player's Handbook*. New schools should use these, too. It is possible to devise new tables from scratch, but this creates considerable work for the DM, adding unnecessary complications and an increased chance of an unbalanced campaign. In any case, specialists should not be allowed to progress more quickly than the *Player's Handbook* tables allow

## Hit Points

All existing schools use 4-sided dice to determine their specialists' hit points. The power wielded by a specialist, especially in the higher levels, more than compensates for his relatively low number of hit points. If the specialist is too weak, consider creating more spells, adjusting the current spells to make them stronger, or giving him access to spells from more schools

## Languages

All specialists use Table 4 on page 16 of the *Player's Handbook* to determine the number of languages they can learn (in addition to their native tongue). Certain types of specialists may be able to exceed these limits. Eligible specialists might include those with exceptionally strong academic backgrounds or those who devote a large amount of their spare time studying new tongues.

The types of effects created by a particular wizard might also suggest an extraordinary aptitude for languages; for example, wizards specializing in Transformation magic might not seem to have any particular affinity for languages, but those specializing in Creation might (since they're involved in producing conditions that didn't previously exist, which could include communication skills).

If a new specialist is to have exceptional language skills, keep the following guidelines in mind.

- A new specialist should not be able to acquire more than one language over the limits given in the *Player's Handbook*. For instance, a specialist with an Intelligence of 9 should not be able to learn more than three languages.
- The DM should consider limiting extra languages to high-level specialists; level 15 or higher is suggested, but the DM has the final decision. (In other words, our specialist with an Intelligence of 9 cannot learn his third language until he reaches level 15.)
- Learning the extra language should never be automatic. The DM should oblige the specialist to locate a suitable tutor, devote several hours a day to studying difficult texts, or invent some other requirement that emphasizes role-playing. For the transfigurist, nothing about his specialty suggests an exceptional aptitude for languages, so he'll be restricted to the language limits given in the *Player's Handbook*.

## Oppositional Schools

Each school lies in opposition to one to three of the existing schools of magic. The specialist of the new school will be unable to learn spells from the schools that lie in opposition to his school.

The first step in determining oppositional schools is to decide which existing school most closely resembles the new school. In some cases, this is obvious; for instance, our new school of metamorphics is most like the school of alteration. For less obvious cases, you can eliminate most of the possibilities by recalling which type of magic your new school is derived from (see the Types of Magic section above). A new school will most closely resemble an existing school derived from the same type of magic (see Table 4); for instance, if your new school produces Creation effects, it most closely resembles either the school of illusion or invocation/evocation. Once the choices have been narrowed to two or three schools, it should be easy to pick the school most like your new school. If necessary, try comparing your new spells to the existing spells in the *Player's Handbook* .

When you've decided which existing school most closely resembles your new school, consult the opposition diagram (Diagram 1). The school that lies directly opposite this school is the oppositional school. The school of metamorphics most closely resembles the school of alteration. The school directly across from alteration on Diagram 1 is abjuration. Therefore, abjuration is the school that is in opposition to metamorphics.

One to three oppositional schools may be assigned to a new school. If the new school is relatively weak (the weak school of greater divination has only a single oppositional school), only one opposition school may be needed. If your new school is relatively powerful, it is appropriate to assign it as many as three oppositional schools.

Look again at Diagram 1. The schools on either side of the oppositional school are also options for oppositional schools. For instance, additional oppositional schools for illusion are invocation/evocation and abjuration. If it's appropriate for your school to have three oppositional schools, choose these three.

Most likely, your new school will be neither extremely weak nor extremely powerful. In this case, consider giving it two oppositional schools. One should be the initial oppositional school, and the other can be either of the adjacent schools. To decide between the adjacent schools, choose randomly or choose the one that seems less compatible with your new school.

We must choose the oppositional schools for our new school of metamorphics. Since it is neither exceptionally weak or powerful, we will assign it two oppositional schools.

We decided previously that the school of metamorphics most closely resembles the school of alteration. According to Diagram 1, the oppositional school of alteration is abjuration; therefore, the oppositional school of metamorphics is also abjuration.

According to Diagram 1, the adjacent oppositional schools for abjuration-- and likewise, for metamorphics-- are conjuration/summoning and necromancy. We need to choose one of them for our other oppositional school. Either conjuration/summoning or necromancy would be appropriate, but since the school of alteration already has abjuration and necromancy for its oppositional schools, we will choose the other combination. Therefore, the opposition schools for metamorphics are abjuration and conjuration/summoning.

Admittedly, the choice of the second and third oppositional schools is somewhat arbitrary, but remember that we not only strive for balance, but also for schools with unique advantages and restrictions. The DM always has the option to invent a rationale for the existence of specific oppositional schools. For instance, the energies employed by conjuration/summoning and abjuration magic might induce agonizing headaches in a transfigurist, making it impossible for him to learn spells from those schools

## Ethos

The final step in designing a new school is creating a unique ethos. This step is optional, but it adds color to the school and makes it more interesting for the players.

An ethos also serves as a springboard for determining the personality of specialist characters. An ethos can be anything from a simple outline to a detailed profile. Following are some questions to consider when designing an ethos for a new school.

*Do the specialists of the school adhere to any particular philosophy? Do they share any particular goals?* Such philosophies and goals are often derived from the nature of

the magic studied by the specialist. For instance, specialists from the school of metamorphics study spells dealing with change. Continual exposure to the transience of all things might lead transfigurists to be skeptical about the existence of absolutes--a transfigurist, then, might believe that concepts such as "right" and "wrong" are relative to specific situations.

*Are evil-aligned characters more drawn to this school than good-aligned characters (or vice versa)?* In most cases, wizards of all alignments can be specialists in any school, but a new school might discourage certain alignments and encourage others. Likewise, certain magical academies might accept students of specific alignments only.

If a school does not promote harm to any living creature, or promotes healing, safety, comfort, or compassion, then it probably excludes evil alignments. If it promotes cruelty or self-interest, the school probably excludes good alignments. If a school promotes no particular philosophy, it probably includes specialists of all alignments.

If a school advocates logical thinking and adherence to strict behavioral norms, and discourages excessive self-expression, it probably leans toward lawful alignments. If it encourages creative thinking, freedom of expression, and spontaneous actions, it leans toward chaotic alignments (this is particularly true if it also encourages defiance of written laws to achieve individual goals). If the school takes no particular position on the specialist's relationship with his culture and society, it probably includes lawful, neutral, and chaotic specialists. (The school of metamorphics takes no particular positions on these issues, therefore it is open to specialists of all alignments. Note that this attitude about alignments is also consistent with the school's general philosophy of skepticism about absolutes described above.)

*Are any particular personality types drawn to the study of this school? Do they tend to share any common eccentricities? Common likes or dislikes? Would anything about your new school tend to discourage certain types of people or attract others?* The school of metamorphics attracts students with a natural interest in the world around them. Since its spells change one thing into another, most students will be interested in how things work and how things are put together-- in short, metamorphics students are analytical, curious, and creative.

*What's the relationship of the specialist to other members of his party?* Usually, the type of spells available to a specialist will suggest his role in the campaign. If the specialist has a lot of offensive spells, he will likely be on the front lines when the party goes to battle. A specialist with a lot of defensive or reconnaissance spells might be a good spy or investigator. Although we haven't yet devised many spells for our transfigurists, it looks like neither offensive nor defensive spells will predominate. Therefore, it seems likely that a transfigurist will leave the bulk of the fighting to others in his party.

*Do specialists of this school tend to have a lot of friends? Are they likely to have spouses and families?* This depends on the specialist's philosophy, goals, and personality. Unless the specialist is extreme in one of these areas-- for instance, if he is obsessive about the study of magic, or if his field is considered repulsive or frightening (such as the school of necromancy)-- he is likely to have an average number of friends and an average chance at a successful marriage. (Since transfigurists have no extreme traits, we will assume that they have a fair number of friends and are as likely as anyone to marry and raise a family.)

*Where do these specialists prefer to live?* As mentioned previously, certain schools tend to attract certain types of people. If a school's specialists tend to be outgoing and affable, they probably prefer to live in an urban area. If they're brooding and anti-social, or if they're conducting potentially dangerous research, they probably live in an isolated area. Usually, a specific location won't suggest itself-- specialists tend to live just about anywhere. We will make this the case with transfigurists.

*How do the specialists spend most of their time?* Reclusive types will stay close to home, usually lost in research, reading, or writing. Curious types are more inclined to explore the world, eager to meet people and experience new situations. In most cases, there will not be obvious pastimes applicable to all specialists of a school. This will be the case with transfigurists. They spend some of their time doing research at home and a fair amount of time out in the world exploring and socializing.

*How do the specialists typically earn a living?* Common occupations for wizards include teaching, counseling, researching, and advising. However, the spells available to a particular specialist might suggest additional careers. The metamorphics spells do not suggest any particular occupation, so transfigurists probably pursue the common wizard occupations.

# Chapter 3: Wizard Kits

In Chapter 1, we discussed at length the schools of magic described in the *Player's Handbook*. In Chapter 2, we explained how to design new schools. Specialization in a school is an excellent way to individualize a wizard character, but it is not the only way.

In this chapter, we'll show you how to further individualize a wizard character by choosing a wizard kit. A kit is a collection of skills, proficiencies, advantages, and disadvantages used to help define a wizard's personality and background as well as his role in the campaign

## Kits and Character Creation

Wizard kits are entirely optional-- a wizard character can easily get along without one. But a player who wishes to add detail to his wizard should choose a kit when the character is first created. Only one wizard kit can be chosen for a character.

It is possible to incorporate these rules into existing campaigns, providing the players and the DM can agree on which kits are appropriate. A kit must be compatible with a character's past actions, his background, and his established personality traits. For instance, if a diviner has been played as a thoughtful man of reason with a history of preferring negotiation to combat, and the player has made it clear that his character is from a sophisticated urban culture, it doesn't make sense to assign him the Savage Wizard kit.

Once a particular kit has been assigned to a character, it cannot be changed. However, the character can later abandon it if he wishes, giving up all benefits and hindrances. Bonus proficiencies (see below) are not forfeited. Instead, such proficiencies are no longer considered to be bonuses. The former bonus proficiencies are set aside until the character acquires new proficiency slots; at that time, the new proficiency slots are filled by the former bonus proficiencies.

When designing a new character, first determine the character's ability scores, race, specialization, and alignment.

Once these elements have been decided, choose a kit for the new character. After choosing the kit and recording the information on the character sheet, continue with the character's proficiencies, money and equipment, and other pertinent information.

## Kits and Schools of Magic

Kits are culturally-based. Generally, any kit can be assigned to a specialist from any school. An Amazon-- one of several kits described below-- might be a necromancer or an illusionist, while a Mystic-- another type of kit-- could be a diviner or an abjurer.

However, there are occasional exceptions. Diviners, for instance, require a high Wisdom score, but the Savage Wizard-- a kit associated with the more primitive parts of the world-- usually lacks the necessary intuition and insight to specialize in the school of greater divination. Likewise, there are also some schools that favor certain kits.

All excluded schools and preferred schools are noted in each kit description. But these are only suggestions-- a Savage Wizard diviner is perfectly acceptable if the DM rules that such a character is allowable in his campaign.

Unless the DM determines otherwise, all kits are available to mages

## DM™ Choices

Before allowing players to choose kits for their characters, the DM should look at each kit and consider several factors.

*Is this kit appropriate to the campaign?* Not all kits make sense for every campaign. If it is established that Amazons do not exist in the DM's campaign world, he should not allow players to choose the Amazon kit. The DM should tell the players which kits he will allow and which are forbidden before they create their characters.

*Do the players need more information about a kit?* The DM might want to furnish the players with additional background information about a particular kit. For instance, he might tell them that in his world, the Savage Wizards all live on the jungle peninsula of Blackroot and have had little-- if any-- contact with other civilizations.

*Are there any changes in the kit?* The DM is free to make changes in the proficiencies, hindrances, and any other components of the kits to make them compatible with his campaign world. The players should be informed of any such changes before they choose kits for their characters.

## The Wizard Kits

Each wizard kit consists of a variety of elements.

**Description:** This section explains the cultural background, appearance, and manner of characters associated with this kit. It also lists any requirements necessary for characters taking the kit; for instance, characters taking the Amazon Sorceress kit must be female. Suggestions are also given for how a character might abandon the kit.

**Preferred Schools:** This lists which specialists are most appropriate to the kit. As explained in the *Kits and Schools of Magic* section above, there are many exceptions, and

these should be considered suggestions only.

Chapter 1 outlined an ethos for each school, suggesting philosophies, attitudes, and personality traits for each specialist. When designing a character, the player should compare the personality traits and attitudes of the character's school with those of his kit. If a conflict arises, the player can choose whichever traits and attitudes he prefers, or whichever seem to make the most sense for his character. For instance, according to the abjurer's ethos in Chapter 1, an abjurer tends to be gentle and soft-spoken. However, a player who chooses the Amazon Sorceress kit may decide that his Amazon Sorceress abjurer is out-going and boisterous, as is appropriate to the Amazonian culture of his campaign world. With the DM's permission, an out-going, boisterous Amazon Sorceress abjurer is perfectly acceptable.

In general, a character's cultural background will have more influence on his personality than his school. Therefore, if a player cannot decide between the personality traits associated with his school's ethos and the traits associated with his character's kit, he should give more emphasis to the kit traits.

**Barred Schools:** This entry explains which schools are inappropriate for the kit. Though the DM is free to make exceptions, it is usually not a good idea to assign a kit to a specialist from a barred school.

**Role:** This section describes the role of a particular wizard in his society and in his campaign. For instance, an Amazon Sorceress has a different cultural role than a Witch, even if both are enchanters.

**Secondary Skills:** If you're using the Secondary Skills rules from the AD&D® 2nd Edition game rules, then a kit may require a character to take a specific skill instead of choosing or rolling randomly for it. (When choosing kits for characters, we suggest you use the Weapon and Nonweapon Proficiency rules instead of the Secondary Skills rules.)

**Weapon Proficiencies:** If you are using the Weapon Proficiency rules from the AD&D 2nd Edition game, this entry indicates which Weapon Proficiency is required for characters taking this kit. In some cases, a specific Weapon Proficiency is required; in other cases, a Weapon Proficiency can be chosen from among a list of recommended proficiencies.

**Nonweapon Proficiencies:** If you are using the Nonweapon Proficiency rules, this entry indicates whether specific Nonweapon Proficiencies are required for characters taking this kit. However, unlike Weapon Proficiencies, the Nonweapon Proficiencies are bonuses. If a kit requires that the character must have Astrology, then the character gets that proficiency free, above and beyond the slots he is normally granted. Even if such proficiencies belong to groups other than the Wizard or General groups, the character still gets them as bonuses at no charge.

If the kit grants a Nonweapon Proficiency that the wizard already has because of his specialization, the character receives instead one extra free Nonweapon Proficiency slot. He may spend this free slot on any specialization of his choice.

Some Nonweapon Proficiencies are recommended, not required. In such cases, the character is not required to take the proficiency if he does not want it. If he takes a recommended proficiency, he spends the normal number of his available proficiency slots.

Table 38 on page 55 of the *Player's Handbook* lists Nonweapon Proficiency crossovers for various groups. The crossover groups that apply to mages and illusionists

also apply to specialists from all other schools; that is, any specialist selecting a Nonweapon Proficiency from the Wizard or General groups shown on Table 37 (page 54-55 of the *PH*) spends the listed number of proficiency slots. When any specialist selects a proficiency from any other category, he must spend one additional slot beyond the number listed (exceptions are given in the Nonweapon Proficiencies entries for the various kits).

**Equipment:** Some wizard types tend to use specific equipment. Others have limitations or restrictions on the way they acquire or use equipment. This entry details the equipment employed by characters using this kit. (In no case is a wizard allowed to purchase armor.)

**Special Benefits:** Most kits grant special benefits to characters. Often, these benefits are defined as special reaction bonuses when encountering certain classes of society, or as special rights in specific cultures.

**Special Hindrances:** Each kit carries certain disadvantages to hinder the wizard. Often, these are reaction penalties or cultural restrictions.

**Wealth Options:** Some wizard types have special rules regarding their wealth. Usually, these rules specify differences in the amount of money received when the character is created and limitations on how the money can be spent.

**Races:** If a kit is not available to particular races, this will be noted here. Unless the DM makes exceptions for his campaign, humans can choose any of the kits.

### A Note About Reaction Adjustments

Several of the wizard kits receive reaction bonuses and penalties as part of their special benefits and special hindrances. As noted in the *Player's Handbook* (page 18), characters with very high or very low Charisma receive "reaction adjustments. " A character with high Charisma gets a bonus (expressed as a plus, such as +3), while a character with low Charisma gets a penalty (expressed as a minus, such as -3).

When rolling 2d10 for encounter reactions (see page 103 in the *Dungeon Master's Guide*), do not add the bonus or subtract the penalty from the die roll. If the character has a Charisma of 16, thus receiving a +5 reaction adjustment, subtract that number from the die roll-- do not add it. Otherwise, the more Charisma a character has, the worse the reaction of the NPCs

## The Kits

### Academician

**Description:** The Academician is a learned scholar whose love of knowledge is matched only by his preoccupation with research. He is fascinated by magic in all its forms and enjoys nothing more than poring over arcane texts and experimenting with exotic magical devices.

The Academician spends so much time involved in intellectual pursuits that he tends to neglect his physical skills. He is not a particularly good fighter and avoids combat when he can, preferring negotiation and parley to violence. Still, he recognizes the necessity of combat in certain instances, and will fight valiantly when required.

Academicians can be found in virtually any culture, but they are most likely to come from large urban areas that provide ready access to libraries, museums, laboratories, and other resources.

A character must have a minimum Intelligence of 13 and a minimum Wisdom of 11 to become an Academician.

There are no special rules for abandoning this kit. An Academician who becomes disillusioned with the academic life or loses interest in intellectual pursuits can choose to neglect his studies or research, but he is free to resume them at any time.

**Preferred Schools:** The Academician is intrigued by all the schools of magic, but is especially drawn to schools with a wide range of spells, including alteration, illusion, and invocation/evocation.

**Barred Schools:** There are no barred schools for the Academician.

**Role:** In his homeland, the Academician is a respected member of society, valued for his skills as a teacher and advisor as well as for his seemingly endless store of knowledge on a variety of subjects. Most likely, he will fill similar roles in a campaign.

In spite of his somewhat sedentary background, the Academician welcomes the chance to join an adventuring party. For him, it is an unparalleled opportunity to experience new cultures, acquire new devices, and acquire first-hand information about people, places, and creatures he may have only read about.

**Secondary Skills:** Required: Scribe.

**Weapon Proficiencies:** Required (the player may choose from the following): Dagger, Dart, Knife, or Sling.

**Nonweapon Proficiencies:** Bonus Proficiency: Reading/Writing. Recommended: (General) Artistic Ability, Etiquette, Heraldry, Languages (Modern); (Wizard) Ancient History, Astrology, Herbalism, Languages (Ancient), Spellcraft; (Priest) Local History.

**Special Benefits:** The Academician receives both of the following benefits:

1. Academicians maintain an extensive correspondence with scholars throughout the world. Additionally, an Academician's reputation as a man of wisdom often precedes him. When encountering an NPC who is familiar with his reputation, who turns out to be one of his correspondents, who fancies himself an intellectual, or who is an author, researcher, teacher, journalist, or fellow scholar, the Academician receives a +3 reaction bonus.

2. The Academician receives a bonus to all Intelligence Checks and Wisdom Checks. The DM has two options for assigning this bonus. He may simply give the Academician a flat +1 to his Intelligence and Wisdom Checks, or he can consult Table 5, which takes the Academician's age and race into account; as the Academician ages, his bonuses increase. Once a method for assigning these bonuses is chosen, it cannot be changed later.

**Special Hindrances:** Academicians lack the training and instinct to make good hand-to-hand fighters. When attacking with any type of melee weapon, the Academician always has a -1 penalty to hit on his first blow. Subsequent blows-- when the Academician has had an opportunity to size up his opponent and adjust his attacks accordingly-- are made without this penalty. However, if the Academician attacks a different opponent, his first blow against his new victim is also made at -1.

Academicians tend to be know-it-alls, and unhesitatingly offer their opinions even on matters they know little about. Whenever the party needs to make a decision, the

Academician should offer his opinion; for effective role-playing, the player should have his player speak his mind with unshakable confidence. If other player characters disagree, the Academician might lecture them on the error of their ways, welcome the opportunity for a spirited argument, or roll his eyes at his companion's blatant display of ignorance.

**Wealth Options:** The Academician receives the normal (1d4 +1) x 10 gp as starting money.

**Races:** No restrictions

### Table 5: Ability Check Bonuses for Academicians

| Race | Age | Intelligence Check Bonus | Wisdom Check Bonus |
|---|---|---|---|
| Elf | 100-175 | +1 | 0 |
| | 176-233 | +2 | +1 |
| | 234-350 | +3 | +2 |
| | 351+ | +4 | +3 |
| Gnome | 60-100 | +1 | 0 |
| | 101-133 | +2 | +1 |
| | 134-200 | +2 | +2 |
| | 201+ | +3 | +2 |
| Half-Elf | 15-62 | +1 | 0 |
| | 63-83 | +2 | +1 |
| | 84-125 | +2 | +2 |
| | 126+ | +3 | +2 |
| Human | 15-45 | +1 | 0 |
| | 46-60 | +1 | +1 |
| | 61-90 | +2 | +1 |
| | 91+ | +2 | +2 |

## Amazon Sorceress

**Description:** Amazons belong to matriarchal societies that thrive in a world otherwise dominated by males. Women occupy all important positions in Amazon societies-- they are the rulers, artisans, soldiers, and scholars.

Most Amazon societies have existed unchanged for thousands of years, living in relative isolation from the rest of the word, but others have more recent origins. Some were established by disgruntled women who tired of their subservient roles in male-dominated cultures and decided to rule themselves, while others were created by deities sympathetic to the plight of women.

Men are second-class citizens in Amazon cultures, occupying positions of menial servitude to their female superiors. In some societies, men are kept as slaves, treated only marginally better than domestic animals. Still others have eliminated men entirely.

Amazons from totally male-free societies make occasional forays into neighboring communities to fraternize with men. Others perpetuate their civilization by being extremely friendly with male adventurers passing through their territory; when the Amazons tire of their company, the adventurers are sent on their way or killed.

An Amazon society may be as small as a single village or large enough to fill an entire continent. Because they are continually under siege from male-dominated civilizations, Amazons have mastered the art of war. Traditionally, Amazons are superior horse

breeders and riders, excelling with spears, bows, and other weapons that can be wielded from horseback.

A character must be female to be an Amazon. There are no other requirements.

To abandon this kit, the character must renounce her Amazon citizenship, most likely because she has grown to identify more closely with a different culture.

**Preferred Schools:** Amazons with high Constitution tend to be drawn to the schools of conjuration/summoning and invocation/evocation; both are especially useful on the battlefield. Diviners are also common, as they make excellent administrative advisors and counselors.

**Barred Schools:** Amazons shun the dark forces associated with the school of necromancy. Because of its perceived uselessness in combat, they also avoid the school of illusion.

**Role:** Most Amazons are warriors, but the few wizards among them are held in high regard, as is any person who has mastered a difficult art. Amazon Sorceresses typically serve as seers, advisors, counselors, and administrators. Because of their formidable power, Amazon Sorceresses especially invokers and conjurers-- are always welcome on the battlefield.

In male-dominated cultures, the Amazon is regarded as a curiosity at best. She is stared at, whispered about, and sometimes openly ridiculed. Well-meaning women who have accepted subservience as a cultural norm may try to convince the Amazon to change her unnatural ways, while chauvinistic men, seeing her as a threat to their masculinity, may feel compelled to dominate her in any number of ways. Even open-minded citizens will likely be suspicious of a female with such unusual attitudes.

Among her peers in an adventuring party, the Amazon Sorceress will prove to be a courageous fighter and a capable spell caster. Although the other player-characters may harbor some prejudices of their own about the role of females, the DM should discourage any overt discrimination; once she has proven herself in tough situations, the Amazon should be accepted as an equal in all regards.

**Secondary Skills:** Required: Groom.

**Weapon Proficiency:** Required: None. Recommended: Spear or long bow. This is contrary to the weapons usually allowed wizards, but is typical for Amazon cultures.

**Nonweapon Proficiencies:** Bonus Proficiencies: Riding (Land-based), Animal Training. Recommended: (General) Animal Handling; (Warrior) Animal Lore, Armorer, Bowyer/Fletcher, Hunting, Running, Survival, Tracking.

**Equipment:** When an Amazon character is first created, she must buy her weapons from among the following choices only: bow (any type), dagger/dirk, javelin, knife, spear. Once she has adventured elsewhere in the world, she may purchase other types of weapons.

**Special Benefits:** Male opponents who have never encountered the formidable Amazon women tend to underestimate them. Therefore, the first time such a male encounters an Amazon in combat, the Amazon receives a +3 bonus to hit and +3 to damage on her first blow only. These bonuses reflect the fact that the opponent is taken off guard by such an able female.

This bonus is not applicable in every situation. The DM should consider the following guidelines when ruling on the Amazon Sorceress's bonus.

- The bonus does not apply to opponents of 5th level or higher. Such opponents are

too seasoned to be surprised in this manner.

- The bonus does not apply to opponents from cultures where females are accepted as equals and female warriors are common.
- The bonus does not apply to opponents who have fighting females as comrades, who have faced fighting women before, or who have seen the Amazon use her bonus on someone else.
- The bonus does not always apply to player characters. The DM might ask a quick, guarded question of the player to learn whether his character would underestimate a female opponent.

Regardless of whether the Amazon's first blow hits or misses her intended victim, the victim will never be subject to the bonus again; the bonus can be used only once per victim.

**Special Hindrances:** The Amazon suffers a -3 reaction roll adjustment from NPCs from male- dominated societies. This reaction adjustment no longer applies once characters come to know and respect her. Likewise, player characters need not respond with hostility toward their Amazon companion unless they want to do so for role-playing purposes.

**Wealth Options:** The Amazon Sorceress receives the normal (1d4 + 1) x 10 gp as starting money.

**Races:** Most Amazons are human, but other races are acceptable, with the adjustments that follow.

- Half-elves: Substitute either short bow or spear for the required Weapon Proficiency.
- Gnomes: Substitute throwing axe or short sword for the required Weapon Proficiency, use ponies for mounts, and substitute Tracking and Survival for the bonus Nonweapon Proficiencies.
- Elves: Substitute Endurance and Set Snares for the bonus Nonweapon Proficiencies.

## Anagakok

**Description:** The Anagakok is a wizard from a primitive society that occupies one of the world's most extreme climates. Primarily concerned with survival, the Anagakok uses his magical skills to help his fellow tribesmen locate food, plan for dangerous shifts in the weather, and protect them from hostile creatures and rival tribes who are in competition for the same limited resources. An Anagakok also brings good fortune to his tribe; many believe he is possessed by a guardian spirit (though there is no actual evidence of this).

The Anagakok is known by a variety of names which depend on his society of origin; other names for an Anagakok include Magian, Phylacterist, Veronican, Scarabor, and Obeahist.

Although an Anagakok can originate from any number of hostile environments, two are considered in this discussion. The first is the Anagakok from a climate where the temperature never rises above 0 degrees F., whom we call the Frigid Climate Anagakok. The second is the Anagakok from a climate where the temperature never falls below 100 degrees F., whom we call the Torrid Climate Anagakok.

To be an Anagakok, a wizard must have a Constitution of at least 13. Female Anagakok are as common as males.

Though an Anagakok can renounce his heritage and sever ties with his society, he cannot renounce this kit; the traits of an Anagakok are inborn and permanent.

**Preferred Schools:** The preferred schools of the Anagakok are abjuration, alteration, enchantment/charm, invocation/evocation, and greater divination.

**Barred Schools:** Anagakok are barred from the schools of illusion and necromancy because of their spells' relative uselessness for surviving in hostile environments.

**Role:** The Anagakok is serious-minded, even-tempered, and soft-spoken. Though unfamiliar with societies and cultures other than his own, he adapts quickly and is fascinated by technology in all its forms.

In a campaign, an Anagakok tends to assume responsibility for the safety of his companions; their security is always foremost in his mind. Though the Anagakok are not natural leaders (such roles are usually reserved for the strongest warriors in their tribes) they are superb and fearless combatants, quick to volunteer for the most dangerous missions.

**Secondary Skills:** Required (choose one of the following, based on the Anagakok's background): Fisher, Forester, Hunter, Navigator, Trapper/Furrier.

**Weapon Proficiency:** Required (choose one of the following, based on the Anagakok's background): Bow (any), dagger, harpoon, javelin, knife, sling, trident.

**Nonweapon Proficiencies:** Bonus: Endurance, Survival, Weather Sense. Recommended: (General) Direction Sense, Fire-building, Riding (Land-based), Rope Use, Swimming; (Wizard) Astrology; (Warrior, all cost single slots) Animal Lore, Hunting, Mountaineering, Running, Set Snares.

**Equipment:** A beginning Anagakok can buy weapons only from those listed in the Weapon Proficiency entry above. He can buy only equipment that would normally be available in his home society; the DM has the right to veto any initial purchase.

An Anagakok must spend all his initial money. Any money not spent is lost.

**Special Benefits:** An Anagakok can find food in even the most barren of environments. In a 24-hour period, an Anagakok can find enough food to feed himself and a number of people equal to his level (for instance, a 4th-level Anagakok can find enough food to feed himself and four others every day).

Once per week, an Anagakok can cast a special *good fortune* spell on himself and a number of people equal to his level; the effect of *good fortune* lasts for a number of turns equal to his level (for instance, a 4th-level Anagakok can cast *good fortune* on himself and four others, and the effect lasts for four turns). All opponents have a -1 penalty on their chance to hit when attacking those under the effect of *good fortune*. This ability is innate; an Anagakok is not required to memorize *good fortune*, nor does it count against his daily spell limit. To cast the spell, an Anagakok must merely concentrate for 1 round and point to the subjects to be affected; no verbal or material components are required.

Additionally, an Anagakok has natural immunities to environmental extremes based on his background. A Frigid Climate Anagakok suffers no penalties, damage, or other restrictions in environments of extreme cold. A Torrid Climate Anagakok suffers no penalties, damage, or other restrictions in environments of extreme heat. These immunities apply to natural conditions only; for instance, a Frigid Climate Anagakok suffers normal damage from *cone of cold* and other cold-based spells, while a Torrid

Climate Anagakok suffers normal damage from *fireball* and other heat-based spells.

**Special Hindrances:** Exposure to harsh climates gives the Anagakok an unusual appearance, such as a tough, leathery skin for the Torrid Climate Anagakok, and a head-to-toe covering of short, coarse hair for the Frigid Climate Anagakok. Because of his appearance and strange manner, an Anagakok suffers a -2 reaction penalty from all NPCs unfamiliar with the Anagakok's culture.

Just as their backgrounds provide them with natural immunities to certain environmental extremes, all Anagakok suffer penalties when exposed to environments radically different from those in which they were born. A Frigid Climate Anagakok suffers a -1 penalty to all attack rolls, damage rolls, Ability Checks, and saving throws in environments with temperatures above 100 degrees F. A Torrid Climate Anagakok suffers a -1 penalty to all attack rolls, damage rolls, Ability Checks, and saving throws in environments with temperatures below 0 degrees F.

**Wealth Options:** A beginning Anagakok receives only (1d4 +1) x 8 gp as starting money.

**Races:** No restrictions.

**Notes:** Players and DMs are encouraged to invent their own types of Anagakok from other extreme environments. An Anagakok who lives in the bottom of an active volcano, in the depths of the ocean, or on an island continually battered by hurricane winds are all possibilities. Use the examples above to develop appropriate bonuses and penalties for each type of Anagakok based on his background.

## Militant Wizard

**Description**: The Militant Wizard is skilled in both magical and military arts, making him an extremely formidable opponent. They can come from aggressive, warmongering cultures bent on the conquest of weaker nations, or from cultures continually under siege from their more warlike neighbors, making military preparedness vital to their defense. In any case, the Militant Wizard considers a trained body as important as a trained mind, and prides himself on keeping his combat skills as sharp as his magical talents.

A character must have a Strength of at least 13 to be a Militant Wizard. Though male Militant Wizards will be more common, female Militant Wizards are allowable as well, unless the DM's world specifically forbids them.

Abandoning this kit is difficult. A Militant Wizard must abstain from using both of the weapons he has chosen for his Weapon Proficiencies for three full experience levels. Once he reaches the third experience level, he loses the use of his two Weapon Proficiencies. If he then renounces his citizenship from his home culture, he can successfully abandon this kit.

For example, consider a 5th-level Militant Wizard with Weapon Proficiencies in short sword and long bow. If he abstains from using both of these weapons (and the corresponding Weapon Proficiencies), he loses his Weapon Proficiencies in short sword and long bow when he reaches 8th level. If he then renounces his citizenship from his home culture, he can abandon this kit. If he uses these weapons before reaching 8th level, he must begin again, abstaining for an additional three levels of experience (for instance, if he uses his long bow Weapon Proficiency when at 7th level, he'll have to abstain until he reaches 10th level in order to abandon this kit.)

**Preferred Schools:** Militant Wizards prefer schools with an excess of offensive and defensive spells, such as abjuration, alteration, conjuration/summoning, invocation/evocation, and necromancy.

**Barred Schools:** Militant Wizards are barred from specializing in the schools of enchantment/charm and illusion, as their cultures tend to consider them relatively useless in combat. Though greater divination has uses on the battlefield, particularly in the area of reconnaissance, Militant Wizards are discouraged, but not barred, from divination specialization.

**Role:** Militant Wizards are among the most honored and respected citizens in their societies, since their powerful magic makes them exceptionally able soldiers. Depending on his background, the Militant Wizard may be a brutal, savage killer, wallowing in the violence of the battlefield, or he may be a heroic warrior, fighting with honor and taking lives only when necessary.

A Militant Wizard might have a variety of reasons for joining an adventuring party. Perhaps he shares the party's goal of defeating a force of evil, or he might be seeking treasure to finance his own army at home. He might wish to study the fighting techniques of other cultures, or he might hire on as a mercenary.

Whatever his reasons, the Militant Wizard's fighting skills should greatly benefit any party. He makes an excellent leader, but he is also capable of following orders to the letter, assuming the orders are issued by a commander he respects. The Militant Wizard tends to prefer action to inaction and combat to negotiation. He is skeptical of scholarly and philosophic types, and is unlikely to form close relationships with such characters.

**Secondary Skills:** No particular Secondary Skill is recommended or required. He receives his Secondary Skill either by choosing or rolling randomly, whatever method is normal for the campaign.

**Weapon Proficiency:** Required (choose one from of the following): Battle axe, bow (any), crossbow (any), dagger, javelin, sling, spear, sword (any), warhammer. These are different from the weapons normally associated with wizards, but they are common for Militant Wizards. Also, see the Special Benefits section below.

**Nonweapon Proficiency:** Bonus: (Warrior) Endurance. Recommended: (General) Animal Handling, Direction Sense, Riding (Land-based), Swimming;(Wizard) Languages (Ancient); (Warrior; these take 2 slots only) Blind- fighting, Tracking, (Warrior; these take 1 slot only) Mountaineering, Running, Set Snares.

**Equipment:** The Militant Wizard may buy any equipment he chooses, keeping whatever money he might not use.

**Special Benefits:** The Militant Wizard receives a bonus Weapon Proficiency free of charge; this is in addition to his normal Weapon Proficiency. This bonus Weapon Proficiency does not use any of the wizard's proficiency slots, but he must choose it from the weapons listed in the Weapon Proficiency entry above. Additionally, a Militant Wizard can acquire any of the Warrior's Nonweapon Proficiencies given on Table 37 on page 55 of the *Player's Handbook* at the listed number of slots; for instance, if a Militant Wizard wants the Animal Lore proficiency, it costs him only 1 slot instead of the normal 2 for a wizard.

**Special Hindrances:** Because a Militant Wizard devotes so much of his time and energy to the mastery of military skills, he is limited in his access to spells from various schools. Table 6 lists the oppositional schools for Militant Wizards of each specialty; the

Militant Wizard is forbidden to learn spells from these schools.

### Table 6: Oppositional Schools for Militant Wizards

| Specialist | Oppositional Schools |
|---|---|
| Abjurer | Illusion<br>Alteration<br>Greater Divin. |
| Conjurer | Alteration<br>Greater Divin.<br>Invoc./Evoc. |
| Diviner | Conj./Summ.<br>Abjuration |
| Invoker | Illusion<br>Enchant. /Charm<br>Conj./Summ. |
| Necromancer | Enchant. /Charm<br>Illusion<br>Alteration |
| Transmuter | Necromancy<br>Abjuration<br>Conj. /Summ. |

Militant Wizard mages are likewise limited. The DM may decide which of the following limitations affects Militant Wizard mages in his campaign (choose only one limitation).

1. The Militant Wizard mage is forbidden to learn 8th-level and 9th-level spells from any school.
2. The Militant Wizard mage learns spells as if his Intelligence were two points lower than he actually has, as indicated on Table 4, page 16 of the *Player's Handbook*. This limitation also affects the number of languages he can learn, the highest level of spells he can cast, the maximum number of spells per level he can know, and his spell immunity. For instance, if this limitation is in effect for a Militant Wizard mage with an Intelligence score of 15, he can only know three languages, can cast spells of no higher than 6th-level, has a 55 percent chance to learn a new spell, and has a maximum of nine spells per level that he can know.
3. The Militant Wizard mage can learn spells from only five schools. To determine which schools are unavailable to him, roll 1d8 three times, where 1 = abjuration, 2 = conjuration/summoning, 3 = greater divination, 4 = enchantment/charm, 5 = illusion, 6 = invocation/evocation, 7 = necromancy, and 8 = alteration. If the same result occurs twice,

roll again.

**Wealth Options:** The Militant Wizard receives the standard (1d4 + 1) x 10 starting money.

**Races:** No restrictions

## Mystic

**Description:** Thoughtful, reserved, and extremely introspective, the Mystic is devoted to self-enlightenment and sees the study of magic as the key to spiritual awareness. The Mystic enjoys nothing more than spending long hours contemplating the mysteries of the universe and attempting to become more in touch with his inner self. The Mystic is not necessarily a student of religion or philosophy; he seeks an awareness that can only be found intuitively.

The Mystic is by no means a reluctant magic-user. In fact, the Mystic believes that the casting of each spell and the acquisition of each new magical technique brings him closer to perfect awareness. The mental discipline necessary for the mastery of magic is the perfect compliment to self-knowledge.

The Mystic can come from any culture, but he is usually from a society that places a high value on philosophy, art, and scholarship. His is most likely to join an adventuring party for the opportunity to broaden his outlook, discover new things about himself, and use magic in new, enlightening ways.

To be a Mystic, a wizard must have a Wisdom score of at least 13.

There are no special rules for abandonment of this kit. If the Mystic grows weary of the contemplative life or feels that he has reached a pinnacle of self- awareness, he can simply leave this kit behind.

**Preferred Schools:** The Mystic prefers the schools of illusion, divination, and enchantment/charm.

**Barred Schools:** Because the Mystic is predisposed against magic that harms other living things, he is barred from specializing in the schools of necromancy, invocation/evocation, and conjuration/summoning. He is not prevented from learning spells from these schools-- he simply prefers to limit his association with them.

**Role:** In many societies, the Mystic is considered to be little more than a crackpot, an eccentric with an utter lack of ambition who serves no useful purpose. In more enlightened cultures, the Mystic is seen as a seeker of truth, a sensitive soul engaged in an inspiring spiritual journey.

In a campaign, the Mystic is quiet and non-aggressive. His very presence is soothing to the party, and he always has a word of comfort or encouragement for his companions. The Mystic avoids combat whenever possible, but courageously rises to the occasion when his comrades are threatened. Only in the most extreme circumstances will the Mystic intentionally take a life; however, he will kill if necessary to preserve his own life or the life of a companion.

**Secondary Skills:** The Mystic must take one of the following as his Secondary Skill (player's choice, based on the Mystic's background): Farmer, Forester, Groom, Mason, Scribe, Tailor/Weaver, Woodworker.

**Weapon Proficiency:** Required (the player chooses one of the following): Dagger, dart, or sling.

**Nonweapon Proficiencies:** Bonus: Astrology, Religion. Recommended: (General) Agriculture, Artistic Ability, Carpentry, Etiquette, Languages (Modern), Leatherworking, Pottery, Seamstress/Tailor, Stonemasonry, Weaving; (Wizard) Ancient History, Herbalism, Languages (Ancient), Reading/Writing, Spellcraft.

**Equipment:** The Mystic may buy only the weapon associated with his Weapon Proficiency. As his adventuring career progresses, he can buy (and use) only daggers, darts, knives, and slings. He must spend all of his starting money; any leftover gold is lost.

**Special Benefits:** The Mystic receives one of the following special abilities from the list below. The special ability is chosen when the character is first created and can never be changed.

1. Once per week, the Mystic can *feign death* as per the 3rd-level wizard spell; he can use this ability only on himself. The Mystic can *feign death* for up to 24 hours, awakening at any time. To use this ability, the Mystic must merely concentrate for 1 round; no components are necessary.

2. Once per week, the Mystic can transform his consciousness into a ghostly *spirit form*, leaving his physical body behind. The *spirit form* has the appearance of a misty cloud in the shape of the caster. The *spirit form* cannot attack, speak, or cast spells, but it can fly at a movement rate of 24 (Maneuverability Class B) and can pass through the smallest opening or tiniest crack. The Mystic's *spirit form* can travel an unlimited distance from his physical body as long as it remains in the same plane of existence. The spirit form is invulnerable to all attack forms, but *dispel magic* or a similar spell causes the *spirit form* to instantly return to its body.

While in *spirit form*, the Mystic's physical body remains comatose. The body is subject to all regular attacks and suffers damage normally. The *spirit form* can remain away from the body for up to 24 hours, but once it returns to its body, the Mystic revives and cannot use his spirit form for another week.

To use his *spirit form*, the Mystic must merely concentrate for 1 round; no components are necessary.

3. Once per week, the Mystic can use a special *levitate self* ability for one hour. Once initiated, the Mystic can use this ability to levitate himself straight up in the air at a rate of 10 yards per round. He can stop, hover, descend, and ascend at will, though horizontal movement is not empowered by this ability (however, the Mystic could push himself along a wall to move laterally). While levitating, the Mystic can carry as much weight as he can normally. Unlike the *levitation* spell, the Mystic using *levitate self* suffers no attack roll penalties when attempting to use missile weapons.

To use this ability, the Mystic must merely concentrate for 1 round; no components are required. As soon as a levitating Mystic touches the ground, his use of this ability is over; he can use it again in another week.

**Special Hindrances:** A Mystic must spend two consecutive hours per day meditating. These two hours must always occur at the same time of day; the player can decide which hours are devoted to meditation, but once decided, the time period can never change (typical meditation times are the first two hours of dawn, the first two hours after sunset, or from midnight to 2 a. m. ). If the Mystic neglects to perform his meditation, is unable to perform it, or is interrupted more than once (for more than a total of 1 minute), the following day he is able to cast only the number of spells allowed to a wizard one level

lower than his actual level. For instance, if a 4th-level Mystic is unable to meditate on Day 1, on Day 2 he will be able to cast only as many spells as a 3rd-level wizard.

**Wealth Options:** The Mystic receives only (1d4 + 1) x 5 gp as starting money.

**Races:** No limitations

## Patrician

**Description:** The Patrician is a wizard of noble birth, a member of his culture's aristocracy. Born into a life of wealth and privilege, the Patrician considers himself an arbiter of good taste and a connoisseur of the finer things in life. He looks down his nose at working men and women, as well as all others he considers to be inconsequential rabble. If anything, his mastery of magic makes him even more arrogant than other members of the ruling class, since he sees his talent as clear proof of his superiority over common folk.

The Patrician may join an adventuring party out of a sense of duty to his country or to promote the common good-- in spite of their snobbery, good-aligned Patricians have strong moral codes. A Patrician might have grown weary of his pampered life and sought an adventuring party to add a touch of excitement to his otherwise dreary existence. Alternately, his parents might have ordered him to join a party to teach him humility.

There are no special requirements to be a Patrician. The majority are male, but noblewomen are also included in this category (although such a character would more correctly be called a Noblewoman or Aristocrat).

To abandon this kit, the Patrician must renounce his birthright. He will forever after be ostracized by all the nobility from his homeland and may even be disowned and disinherited by his family.

**Preferred Schools:** The Patrician can specialize in any school, but prefers those that he perceives as most powerful, such as conjuration/summoning, alteration, and invocation/evocation.

**Barred Schools:** The Patrician will not specialize in necromancy, a school he considers disgusting and repulsive.

**Role:** The Patrician prefers the company of nobles and other members of the upper class. Most Patricians are wealthy and have no need to earn money, but many still serve their societies as administrators, counselors, and ambassadors. Since they have access to the the finest teachers and universities, Patricians are extremely well-educated and expert in a variety of areas.

Fellow player characters will rightfully perceive the Patrician to be an arrogant, condescending snob. On the positive side, the Patrician is also well-mannered and courteous, even to those he considers to be his social inferiors. Male Patricians can be extremely chivalrous to members of the opposite sex, regardless of whether they like it or not. The Patrician is generally cooperative with the party, though he will balk at any suggestion that compromises his sense of dignity (for instance, he will never enter a filthy cavern or search the bodies of slain enemies without squawking). His first-rate education and extensive travels make him an excellent source of information.

**Secondary Skills:** Required (the player must choose one of the following): Bowyer, Gambler, Groom, Jeweler, Limner/Painter, Scribe.

**Weapon Proficiency:** Required (the player must choose one of the following):

dagger, knife.

**Nonweapon Proficiencies:** Bonus: (General) Etiquette, Heraldry, Riding (Land-based). Recommended: (General) Dancing, Languages (Modern), Riding (Land-based), Singing; (Wizard) Ancient History, Languages (Ancient), Reading/Writing, Religion; (Rogue, double slots) Ancient History, Appraising, Gaming, Local History, Musical Instrument; (Priest, double slots) Languages (Ancient).

**Equipment:** A beginning Patrician must buy all of the following items: horse (must be at least a riding horse), riding saddle, bit and bridle, horseshoes and shoeing, halter, and saddle blanket. He can spend the rest of his money as he wishes.

**Special Benefits:** The Patrician begins with more starting money than other wizards (see the Wealth Options entry below). Additionally, he receives a +3 reaction modifier from any noble from his own culture, and a +2 reaction modifier from nobles from other cultures. When traveling, a Patrician can demand shelter from any fellow noblemen from his own culture. Such shelter is offered free of charge and is made available for the Patrician and up to two persons per experience level of the Patrician (for instance, a 3rd-level Patrician can demand shelter for himself and six others).

**Special Hindrances:** When making purchases, the Patrician accepts nothing but the best, whether it be a meal, a room for the night, a weapon, or even a chest to carry his possessions. Any time he buys any item, the Patrician must pay 10 to 100 percent more than the listed price in the *Player's Handbook*. The DM will decide the price paid by the Patrician, which may vary from item to item, depending on the quality of merchandise in a particular locale. For instance, the best meal in Village A might sell for 7 sp, while the best meal in Village B might sell for 10 sp. In all cases, the Patrician will settle for no less than the most expensive item available; he always pays at least 10 percent more than the listed price.

If a Patrician lacks the funds to buy high-quality items, he can settle for cheaper goods, but he no longer receives his reaction bonus in that particular encounter or community; NPCs simply do not believe that he is a noble. For instance, if a Patrician settles for a standard 5 sp meal at an inn, all of the NPCs in the inn react to him normally, ignoring his insistence that he's a nobleman. Word will quickly spread throughout the community that an amusing fellow is pretending to be a nobleman, and soon all of the NPCs in the community will react to him normally. If a Patrician settles for shabby accoutrements, such as a normal sword or average saddle, all NPCs will react to him normally until he replaces them with more expensive items.

Just as the Patrician can demand shelter from other noblemen, so can they demand shelter from him. Note that this can get to be an expensive proposition if the NPC noblemen stay for any length of time.

**Wealth Options:** The Patrician receives an extra 150 gp in addition to the standard (1d4 + 1) x 10 gp.

**Races:** No restrictions. However, if a particular race doesn't recognize or allow socio-economic stratifications in the DM's campaign world, that race will not have Patricians

## Peasant Wizard

**Description:** The Peasant Wizard is a spell caster of modest means whose exceptional skills and matchless courage have made him a champion of the masses. Though his

talents have set him apart and made him a legend in his homeland, he will never forget his roots. An advocate of the commoner, the Peasant Wizard devotes himself to the promotion of equality and justice. The Peasant Wizard is the most frequently encountered of all the wizards. There are no additional ability requirements for the Peasant Wizard. No special rules exist for abandoning this kit.

**Preferred Schools:** There are no preferred schools for the Peasant Wizard, though illusionists, abjurers, and invokers are among the most frequently encountered.

**Barred Schools:** There are no barred schools for the Peasant Wizard; however, there are fewer necromancers and diviners than any other specialist.

**Role:** The Peasant Wizard fights on behalf of the common people. He considers himself protector of the helpless, actively opposing any action from the party that threatens or exploits the peasants. For instance, he won't allow his party to recruit peasants for combat support unless they fully understand the risks involved. When a companion of the Peasant Wizard bargains with a common man for goods or services, the Peasant Wizard makes sure his companion pays the common man a fair price. When the party recovers a treasure, the Peasant Wizard demands that the local citizens receive their fair share if they helped the party in any way or if the treasure was recovered on their land.

The Peasant Wizard sees the wealthy classes as a primary reason for the commoners' miseries, so he has little respect or patience for noblemen and the wealthy. Aside from the occasional insult, the Peasant Wizard is likely to avoid associating with any Patricians in his party.

**Secondary Skills:** The player may choose his Peasant Wizard's secondary skill. The DM might consider limiting this choice to skills that are useful to peasants such as swimming; it is unlikely (but not impossible) that a peasant wizard could learn heraldry or etiquette.

**Weapon Proficiency:** Required (player's choice): Bow (any), dagger, knife, spear, dart, sling.

**Nonweapon Proficiency:** Bonus (one of the following, player's choice: Agriculture, Fishing. Recommended: (General) Animal Handling, Blacksmithing, Carpentry, Cobbling, Cooking, Direction Sense, Fire-building, Leatherworking, Pottery, Riding (Land-based), Stonemasonry, Weather Sense, Weaving.

**Equipment:** The Peasant Wizard can spend his money on anything he likes, within the limitations described in the Special Hindrances entry below.

**Special Benefits:** When in his homeland, the Peasant Wizard will always be given food and shelter at no charge from his fellow commoners. This courtesy extends to the Peasant Wizard's companions, as long as he vouches for them. The Peasant Wizard does not receive this benefit in lands other than his own, but he always receives a +2 reaction modifier from peasants in any culture.

**Special Hindrances:** Aside from weapons, a Peasant Wizard may own only one item worth as much as 15 gp. Aside from this item, all of his other items must be valued at 10 gp or less. The total value of all his possessions, including money but excluding weapons, can never exceed 75 gp. Any treasure or possessions in excess of this limit must be donated to some worthy cause.

**Wealth Options:** The Peasant Wizard receives only (1d4 + 1) x 5 gp for starting money.

**Races:** No restrictions.

## Savage Wizard

**Description:** The Savage Wizard is the spell caster of a remote tribe, culturally and technologically primitive by the standards of the rest of the world. Although these tribes commonly maintain functional civilizations for thousands of years, their traditions, dress, and customs are so simple that most outsiders consider them unsophisticated brutes.

There are a variety of Savage tribes around the world, ranging from pacifistic societies of farmers and herders to bloodthirsty headhunters and barbarians. All, however, are sharply attuned to the natural world, sharing a deep respect for animal and plant life and an innate understanding of the mysteries of nature.

To be a Savage Wizard, a character must have a minimum Strength score of 11 and a minimum Constitution score of 13.

To abandon this kit, a character must renounce his membership with his tribe and become a citizen of a different culture. Since tribal roots run deep, a dramatic change such as this should be slow in coming; a Savage Wizard must have advanced at least five levels since leaving his tribe and experiencing adventures in the outside world before cutting ties with his tribe.

**Preferred Schools:** Because their Constitutions tend to be exceptionally high, Savage Wizards excel in the schools of conjuration/summoning and invocation/evocation.

**Barred Schools:** Savage Wizards lack the natural aptitude for mastering the schools of abjuration and enchantment/charm.

**Role:** Most tribesmen are dazzled and impressed by magic, so the Savage Wizard typically holds a position of great power in his tribe. If not the actual ruler, the Savage Wizard is a respected teacher or tribal counselor. Depending on the nature of the tribe, the Savage Wizard is known by a variety of names, among them Witch Doctor, Mundunugu, Wangateur, and Isangoma.

The Savage Wizard's power can sometimes work against him, particularly if his tribe is exceptionally superstitious or if an ambitious tribesman schemes to usurp the wizard's leadership role. If the tribe becomes convinced that the wizard is consorting with demons or otherwise stirring up dark forces better left alone, they may expel the wizard from the tribe with the threat of execution if he returns. This is one way that a Savage Wizard might link up with an adventuring party.

In a campaign, the Savage Wizard takes the role of an outsider, baffled and intimidated by the mysteries of the "civilized" world. Products of technology, such as oil lanterns and crossbows, both fascinate and frighten him. While he is at home in the darkest jungles or most treacherous mountains, he is extremely uncomfortable in cities and towns. If the Savage Wizard is from a relatively pacifistic tribe, he might serve as the conscience of his party, questioning their eagerness to kill, their obsession with wealth, their selfishness, and their inequitable system of justice.

**Secondary Skills:** The Savage Wizard's Secondary Skill should be based on the primary occupation of his tribe; that is, if his tribe is mostly fishermen, his Secondary Skill should be Fishing. Other likely skills include Forester, Groom, Hunter, and Trapper/Furrier.

**Weapon Proficiency:** Required (one of the following, representing his tribe's weapon

of choice): spear, blowgun, dagger, knife, or sling. Regardless of whether the Savage Wizard eventually becomes familiar with new weapons, he is likely to prefer his tribal weapon throughout his adventuring career.

**Nonweapon Proficiencies:** (General) Direction Sense or Weather Sense (player choice); (Warrior) Endurance or Survival. Recommended: (General) Animal Handling, Animal Training, Fire-Building, Fishing, Riding (Land- based), Rope Use, Swimming; (Warrior, double slots) Animal Lore, Bowyer/Fletcher, Hunting, Mountaineering, Running, Set Snares, Tracking; (Priest, double slots) Healing, Local History; (Rogue, double slots) Jumping, Tightrope Walking, Tumbling; (Wizard) Herbalism, Religion. A Savage Wizard cannot take Etiquette or Heraldry when first created.

**Equipment:** The only weapon the Savage Wizard can purchase initially is his tribal weapon (see Weapon Proficiency). He must spend all of his remaining gold when he is created; he may not keep any unspent gold. He can purchase only equipment that would normally be available to his tribe; for instance, his tribe probably has herbs, nuts, fishing nets, and rafts available, but they are unlikely to have chains, lanterns, hourglasses, or magnifying glasses. The DM has the final word as to what equipment is available to any particular Savage Wizard.

**Special Benefits:** The Savage Wizard receives one of the following special abilities from the list below. The special ability is chosen when the character is first created and can never be changed.

1. The Savage Wizard can manufacture a protective talisman once per week. The talisman is a small pouch of herbs hung on a leather cord which is worn around the subject's neck. The talisman gives *protection from evil* to the wearer, identical to the effects of the 1st-level wizard spell. The talisman offers continual protection for a full day, after which time the herbs disintegrate. *Dispel magic* or a similar spell permanently cancels the magic of that particular talisman. The Savage Wizard requires no less than one hour to manufacture a talisman.

2. Once per week, the Savage Wizard can construct a small replicant of any single victim of his choice. The replicant is about 6 inches tall, made of clay, and crudely resembles the form of the victim. It must also contain a lock of hair, a fingernail, or other small piece of organic material from the victim. A Savage Wizard requires one hour to manufacture a replicant.

Whenever the Savage Wizard cuts a piece from the replicant, sticks a pin in it, or otherwise "attacks" it, the replicant suffers 1-4 hit points of damage. The victim who is represented by the replicant suffers an identical amount of damage, regardless of the distance between the replicant and the victim (however, the victim must be on the same plane of existence as the replicant). Every type of damage on the replicant inflicts 1-4 hit points of damage; therefore, the Savage Wizard must take care not to destroy the replicant, for burning, crushing, or throwing the replicant into a pool of quicksand still inflicts only 1-4 hit points of damage. The replicant disintegrates when any of the following conditions are met:

- The replicant has suffered 10 hit points (or more) of damage.
- *Dispel magic* or a similar spell is cast on the replicant.
- A week passes since the replicant's creation.

3. Once per week, the Savage Wizard is able to forecast the general fortunes of some

major undertaking by interpreting an omen from observing the natural conditions around him. To be receptive to an omen, the wizard must do nothing but concentrate for one uninterrupted turn; if his concentration is broken, he cannot attempt to interpret an omen for another week. After the turn of concentration, he studies his surroundings for an omen-- a rippling pond, a gathering of clouds, a swarm of insects, or the veins in a leaf are all possible sources of omens.

A wizard usually consults an omen before starting a journey, engaging in a major battle, or embarking on some other significant task. If the DM has knowledge about the proposed action, the omen should reveal the appropriate information; for instance, if the party is considering exploring an abandoned building, but the DM knows it contains a spectre, the result should be an ill omen. In situations where the DM has no information on which to base his judgement, roll 1d10 and consult Table 7.

**Table 7: Savage Wizard Omen Results**

| d10 Roll | Result |
|---|---|
| 1-2 | Ill Omen: The party should not undertake the task this day. If they ignore the omen, all party members will suffer a -1 penalty on "to hit" and saving throw rolls for the rest of the day, their chance for encounters will be doubled, and a -3 reaction modifier will be applied to all encounters |
| 3-4 | Great Danger Exists: If the party proceeds, their chance for encounters is doubled for the rest of the day and a –3 reaction modifier applies to all encounters. Opponents have a +1 applied to their chance to hit |
| 5-7 | Neutral Omen: The information is vague. No special modifiers apply |
| 8-9 | Favorable Omen: The party members' movement rate is increased by 50% for the rest of the day, and opponents have a -1 applied to their chance to hit |
| 10 | Auspicious Omen: All effects of a Favorable Omen apply; additionally, all party members gain a +1 on all saving throws made for the rest of the day |

**Special Hindrances:** The Savage Wizard's strange appearance and manners make strangers wary of him. Therefore, he suffers a -2 reaction adjustment from all NPCs not from his own tribe (PCs can react as they wish, but they should quickly become accustomed to the Savage and accept him as an equal.)

**Wealth Options:** The Savage Wizard begins with only (1d4 +1) x 5 gp. As the campaign progresses, the Savage will have the opportunity to acquire more treasure, and it is up to the player whether he appreciates its value or rejects it as a worthless. (For instance, a Savage might accept gold but have a superstitious belief that requires him to reject gems.)

**Races:** No restrictions.

## Witch

**Description:** The Witch is a wizard whose powerful magical abilities are extraplanar in origin. Though wizards typically learn the basics of spellcasting at magic academies or from learned mentors, Witches learn magical skills from entities and their minions from other planes of existence, or from other Witches.

Occasionally, these extraplanar entities contact youthful humans or demihumans for magical instruction; other times, humans and demihumans seek out the entities through arcane rituals and petition them for instruction. The entities agree to such instruction for a variety of reasons-- some hope to train their students to eventually become emissaries; some hope to use them as conduits for various forces; some hope to seduce them as consorts; and some simply share their magical secrets for their own amusement.

Whatever the motives of the extraplanar entities, they exude a powerful directing influence over their students. However, a few Witches with particularly strong wills are able to maintain their own drives while using their magical skills to further their own goals. Such Witches face a life-long struggle with the forces who relentlessly strive to direct their spirits.

The requirements for becoming a Witch are higher than for any other kit. Because her training is more demanding than that received by most other wizards, she must have a minimum Intelligence and Wisdom of 13. To resist the corruption inherent from contact with extraplanar entities, she must have a minimum Constitution of 13. The vast majority of Witches are female, but male Witches are also possible, commonly called Warlocks.

The Witch kit cannot be abandoned. If a Witch manages to sever all ties with the entities responsible for her instruction (usually requiring the power of a *wish* or its equivalent), she loses two experience levels. If she still wishes to pursue a magical career, she must relearn the experience levels that she lost.

**Preferred Schools:** The most appropriate school for Witches is enchantment/charm. Conjuration/summoning and necromancy are also good choices.

**Barred Schools:** There are no barred schools for Witches.

**Role:** Regardless of her actual alignment, all but her closest friends are likely to presume that a Witch is in collaboration with extraplanar spirits, and will shun her accordingly. There are few places where a Witch is welcome, and for the most part, a Witch will need to conceal her identity when traveling to assure her safety.

A Witch's player character companions need not have such fears or prejudices against her, especially after she proves herself in life-and-death situations. However, there might always be a veil of suspicion between the Witch and her companions, as if they cannot quite bring themselves to trust her completely. Any player characters with suspicious natures, particularly those with primitive or unsophisticated backgrounds, may never fully warm up to a Witch and will avoid being alone with her, sometimes even accusing her of betraying the party or bringing them bad luck. (The DM is free to encourage this type of role-playing, but not to the point of disrupting the campaign. If this distrust becomes problematic, the DM might remind the PC leader of the party that the Witch is indeed a good-aligned character and it is his job to promote good will among his companions.)

Although a Witch learns her magical techniques from extraplanar entities, once on her own, she learns her spells in much the same way as any other wizard. Still, her techniques for casting spells may differ significantly from the standard methods. The casting times,

ranges, and effects of her spells are no different from the same spells used by other wizards, but she may use different verbal, somatic, or material components, as well as meditation. These differences should make her seem even more threatening to outsiders, as well as making her seem more remote to the other player characters.

**Secondary Skills:** Required: None. Recommended: Scribe.

**Weapon Proficiency:** The Witch is not allowed an initial Weapon Proficiency, nor can she acquire a Weapon Proficiency as she advances in level.

**Nonweapon Proficiency:** Bonus Proficiencies: Herbalism, Spellcasting. Recommended: (General) Artistic Ability, Brewing, Cooking, Languages (Modern), Weather Sense; (Wizard) Ancient History, Astrology, Languages (Ancient), Reading/Writing, Religion; (Priest, double slot) Healing.

**Equipment:** When a Witch is first created, she must buy her weapons from among the following choices: Dagger or dirk, knife, sling, staff sling. Additionally, the Witch can choose up to 1,500 gp worth of magical items from Table 89 (Potions and Oils), Table 91 (Rings), Table 92 (Rods), Table 93 (Staves), Table 94 (Wands), and Tables 95- 103 (Miscellaneous Magic) on pages 135-139 of the *Dungeon Master's Guide*. These items are free-- she doesn't have to pay for them (but she cannot keep any of the leftover 1,500 gp).

**Special Benefits:** When a Witch is initially created, she automatically gains the spells *detect magic* and *read magic*; these spells are in addition to any spells she normally receives. As a Witch increases in level, she automatically gains the following abilities. These are all naturally acquired abilities, and do not count against the number of spells she can know or use. All of the following abilities can be used once per week.

**3rd Level:** The Witch acquires the ability to *secure familiar*. This is identical to the 1st-level wizard spell *find familiar*, except that a Witch does not need to burn 1,000 gp worth of incense and herbs in a brass brazier. Instead, the Witch must merely concentrate for one turn. If a suitable familiar is within 1 mile per level of the Witch, it will arrive within 1d10 hours. A Witch can have only one familiar at a time.

**5th Level:** The Witch acquires the ability to *brew calmative*. Assuming she has access to the proper ingredients (usually available in any forest), the Witch can brew one dose of an elixir that has the effect of a *sleep* spell when a victim comes in contact with it. One dose is sufficient to coat a sword or any other single weapon. The elixir has no effect on victims with more than 8 HD; victims can resist the effects of the elixir with a successful saving throw.

The Witch requires one hour to brew the elixir. The elixir loses its potency after 24 hours.

**7th Level:** The Witch acquires the ability to *brew poison*. With the proper ingredients, available in most forests, she can brew one dose of Class L contact poison sufficient to coat a single weapon. The Witch requires one hour to brew the poison. It loses its potency in 24 hours.

**9th Level:** The Witch acquires the ability to *beguile* any single person or monster (assuming the person is no higher than 8th-level or the monster has no more than 8 HD). *Beguile* is identical to the 4th-level wizard spell charm monster and the 1st-level wizard spell *charm person*, except that the victim is not allowed a saving throw. To cast *beguile*, the Witch must merely point at the victim and concentrate for 1 round; there are no verbal or material components.

**11th Level:** The Witch acquires the ability to *brew flying ointment*. Assuming she has access to the proper ingredients (usually available in any forest), the Witch can brew one dose of an ointment which, when rubbed on the skin, gives the recipient the ability to fly, as per the 3rd-level wizard spell *fly*. The dose is sufficient to affect one human-sized subject; the effects persist until the ointment loses its potency 24 hours after it is brewed. The Witch requires one hour to brew the ointment.

**13th Level:** The Witch acquires the ability to inflict a *witch's curse* on any single person or creature. This is exactly identical to the 4th-level wizard spell *bestow curse*, except that its effect is automatic; the victim is not allowed a saving throw. The effect of the curse persists for 24 hours unless the curse is dispelled by a *remove curse*, *wish*, or similar spell. To cast the spell, the Witch must merely point at the victim and concentrate for 1 round; no verbal or material components are required. To determine the effects of *witch's curse*, roll 1d8 and consult Table 8.

### Table 8: Effects of Witch's Curse

| d8 Roll | Result |
|---|---|
| 1-3 | One ability of the victim is lowered by 3 points. Determine which ability is lowered by rolling<br>1d6:<br>1 = Strength<br>2 = Dexterity<br>3 = Constitution<br>4 = Intelligence<br>5 = Wisdom<br>6 = Charisma |
| 4-5 | The victim's "to hit" and damage rolls are reduced by 4 points |
| 6 | The victim becomes blind, as per the 2nd-level wizard spell blindness. The effect persists for 24 hours or until the *witch's curse* is dispelled. |
| 7 | The victim loses 1 hit point per hour for the next 24 hours. These lost hit points cannot be recovered by normal or magical means until the *witch's curse* ends in 24 hours or unless the curse is dispelled. If the victim is reduced to 0 hit points or less within 24 hours of receiving the curse, or before the curse is dispelled, he dies. |
| 8 | The victim immediately lapses into a state of *temporal stasis*, as per the 9th-level wizard spell. The effect persists unless the curse is dispelled. Otherwise, at the end of 24 hours, the victim is reduced to 0 hit points and dies. |

**Special Hindrances:** Because of their non-conventional training, Witches do not earn bonuses to their experience for high ability scores. Witches cannot be multi-classed or dual-classed.

Generally, outsiders are terrified of Witches. Unless an NPC is exceptionally open-

minded or has extremely high Intelligence or Wisdom (13 or more in either ability), the Witch receives a -3 reaction roll. If the NPC is uneducated, comes from an extremely superstitious or unsophisticated culture, or has low Intelligence and Wisdom (under 10 for both), the Witch receives a -5 reaction roll. Additionally, if a Witch lingers in a superstitious or culturally unsophisticated community for more than a day, she runs the risk of facing a mob of hostile citizens bent on running her out of town, imprisoning her, torturing her, or executing her. (The DM decides the size of the mob, their intentions, and the likelihood of their accosting the Witch. As a rule of thumb, assume a 20 percent chance of a 4d6-member mob forming in a hostile community if the Witch stays for a day. This chance increases by 20 percent for every additional day the Witch remains; the size of the mob increases by 2d6 members.)

The Witch must periodically struggle with the extraplanar forces striving to direct her. The forces are so powerful that they cannot be dispelled; all the Witch can do is endure them. When undergoing these internal struggles, the Witch suffers penalties to her combat abilities and saving throws.

The DM has three options for determining the frequency and intensity of these penalties, depending on the needs of his campaign and how much bookkeeping he is willing to undertake:

1. The Witch suffers a -2 penalty to her attack rolls and a -2 penalty to her saving throws on any night with a full moon and the three nights before and after the full moon (the penalties apply to a 12 hour period from about 6 p. m. to 6 a. m. ). On most worlds, a full moon will occur about once per month; if the moon of the DM's world has a shorter or longer cycle, increase or decrease the number of nights the Witch is affected; she should be affected about seven nights out of 4 weeks. If there are several moons, the Witch is affected by only one of them.

2. There is a 25 percent chance per day that the Witch will be subjected to an internal struggle with extraplanar forces. The DM determines this at the beginning of the day; the Witch is aware of the result. Throughout that night (a 12-hour period lasting from about 6 p. m. to 6 a. m.), the Witch suffers a -2 penalty to her attack rolls and a -2 penalty to her saving throws.

3. The Witch struggles with the extraplanar forces every night. For a 12- hour period lasting from about 6 p. m. to 6 a. m. , she suffers a -1 penalty to her attack throws; there is no penalty to her saving throws.

**Wealth Options:** The Witch receives the standard (1d4+1) x 10 gp as starting money.

**Races:** No racial restrictions.

**Note:** The Witch is among the most complex of all the kits, and many of the details are left up to the player's discretion. For instance, he may wish to design specific daily rituals for his Witch, or he may wish to expand on the Witch's relationship with the entities who originally trained her. What exactly are they? Where are they? Can the Witch contact them for favors? What exactly happens if the forces succeed in controlling the Witch? Does her alignment change? Her abilities? Her relationship to the party? There are many possible variations on the Witch kit, and the DM is encouraged to experiment, as long as he avoids the temptation to make her excessively powerful, and keeps in mind the potential disruptions in his campaign.

## Wu Jen

**Description:** The Wu Jen is a wizard from cultures based on medieval oriental civilizations. He is a sorcerer of mysterious power and uncertain fealty. Unlike the oriental samurai, the Wu Jen seldom answers to a lord or master. His primary allegiance is to himself and to his craft.

The Wu Jen seldom lives among the masses, preferring instead to dwell in the wilderness where he can contemplate the secrets of nature without interruption. Living the life of a hermit, the Wu Jen concentrates on purifying his body and mind, thus making him more receptive to the supernatural forces of the world.

To be a Wu Jen, a wizard must have an Intelligence of at least 13. He cannot be of lawful alignment, but may still be good, evil, or neutral. The Wu Jen kit cannot be abandoned.

**Preferred Schools:** Wu Jen prefer the schools of conjuration/summoning, alteration, and invocation/evocation.

**Barred Schools:** There are no barred schools for the Wu Jen.

**Role:** Unless the campaign has an eastern setting, the DM, in conjunction with the player, should invent a plausible explanation for the Wu Jen's appearance so far from home. Perhaps the Wu Jen is on a religious pilgrimage. Perhaps a magical device or spell transported the Wu Jen to the western world, either intentionally or unintentionally. Or perhaps the Wu Jen is on a decade-long quest for knowledge or self-awareness, and his travels have brought him to the other player characters.

Whatever the reason, the Wu Jen should add a touch of oriental intrigue and exotic culture to a western-based party. His fellow player characters should find the Wu Jen's habits strange and fascinating. For instance, a Wu Jen prefers to record his spells on scrolls instead of in spell books. Perhaps he prays to the sun for an hour each day at dawn, or maybe he eats only roots and berries. A Wu Jen keeps his emotions hidden, and his motives are equally difficult to discern. It is unlikely that the Wu Jen shares the party's goals and moral code; if he agrees to join the party, it is probably due to his intellectual curiosity.

The DM is within his rights to forbid Wu Jen from the campaign. Before a player selects this kit, he must check with the DM to make sure that Wu Jen are allowed.

**Secondary Skills:** Required: Scribe.

**Weapon Proficiency:** Required (choose one of the following): Blowgun, short bow, dagger, dart, sling. Alternately, the Wu Jen can choose from the selection of oriental weapons listed in Table 9. The Wu Jen has an automatic and permanent +1 bonus to hit whenever using the weapon he has chosen for his Weapon Proficiency.

**Nonweapon Proficiencies:** Bonus Proficiencies: Etiquette, Artistic Ability (Painting, Calligraphy, or Origami). Recommended: (General) Riding (Land-based), Cooking, Dancing, Singing; (Wizard) Astrology, Herbalism, Spellcraft; (Priest, double slot) Musical Instrument; (Rogue, double slot) Blind-fighting, Gaming, Juggling, Tumbling.

**Equipment:** The Wu Jen must buy all weapons from the choices listed in the Weapon Proficiency entry above. He may have no more than 10 gp remaining when he has finished purchasing his equipment.

**Special Benefits:** When a Wu Jen reaches 4th level, he gains the power to summon massive magical energies that allow him to cast any one spell that is three or more levels lower than his level at maximum effect. The spell automatically has maximum range, (if

desired), duration, and effect. Thus, a 4th-level Wu Jen can cast a 1st-level spell at maximum effect. A Wu Jen can use this ability once per day.

**Special Hindrances:** The Wu Jen operates under special taboos that do not affect other characters. Though the taboos may seem trivial or even ridiculous to other characters, the Wu Jen takes them quite seriously-- violating a taboo causes the Wu Jen to lose levels of ability, lose spells, become ill, or even die (the DM decides the exact penalty). A 1st-level Wu Jen has one taboo and gains an additional taboo every five levels thereafter (at 6th level, 11th level, and so on). The DM selects the taboos. Some suggestions follow; the Wu Jen:

- Can't eat meat or animal products (including milk, eggs, and cheese).
- Can't sleep within 20 yards of a member of the opposite sex.
- Can't wear a certain color.
- Can't carry gold (or other precious metal) on his person.
- Can't bathe or must bathe frequently.
- Can't cut his hair or fingernails.
- Can't intentionally take the life of an insect.
- Can't drink alcoholic beverages.
- Can't sit facing the north (or other direction).
- Can't speak after sunset (except to cast spells).

**Wealth Options:** The Wu Jen starts with the normal (1d4+1) x 10 gp.

**Races:** Normally, a Wu Jen must be human. The DM may make exceptions in his campaign, elves and half-elves being the most likely choices.

**Note:** For more detailed information about the Wu Jen, along with additional spells, weapons, and proficiencies, see *Oriental Adventures*. The DM may need to make some adjustments to adapt the descriptions and statistics to AD&D® 2nd Edition rules

### Table 9: Selected Oriental Weapons for the Wu Jen

| | | Weight | | | Speed | Damage | |
|---|---|---|---|---|---|---|---|
| **Name** | **Cost** | **in lbs.** | **Size** | **Type*** | **Factor** | **S-M** | **L** |
| Bo Stick | 2cp | 4 | L | B | 3 | 1-6 | 1-4 |
| Boku-toh | 6cp | 3 | M | B | 4 | 1-4 | 1-2 |
| Jitte | 10cp | 2 | S | B | 2 | 1-4 | 1-2 |
| Shuriken | 10cp | 1** | S | P | - | 1-6 | 1-4 |

* B = Bludgeoning weapon, P = Piercing weapon.
** Ten large shurikens weigh a total of 1 pound.

Description of Weapons
Bo stick: A staff of hard wood that is very difficult to break and is normally 6-7 feet in length.
Boku-toh: A wooden replica of a short sword, usually used for practice since it cannot cut or slash. Used aggressively, it can cause bludgeoning damage.
Jitte: A tapered iron bar with a short hook near the handle. Although the hook is not sharp enough to cut or pierce, the jitte can be used to strike blows.
Shuriken: A small throwing weapon in the shape of a star with needle-like projections.

They are thrown by hand and easily concealed in folds of clothing. A large-star shuriken has a fire rate of 3, a short range of 5 yards, a medium range of 10 yards, and a long range of 20 yards.

## Recording Kits on the Character Sheet

To record a wizard kit on character record sheets, follow these steps:

1. In the space where the character's school is recorded, add the name of his wizard kit.
2. When recording the character's Nonweapon Proficiencies, add the bonus proficiencies the character receives from his wizard kit. Mark the bonus proficiencies with an asterisk to indicate that they are free.
3. Make notes about the character's special benefits and hindrances and other pertinent information in any available space on the sheet

### Modifying the Kits

The DM is encouraged to modify the kits to more accurately represent the history, cultures, and events of his campaign world.

However, he should not violate the nature of the kit; males should not be allowed to be members of the Amazon kit, nor should Patricians be allowed to be necromancers. Common sense must prevail. However, if there are no oriental or eastern-styled cultures in his world, the DM is free to disallow the Wu Jen kit. Similarly, if a natural disaster wiped out all traces of Amazon society in his world, he can disallow the Amazon kit

## Creating New Kits

Using the kits above as guidelines, many new kits can be created. If the DM has a certain type of wizard that he would like in his world, he should design a Wizard Kit for that personality. To design a Wizard Kit, the DM should consider the following questions about the wizard and his role in the campaign.

**Description:** What's this wizard like? Is he drawn from a specific literary, mythological, or historical source? Are there any special requirements for a character who wishes to be this type of wizard?

**Role:** What place does this wizard have in the campaign? How is he regarded by his own culture? By other cultures? Is there a particular attitude or outlook he needs to belong to this Wizard Kit?

What kinds of activities does this wizard tend to perform in a campaign-- is he a bold man of action? A withdrawn scholar? An impulsive show-off? What is his relationship with the other characters-- is he friendly, distanced, wary, impassive?

**Preferred and Barred Schools:** Are there certain types of specialties that seem especially appropriate to the wizards described in your kit? If so, note them as preferred schools. Are there other specialists that seem particularly inappropriate to your kit? Note them as barred schools.

**Secondary Skills:** If using the Secondary Skills system, you need to decide if this Wizard Kit requires such a skill. If there isn't a particular secondary skill or skills common to all wizards of this type, then do not require a secondary skill. But if all

members of a Wizard Kit share the same skill-- or one of a small number of skills-- then you might require it of all characters who take this kit.

**Weapon Proficiencies:** Often, certain types of wizards tend to favor certain types of weapons. Others select their weapons from a wide range of choices. If the wizard described in your kit seems to prefer one or two weapons more than others, note this in the kit. Keep in mind, however, that all wizards share certain weapon restrictions-- see Chapter 5.

**Nonweapon Proficiencies:** As with weapon proficiencies, many wizards tend to have certain skills in common. For instance, it would be hard to imagine a Patrician who wasn't skilled in Etiquette. Therefore, one or two nonweapon proficiency slots can be given free of charge to characters taking this kit. If appropriate, the proficiencies can come from the Priest, Rogue, and Warrior listings. Normally, the cost in slots for non-wizard proficiences would be higher, but this can be ignored when kits are being given free.

**Equipment:** If a wizard is known for using certain types of equipment, require that such a character have this equipment before the campaign begins. If some but not all wizards of this type use the same equipment, then it needn't be required; instead, simply list it as recommended equipment.

**Special Benefits:** Although not necessary, most Wizard Kits should have some special benefit. Any kind of benefit is acceptable, but it should relate to the way this wizard operates in fiction, mythology, or similar source material. Possible benefits could include:

- Bonuses to reaction rolls, particularly from certain categories of people. Bonuses on wizard proficiency uses, especially in specifically defined situations.
- Bonuses to hit and/or damage, especially against certain categories of enemies, or in special circumstances.
- Special resistances, such as an immunity or bonus to saving throws against specific magical attacks or types of magic.
- Special rights in the culture in which the character normally travels (such as immunity from prosecution or free lodging on demand).

**Special Hindrances:** One or more special hindrances should be imposed which limit the character as much as his special benefits help him. Possible hindrances include:

- Penalties to reaction rolls, especially from certain categories of people.
- Penalties to hit and/or damage, particularly against certain categories or enemies, or in special circumstances.
- Restrictions from learning certain nonweapon proficiencies.
- Special restrictions in the culture in which the characters normally travel (for instance, the wizard is prohibited from owning property or is punished excessively for certain crimes).

**Wealth Options:** Does the wizard have less or more starting gold than other characters? Are there any restrictions as to how his starting gold must be spent?

**Races:** Note any variations for wizards of specific races. Are any races barred from the kit? Does any race receive special benefits, proficiencies, or hindrances when taking this kit?

**Notes:** If there are any additional details about the kit, explain them fully. You can also adapt kits to other classes by adjusting the skills, weapons, proficiencies, benefits,

and hindrances. A campaign might include Academician Priests or Patrician Warriors

## Wizard Kit Creation Sheet

At the end of this book is a blank Kit Creation Sheet. Copies of this sheet may be made to help you design new kits. The DM or players can design new kits appropriate to the character types they would like to play. However, if a player designs his own kit, he should check all details of the kit with his DM. The DM may make changes, or he may disallow the kit altogether

### Suggestions for New Kits

Here are a few ideas that might be developed into new kits:
Dragon Master (a wizard with a special affinity for dragons and the magic they use)
Outlaw Wizard (a wizard who is rightly or wrongly wanted by the law)
Spiritualist (a wizard with a special interest in ghosts, spirits, and extraplanar phenomena)
Nomad (a rootless wizard with no permanent homeland)

# Chapter 4: Role-Playing

Your wizard character now has a specialty, an interesting variety of low-level spells, a nice set of proficiencies, and a kit from the previous chapter.

Ready to adventure? Not quite. There's more to role-playing a wizard than casting spells, checking proficiencies, and swinging a staff at the bad guys. In this chapter, we present suggestions for role-playing techniques that will help your character come to life

## Wizard Personalities

No two wizards are alike. They may have the same specialties, the same spells, even the same backgrounds, yet each has his own set of quirks, flaws, goals, and interests that make him a unique personality.

This chapter provides descriptions of different wizard personalities drawn from fantasy literature and mythology. Players should look at them all and see if any of the descriptions fit their conceptions of their characters.

Each player should think about what his character would be like if he actually existed-- would he be bold or cautious? Greedy or generous? Considerate or selfish? Thoughtful? Impulsive? Flamboyant?

If any of the personality types listed seem right for your character, feel free to use the description as a basis for making role-playing decisions about a PC's actions and goals. The descriptions can also be used to help decide how a PC interacts with NPCs and with other members of his party. If none of these descriptions seem exactly right for your character, perhaps one or more of them will inspire you to create a new personality type.

Each personality description below includes the following information:

**Character Description:** This section describes the character's general attitudes,

motivations, and outlook, and how he is most likely to function in a typical campaign. In some cases, suggestions are given as to what types of players might find this particular personality type the most enjoyable to play.

**Best Suited For:** Some personality types are more appropriate for certain alignments than others, and some are more appropriate for certain kits than others. This information is provided here.

These are only recommendations, not hard and fast rules, and using alignments and kits other than the ones suggested might require some imaginative rationale on the part of the DM and the player. For instance, an Entertainer/Savage Wizard could exist, but he will probably be rare in a typical campaign world. Novice players are advised to remain within the alignment and kit recommendations in this section.

**In Combat Situations:** Each personality type approaches combat situations in a slightly different fashion. Some might charge straight ahead with their weapons swinging, while others might hold back to size up the enemy before committing to a course of action. Some might cast their strongest spells first, others might hold them in reserve. This section details each personality type's combat style.

**In Role-Playing Situations:** This section explains how the character is likely to react when encountering NPCs. These suggestions should be used as guidelines when role-playing conversations, including interrogations, interviews, and small talk. This section will also give an idea how the character might interact with the other player characters.

### The Altruist

**Character Description:** The Altruist is a selfless humanitarian, his actions fueled by a passion for justice. The Altruist regards his magical skills as a special gift to be used to promote the common good, and he devotes his life to the welfare of others. He is admired by the oppressed, scorned by oppressors, and respected by all. Because his goals are simple and his values are unambiguous, this personality type is a particularly easy one to play. It is a good choice for characters of beginning players. Experienced players, however, may find him a bit boring, and the DM should be aware that an entire party of Altruists can lead to a lifeless campaign.

**Best Suited For:** Any kit is appropriate for the Altruist. Obviously, this type of character should be of good alignment, lawful good being the most frequently encountered.

**In Combat Situations:** The Altruist is a courageous, aggressive combatant. He is as selfless on the battlefield as he is in all other walks of life; if an Altruist has a single *protection from evil* spell, he will cast it on the most vulnerable member of his party, using it on himself only if he's absolutely certain that all of his companions are safe. He attacks honorably and with mercy, accepting the surrender of his opponents whenever possible. He assumes leadership roles if necessary, though he seldom seeks them.

**In Role-Playing Situations:** The Altruist is polite, even-tempered, and thoughtful. He has little patience for liars and cheaters, and NPCs who exploit the helpless are especially repugnant to him. Most NPCs, except those of evil alignment, admire and respect the Altruist's strong moral code, but some NPCs may see him as self-righteous and pompous.

## The Brooder

**Character Description:** The Brooder is tormented with self-doubt; he worries about his relationship with the rest of the universe, where he fits in with the rest of mankind, and the meaning of his own existence. He may dwell for days on the ramifications of some seemingly insignificant action. If he makes a wrong decision or a decision he perceives as being wrong, he may become consumed with self-loathing, spiraling into a deep depression that can persist for weeks. Holding himself to impossibly high standards, the Brooder is continually disappointed with his performance as a wizard, a citizen, and as a human being.

Obsessed with perfection, the Brooder tends to be an extremely skilled spell caster and combatant. His mind is sharp and his actions are precise and correct. Although he usually succeeds at whatever he attempts, his accomplishments seem to bring him little fulfillment or joy.

Not surprisingly, the Brooder's outlook on life is dismal. He believes the struggle between good and evil can never be won; it will continue to claim victims on both sides for all eternity. Friendship is valued but transient; a friend today can be an enemy tomorrow. Acts of courage and selflessness are admirable but ultimately futile. Existence is a tragic joke-- men are only puppets in the hands of incomprehensibly cruel gods.

Because the Brooder seldom voices his opinions, this personality is a good choice for players who tend to be quiet. Conversely, the Brooder is a nice change of pace for players who normally take charge.

**Best Suited For:** Because the Brooder tends to reject moral absolutes, he gravitates toward neutral alignments, particularly neutral good and chaotic neutral. The Brooder can use any kit, but the Academician, the Mystic, and the Wu Jen are especially good choices.

**In Combat Situations:** The Brooder is an excellent fighter. Cowardice is unknown to him; since he doesn't believe his own life is particularly precious, he fights as if he has nothing to lose. He is calm and clear-thinking in times of crisis, using his spells to their maximum effectiveness. If necessary, he will unhesitatingly risk his life for a friend.

If the Brooder is preoccupied with a past mistake or a depressing philosophical revelation, he may be slow to join a battle. Likewise, if the Brooder is in a state of mind where the differences between good and evil seem especially ambiguous, he may decline to participate in a fight. Usually the Brooder can be roused to battle by a firm request from the party leader or the gentle urgings from a trusted companion. Even in the depths of despair, the Brooder will not stand idle and allow harm to come to his companions.

**In Role-Playing Situations:** In most encounters with NPCs, the Brooder will remain quiet and distracted, leaving most of the talking to his companions. He is loathe to offer his opinion, and seldom cares to hear the opinions of others. Most of the time, he is

simply apathetic. Most NPCs perceive the Brooder to be emotionless and preoccupied, and keep their distance. Sensitive NPCs might feel sorry for him.

The Brooder's attitude can be extremely frustrating to his fellow player characters. Since he keeps to himself most of the time, usually his companions will only be able to guess what he's thinking or feeling.

Some PCs may attempt to befriend him. Kindness and patience will eventually break through a Brooder's shell. Although he may not show it, the Brooder feels friendship deeply, and may even share his deepest thoughts with a companion who has been kind and caring

## The Commander

**Character Description:** The Commander is a natural leader who exudes authority. This may be due to his upbringing, his training, his innate tendencies, his birth order (these types tend to be first-born), or any combination of these factors, but whatever the reasons, taking charge comes automatically to the Commander. He is decisive, imposing, and inspiring.

The safety of his companions is of paramount importance to the Commander, and he feels personally responsible for their actions. The Commander is not always the leader of his party-- he understands that a leader cannot function without able followers-- but he always tends to act like one, issuing orders, taking charge, and showing initiative whenever others are slow to act.

Players selecting this type of character should be prepared to make most of the decisions for the group. If a player is uncomfortable with this role, he would do better to choose a different personality type.

**Best Suited For:** Lawful and neutral are the most appropriate alignments for Commanders. Characters of evil alignment might demonstrate good leadership, but are too self-centered to fit the nature of this personality. Chaotic characters usually lack the necessary discipline needed for leadership.

A Commander can take the Amazon, Anagakok, Militant Wizard, Patrician, Peasant Wizard, Savage Wizard, or Wu Jen kit. Academicians tend to be too analytical and Mystics are too self-absorbed. Most Witches will have difficulty gaining the complete trust of their parties, though Witch Commanders are certainly feasible.

**In Combat Situations:** A Commander is a master tactician and superb strategist. In combat, his mind is constantly at work, looking for weaknesses in an enemy's defense, weighing attack options, considering the best positions for friendly forces, and deciding when to withdraw and when to press ahead. Even if someone else is actually in charge, the Commander inevitably will be issuing orders and attempting to boost his party's morale.

**In Role-Playing Situations:** Unless he is outranked or asked to refrain, the Commander will presume to speak for the group in NPC encounters. He will negotiate a group rate for the party at an inn, and speak to the local authorities about recruiting extra men for an anticipated battle. Depending on his manner, NPCs may see the Commander

as either arrogant or accommodating, but they will always be impressed with his self-confidence

## The Counselor

**Character Description:** The Counselor is a learned man of calm self-assurance who typically serves as an advisor to rulers, administrators, military men, and adventurers.

A Counselor is typically older than other adventurers and is usually more experienced, but could also be a younger character with a special talent for understanding human nature or a natural empathy.

A man of integrity and great dignity, he is respected not only for his knowledge, but also his insight into human behavior. He believes in moderation and justice, and has a helping hand and kind word for all.

The Counselor is a good choice for players who like to play thoughtful, even-tempered characters who are more apt to be advisors than leaders. Since novice and low-level characters lack the experience for this personality type, mid-level and high-level characters (especially those with high Wisdom scores) are the best choices to be Counselors.

**Best Suited For:** Because a Counselor's relationship with others is based on trust, characters of good alignments are best suited for this personality type, especially lawful good characters. Chaotic good characters can function as Counselors as well, although this type of Counselor will be guided more by his own personal philosophies than by any accepted standards of law and moral values. Neutral characters tend to be too selfish; it is unlikely that other characters would turn to them for advice. Evil Counselors are not likely to be accepted in a party whose members are mostly good and/or lawful.

Any kit can be adapted to this personality type. The Academician is a logical choice, but the Mystic and Wu Jen also make good Counselors (the Wu Jen has much eastern wisdom to offer, while the Mystic is eager to share his insights into the human condition).

**In Combat Situations:** The Counselor is a veteran of many battles, but because he is likely to be of advanced years, he is not the best physical combatant. He most likely will remain in a protected position, probably near the back of the party or in a good vantage point from which to cast spells.

The Counselor is also an excellent negotiator. Whenever possible, he will try to seek common ground with an aggressor in an attempt to avoid combat. The Counselor seldom takes the role of a military leader, but usually functions as the leader's chief advisor and consultant.

**In Role-Playing Situations:** All but the most mean-spirited and evil-hearted NPCs will respect the Counselor for his wisdom and compassion. The Counselor will never turn his back on a person in trouble, and is forever making the problems of others his own. At the same time, the Counselor is a shrewd judge of character and is usually the first to spot a charlatan or a duplicitous NPC.

In a campaign, the Counselor is everybody's best friend. He always has time to hear his companions' problems, no matter how trivial, and serves as a source of both comfort

and sage advice

## The Intimidator

**Character Description:** Many believe that the wizard is the most powerful of all mortals-- the Intimidator is convinced of it. Radiating power and confidence, the Intimidator faces all challenges head on. There's no opponent too tough and no obstacle too difficult for him. His access to magic makes him superior to all others-- at least *he* believes this to be fact. His reaction to common people-- that is, people who cannot cast spells-- ranges from sympathy to impatience, but as long as they acknowledge his superiority, he can tolerate them.

Usually, this amount of confidence evolves over many years, so most Intimidators are mid-level or high-level wizards. But an especially powerful or an especially arrogant lower-level wizard might easily be an Intimidator.

An inflated ego alone is not enough-- this personality type is primarily intended for wizards who are in fact more powerful than their contemporaries. To qualify as an Intimidator, a wizard should have higher than normal scores in at least two abilities other than Intelligence (for instance, a wizard with Strength and Charisma scores of 12 or more would be a good candidate for an Intimidator). However, even if a character lacks exceptional abilities, he might still be an Intimidator if he has a reputation as a no-nonsense aggressor and has the personality to match.

**Best Suited For:** The Intimidator is suited to any alignment, though characters of neutral and chaotic alignments might make better egomaniacs; neutral good, neutral evil, chaotic good, and chaotic neutral are all appropriate choices.

Any kits that suggest aggressive, grim characters are good for the Intimidator, with the Savage Wizard and the Militant Wizard being obvious choices. More passive types, such as the Mystic and Academician, are less appropriate for the Intimidator.

**In Combat Situations:** The Intimidator loves nothing more than a good fight. He is a shrewd, dangerous opponent bent on extinguishing every one of his enemies.

Although he does not attack recklessly, the Intimidator prefers to face off with the most formidable opponent on the battlefield. Where some wizards might use *fireball* to frighten a group of opponents by sailing it over their heads, the Intimidator would scare them by firing it directly at their leader, incinerating him.

**In Role-Playing Situations:** The Intimidator is accustomed to getting his way. If reason fails, he will threaten, frighten, or otherwise intimidate NPCs to get their cooperation, unless a player character companion intervenes.

The Intimidator is a man of few words. He knows that a snarl or a stare can be a much more effective way to coerce uncooperative NPCs than long speeches or kind words. Needless to say, the Intimidator is not especially adept at delicate negotiations.

In a campaign, all player characters will respect the Intimidator, but he's likely to associate only with player characters he sees as peers, such as high-level warriors and other wizards. The Intimidator will tend to be patronizing and condescending to the rest of the party, treating them as well-meaning children, incompetent bumblers, or outright

irritants

## The Mercenary

**Character Description:** The Mercenary sees the adventuring life as a means to further his personal wealth. He may accept a job with a party at a set salary or might agree to take a fixed share of any treasure the party finds. Any interest he has in the party's goals are secondary to his pocketbook.

Not all Mercenaries are interested in money. Some may be interested in acquiring souvenirs for their personal collections, while others may wish to hoard magical devices or fatten their spells books. In all cases, however, the Mercenary's first interest is in himself.

A Mercenary is not necessarily a criminal or a thief-- he prides himself in his professionalism and has no shame about his interest in wealth and material possessions. Since his motivations are straightforward, the Mercenary is a good personality type for novice players.

**Best Suited For:** The Mercenary is best suited for neutral alignments, particularly neutral good and lawful neutral. Lawful good characters are less inclined to exploit others for personal gain, while evil characters are more likely to turn to criminal activities to increase their wealth. This personality type is suitable for any kit.

**In Combat Situations:** The Mercenary is a good, professional combatant. He takes orders well, offers strategic suggestions when asked, and fights valiantly alongside his companions. However, he will not volunteer for dangerous missions, nor will he unnecessarily risk his neck unless he gets extra pay or there's a chance of recovering an especially desirable treasure.

**In Role-Playing Situations:** The Mercenary tends to let the other player characters do most of the negotiating and interacting with NPCs. He may take a more active role if he suspects an NPC has information about a treasure or about any of his other personal interests. Otherwise, there are no restrictions for the Mercenary-- he can be humorous and personable, introverted and serious, or arrogant and obnoxious, as determined by the player

## The Mystery Man

**Character Description:** The Mystery Man is a genuine enigma. Surrounded in a veil of secrecy, his motivations, his goals, and the details of his background are kept hidden from even his closest companions. He favors dark clothing and speaks only when necessary; his words are often cryptic or vague, suggesting that the Mystery Man knows far more than he chooses to reveal.

No one is certain why the Mystery Man behaves as he does. Perhaps it is due to an oath to an ancestor, or perhaps it is a neurotic compulsion. Whatever the reason, the Mystery Man is clearly determined to operate on his own terms. Consequently, the Mystery Man is a good personality type for players who feel comfortable with offbeat

characters.

**Best Suited For:** The Mystery Man is perfectly suited for neutral alignments, especially neutral good and lawful neutral, but any alignments are possible. The Mystery Man's reason for maintaining his veil of secrecy might suggest an appropriate alignment. For instance, if he has taken an oath to avenge the death of his spouse, he might be lawful good. If his magical aptitude makes him feel like an outcast from society, but he still identifies with order and organization, he might be lawful neutral. If he conceals his identity because he is an escaped criminal, he might be lawful or neutral evil.

Any of the kits can be adapted to the Mystery Man.

**In Combat Situations:** Typically, the Mystery Man listens impassively to the orders of his leaders, then fights as he chooses. The Mystery Man can be counted on to do the unexpected; as a battle gets underway, he may suddenly vanish, then abruptly appear in the midst of an opposing force. He might use *control undead* to command undead creatures to lift him to their shoulders and carry him into battle. He might *summon shadow* for a whispered conversation, dismiss the shadow, then use *light* to make himself glow while he attacks an opponent.

While his fighting style is eccentric, it is startlingly effective. Opponents are usually baffled by the Mystery Man's tactics or are intimidated by his manner and appearance. For these reasons, the Mystery Man is a first-rate combatant.

**In Role-Playing Situations:** The very presence of the Mystery Man is enough to make many NPCs uncomfortable. While he usually lets his companions do most of the talking, NPCs often are so intimidated by the Mystery Man that they are quick to cooperate just to get rid of him. Many NPCs of the opposite sex find that the Mystery Man's veil of secrecy makes him intriguing and extremely attractive. While polite and considerate to his companions, the Mystery Man has no interest in socializing with them.

## The Neophyte

**Character Description:** The Neophyte is a young, low-level wizard: an inexperienced novice anxious to begin his life as an adventurer and excited about the prospects ahead.

However, the Neophyte's eagerness is more than matched by his naivete. He has seen little of the world outside of his homeland; when encountering new cultures or experiencing new situations, he may be confused and intimidated or curious and impulsive. Since he tends to overestimate his abilities and underestimate dangers, he constantly gets himself into trouble. Still, his cheerful outlook and youthful enthusiasm endear the Neophyte to his companions, and he is a welcome member of any party, even if his friends usually have their hands full looking after him.

Hopefully, the Neophyte will not be naive forever. With experience comes wisdom, and with wisdom comes sophistication. As a campaign progresses, the Neophyte should temper his impulsiveness with caution and his brashness with maturity. Therefore, this personality type is only a temporary one-- at some point, the character will abandon the role of the Neophyte and grow into a different personality. The road from innocence to maturity is a fascinating one, making the Neophyte an excellent choice for novice

wizards and beginning role-players.

**Best Suited For**: The entire range of neutral and good alignments are open to the Neophyte. Characters with evil alignments should be avoided-- they aren't trusting or naive enough to make enjoyable Neophyte characters.

Since all wizards begin their careers as novices, any kit suits the Neophyte, although the serious-minded Wu Jen and Academician are less likely to exhibit the Neophyte's enthusiasm and impulsiveness.

**In Combat Situations:** The Neophyte has probably experienced little combat in his life, especially the life-threatening variety. Although understandably nervous, he is also determined to do his best and prove to his comrades that he is not just a child who needs to be protected. Unfortunately, this attitude often results in inappropriate and ineffective tactics; the Neophyte is likely to charge his opponents head-on, regardless of their size or strength, or fire missile weapons at anything that moves. He might seem to cast spells at random, sometimes squandering his most powerful magic on relatively defenseless foes. As an inexperienced spell caster, he is not familiar with sophisticated casting techniques; for instance, when faced with a charging wolf pack, he's more likely to use *magic missile* on a single wolf instead of casting it on a nearby cliff-face to cause an avalanche, thus destroying the entire pack.

Assuming his companions can keep him from accidentally killing himself, the Neophyte gradually learns from experience, becoming a more skillful combatant as he matures. Eager to learn, a Neophyte will make a good student to a more experienced comrade. An older and wiser PC wizard might wish to take a Neophyte under his wing to show him the ways of the world.

**In Role-Playing Situations:** Generally, the Neophyte does not know how to act around NPCs, particularly those older than him. He might be shy and say nothing, or he might blurt out something inappropriate. Figures of authority intimidate him, smooth-talkers take advantage of him, and attractive members of the opposite sex reduce him to a blathering, stammering idiot.

The Neophyte tends to accept people on face value; he never guesses that a friendly stranger might be picking his pocket. Friendly, personable NPCs will find the Neophyte charming and amusing; impatient, businesslike NPCs will find him exasperating and annoying

## The Obsessive

**Character Description:** The Obsessive is motivated by a single, all-consuming goal. This goal might be learning a particular spell, locating a long-lost mentor, acquiring a particular magical item or artifact, or avenging the death of a loved one. The goal might also be completely unrealistic, such as ridding the world of all evil, or filling his spell books with the formulas of every known spell.

The Obsessive focuses on the resolution of his goal to the exclusion of all else. He views his association with an adventuring party as a means to an end; for instance, he might join an adventuring party if he learns that they are journeying to a faraway

kingdom where he believes an artifact might be located. The Obsessive cooperates with an adventuring party only to the extent that their goals don't conflict with his.

If his goal is realistic, it is unlikely that a character will remain an Obsessive forever. A player selecting this personality type might want to choose a second personality type for his character once he reaches his goal. This second personality type might also suggest a goal for the Obsessive. For instance, if a character is a Commander at heart, he might become an Obsessive if he is consumed with finding an evil NPC responsible for killing all of his men. When he brings the NPC to justice, the Obsessive reverts to Commander.

**Best Suited For:** Characters of any alignment can be Obsessives, though certain obsessions are more appropriate for certain alignments. For instance, an Obsessive bent on avenging his daughter's murder probably has a strong sense of justice; he's probably of lawful alignment. A greedy Obsessive who seeks a legendary fortune in gold could be of a neutral alignment, possibly neutral evil.

Any kit can be used for the Obsessive.

**In Combat Situations:** The Obsessive tends to be a brutal, savage fighter, since he sees opponents as another obstacle between him and his goal; he wants them out of the way as quickly as possible. Negotiation makes him impatient; he would rather blast his adversaries to bits with a *fireball* than waste time talking. That does not mean that the Obsessive takes unnecessary risks-- after all, he cannot reach his goal if he's dead-- but he is prone to recklessness and can easily endanger his companions if he is not kept in check by a firm leader.

**In Role-Playing Situations:** In all cases, the Obsessive is more concerned with his personal goal than the goal of the party. He'll question NPCs intently for information about his goal, and if they have nothing to offer, he will seek out other NPCs to interview. If the party leader convinces him that he is operating to the detriment of the party's goals as well as his own, the Obsessive will restrain himself, but this will probably be only temporary.

In a campaign, the Obsessive is self-absorbed and humorless. He will talk incessantly to his companions about his own goal, but his eyes will glaze over when they share their problems or opinions with him. The Obsessive's attitude does nothing to endear him to his companions, but depending on the nature of his goal, they may feel sympathy or compassion for him

## The Showman

**Character Description:** No one enjoys being a wizard more than the Showman. He delights in dazzling friends and foes alike with surprising, dramatic magical effects. Nothing stirs the heart of a Showman more than learning a new magical effect or putting a new twist on an old spell. He sees magic as a fine art, comparable to sculpting, composing, and painting. He has more appreciation for a well-executed cantrip than for a mundanely-cast 9th-level spell.

The Showman casts spells with a flair. He considers both opponents and allies as

potential audiences. If a spell requires a short phrase for its verbal component, he'll incorporate the phrase in a song or poem. If a spell requires him to point at a subject, he will use a series of elaborate and dramatic gestures to arrive at pointing his finger. His alteration spells are strikingly imaginative; his illusions are breathtaking works of art. Nothing frustrates a Showman more than having to use a spell in the same way twice, especially if his audience of friends or foes has seen it previously.

The Showman's flamboyance is easily matched by his ego. He wallows in the approval of others; applause is like music to him, a compliment is like food to a starving man. However, even the most casual criticism can send him sulking and an insult can devastate him.

Most often, the Showman is cheerful and upbeat. Most people find him great fun to be around, and no one can argue that his approach to magic is genuinely entertaining. This is a good character type for players who want to introduce more humor and playfulness into a campaign.

**Best Suited For:** The spontaneity typical of the chaotic alignments makes them good choices for the Showman, but good and evil alignments are appropriate (the good-aligned Showman loves to share his skills with others and bring smiles to their faces; the evil-aligned Showman enjoys frightening and intimidating them). The Showman is not likely to be drawn to the cautious and self-centered neutral alignments.

The Showman is best suited for the Amazon, Peasant Wizard, Witch, and Wu Jen kits. The Academician tends to be too cerebral, the Anagakok and the Militant Wizard too serious, the Savage Wizard too unsophisticated, the Mystic too introspective, and the Patrician too stuffy.

**In Combat Situations:** The Showman relishes combat, since it gives him a perfect opportunity to show off his spells. Needless to say, the Showman will always go for the most spectacular, dramatic, and dazzling effects-- if he wants to scare away an opponent with *phantasmal force*, why create a simple ogre or troll when he can create a multi-headed werewolf with purple tentacles and 10-inch golden fangs? Unfortunately, his flair for the dramatic sometimes finds him squandering his higher-levels spells unnecessarily, such as in using *lightning bolt* when the less-spectacular *magic missile* would be just as effective.

**In Role-Playing Situations:** Since the Showman views all new acquaintances as potential audiences, he enjoys meeting people from all walks of life. The Showman is especially fond of members of the opposite sex, and will often go to great lengths to impress and dazzle them, sometimes at the expense of the business at hand. Most NPCs see the Showman as endearing and charming, but some find his attention-getting antics obnoxious.

Among his companions, the Showman is appreciated for his pleasant attitude and positive outlook. He is always able to boost morale with a clever trick or entertaining demonstration. At times, PC leaders might have a problem impressing the Showman with the seriousness of a situation or getting him to focus on an important task, but flattery or indulgence usually get the Showman's cooperation

## Changing Personality Types

Players are encouraged to alter the above personality types in any way they see fit. Characteristics of one personality can be combined with characteristics of another to create brand new types (Brooding Commanders are possible, as are Obsessive Mystery Men). The DM is also free to modify the personality types and make suggestions to his players. As always, the DM has the right to forbid the players from choosing extreme personalities for their characters; for instance, the DM might decide that Mercenaries are too disruptive to his campaign and suggest an alternative to his players.

Sometimes, a player might wish to change his character's personality. Maybe the character has matured and outgrown his old personality type. Or maybe the character has reached a turning point in his life that has forced him to change his outlook or rethink his philosophy.

Since the personality types are not governed by a strict set of rules, players can change them whenever appropriate. However, such changes should be rare, and typically should mark a major turning point in his life; a player should not change his character's personality just for the sake of trying something new. A personality change should develop naturally out of the events of the campaign, perhaps as a result of a catastrophic event; for instance, an Altruist might become a Brooder because a friend or family member was brutally murdered by a hoard of pillaging orcs.

Following are some ways such changes might occur.

The Altruist may become disillusioned when a formerly trusted companion sells him out or when he realizes that his good intentions are unappreciated by the commoners he has vowed to defend. This Altruist might then become a Brooder. If his altruism turns to cynicism, he might decide to become a Mercenary.

The Brooder may experience an enlightening event that gives him a more positive attitude; for instance, he could earn the admiration of a child or he could fall in love. Since he is sensitive and introspective by nature, a former Brooder could become a Counselor.

The Commander could become fed up with the constant responsibility for the others in his party, or the burden of command could begin to overwhelm him. Depending on his disposition, he could become a Brooder, a Counselor, an Altruist, or even an Intimidator. Regardless of his change (unless he is consumed with bitterness or completely amoral) he'll still have leadership tendencies and likely will find the urge to give orders impossible to resist.

The Counselor isn't likely to change, since his personality type is associated with maturity and experience. He could temporarily become a Commander if no one else was available, but most other personalities are so contrary to his nature that he would find it difficult to change himself.

The Intimidator is not likely to change much, either. Possibly, falling in love or experiencing some other dramatically positive experience could soften him enough to make him consider changing his outlook. In time, a reformed Intimidator could become a Counselor, or he could eventually assume the duties of a Commander.

The Mercenary could easily become an Obsessive if he becomes consumed with acquiring an impossibly large amount of treasure or locating an artifact that does not exist. Exposure to the world's impoverished and neglected might encourage him to

change his ways and become an Altruist.

The Mystery Man could become just about any other personality type (except a Neophyte) once he decides to abandon his veil of secrecy.

The Neophyte will eventually become more mature and lose his youthful naivete. His experiences in the campaign will probably suggest a new personality for him. (Note that it is extremely unlikely that a character will change from his current personality into a Neophyte; that would probably require the character to lose his memory and become young again.)

The Obsessive will not change unless he gives up his obsession, in which case he will likely become a Brooder. If he reaches his goal, he could become nearly any personality type.

The Showman might be forced to assume more responsibility and become a Commander, or he could become disillusioned with constantly trying to win the approval of others and become a Brooder. If he begins charging money for his performances, he might be tempted to become a Mercenary. A Showman bent on developing the ultimate magical effect might risk becoming an Obsessive.

## Ideas for New Personality Types

The personality types are not confined to the ones suggested above. Here are a few other possibilities:

- The Sidekick (a trusted companion and assistant to a player character).
- The Compromiser (a superb negotiator, dedicated to preserving harmony and good relations among his companions).
- The Coward (a reluctant fighter, frightened of everything and always expecting the worst).
- The Carefree Wanderer (a happy-go-lucky wayfarer).
- The Sneak (a wizard who loves to trick people and take advantage of their naivete).
- The Chronicler (a historian devoted to making a permanent, detailed record of his party's activities)

## Character Background

When a player has selected a personality type for his character, he can individualize him further by making decisions about his appearance, his interests, his family, and other details about his background. This information does not need to be recorded on the character sheet, but the player is certainly allowed to do so. The more a player knows about his character, the more he will seem like a real person and be more fun to play. Here are just a few of the many details to consider.

**Name:** Some wizards prefer exotic names that add to their reputations as men of mystery. Such a name is sometimes a modification of the wizard's real name, such as "Brindon" for a wizard whose real name is "Benbrindon Swule. " Alternately, a wizard might make up a new name for himself; for instance, Benbrindon Swule might decide to call himself "Antra," an arcane term meaning "Champion of the Dawn. " Many wizards

also add an adjective to their names to declare their importance to the world, such as "Brindon the Dark" or "Antra the Magnificent. "

**Age:** Think about the wizard's age and how it might influence his outlook and attitudes. Older wizards tend to be wiser and slower, while younger wizards are more energetic and impulsive. Wizards frequently have long careers; human wizards can be active well into their 80s and beyond. However, it is unusual for a novice wizard to be younger than 20 or so, since magical training can take many years.

**Physical Appearance:** What does the wizard look like? How tall is he? How much does he weigh? What color are his hair and eyes? Does he have any interesting birthmarks? Scars? How did he get them?

**Mannerisms:** Often a wizard has a unique physical quirk, eccentric behavior, or habitual expression that sets him apart from the crowd. Does the wizard rub his chin when he's thinking? Does he always sleep on his back? Does he pick his teeth with his fingernail?

**Beliefs:** Is the wizard religious? Is his outlook on life generally positive, or is he a pessimist by nature? Is he superstitious? Does he have any phobias?

**Birthplace and Nationality:** The wizard's birthplace reflects his cultural heritage, which in turn influences the way he looks at the world. Is he upper class (or the equivalent)? Middle class? Born in poverty?

**Family:** What were the wizard's parents like? Did they encourage him to be a wizard, or are they ashamed of his avocation? Was the wizard an orphan (and if so, has he learned why he was abandoned)? Does he have brothers and sisters? Is he still close to them? If not, what happened?

**Birthright:** Does the wizard have a special birthright, such as a family heirloom or a share of the family holdings? Does he stand to inherit this birthright when he reaches a certain age or achieves a certain goal?

**Education:** Where did the wizard receive his magical training? Did he attend a prestigious academy? Was he taught by a mentor? Several mentors? Is he on good terms with them, or are they estranged? If so, what happened?

**Career:** Unless the wizard is independently wealthy, depends on the kindness of strangers, or lives like a hermit, he probably has some way to earn a living. In many cases, a wizard's school of specialization will suggest a career; for instance, a diviner could probably earn a good living as a fortune teller. Otherwise, the character can pick any career or vocation that seems reasonable and doesn't contradict his upbringing. (See the following section for suggestions.)

**Clothing:** You can tell a lot about a person by the way he dresses. A wizard favoring

dark robes suggests a conservative personality, while a wizard wearing glittering shirts and multi-colored trousers is probably as flamboyant as his clothing.

**Likes and Dislikes:** Does the wizard have a favorite food? A favorite drink? Does he like music, books, or art? What types? What does he do for fun? Is he a sportsman? A gambler? A collector?

## Wizardly Careers

Owing to their wide range of abilities, the professions available to wizards are almost without limit. Below are a few of the most common careers. Each career includes the names of specialists and kits which are commonly associated with it-- but note that these are general guidelines only, and there are likely to be exceptions in many campaigns.

### Teacher

A wizard opting for a career as a teacher could be either an instructor at a magical academy (full-time or part-time), a professor at a regular college, or a private tutor. The wizard's background might suggest his academic field; history, mathematics, and any of the sciences are likely possiblities.

Suggested Kits: Academician, Patrician, Wu Jen

Suggested Specialties: Invoker, Abjurer, Transmuter, Enchanter

### Administrator

Frequently, the local wizard is one of the most learned men in his geographic area. If he has earned the trust of the citizenry, he may be asked to serve as a government administrator. Wizards are more likely to be administrators of small villages than large cities, since the needs of a small village are not likely to be as demanding, leaving the wizard plenty of free time to pursue his research.

Suggested Kits: Academician, Amazon Sorceress, Militant Wizard, Patrician

Suggested Specialties: Diviner, Abjurer, Transmuter

### Advisor

Noted for their wisdom and insight, wizards are sometimes retained by monarchs as personal advisors. Diviners are especially sought for these positions.

Suggested Kits: Academician, Amazon Sorceress, Mystic

Suggested Specialties: Conjurer, Enchanter, Transmuter, Diviner

### Trader

A wizard's quest for hard-to-find components for his spells and his research can take him to cities and villages around the world. A career as a tradesman can be a natural outgrowth of these travels. Wizard traders are most likely to deal in precious gems, potions, and various collector's items. A wizard may also earn a living as a broker in spell

components, dealing exclusively with other wizards.
Suggested Kits: Anagakok, Militant Wizard, Peasant Wizard, Savage Wizard
Suggested Specialties: Transmuter, Enchanter, Abjurer

### Physician

Although the healing arts are more typically associated with priests, wizards also have been known to work in the field of medicine, thanks to their talents for manufacturing potions of healing and other healthful elixirs. Wealthy noblemen have been known to hire wizards as their personal physicians.
Suggested Kits: Academician, Anagakok, Witch
Suggested Specialists: Enchanter, Abjurer, Necromancer

### Treasure Hunter

A wizard who spends his days as a member of an adventuring party has ample opportunity to discover treasures and earn rewards. Exceptionally talented wizards may receive a weekly or monthly retainer from an adventuring party in addition to a share of any treasure discovered or rewards earned. Such wizards have no need for formal careers, assuming their services are in demand or the missions they undertake are successful.
Suggested Kits: Amazon Sorceress, Anagakok, Militant Wizard, Savage Wizard
Suggested Specialists: Conjurer, Illusionist, Necromancer, Invoker

### Entertainer

A wizard with a flair for the dramatic can earn a decent-- if irregular-- living as a professional entertainer. Opportunities include private shows for noblemen, annual celebrations, and street performances after which the wizard passes the hat for donations. Enterprising wizards sometimes rent halls and stage shows, charging admission from entertainment-starved citizens.
Suggested Kits: Peasant Wizard, Witch
Suggested Specialists: Illusionist, Conjurer

### Lecturer

To earn a living as a lecturer, a wizard must have the engaging personality of an entertainter as well as the knowledge of a scholar. Such a wizard may travel from city to city, giving lectures in his field of expertise at the invitation of academies, royal courts, and private organizations. Lecturers with reputations as compelling speakers sometimes rent halls and charge admission.
Suggested Kits: Academician, Patrician, Mystic
Suggested Specialties: Conjurer, Enchanter, Transmuter, Diviner

### Author

Experienced wizards sometimes record their research procedures, tips for successful

spellcasting, or techniques for magical item creation in detailed manuscripts. Depending on the reputation of the wizard, such tomes can command hefty sums. Rarely are more than a few copies of any such manuscript produced, but each copy may fetch thousands of gold pieces for the author. Some wizards also have made names for themselves as authors of history, mathematics, and philosophy texts.

Suggested Kits: Academician, Patrician, Mystic

Suggested Specialists: Conjurer, Enchanter, Diviner

### Fortune Teller

Diviners can take advantage of their skills by charging for their fortune telling services. While it is common for kings and other noblemen to retain the services of an astrologer, palm reader, or other type of fortune teller, some wizards set up shop on their own, charging a fee to anyone in need of their talents. Unscrupulous wizards have been known to sell their services as fortune tellers to superstitious peasants, even though these wizards may lack any actual ability in this area.

Suggested Kits: Amazon Sorceress, Mystic, Witch, Wu Jen

Suggested Specialists: Enchanter, Diviner, Conjurer

### Alchemist

Many wizards with a flair for research and laboratory technique become successful alchemists. Most of their work is non-magical in nature, creating fertilizers, perfumes, cough medicines, tooth powders, and food coloring for modest fees. Magical potions, while requiring more skill and effort, are also sold, although few commoners can afford such expensive creations.

Suggested Kits: Academician, Witch, Wu Jen

Suggested Specialists: Transmuter, Invoker, Enchanter, Necromancer

## Wizard Adventures

Occasionally, the DM might wish to slant some of his campaign's adventures toward his wizard player characters. To do so, he needs to devise a way to bring the wizard characters into the adventure without excluding the other player characters. Following are several suggestions that can be used as springboards for this sort of adventure

### The Novice Wizard

A low-level wizard who has just graduated from an academy of magic (or has just ended his apprenticeship with a mentor) is often sent into the world to complete a mission or quest. The mission serves as his final exam; its completion proves to the novice's superiors that he has successfully mastered his magical skills and is ready to take his place as a full-fledged wizard. Failure means that the novice requires additional training.

There are all types of suitable missions. For instance, the novice's superiors might ask him to journey into an uncharted jungle to retrieve the blossom of a rare flower. They might ask him to explore the ruins of an ancient castle to search for a long-lost spell

book, or travel to a small village and drive off a hoard of invading monsters. Since most mentors encourage their apprentice wizards to seek help (it teaches them the importance of cooperation), the wizard might recruit his player character companions to aid him.

### The Outcast Wizard

In many societies, the practice of magic is considered blasphemous. Ordinary citizens shun and despise all wizards, considering them to be disciples of supernatural forces. In extreme cases, those suspected of being wizards are imprisoned or even executed.

A player character wizard may have been operating secretly in such a society, fearing the worst if his true skills were revealed. The wizard would welcome the chance to join a party preparing to embark on any type of adventure, if it were to take him far away from his homeland. Alternately, a party might encounter a wizard who was forced to leave home when his skills were discovered by his countrymen or his family.

### Magic's Good Name

In a world where magic has a bad reputation, a PC wizard might want to join an adventuring party to prove that magic can be used as a force of good. If the party's mission is successful and the wizard is at least partly responsible, magic might once again be accepted as a respectable and honorable profession.

There are any number of situations incorporating this idea:

- The PC wizard wants to confront an influential ruler in a distant land who is responsible for spreading propaganda about the inherent evil of magic. The ruler might be an evil wizard, bent on stirring up support from the populace to stamp out rival wizards. He could also be of good alignment, but a bad experience with magic as a youth left him prejudiced against all wizards.
- The PC wizard wants to learn how many wizards still exist in the world. Perhaps many wizards have gone into hiding, and the PC wizard is determined to find out what has happened to them.
- The PC wizard wants to discover how many young people are interested in learning magical skills. Perhaps the PC wizard wishes to establish a magical academy of his own, or perhaps he wishes to find a young novice with whom he can share his knowledge. Are such students difficult to find? If so, why? Will the PC wizard face resistance from the family of a potential student? From the local authorities? What must the PC wizard do to prove that his intentions are honorable?
- The PC wizard wants to verify rumors that a violent feud has erupted between two organizations of wizards in a distant land, thus sullying the reputations of wizards everywhere. The rival wizard groups might be of different alignments, members of oppositional schools, or from different races. Their feud might be over a contested piece of land or a landmark-- such as a tower or cemetery-- or one group might have religious objections to the type of spells used by the other group. Settling their disagreements can be used as a springboard for new adventures.

### Assisting the Citizenry

Many wizards serve as administrators, advisors, or teachers, or hold other positions of responsibility in their communities. The local citizens are likely to barrage such wizards with a constant stream of requests for favors and assistance. Most of these requests will be trivial and easily addressed, but others might require the PC wizard to recruit the help of his player character companions.

Sometimes, a seemingly innocuous request ("Something's been into my crops-- I think it's a bunch of kids. Could you stop them?") might lead the PC wizard to believe that more is happening than meets the eye. He might summon his companions to help him investigate, and their discoveries could be the beginning of a long campaign. (The party discovers clawed footprints among the damaged crops. The footprints lead to a nearby forest, then abruptly vanish. What's going on?).

### The Scholarly Quest

A wizard player character engaged in magical research might require a particular component that exists only in a hard-to-reach part of the world. If the journey promises to be dangerous, the wizard might ask his friends to accompany him. Alternately, if a PC wizard encounters a party going in the same direction, he might agree to assist them on their mission in exchange for safe passage to the location of his sought component. After recovering the component, the wizard might have become close enough to the other PCs to voluntarily continue on their mission with them. Or maybe the other PCs got the wizard out of a tough spot and the wizard feels obligated to return the favor by completing the mission with them.

The party's mission might coincide with something the wizard PC wants. For instance, the party might be embarking on a mission to stop a notorious evil wizard. The evil wizard might possess a magical device the PC wizard has coveted for a long time. The PC wizard could agree to help the party in exchange for the magical device.

### Out of Retirement

An elderly wizard might grow weary of his sedentary existence and welcome any opportunity to add some excitement to his life. Such a wizard would eagerly join any party of player characters if the party's mission promised to be exciting and didn't violate the wizard's personal values (a PC wizard of good alignment is unlikely to join an evil party about to embark on a murder spree unless he is pretending to be evil in order to stop them).

Since a party can always use an extra wizard, a group of player characters might coax an old PC wizard out of retirement to help them on a mission. The PC wizard might be enticed by a monetary reward, the lure of adventure, or the possibility of settling an old debt (perhaps the party believes they will be facing an old nemesis of the PC wizard). The PC wizard also might agree to help them out of a sense of loyalty to his former companions

## Magic in the Campaign World

Whether designing a campaign or establishing the parameters of a single adventure, the DM will find it helpful to understand the prevalence of magic in his world. Is magic relatively common-- are wizards encountered as frequently as any other character type-- or is magic extremely rare, with practitioners relegated to rumors and legend? Deciding how much magic exists involves not just the number of wizards and magical items, but also the prevalence of spells, magical monsters, and magical effects in general.

Here are a few of the questions the DM should consider when deciding how magic fits into his world:

**How common are wizards?** The frequency with which wizards are encountered gives a good indication of how often a party is likely to encounter magical items and spell books. Obviously, if magic is uncommon, magical items are especially valuable.

**How available are academies and mentors?** A world with little magic provides would-be wizards with few opportunities to learn their crafts. Advancement through the various levels of skill is likely to be slow. Certain specialties may not be available at all. Conversely, a world where magic is relatively common should have a variety of specialists of all levels among its population.

**How are wizards accepted among the general population?** Are wizards feared or respected? Revered or despised? A predominance of magic does not guarantee that the general population feels comfortable with wizards; though familiarity can foster acceptance, it can also breed prejudice and resentment.

**Is there a relationship between magic and political power?** Wizards usually wield more power than any other group in a society. Have the wizards used their power for political gain? Are they commonly found as rulers and administrators? Does the general population reject the idea of wizard rulers (wizards are too strange or too frightening) or do they embrace it (wizards are smart and deserve to run the government)?

**How integrated are wizards in the rest of society? Do wizards live openly, or must they keep their abilities secret?** Are wizards able to walk down the street unmolested, or do they invariably draw a crowd of curious on-lookers or hostile townsmen who regard them as a threat? Do they live in a special area of town, or can they make their homes anywhere they wish? Do they associate only with other wizards, do they mingle freely with people from all walks of life, or do they prefer a solitary existence?

There are no fixed rules for the amount of magic available in a campaign world, as long as the DM strives for consistency and balance. Following are some general guidelines for several different types of campaigns.

## Worlds With Excessive Amounts of Magic

In worlds where magic is relatively common, the non-wizard is sometimes the outsider. Wizards are the most frequently encountered character class and typically hold all positions of power. Wizards of good alignments consider themselves caretakers of the non-wizard population; wizards of evil alignments see the non-wizards as an exploitable

resource.

Kingdoms controlled by evil wizards often clash with one another. They also frequently wage war on kingdoms controlled by good wizards. The awesome power wielded in these conflicts can easily devastate the entire world. (Think of such conflicts as the wizardly equivalent of nuclear war.)

Mentors and academies of magic are common, as are wizards of all schools and levels. Novices tend to rise quickly in ability, and high-level wizards are in abundance. Magical items and magical monsters abound. There may be a large number of priests as well, since they are also magic-users, but an abundance of wizards does not guarantee that a world has an abundance of priests. (Priests get their magical abilities from the gods, who may be as generous or as stingy with their gifts as the DM wants.)

Worlds where magic is prevalent are invariably populated by a large number of powerful characters. The DM will probably have his hands full trying to maintain play balance, devising challenging adventures for his player characters, and prevent non-wizard player characters from feeling overwhelmed or insignificant. For these reasons, it is suggested that only experienced DMs attempt to stage adventures in a magic-heavy campaign world. Creating a world where magic is taken for granted can be difficult, but for DMs and players up to the challenge, it can be a fascinating alternative

## Worlds With Typical Amounts of Magic

"Typical" in this sense means the amount of magic present within the limits of an average AD&D® campaign world. In such worlds, magic is known to exist, but real wizards are regarded with awe and perhaps a little suspicion. Average people may be baffled by magic and others may be afraid of it, but all are impressed by its power.

Wizards are uncommon, especially those of higher levels. Novices wishing to master a particular school of magic may have to work hard to find a suitable mentor or academy. In some areas of the world, certain specialists may not even exist. Spell books, magical items, and magical monsters are relatively rare; finding one will probably be a major event in the life of any character.

To avoid violating the unique nature of magic in this type of world, the DM must be careful to set limits on the availability of magical items, spell books, and magical effects in general. He also may wish to limit the number of magic-users by deciding whether PCs can be multi-class or dual class characters with wizard or priest spells. In a campaign where such restrictions are in force, evil wizards will not need to be quite as powerful to be effective against a typical party. Without such restrictions, there are likely to be more magic-users in a party, meaning that evil wizards will need to be of higher levels to be effective opponents.

## Worlds With Low Amounts of Magic

Not surprisingly, wizards are rare commodities in worlds where little magic exists. Most people have never seen a real wizard. In some of these societies, wizards are confined to myths and legend. A player character wizard will likely be restricted to low levels, and advancement will be difficult. In fact, it may be impossible for a wizard to reach higher levels of ability-- such spells may simply not exist. Magical items are

extremely rare, if they exist at all. Magical monsters are equally rare, but those encountered are especially formidable, wielding powers unheard of by a typical adventuring party.

## Worlds With No Magic

By means of a portal, a magical device or artifact, or divine intervention, an adventuring party might find themselves on a world where magic does not exist. Alternately, a player character may find himself transported from a world where magic is common to a world with no magic. Aside from the PC wizards in the party, such a world has no wizards at all. There are also no magical items, spell books, magical monsters, or magical effects of any kind. Such a world will have a number of interesting ramifications for wizard characters, as well as for the party as a whole.

- There is no way to recharge rods and other magical items.
- There is no way for a wizard to learn new spells.
- Magical research is impossible.
- Magical potions no longer exist (aside from those the characters brought with them).

How would such a world react to a wizard? As an analogy, imagine how people of our world would react to the news that an actual wizard walked the planet. Some would beseech him for favors, while others would seek to exploit him. Some would see him as a hero, while others would see him as a physical manifestation of their religious beliefs. Governments might attempt to recruit him as a weapon against enemies. Scholars might seek to study him. Unsophisticated people, fearful of his power, might try to capture or kill him.

Obviously, a world without magic is radically different from the typical AD&D® campaign world, but it can be a refreshing change for the DM and a stimulating challenge for players with wizard PCs. There are many interesting themes to explore in this type of campaign world, but the action is also likely to be more subdued without magical monsters and evil wizards for opponents.

## Campaign Variations

Following are a few off-beat suggestions for using wizards and magic in a campaign. The DM is free to modify, combine, and vary these suggestions as he sees fit

## The All-Wizard Campaign

In this type of campaign, most of the player characters are wizards. Other classes are allowed, but they are usually restricted to one character from each class. (That is, a party can have no more than one warrior, one priest, and one rogue-- the rest are wizards.)

To begin this type of campaign, the DM can encourage players to take PC wizards by fostering an atmosphere where NPCs have a special admiration for wizards or where magic is an especially revered field of study. Alternately, the DM can simply require the players to use wizard characters. All wizard kits are allowed in this type of

campaign, as are multi-class and dual-class characters as long as one of the class choices is wizard. The DM is forewarned that he will have to be especially creative to invent adversaries of sufficient power to provide acceptable challenges for a party of wizards.

### The Single Wizard Kit Campaign

The DM might decide that all magic in his world stems from a particular culture; therefore, all wizards must have the same kit. This includes player character wizards and well as NPC wizards of all alignments. Among the kits especially appropriate for this type of campaign are the Amazon, the Anagakok, and the Wu Jen. If the DM wishes, player characters of all classes might be required to take the same kit, but this is not necessary for an interesting campaign.

How this type of campaign affects the existence of magical items and magical monsters is the decision of the DM, but there are likely to be fewer of both (see *Worlds With Low Amounts of Magic* in the Magic in the Campaign World section above). In a campaign where all magic comes from an Amazon culture, all magical items will have their origin in that culture. Dragons, for instance, may exist throughout the world, but all of them trace a common ancestry to a land dominated by Amazons.

### The Restricted School Campaign

In this type of campaign, certain schools of magic do not exist. For instance, in a world where the school of illusion does not exist, wizards do not have access to *phantasmal force*, *minor creation*, or any other illusion spells, nor are they allowed to specialize as illusionists. Researching these types of spells is also forbidden. If a spell belongs to two schools, then the spell is still available if it belongs to a school that still exists. For instance, in a world where the school of illusion does not exist, *rainbow pattern* is available since it also belongs to the school of alteration.

Whether magical items that duplicate the effects of non-existent schools are available is the DM's decision, but for consistency, it makes sense to forbid them. Another good idea is to give wizards access to the spells from the school of lesser divination-- it is very difficult to function as a wizard without them.

As another variation, the DM might consider having more than one non-existent school in his campaign world. (Schools in direct opposition to one another, as shown in Figure 1 in Chapter 2, are good choices to eliminate. For instance, if the school of illusion is nonexistent, then the school of necromancy might not exist either). In an especially restrictive world, perhaps only one school of magic exists; if only the school of illusion exists in the DM's world, then all wizards must be illusionists and have access only to illusion spells-- spells from any other school do not exist.

### The Restricted Level Campaign

Similar to the Restricted School Campaign, in this variation, high-level magic does not exist. For instance, the DM might decide that no spells of 6th level or higher exist. Therefore, a wizard has access to spells of 1st level through 5th level only, and he is unable to research higher-level spells. As with the Restricted School Campaign, the DM

decides whether magical devices duplicating the effects of higher-level spells exist.

# Chapter 5: Combat and the Wizard

This chapter tells the wizard how to make the most of his magical abilities in combat. It also includes some tips for effective strategy and planning, along with advice on weapon selection.

## The Spell Arsenal

### The Wizard's Advantages

In combat, there are two important advantages a wizard has over the non-magicusing members of his party:

1. The wizard is an extremely versatile opponent; high-level wizards are likely to be the most versatile characters in an adventuring party.

2. While the abilities of most other characters tend to confine them to specific roles, the wizard can adapt his skills to new situations by selecting the appropriate spells from his spell books (assuming that the wizard has access to a variety of spells). For instance, a high-level warrior has the same skills today that he did yesterday.

But a high-level wizard begins each day anew, memorizing a selection of spells from his spell books that may be radically different from those he memorized the day before. With the right spells, a wizard can be a master of reconnaissance one day and an engineer of destruction the next. But if a wizard has a large selection of spells in his spell books, how does he know which ones will be most helpful on any particular day? Some wizards, of course, will simply load up with their most powerful spells and hope for the best. But a shrewd wizard will look closely at his spells and analyze their primary functions to decide which are the most appropriate to a particular situation.

## Spell Categories

A helpful way for a wizard to analyze his arsenal is by assigning his spells to various categories. The following system uses six categories based on a spell's use in combat situations. The categories include:

**Defensive 1.** This category of spells provides protection from harm. It includes spells that make the subject more difficult to hit, increase his resistance to damage, and shield him from various types of opponents. Usually, a wizard casts this type of spell on himself or on his allies.

**Defensive 2.** This category of spells hinders an opponent's ability to attack without directly causing damage to the opponent. It includes various *charm, hold*, and blinding spells, along with spells that add penalties to an opponent's attack rolls. Usually, a wizard

casts this type of spell directly on one or more of his opponents.

**Offensive 1.** This category of spells increases the chance to inflict damage on an opponent. It includes spells that give bonuses to attack and damage rolls, as well as those that increase strength. It does not include spells that directly inflict damage. Usually, a wizard casts this type of spell on himself or his allies.

**Offensive 2.** This category of spells directly inflicts damage on opponents. It includes spells that cause an opponent to lose hit points, such as *chill touch* and *lightning bolt*, spells that cause creatures to lose levels of ability, such as *energy drain*, and spells that cause damage to specific creatures, such as *transmute water to dust*. Usually, a wizard casts this type of spell on one or more of his opponents, although exceptions include spells that create or summon entities to fight on the caster's behalf, such as *monster summoning*.

**Reconnaissance.** This category reveals information about opponents or provides warnings about their actions.

**Special.** This catch-all category includes spells that have no specific offensive, defensive, or reconnaissance use in combat.

How do you decide which spells belong to which categories? It is not an exact science, but rather a generalization based on a spell's most common use in combat situations. For instance, *fireball* can be used to destroy inanimate objects, but in combat situations, it is usually used to inflict damage on an opponent; therefore, it is an Offensive spell -- Offensive 2, to be exact. *Light* is helpful for finding the way in a dark cavern, but in combat, it can be used to blind opponents to reduce their attack rolls, making it a Defensive spell-- more precisely, a Defensive 2 spell. (For quick reference, it may be helpful to note each spell's category next to its name on the character sheet.)

If a spell seems to fit into more than one category, that is to be expected. Remember, the point is not to draw rigid boundaries, but to learn to think in terms of a spell's function as opposed to its level or flashy name. As an illustration, here are categorizations of some 1st- and 2nd-level spells from the *Player's Handbook*.

**Defensive 1:** *Protection from evil, armor, shield, mirror image, invisibilty, blur*

**Defensive 2:** *Color spray, enlarge, light, grease, shocking grasp, taunt, wall of fog, deafness*

**Offensive 1:** *Spectral hand, strength*

**Offensive 2:** *Burning hands, shocking grasp, chill touch, flaming sphere, stinking cloud*

**Reconnaissance:** *Alarm, comprehend languages, message, detect undead, ESP*

**Special:** *Dancing lights, erase, hold portal, jump, mending, spider climb, wizard mark*

The various categories are discussed in detail in the following sections. Players should use the information to help them assign their spells to categories, which in turn will enable them to choose the best spells for their wizards to memorize in a particular situation

## Defensive Spells

Defensive spells provide protection from specific or general types of attacks in the following ways:

- By acting as a shield or barrier (*protection from normal missiles*)
- By decreasing an opponent's attack capability (*slow*)
- By giving temporary immunity (*stoneskin*)
- By removing the subject from a dangerous situation (*teleport*)
- By sending away the opponent (*dismissal*)
- By reducing the amount of damage suffered (*armor*)

The school of abjuration offers the greatest variety of Defensive spells, but Defensive spells are also available in every other school. Some particularly effective Defensive spells are offered in the schools of alteration (*gaze reflection* and *wraithform*), enchantment/charm (*sleep* and *hold person*), and illusion (*hypnotic pattern* and *mislead*).

Spells in the Defensive 1 category are typically cast on the wizard or on his companions to provide direct protection from attacks; *globe of invulnerability, invisibility,* and *protection from evil* are examples of Defensive 1 spells. Spells in the Defensive 2 category are typically cast on one or more opponents to hinder their ability to attack or prevent them from attacking altogether; *fumble, ray of enfeeblement*, and *binding* are examples of Defensive 2 spells.

In general, Defensive 2 spells offer more protection than Defensive 1 spells, since they effectively protect the entire party. For instance, a wizard protecting himself with the Defensive 1 *globe of invulnerability* spell may be safe from an attacking opponent, but the opponent is free to attack the wizard's companions. However, an opponent affected by the Defensive 2 *sleep* spell cannot attack anybody in the party.

Following are some general situations in which a wizard will find Defensive spells particularly useful:

*The party has only a few members or has only low-level members.* The wizard's inability to use armor is his most vulnerable characteristic. A wizard must either count on his companions for protection or provide it for himself. In small parties, there probably are not enough members to provide bodyguards for the wizard. A small party will also have their hands full in combat situations, and probably will not have the time or the resources to look after a wizard. Likewise, a party of low-level characters lacking high-quality armor or other protective devices may have to depend on their wizard to provide protection for them.

*The party has taken an excessive amount of damage.* A party that has lost a lot of hit points is not in a position to take chances, especially if they anticipate trouble. A wizard armed with Defensive spells can help the party through any tough times ahead.

*The party includes other player character wizards who lack Defensive spells.* If the party does not know what type of dangers it may face, a good idea is to have as many different types of spells available as possible. It is helpful if the wizard arms himself with a healthy supply of Defensive spells if his fellow magic-using companions do not have them or choose not to use them.

*The wizard anticipates being alone.* If the wizard expects to be alone on guard duty or investigating a dangerous locale by himself, operating as a spy, or otherwise functioning without the company of others, he is safest with a supply of Defensive spells to compensate for his lack of armor.

*The party anticipates encountering a specific type of enemy.* Many Defensive spells offer protection against a specific type of attack. If the party believes it will be encountering a particular type of opponent, the wizard should arm himself accordingly. (For instance, if the party anticipates encountering an evil wizard, Defensive spells such as *dispel magic* and *Serten's spell immunity* would be wise choices.)

## Offensive Spells

Offensive spells increase the ability of the caster (or persons of the caster's choice) to inflict damage, or directly inflict damage on opponents in the following ways:

- By attacking specific targets (*magic missile*)
- By attacking all opponents within a designated area (*cloudkill*)
- By summoning surrogates capable of attacking (*monster summoning*)

Schools offering a variety of Offensive spells include conjuration/summoning (*flame arrow* and *Evard's black tentacles*,) invocation/evocation (*fireball* and *death fog*), and necromancy (*spectral hand* and *death spell*.

Spells in the Offensive 1 category are typically cast on either the wizard or on his companions to increase their ability to attack or inflict damage; strength, spectral hand, and enchanted weapon are examples of Offensive 1 spells.

Spells in the Offensive 2 category are typically cast on one or more opponents to inflict damage directly, effectively functioning as weapons for the wizard; *flaming sphere, shocking grasp*, and *finger of death* are examples of Offensive 2 spells.

In general, Offensive 2 spells are more effective than Offensive 1 spells, since they inflict damage directly. For instance, a wizard successfully casting an Offensive 1 strength spell on himself must still strike an opponent to inflict damage; a successfully cast *fireball* inflicts damage immediately. Following are some general situations in which a wizard will find Offensive spells particularly useful:

*The party is large or has a number of high-level members.* Again, the main consideration is the vulnerability of the armor-less wizard. In larger parties, there are

likely to be enough members to supply the wizard with a bodyguard or two (note that this does not mean a bodyguard in the literal sense, but rather a designated member to help protect the wizard from attacks). Likewise, if the party has several high-level members with a lot of hit points and high-quality armor, they will not be as dependent on the wizard for protective spells. A wizard who does not need a lot of Defensive spells is free to arm himself with a high number of Offensive spells.

*The party has few warriors*. While unusual, it is not impossible for a party to be completely composed of wizards, priests, and rogues. In such a case, a wizard with an arsenal of Offensive spells can make an acceptable substitute for a warrior. But note that even the best-armed wizard must still contend with a low Armor Class, meaning he will still need to rely on one or more of his companions for protection.

*The party is making its last stand.* When a party is facing its final challenge at the climax of an adventure (presuming the party realizes they have reached the climax of an adventure) or is making a life-and-death stand against an opponent of awesome power, they may need all of the offensive capabilities they can muster. If the wizard genuinely feels he has nothing to lose (or if the wizard is willing to sacrifice his life to achieve the party's goals), he may wish to arm himself with as many Offensive spells as possible to maximize his party's chance of success.

*The party anticipates facing an onslaught of enemies*. A party may also need heavy offensive capabilities if they anticipate facing a large number of enemies (such as a battlefield filled with hundreds of orcs and goblins) or a few enemies with a lot of power (such as a cadre of giants). Again, unless the wizard is willing to lay down his life for the cause, the party should take the wizard's vulnerability into account when planning their strategy.

*The party includes other player character wizards who lack Offensive spells.* This principle applies to the use of Offensive spells as well as Defensive spells. If the first wizard in a party has nothing but Defensive spells, and the second wizard has a variety of both Offensive and Defensive spells, it makes sense for the second wizard to arm himself with Offensive spells (unless one of the situations described above suggests a different strategy).

**Reconnaissance Spells**

Reconnaissance spells neither inflict damage nor provide protection, but they serve a vital function in combat by furnishing crucial information in the following ways:

- By revealing the presence of enemies (*detect evil*)
- By revealing enemy motivations (*ESP*)
- By revealing enemy actions (*clairvoyance*)
- By revealing future events (*foresight*)
- By revealing past events (*legend lore*)
- By employing supernatural guidance (*vision*)

Obviously, most Reconnaissance spells come from the school of greater divination, but other schools have them as well, including abjuration (*alarm*), alteration (*comprehend languages* and *wizard eye*), and illusion (*magic mirror*). Following are some general situations in which a wizard will find Reconnaissance spells particularly useful:

*The party is entering an unknown area.* The more a party knows about the potential dangers of a previously unexplored castle, jungle, or stretch of enemy-occupied terrain, the better they can cope with whatever they meet. A quick survey of the territory by a wizard using *clairvoyance, detect evil,* or similar spells can be an effective deterrent against ambushes and other unexpected surprises.

*The party is unsure of the enemy's motivations.* Not all NPCs are enemies (maybe they are hostile because they assume the PCs are the bad guys), and not all enemies are bent on destroying the party (maybe they are trying to get back to their leader as quickly as possible and the PCs are in their way). A wizard using *ESP, know alignment,* or similar spells can clarify the motives of NPCs, possibly allowing the party to avoid combat entirely.

*The party needs a lookout or a volunteer for guard duty.* A wizard armed with spells such as *clairaudience, clairvoyance, foresight,* and *wizard eye* makes an excellent lookout. He can also serve as a party's communications officer in combat, keeping track of his companion's actions, tracking the actions of the enemy, and becoming alerted to companions in need of assistance.

*The party needs a spy.* The wizard who knows a variety of Reconnaissance spells makes a perfect spy, either acting by himself (in which case he should ensure that his chances of being discovered are small, since he has no armor) or in conjunction with a companion who can serve as his bodyguard. Unlike rogues or invisible characters, who are also good candidates for spying missions, a wizard using *clairaudience, ESP,* and similar spells can gain a lot of information from relatively safe distances.

## Special Spells

Special spells are those that have limited use in combat. They do not offer protection, inflict damage, or reveal information. Such spells assist the party in these ways:

- By making repairs (*mending*)
- By labelling personal possessions (*wizard mark*)
- By changing appearances (*alter self* and *fool's gold*)
- By creating various illusionary effects *(illusionary wall* and *minor creation*)

Though nearly all schools have their share of Special spells, the school of illusion has a surplus of them, which is one reason why the illusionist is considered by many to be the least useful specialist in combat.

This does not mean that Special spells are completely useless on the battlefield. As with all types of magic, clever wizards will invariably find a variety of uses for Special spells. For instance, the Special spell *dancing lights* does not cause blindness or inflict

damage, but cast at the right time, it could be used to distract an opponent, rendering him momentarily unable to attack. In general, however, Special spells are the worst choices for a wizard anticipating combat.

## A Mix of Spells

In the examples above, we suggested a number of situations where it is to the wizard's best advantage to arm himself with an arsenal of spells from a particular category. In some situations, however, a wizard might be better arming himself with a few spells from each category. Here are a few examples:

*The party is beginning a new adventure*. When embarking on a new adventure or a new episode of an ongoing campaign, it is unlikely that the party will know exactly what obstacles or dangers they will face. In these cases, a wizard armed with a mix of Defensive, Offensive, Reconnaissance, and Special spells will be able to handle a variety of situations. As the adventure progresses and the party accumulates more information, the wizard can adjust his spell mix accordingly, perhaps concentrating on Defensive or Reconnaissance spells as the situation dictates.

*The party has only a single wizard.* In this case, the party might have to rely on the wizard to assume a variety of roles-- for instance, he may be expected to provide magical protection for the party (requiring Defensive spells) as well as ferreting out information about its opponents (requiring Reconnaissance spells). Of course, the more duties a wizard assumes, the less effective he can be at any one of them, but sometimes such a situation is unavoidable. The party has a large number of powerful characters in a variety of classes. The more power a party has at its disposal, and the more that power is dispersed among a large number of characters, the less dependent they will be on any one party member. In this case, a wizard's arsenal of spells is not as crucial. If the party has a number of strong warriors for offensive and defensive actions (as well as an extra warrior or two to serve as bodyguards for the wizard), has some rogues for spies, and has a magical scrying device, it is not vital for a wizard to concentrate exclusively on Defensive, Offensive, or Reconnaissance spells.

*The wizard has no choice.* If the wizard is just beginning his career, he probably does not have a lot of spells in his spell books. Likewise, if he has only Defensive spells in his spell book, he obviously cannot choose from the various categories.

## Weapon Restriction

Wizards are severely limited in the weapons they can use. Little if any of their formal training is devoted to combat, and they usually are unable to devote the time and effort necessary to master such skills. Consequently, their weapon choices are confined to those that are easy to learn and simple to use. As a general rule, the DM should confine wizards to the following weapons:

Blowgun

Barbed dart

Needle
Dagger or dirk
Dart
Knife
Quarterstaff
Sling
Sling bullet
Sling stone
Staff sling

These restrictions apply to magical weapons of similar types as well. For instance, just as a wizard is denied the use of a two-handed sword, he is denied the use of a *two-handed sword +1*.

In certain situations, the DM may allow a wizard to use a weapon other than those listed above. However, the DM is cautioned to make exceptions to the wizard's weapon restrictions with care, to avoid unbalancing the game and violating the special nature of the wizard.

Here are a few situations where the DM might consider making exceptions to the wizard's weapon restrictions:

**The wizard's kit allows for different weapons.** The Anagakok kit, for instance, allows for tridents and harpoons, while the Amazon kit allows for spears and long bows. If the DM gives permission for players to pick one of these kits, or another kit with weapons other than those listed above, he should also allow him to use the kit's weapons. However, the DM is within his rights to forbid the use of any weapon-- if he decides harpoons are unavailable in his campaign world, then even an Anagakok cannot use them.

**Instruction in the use of a particular weapon was part of the wizard's training.** Just as certain kits allow certain weapons, certain cultures might require all of its citizens to master certain weapons. A warlike culture, for instance, might insist that all of its male citizens are to be trained in the use of swords and spears, and wizards are not excluded. The player must establish these type of background details at the beginning of his character's career -- they cannot suddenly be brought into play in the middle of a campaign ("Did I forget to mention that my character's father trained him to use a club?"). As always, the DM can veto any background suggestions that he considers unacceptable in his campaign.

## Chapter 6: Casting Spells In Unusual Conditions

A wizard's adventures can take him to all kinds of exotic locations. But if he finds himself battling foes beneath the ocean's surface or exploring a mysterious locale in an alternate plane of existence, he will discover that his spells are operating a little differently than usual. This chapter explains the differences.

Spell casting abilities can also be affected by sensory changes, such as a temporary loss of vision, an impaired ability to speak, and impaired movement. These problems, as

well as how a wizard's spells are affected when cast under less than optimum conditions and how he might compensate for these differences, will be discussed in this chapter.

## Casting Spells Underwater

Assuming that the wizard can find a way to breathe underwater for extended periods (such as a *water breathing* spell or potion), most of his spells will function normally underwater, with identical casting times, ranges, components, and effects. There are, however, a number of exceptions, detailed below. Rather than being frustrated by these changes, the wise wizard will study them carefully and use them to his advantage

### Spells That Are Ineffective Underwater

The following spells cannot be cast or will not function underwater. All spells are from the *Player's Handbook* except those labeled NS (for New Spell) which are found in Chapter 8 of this book. Spells marked with an asterisk ( * ) will function normally when cast within the bounds of an *airy water* spell.

**1st Level**

*affect normal fires**
*burning hands**
*jump**
*mount*
*wall of fog**

**2nd Level**

*flaming sphere**
*fog cloud **
*pyrotechnics**
*summon swarm*
*whispering wind**

**3rd Level**

*fireball*
*flame arrow**
*gust of wind*
*illusionary script**
*Melf's minute meteors*
*wind wall*

**4th Level**

*fire aura* (NS)
*fire charm*
*fire shield ** (only the flame shield version of this spell is forbidden; the chill shield version functions normally)
*fire trap*

*shout* *
*solid fog* *
*wall of fire*
*wind breath* (NS)

**5th Level**
*cloudkill* *
*distance distortion*

**6th Level**
*control weather*
*death fog* *
*guards and wards* *
*lower water*

**7th Level**
*delayed blast fireball*

**8th Level**
*incendiary cloud*

**9th Level**
*meteor swarm*

## Spells That Are Modified When Cast Underwater

The following spells are altered as described when cast underwater. All spells are from the *Player's Handbook*, except those labeled NS (for New Spell) which are found in Chapter 8 of this book

**1st Level**
*Chromatic Orb* (NS): The heat, fire, and stinking cloud effects are unavailable underwater.

**2nd Level**
*Filter* (NS): Instead of filtering vapors, filter eliminates poisons in the water.

*Ice Knife* (NS): Because of water resistance, an ice knife cast underwater can strike targets only within 10 yards. It causes a maximum of 1-4 hit points of damage.

*Melf's Acid Arrow*: The acid from this arrow lasts only a single round before it is washed away by surrounding water.

**3rd Level**
*Fly*: This spell enables the subject to swim effortlessly at any depth and in any direction, even if the subject is encumbered or is normally too heavy to float. The

maximum speed is 9.

*Lightning Bolt:* Instead of a stroke, the electrical discharge takes the form of a sphere with a 20-yard radius, centering on the point where a stroke would have occurred if the spell had been cast above water. All those within the sphere suffer 1d6 hit points of damage per level of the caster; the maximum damage is 10-60 (10d6) hit points. A successful saving throw reduces this damage to half (round fractions down).

*Monster Summoning I:* Only creatures that can breathe and function underwater can be summoned. (If available, the DM should use the appropriate Aquatic Monster Summoning table in the *Monstrous Compendium*.)

*Phantom Steed:* A phantom steed created underwater is a hippocampi with a black forebody and silver-gray scales. These steeds do not gain the special traveling or flying abilities of the regular *phantom steeds*, but they do gain the movement rate of 4 per level of the spell caster (to a maximum movement rate of 48). Otherwise, they are similar to the steed created by the spell.

**4th Level**

*Ice Storm*: The hail stones created by this spell will be as large as normal, but their downward force is greatly reduced, inflicting only 1-10 hit points of damage before floating toward the surface. The sleet variation of this spell is useless underwater, since all of the sleet melts as soon as it is created.

*Monster Summoning II:* Only creatures that can breathe and function underwater can be summoned. (If available, the DM should use the appropriate Aquatic Monster Summoning table in the *Monstrous Compendium*.)

*Wall of Ice*: A *wall of ice* can be formed underwater, but it immediately floats to the surface and bobs in the water like an ice floe. This renders the *ice plane* and hemisphere variations useless. The *ice sheet* variation of this spell inflicts no damage underwater.

**5th Level**

*Conjure Elemental:* Air elementals and fire elementals cannot be conjured underwater. Earth elementals must remain on the floor of the sea, lake, or river from which they are conjured. While unable to leave the floor, they can still attack creatures or assault constructions that are resting on or are imbedded in the floor. Water elementals can be conjured normally.

*Monster Summoning III*: Only creatures that can breathe and function underwater can be summoned. (If available, the DM should use the appropriate Aquatic Monster Summoning table in the *Monstrous Compendium*.)

*Transmute Rock to Mud:* This spell operates underwater as it does elsewhere, except

that the mud immediately begins to dissipate. If cast on the ocean floor (or the floor of any other body of water), only extremely heavy creatures who are unable to swim are in any danger of sinking into the mud.

**6th Level**

*Chain Lightning*: Underwater, this acts as a *lightning bolt* of twice the normal size (either a forked bolt up to 20 feet wide and 80 feet long, or a single bolt 10 feet wide and 160 feet long. However, it strikes only a single object and inflicts only 1d6 hp of damage for every level of the caster (save vs. spells for half damage). It will not arc to other targets.

*Conjure Animals:* Only creatures that can breathe and function underwater can be conjured.

*Monster Summoning IV:* Only creatures that can breathe and function underwater can be summoned. (If available, the DM should use the appropriate Aquatic Monster Summoning table in the *Monstrous Compendium*.)

*Otluke's Freezing Sphere:* The *frigid globe* variation of this spell can be extremely dangerous to the caster when cast underwater. The globe of absolute zero matter will instantly freeze the water around the caster into a block of ice of a volume equal to 50 cubic feet per level of the caster. The entombed wizard will immediately float to the surface. Unless he receives assistance or is able to free himself, he will immediately begin to suffocate.

*Part Water:* This spell can be used to form a "tunnel" through water-filled areas, no wider than 10 feet in diameter. The "tunnel" contains air, enabling creatures inside it to breathe normally.

*Transmute Water to Dust:* Casting this spell underwater causes a "hole" to open in a previously water-filled area. The size of the "hole" is up to 10 cubic feet per level of the caster. Assuming there is sufficient surrounding water-- that is, if the spell was not cast on or near the surface of the water-- the unaffected water will rush in, inflicting 1 hit point of damage per level of the caster to all within (no saving throw).

**7th Level**

*Monster Summoning V:* Only creatures that can breathe and function underwater can be summoned. (If available, the DM should use the appropriate Aquatic Monster Summoning table in the *Monstrous Compendium*.)

*Mordenkainen's Magnificent Mansion:* At the caster's option, the mansion can be filled with water, or the influx of water can be prevented, keeping the mansion's interior tidy and dry.

**8th Level**

*Monster Summoning VI:* Only creatures that can breathe and function underwater can be summoned. (If available, the DM should use the appropriate Aquatic Monster Summoning table in the Monstrous Compendium. )

*Sink:* This spell places the subject a specified number of feet beneath the floor of the lake, ocean, or sea. The magic of the containment will radiate through the water to the surface.

**9th Level**

*Monster Summoning VII:* Only creatures that can breathe and function underwater can be summoned. (If available, the DM should use the appropriate Aquatic Monster Summoning table in the *Monstrous Compendium*.)

## Casting Spells in Other Planes

As described on page 132 of the *Dungeon Master's Guide*, the AD&D® game world consists of many planes of existence aside from the familiar Prime Material plane. Just as physical laws operate differently in these planes, so do the effects of magic and the ways in which spells are cast. General guidelines for using wizardly magic in the various planes are given below. (If planning a campaign in one or more of the other planes of existence, or if a DM is interested in additional information about the planes, consult the *Manual of the Planes*.)

### The Ethereal Planes

From the wizard's perspective, the key features of the Ethereal planes include the following:

- The effects of time occur 10 times slower than on the Prime Material plane. For instance, for every 10 turns that pass on the Ethereal planes, only a single turn has passed. Therefore, the subjective time for the wizard to memorize and cast spells is 10 times as long as the actual time required.
- The thick soup of ethereal matter restricts clear vision to about 100 yards.
- Because of the semi-solid nature of the ethereal matter, spells that create restraining effects, such as *web* and *wall of stone*, are easily circumvented by the victim-- he must only move the ethereal matter out of the way. Restraining spells that inflict damage, such as *wall of fire*, are equally easy to circumvent, but still cause harm to the victim.

The schools of magic are affected as follows:

**Abjuration:** Spells of 5th level and above will not function.
**Alteration:** All spells of this school function normally, subject to the special laws of the Ethereal planes.

**Conjuration/Summoning:** Entities from the Prime Material, Astral, and outer planes cannot be summoned. *Leomund's secret chest* places the conjured chest in a location in the Ethereal plane different from that of the caster.

**Divination:** These spells function only if the wizard is in the area between the Prime Material plane and the Ethereal planes (called the Border Ethereal) and is casting the spells into one of the adjacent planes. For instance, *detect magic* will not work in the Ethereal plane, but it functions normally if cast from the Border Ethereal into the Ethereal planes. *Contact other plane,* however, functions everywhere in the Ethereal planes.

**Enchantment/Charm:** All spells of this school function normally, subject to the special laws of the Ethereal planes.

**Invocation/Evocation: All** spells of this school function normally, subject to the special laws of the Ethereal planes, except that materials created by evocation spells are made of ethereal matter and have the properties of that matter. *Bigby's forceful hand*, for instance, will not stop an opponent.

**Illusion/Phantasm:** All spells of this school function normally, subject to the special laws of the Ethereal planes. However, illusionary images and items do not disappear at the end of the spell's duration, or when the wizard stops concentrating, or when the illusion is touched. Instead, the images and items gradually fade away. *Invisibility*, *change self*, and *fear* are not subject to fading and function normally.

**Necromancy:** All spells of this school function normally, subject to the special laws of the Ethereal planes.

**Magical Items:** Pluses on weapons are reduced by one to attack and damage rolls (a *sword +2* effectively becomes a *sword +1* ). Armor and protective devices are likewise reduced by one plus. Magical items that duplicate specific types of spells operate under the same restrictions as described above.

## The Inner Planes

From the Wizard's perpective, the key features of the Inner planes include the following:

- Spells that rely on elemental forces can be modified to affect all other elemental types, though each modification must be researched separately. For instance, a spell that affects water can be used to similarly affect earth or fire, so that a *wall of water* may appear or *create air* can be cast. To determine if a modified spell can be cast, the wizard must roll against his Intelligence as if learning a new spell. If the roll fails, the wizard cannot make another attempt for one full day (as measured on the Prime Material plane). These modified spells can be used only in the inner planes.
- Modified spells apply only when modifying one elemental spell to another. Positive and negative energies are not eligible. For instance, a wizard cannot create a *wall of negative energy*.
- In the plane of Fire, all material created by spells (such as water and ice) is immeadiately affected by the extreme heat. For instance, the ice created by *ice storm* immediately melts.
- In the plane of Water, spells are affected as described in the *Casting Spells Underwater* section above.
- In the Energy planes, matter created by spells is destroyed one round affect its

creation. Spells that inflict variable amounts of damage in the plane of Positive Energy, and minimum damage in the plane of Negative Energy. Spells that inflict damage over a period of several rounds function for only one round.

The schools of magic are affected as follows:

**Abjuration:** All spells of this school function normally, subject to the special laws of the inner planes, except where noted in the spell description. Spells affecting extra-dimensional creatures *do not* affect creatures native to the inner planes. When the *anti-magic shell* is used in the inner planes, all magical protections are removed from within that sphere, removing any protection the user may have to survive in that plane.

**Alteration:** These spells are the most likely to be modified as described above. A *lower water* spell, for instance, can be modified to *lower fire* in the plane of Fire, and *airy water* could be modified to *airy fire*. Here are a few special cases:

- *Transmute rock to mud* can function as *transform element to para-element*; earth becomes ooze or magma, fire becomes magma or smoke, air becomes smoke or ice, and water becomes ice or ooze. Each type of transmutation must be researched separately.
- *Transmute water to dust* can be modified to *transform element to negative quasi-element*; elemental water becomes ash, air becomes vacuum, fire becomes ash, and earth becomes dust.
- *Astral spell* will not work in the inner planes.

**Conjuration/Summoning:** Usually, spells summoning a particular type of elemental creature summon that being only in its native plane. These spells do not guarantee control over the summoned elemental, but the elemental is not immediately hostile to the caster. Spells summoning animals, monsters, or other Prime Material creatures instead summon the elemental versions of these creatures. Elemental creatures have the same appearance and abilities as their Prime Material counterparts, but are elementals of that type found in that inner plane (except that the Positive and Negative planes have no elemental types).

Spells that contact beings in the Astral and outer planes do not function in the inner planes.

**Divination:** These spells function normally. Those that call on an entity function only if that entity is native to the inner planes or Ethereal planes.

**Enchantment/Charm:** These spells function normally. *Hold person* and *charm* spells work only against humanoid elementals.

**Illusion/Phantasm:** These spells function normally.

**Invocation/Evocation:** Usually, invocation spells function only if the entity's domain is in the same plane as the wizard. Evocation spells dealing with elemental forces can be modified to call upon any elemental force. These include spells that create items of fire, lightning, ice (but not cold), winds, clouds, fog, and flames. For instance, a *fireball* can be modified into a *lightning ball* or *earth ball*, and *lightning bolt* can be modified into *fire bolt* or *air bolt*; in all cases, the range and damage remain the same. Note that spells such as *cone of cold* and *wall of iron* cannot be modified, since they have no actual elemental basis.

**Necromancy:** Beneficial necromantic spells restore hit points, abilities, levels, or life. Harmful necromantic spells deprive victims of these quantities. Beneficial necromantic spells will not function in the Negative plane, while harmful spells automatically succeed

and inflict maximum damage. Beneficial spells restore the minimum number of hp in the negative quasi-planes, and those spells that require a saving throw or are based upon Constitution automatically fail; harmful spells automatically succeed and inflict maximum damage. Beneficial spells automatically succeed and operate to their maximum ability in the positive quasi-planes; harmful spells inflict minimum damage and saving throws of 2 or greater automatically succeed against these spells. Beneficial spells in the Positive Material plane automatically succeed and operate to their maximum ability; harmful spells automatically fail.

**Magical Items:** Weapon pluses are reduced by two to attack and damage rolls (a *sword +3* effectively becomes a *sword +1* ). Exceptions include those with pluses against particular elemental creatures and those that draw their power from elemental planes, such as energy draining swords. Armor and protective devices are likewise reduced by two pluses. Magical items that duplicate specific types of spells operate under the same restrictions as described above

## The Astral Plane

From the wizard's perspective, the key features of the Astral plane include the following:

- Items or matter created by spells are affected by the plane's weightless environment. For instance, water forms into circular balls; when touched, these liquid balls flow over the victim in a light film. Liquids that inflict damage, such as acid, inflict twice their normal damage, and victims covered in liquid film cannot speak without letting the liquid into their lungs and drowning in 1-4 rounds. Victims covered in liquid cannot use spells with verbal components (unless they are affected by *water breathing* or a similar spell or device that allows them to breathe underwater). The liquid can be removed by extensive toweling, entering a plane where gravity exists, or spinning the victim fast enough so that the liquid is flung from his body.
- Fires burn in circular flames without consuming their fuel sources. *Wall of stone* and other *wall* spells, along with other spells that create surfaces, generate hollow spheres with radii of 10 feet plus 2 1/2 feet per level of the caster, regardless of the listed area of effect. Temperature is poorly conducted in the Astral plane, so spells generating heat and cold do not affect those outside the spell area.
- A wizard cannot move or dodge while casting spells; if already moving, he must continue moving with the same speed and in the same direction as the previous round in order to cast the spell.
- Spells that require access to the Ethereal or inner planes will not function.

The schools of magic are affected as follows:

**Abjuration:** These spells work normally, except that they cannot affect the fabric of the Astral plane itself; the plane cannot be dispelled or held back. *Dispel magic* affects astrally projected travelers by casting them back to their original bodies; it has no effect if cast against the plane or against silver cords.

**Alteration:** Alteration spells that contact the Ethereal and inner planes or make use of

extradimensional space will not work, such as *vanish* and *rope trick*.

Objects animated by alteration spells have an Intelligence of 0 for movement purposes, but they can attack creatures adjacent to them. Spells that modify movement function only in situations where that movement is permitted in the Astral plane. For instance, *fly* only works in balls of air, *jump* only works if the subject can push against solid objects, and *slow* and *haste* affect only muscular movement (likewise affecting combat) but have no affect on mental concentration movement. Alteration spells that control or modify conditions operate only if the conditions already exist; wizards cannot call these conditions into existence.

**Conjuration/Summoning:** Conjuration/Summoning spells of 5th level or higher do not function unless linked with abjuration magic (for instance, a spell belongs to both the conjuration and abjuration schools). Summoning cantrips will not operate, but conjuration cantrips will. Spells that call for the direct intervention of an entity will not work unless the entity is a native of the Astral plane.

**Enchantment/Charm:** Spells cannot call into being creatures from other planes. Spells that manipulate or call into being extradimensional space in the Astral plane do not function, such as *deeppockets*.

**Divination:** Because of the inherent magic of the Astral plane, *detect magic* causes the entire plane to radiate magic; there is only a 5% chance for detecting a specific magic radiation against this background. Spells such as true seeing and devices such as the gem of seeing reveal the fully infinite nature of the Astral plane, an experience that can overwhelm the viewer. The chance of being overwhelmed is 100% minus 5% per level of the viewer. Those overwhelmed are immobilized for the duration of the spell or for 1-6 true turns if viewing through a device.

**Illusion/Phantasm:** Illusionary spells and phantasm spells with an illusionary component function normally, but phantasm spells without an illusionary component will not function. For instance, *phantom steed* will not work because the spell has no illusionary component, but *phantasmal force* can be cast, since it has an illusionary component.

**Invocation/Evocation:** These spells function normally, except as modified by the physical laws of the Astral plane (see the explanation of the effects of a weightless environment above). The spells created by the archmage Bigby function differently when cast against creatures that are moving by mental concentration (those moving physically--such as by pushing off objects-- are affected normally).

- *Interposing hand*: Those of lesser Intelligence than the caster are stopped, others are slowed in movement by 50%.
- *Forceful hand*: If the caster has a higher Intelligence than the affected creature, the caster controls the speed and direction of the creature. Equal or greater Intelligences result in no movement.
- *Grasping hand:* This operates the same as the interposing hand if the caster's Intelligence is equal or less than that of the victim, but it repels the victim as a double strength forceful hand if the caster has higher Intelligence.
- *Clenched fist* and *crushing hand* function normally.

**Necromancy:** These spells function normally. However, a *clone* created on the Astral plane requires 1,000 years to grow for every day it would take to grow on the Prime Material plane. Therefore, if a *clone* needed two months to grow on the Prime Material

plane, the same clone would require 60,000 years to grow on the Astral plane.

**Magical Items:** Weapons are reduced by one plus to their attack and damage rolls (a *sword +2* effectively becomes a *sword +1*). Exceptions include those with pluses against astral creatures. Armor and protective devices are likewise reduced by one plus. Magical items that duplicate specific types of spells operate under the same restrictions as described above.

Normal potions in normal vials have the viscosity of syrup and tend to cling to the sides of the vials; such potions require 1-4 rounds to consume with a 5% chance that the drinker chokes (no damage, but the drinker loses the effects of the potion). Drinking potions from wineskins or soft flasks avoids this difficulty and allows normal consumption.

Magical items that tap into extradimensional space or the Ethereal or inner planes do not function in the Astral plane, nor do items that call upon powers from those planes.

## The Outer Planes

From the wizard's perspective, the key features of the outer planes include the following:

- Spells that require access to powers and creatures in the inner planes and Prime Material planes do not function (unless otherwise noted below).
- Cantrips will not function.
- Creatures and phenomena native to the outer planes are unaffected by Prime Material planar spells that summon, communicate, control, or prevent entry. Comparable spells exist for each plane, but they must be learned by the wizard in that plane; *animal growth* for animals of Elysium is an example. These are not considered modifications of existing spells, but different spells altogether.

The schools of magic are affected as follows:

**Abjuration:** These spells are useless against beings native to the plane the wizard is in (for instance, *protection from evil* has no effect on the evil occupants of the Nine Hells). However, *dispel magic* disrupts spells cast by creatures native to the outer planes.

**Alteration:** The Chaos planes (Happy Hunting Grounds to Tarterus, inclusive) have a random effect on alteration spells that create matter (such as *fog cloud*) or change matter into other shapes (the various *polymorph* spells). The chance of a random effect depends on the plane (see Table 10).

### Table 10: Chance of Random Effects of Alteration Spells in Outer Planes

| Plane | Chance of Random Effect |
|---|---|
| Happy Hunting Grounds | 20% |
| Tarterus | 20% |
| Olympus | 40% |
| Abyss | 40% |
| Gladsheim | 60% |

| | |
|---|---|
| Pandemonium | 60% |
| Limbo | 80% |

Created matter subject to a random effect has its appearance altered; for instance, a *fog cloud* might be blue in color or sparkle like diamonds. The change does not affect the properties of the matter. The DM determines the nature of the change.

The random effect for a spell that alters the shape of matter is that the spell may not function at all, or that it may function in an unintended matter. Roll 1d100 on Table 11 if such a random effect is indicated.

### Table 11: Random Effects of Altered Shapes in the Outer Planes

| d100 Roll | Effect |
|---|---|
| 1-10 | Target does not change in appearance or properties. |
| 11-30 | Target changes in appearance (as determined by DM), but retains all the properties of the original. |
| 31-50 | Target does not change in appearance, but gains the properties of the new form. |
| 51-70 | Target changes to resemble some nearby random object or creature, but retains the abilities of its original form. |
| 71-90 | Target changes to resemble some nearby random object or creature, and gains the abilities of that object or creature. |
| 91-00 | Target changes in form and function into something not in the immediate area. (DMs are encouraged to be fiendish.) |

**Conjuration/Summoning:** Non-native beings cannot be summoned unless they are in adjacent planes or planar layers. Creatures native to the plane can be called upon, but they are not controlled by the wizard; any tasks given such creatures must be negotiated. Protective spells that are effective in the Prime Material plane do not function against native creatures.

*Find familiar* will bring an imp, quasit, brownie, or pseudo-dragon. The DM is free to add other suitable candidates or to modify the appearance (but not the abilities) of these familiars.

**Enchantment/Charm:** Spells directed toward specific creatures (such as *charm person*) will not function against their outer planar equivalents. Planes other than the one occupied by the wizard cannot be accessed, though extradimensional space can be (so spells such as *deeppockets* function normally, but spells such as *shadow walk* will not). *Magic jar* or any similar spell that leaves the caster's original body unoccupied creates the risk of that body being occupied by a native of the other planes (see the Necromancy entry below for details).

**Divination:** Spells that detect or identify mainly respond to the alignment of the plane,

overwhelming the alignment of any beings in the plane. For instance, if a good warrior is in the Nine Hells, *know alignment* is overwhelmed by the plane's evil nature and will not reveal that the warrior is good. However, a detect good will reveal the warrior's goodness.

**Illusion/Phantasm:** These spells function normally, though the caster should keep in mind that many of the powerful beings inhabiting these planes are immune to illusionary attacks and effects. However, spells that rely on *demi-shadow magic* and *shadow magic* function at half strength and half effects. *Shadow monsters*, for instance, creates creatures with half the standard hit points that inflict half the standard damage when attacking; shadow magic inflicts only half damage and effects.

**Invocation/Evocation:** These function normally, although they may be changed due to prevailing conditions in a particular plane. Generally, these changes are similar to those experienced in the inner planes. For instance, a *wall of ice* will begin to melt immediately in the heat of the Nine Hells.

**Necromancy:** These spells have no effect on the natives of the planes. *Reincarnation* causes revived individuals to be of the same alignment as the plane; for instance, a PC reincarnated in the Nine Hells will be evil. Spells that involve a body uninhabited by a spirit, such as magic jar, have a 1 percent chance per day per depth of layer of being inhabited by native spirits. For instance, a character who died on the eighth layer of the Nine Hells has an 8 percent chance per day of his body being occupied unless it is raised, while a body on the 100th level of the Abyss has a 100 percent chance of being occupied on the first day). The spirits will not voluntarily release the body (a *limited wish* or spells of similar power will dispel them).

**Magical Items:** Weapons are reduced by one plus for each plane they are taken through; this applies only when moving from plane to plane, not when moving through planar layers. If a weapon becomes non-magical, all special abilities are lost. These penalties do not apply to weapons designed to affect particular creatures of the outer planes. Armor and other protective devices are similarly affected. All other magical items suffer the same limitations as the spells they mimic. Magical items that reach into extradimensional space function normally, but those that draw power from the inner planes or access the Ethereal planes do not function.

## Casting Spells When the Caster is Impaired

### Impaired Vision

A wizard's vision can be permanently or temporarily impaired as a result of blindness (magical or natural), disease, poison, or physical damage. Vision is also impaired in darkness.

The ability to see is not crucial in the casting of many spells. For instance, *mirror image*, *monster summoning*, *tongues*, and *comprehend languages* (when used to translate spoken words) do not require the wizard to be looking at anything in particular, and can therefore be cast with impaired vision. However, spells such as *read magic*, *detect invisibility*, and *comprehend languages* (when used to translate written words) that require the wizard to be looking at a particular object or location cannot be cast with impaired vision.

Impaired vision has no effect on spells the wizard casts on himself, such as *change self*

or *armor*. Likewise, impaired vision has no effect when the wizard is attempting a touch spell (such as *protection from evil*) on a willing subject, presuming the wizard is close enough to the subject to touch him. However, if a wizard attempts to use a touch spell on an unwilling subject, the wizard must make a successful attack roll with a -4 penalty (this assumes that the wizard is close enough to his intended subject to touch him). As with all attacks, the DM can modify this roll if the victim is unprepared for the attack or is unaware of it. If the roll succeeds, the wizard touches the subject and the normal spell effect occurs.

Spells that are cast on a specific person, place, or thing from a distance, such as *charm person* or *magic missile*, cannot be cast by wizards with impaired vision. A wizard cannot simply blast a *magic missile* in a general direction and hope for the best-- the spell does not operate that way. Knowing the exact destination of these types of spells is a vital element of their execution.

Spells that are cast over a general area can be cast by wizards with impaired vision, although their effects may not be as precise as they would be if the wizard could see. For instance, a wizard with impaired vision could cast *flaming sphere* in front of himself and direct it to move straight ahead toward an area where he hears a group of screeching goblins. But if the goblins scatter at the approach of the *flaming sphere*, the wizard will not be able to accurately direct its movement to run them down.

This limitation also holds true for illusion spells that create illusionary images, such as *phantasmal force*; at best, the illusionist is making a rough estimate as to the location of his illusion, and any adjustments he makes to the illusion (such as moving it or having it respond to the actions of other characters) is unlikely to be more than an educated guess.

Additionally, the vision-impaired wizard is creating visual illusions from memory, and the results might not always be as precise as they would be if the wizard could see. In general, the more complex the illusion cast by a vision-impaired wizard, the more easily the illusion will be disbelieved by an opponent; the DM is free to add as much as a +4 bonus to the saving throws of opponents attempting to disbelieve such illusions (see pages 81-82 of the *Player's Handbook* for details on adjudicating illusions, and the section on illusions in Chapter 7 of this book).

Vision-impaired wizards can use their familiars for information about their surroundings, thus enabling them to cast spells with more accuracy and precision. *Wizard eye* and similar spells can help a vision-impaired wizard to "see." *Infravision* is not always useful in these situations, since it works to enhance the wizard's natural vision (although *infravision* helps if the wizard's vision is impaired because of darkness, and not because of disease or damage). The non-weapon proficiency Blind Fighting is equally ineffective for the vision-impaired wizard.

### Impaired Hearing

A wizard's hearing can be permanently or temporarily impaired as a result of deafness (magical or natural), disease, poison, or physical damage (such as repeated exposure to loud noises). Unlike the vision-impaired wizard, the hearing-impaired wizard has only modest limitations on his spell casting abilities.

Although most spells have a verbal component, it is not necessary for the wizard to clearly hear the words or sounds he utters to cast a spell. These sounds serve to release

magical energies which in turn trigger specific reactions; as long as the wizard utters the correct sequence of sounds, it makes no difference if he actually hears the sounds himself. Note that a *silence* spell prevents the casting of any spells with verbal components, since *silence* prevents the sounds uttered by the wizard.

Spells that require the wizard to hear, such as *comprehend languages* (when used to translate speech), are ineffective for hearing-impaired wizards. Spells that create sounds, such as *alarm*, are able to be cast, but the impaired wizard will not hear the effects.

Hearing-impaired wizards casting illusions with audible elements may encounter the same problems as vision-impaired wizards. The audible elements of such illusions will have to be educated guesses, based on the wizard's memory of actual sounds. As with illusions cast by sight-impaired wizards, the more complex the illusion cast by a hearing-impaired wizard, the more easily the audible element of the illusion will be disbelieved by an opponent. The DM is free to add as much as a +4 bonus to the saving throws of opponents attempting to disbelieve such illusions. A hearing-impaired wizard cannot use his familiar to serve as surrogate "ears" to enable him to cast such spells with more precision or accuracy

## Impaired Speech

A wizard's ability to speak can be impaired as a result of disease, magic (such as a *silence* spell), or physical damage. A gagged wizard will also be unable to speak. No spell with a verbal component can be cast by a wizard with impaired speech; he must be able to enunciate each phrase or sound of a spell's verbal component clearly and distinctly for the spell to be successful. *Ventriloquism* cannot substitute for an impaired-speech wizard's voice when he attempts to speak a spell's verbal component; *ventriloquism* is useless to a speech-impaired wizard, since it is an extension of sounds the wizard is normally able to make.

Similarly, an impaired-speech wizard cannot use his familiar to speak verbal components, including those familiars capable of speech, since spells only operate if the wizard himself utters their verbal components.

However, an impaired-speech wizard can use the spell *vocalize* to allow him to cast spells that normally require a verbal component. Casting these spells must take place within the duration of the *vocalize* spell. (For more about vocalize, see Chapter 9. ) According to the *Player's Handbook* (pages 85-86), the use of components is an optional rule. If components aren't used for spell casting in your campaign, it is assumed that the caster must be able to speak in order to cast any spell (see the first paragraph in the Casting Spells section on page 85 of the *PH* ). *Vocalize* can still help a speech-impaired wizard if the components rules are not in use; otherwise, all of the rules for speech-impaired wizards apply.

## Impaired Movement

Many spells require somatic components (gestures or movements). If the wizard is unable to move his hands (because of damage, a magical effect, or physical restraint) he may be unable to cast a spell that requires hand movements. If a spell specifically requires hand movements, the wizard isn't allowed to substitute another method. He

cannot just wiggle his ears or rock his head in place of the required hand movements, nor can he use a familiar or other character (or animated object) to act as his surrogate to execute them. If a single finger is the requirement for a somatic component (for instance, if the wizard needs to point at the target of his spell), then he needs only one free hand to cast the spell; otherwise, either hand (or any finger) will suffice.

Note that a movement-impaired wizard also might have difficulty with spells requiring material components. If the wizard has his hands tied, he may not be able to reach the necessary material components inside his back pack or mingled with other items in a deep pocket in his robe. Even if he manages to fish them out, certain spells may require him to manipulate the material components in a certain way (he might be required to rub the components together or hold them flat in his hand; *protection from evil* requires the caster to trace a three-foot-diameter circle on the ground with powdered silver). If he cannot manipulate the material components as required, the spell will not work. When a wizard acquires a new spell, the DM should clarify its casting procedures.

Remember that the use of components is an optional rule. If components are not used for spell casting in your campaign, assume that the caster must have both arms free in order to cast any spell (see the Casting Spells section on page 85 of the *PH* ). Any combination of hand movements and gestures will suffice.

### Impaired Concentration

The successful casting of a spell requires intense, uninterrupted concentration from the caster. If the caster's concentration is interrupted by an attack, a sudden noise, or any other distraction, the spell is lost.

In certain situations, the caster may have trouble focusing or sustaining his concentration. He may be suffering from an extreme headache or other illness. He may be dizzy, fatigued, or otherwise disoriented. Or he may have had a little too much wine and is feeling the after-effects. In such cases, the DM can rule that the wizard is unable to cast spells as effectively as he normally would. In extreme cases-- for instance, if the wizard's headache is so severe that he is unable to stand or open his eyes-- the DM might rule that the wizard is completely unable to cast spells until his condition improves.

In less extreme cases, the DM can require the wizard to make a successful Intelligence Check before attempting to cast any spell to see if he can muster the necessary degree of concentration. After the wizard announces which spell he will attempt to cast, the player rolls 1d20. If the result is less than or equal to the wizard's Intelligence, the spell is cast normally. If the result is greater than the wizard's Intelligence, the spell is lost.

The DM might wish to add a penalty or bonus to these Intelligence Checks. For instance, if the wizard is disoriented as a result of falling out of a tree and landing on his head, the DM might require a -2 modifier to his Intelligence Checks prior to casting his spells.

## Chapter 7: Advanced Procedures

This chapter offers a variety of suggestions for experienced wizards to help them make more of their magical skills. Included are suggestions for spell research, advice on adjudicating illusions, and some creative casting techniques for putting new twists on old

spells

## Levels Above 20th

The *Player's Handbook* lists experience levels and spell progressions only for wizards up to 20th level, but there is no rule that specifically restricts wizards from advancing to 21st level and beyond. There are, however, practical reasons for restricting advancement into unusually high levels. Not only is it difficult for the DM to design meaningful challenges for these characters, players quickly become bored with characters whose powers and abilities rival those of the gods. A good policy is to enforce mandatory retirement of characters once they reach 20th level; pages 20-21 of the *Dungeon Master's Guide* explain how this is done.

Ambitious DMs and curious players are free to explore the campaign possibilities of the upper levels if they so desire. Table 12 gives the experience point requirements and Hit Dice for wizards of levels 21 through 32 (this table is an extension of Table 20 on page 30 of the *Player's Handbook*). A wizard must earn 365,000 experience points per level to achieve each level beyond 32. After 10th level, wizards earn 1 hit point per level, and they no longer gain additional hit point bonuses for high Constitution scores.

Table 13 gives the spell progression for wizards of levels 21 through 32 (this table is an extension of Table 21 of the *PH* ). For 33rd level, add one each 5th-, 6th-, and 7th-level spell; for 34th level, add one each 1st-, 2nd-, 3rd-, and 4th-level spell; for 35th level, add one each 8th- and 9th-level spell; and for levels beyond 36th, repeat this progression.

### Table 12: Wizard Experience Levels Beyond 20th

| Level | Mage/Specialist | Hit Dice (d4) |
|---|---|---|
| 21 | 4,125,000 | 10+11 |
| 22 | 4,500,000 | 10+12 |
| 23 | 4,875,000 | 10+13 |
| 24 | 5,250,000 | 10+14 |
| 25 | 5,625,000 | 10+15 |
| 26 | 6,000,000 | 10+16 |
| 27 | 6,375,000 | 10+17 |
| 28 | 6,750,000 | 10+18 |
| 29 | 7,125,000 | 10+19 |
| 30 | 7,500,000 | 10+20 |
| 31 | 7,875,000 | 10+21 |
| 32 | 8,250,000 | 10+22 |

### Table 13: Wizard Spell Progression Beyond 20th Level

| Wizard Level | Spell Level | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| 21 | 5 | 5 | 5 | 5 | 5 | 4 | 4 | 4 | 2 |

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| 22 | 5 | 5 | 5 | 5 | 5 | 5 | 4 | 4 | 3 |
| 23 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 3 |
| 24 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 4 |
| 25 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 5 |
| 26 | 6 | 6 | 6 | 6 | 5 | 5 | 5 | 5 | 5 |
| 27 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 5 | 5 |
| 28 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 6 |
| 29 | 7 | 7 | 7 | 7 | 6 | 6 | 6 | 6 | 6 |
| 30 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 6 | 6 |
| 31 | 8 | 8 | 8 | 8 | 7 | 7 | 7 | 6 | 6 |
| 32 | 8 | 8 | 8 | 8 | 7 | 7 | 7 | 7 | 7 |

## Spells Above 9th-Level

There are no spells higher than 9th-level, and there never should be. Including higher-level spells would not only greatly imbalance the game, it would also give characters access to magic reserved exclusively for gods.

DMs contemplating the idea of designing 10th-level or higher spells in spite of this advice should first consider the implications of *wish*, generally considered to be the most powerful of all the spells. To be worthy of its superior ranking, any 10th-level spell would have to be significantly stronger than a *wish*, and if the game is to retain its integrity, that's a mighty tall order.

In a high-level campaign, the DM might decide that his characters do not have access to an adequate number of high-level spells. Rather than fuss with 10th-level spells, the DM is encouraged to add to the list of 9th-level spells (see the section on Spells in Chapter 2 for suggestions)

## Spell Commentary

Part of the fun of playing a wizard is developing new applications for spells through experimentation and improvisation. However, the creative use of many spells may not be immediately obvious. If a wizard always uses his spells in the same old ways, he is not taking full advantage of them.

The following list features some unusual applications for a variety of spells from all levels. Players can also use these suggestions for inspiration when inventing new uses for other spells in their arsenals. Additionally, clarifications of several of the game's more esoteric spells are provided, which can be used by the DM to help adjudicate their effects

## 1st Level

### Cantrip

The simple effects created by cantrips have unlimited potential in the hands of a clever caster. Some examples:

- A wizard is resting in an inn when he is awakened by the sound of a burglar entering through the window. The wizard casts *cantrip* to create wracking moans and cries emanating from inside a closet. Believing the room to be haunted, the

terrified burglar may flee.

- A wizard is searching a dark castle when he discovers a dusty book lying on a desk. He remembers that similar books were trapped to explode in a ball of fire when touched; such books were marked with a skull on the front cover. The wizard casts *cantrip*, creating a small breeze to blow the dust away from the book, revealing the skull on the cover.
- A wizard traveling through a jungle is accosted by a band of cannibals. The wizard casts *cantrip* to create a puff of colored smoke. The intimidated cannibals, suspecting that the wizard wields powerful magic, decide to leave him alone.
- The companion of a wizard is about to engage a dangerous opponent in a duel. The wizard casts *cantrip* to cause a slight itch on the opponent's face. The opponent is distracted, giving the wizard's companion a momentary advantage.
- A menacing warrior stands before the party. The wizard casts *cantrip* to create a banana peel in front of the warrior. The warrior takes one step and falls on his face.

**Enlarge**

Much is made in the spell description in the *Player's Handbook* of changing the size of creatures, but wizards often overlook the usefulness of enlarge to change the size of objects. For instance, if the party is being pursued through a narrow passage or hallway, casting *enlarge* on a stone or other object behind the party can effectively block the passage and prevent the enemy's advancement. Similarly, if the party is faced with a locked or stuck door, the reverse spell, *reduce*, might be able to shrink the door just enough to allow the party to get through.

**Mending**

In addition to the uses for mending listed in the spell description, this spell can also be used to repair a leaky boat, a torn document, a broken wagon axle, or a cut rope (but it won't link the ends of two different ropes to make a single rope).

## 2nd Level

**Invisibility**

Wizards should keep in mind that *invisibility* is an illusion, a condition of artificial reality-- it's not an enchantment that causes the caster (or creature of the caster's choice) to literally disappear. As such, *invisibility* is subject to all of the advantages and limitations of illusionary magic. Following are the most pertinent points:

- The *invisible* character can always see himself; in effect, he automatically disbelieves the illusion.
- The caster cannot tell with certainty which observers have successfully disbelieved his illusion of *invisibility* ; he can only be sure by observing their reactions.
- All objects on the *invisible* subject's person are also invisible. However, the DM might wish to impose limitations, since it might not make sense for a 30-foot pole carried by an *invisible* character to also be entirely *invisible*. The DM might assume, for instance, that the illusion extends to a 1-foot or 2-foot radius around the affected subject; hence, all objects in contact with the subject that are within this area are also *invisible*. If such a limitation is imposed, then an object extending

beyond this range (such as the 30-foot pole) is entirely visible; partially invisible objects aren't allowed.

- Not every creature with fewer than 10 Hit Dice is excluded from noticing an *invisible* character. Creatures with excellent hearing or those with a sensitive sense of smell have a chance of detecting an *invisible* character. The DM should take such heightened senses into account when determining which creatures are allowed saving throws.
- Opponents do not automatically get a chance to detect the presence of an *invisible* creature. They must first have reason to believe an *invisible* creature is among them. For instance, a creature might have abruptly disappeared, or the opponents might hear a mysterious sound or notice footprints in soft ground. If one opponent successfully sees an *invisible* creature, he can alert his companions to the creature's presence, at which time they are allowed saving throws to detect the creatures if they haven't made such throws already. (For more about the limits of illusions, see the "More About Adjudicating Illusions" section that follows. )

**Misdirection**

This spell can be used to misdirect the results of non-weapon proficiencies that impart knowledge. Examples of non-weapon proficiencies affected by *misdirection* include Ancient History, Animal Lore, Appraising, Astrology, Direction Sense, and Herbalism. If the subject of misdirection fails his saving throw, he receives incorrect information from the use of his proficiency. For instance, *misdirected* Animal Lore will convince the subject that a vicious creature is harmless, while *misdirected* Appraising will convince him that a valuable gem is worthless.

**Web**

This spell can be used as a makeshift net to prevent damage to falling characters, assuming there are suitable projections or surfaces available to anchor the web. A *web* of at least 5 feet of thickness protects a falling character from damage regardless of the height from which he falls

## 3rd Level

**Hold Person**

The name of this spell should not be taken literally. *Hold person* makes its victims rigid-- if they're falling, for instance, it cannot "freeze" them in mid-fall and suspend them in the air. (However, see the hold monster entry below.)

**Item**

Use this spell on a weapon if the party is on the verge of being captured. In its cloth-like state, the shrunken weapon can be concealed up the caster's sleeve or it can be tucked underneath his belt or in his trousers. The wizard can later use the enlarged weapon to surprise his captors or, if the wizard's hands are bound, he may be able to use the weapon to cut himself free. Similarly, the spell can be used to conceal a grappling hook or a thief's pick. (The wizard should be careful where he hides a shrunken weapon; if a shrunken long sword is tucked inside his pants and is enlarged before it is removed, the

result could be extremely painful.)

**Melf's Minute Meteors**

One of the most frequently overlooked functions of *Melf's minute meteors* (or any flame-producing spell, such as *fireball*) is its ability to ignite combustible materials. In the right situations, this ability is capable of producing a startling amount of damage, rivaling and often exceeding the damage caused by spells of much higher levels.

**Tongues**

This spell can be quite useful to the wizard for discreetly communicating with other characters, but only if he understands exactly how it works. *Tongues* acts as a selective translator, not as a universal translator-- that is, not everyone in the spell's area of effect understands the translated language.

For instance, imagine that a wizard can speak only common. All other members of his party also speak only common. The party encounters a group of two dwarves and one gnome; the dwarves speak only dwarvish, the gnome speaks only gnomish. The wizard casts *tongues* and speaks to the gnome; the gnome automatically understands what the wizard says, but the dwarves and the other party members do not--as far as they can tell, the wizard is speaking gnomish. Assuming the wizard is of sufficiently high level (he can speak one additional tongue for every three levels of experience) and the spell's duration has not yet expired, he can also address the dwarves. Both dwarves will understand the wizard, but the gnome and the rest of the party will not.

If a dwarf and a gnome begin chattering at the wizard at the same time, and the wizard is of sufficiently high level and the spell's duration hasn't expired, the wizard can understand them both. The other party members, however, will hear nothing but babble

## 4th Level

**Dig**

This is a very helpful spell when dealing with large, uncontrollable fires that are spreading in a field or other open area. To stop the advance of a spreading fire, *dig* can be used to create a firebreak--a ditch of broken soil devoid of combustible material. A fire reaching a firebreak will stop advancing, eventually burning itself out. If the fire is too large to stop, the wizard can protect himself and his companions by using *dig* to surround themselves with a firebreak and remain inside it while the fire rages around them. The wizard must take care to make the firebreak large enough to protect himself and his companions from heat damage, which typically affects those within 5 feet of the flames.

**Fumble**

This spell can cause a lot of grief to opponents in precarious positions. *Fumble* cast on a character clinging to the side of a cliff might cause him to fall. If cast on a character moving hand over hand across a rope bridge, the character might lose his grip and fall. If such a character fails his saving throw, he plunges from the cliff or releases the rope. If he succeeds in his saving throw, he hesitates, but doesn't fall.

**Otiluke's Resilient Sphere**

The *sphere* is an intact bubble filled with air. Therefore, a creature or object enclosed in the sphere will bob like a cork on the surface of an ocean or other body of water. If the *sphere* contains more weight than air, the *sphere* will gradually sink, but it could be pushed or carried by water-breathing creatures with sufficient strength. If a water-breathing character wants to explore a dark, underwater cavern, the *sphere* could be cast around a burning fire. The protected fire could then be carried underwater and would continue to burn until the air supply in the *sphere* was exhausted. (The carrier should take precautions to prevent being burned--in most cases, heavy gloves would probably do the trick).

## 5th Level

### Hold Monster

Since this spell immobilizes victims and prevents them from moving under their own power, it is a very effective way to bring down flying creatures. *Hold monster* cast on a creature hovering overhead will not only cause it to fall to the ground, it also might suffer a significant amount of damage when it hits (1d6 hit points of damage per every 10 feet fallen).

### Telekinesis

This spell can be used to scoop up slimes, jellies, and other semiliquid creatures in jugs or similar containers. If the containers are sealed, *telekinesis* can be used to position the containers over an opponent's head, then tipped to dump their contents. Such containers could also be filled with poison, acid, or other damaging substances

## 7th-Level

### Limited Wish

As with *wish* (see the discussion below), the DM should decide the limitations of *limited wish* before his wizards have an opportunity to use it, preferably before the campaign begins. Here are some suggestions for what a limited wish can accomplish. The DM is free to alter these suggestions as he sees fit.

- A *limited wish* can heal damage for the caster or any single character of the caster's choice. A good range is 20-35 hit points (5d4 + 15) of healing. If a *limited wish* is used to heal damage in this way, it cannot be used to restore life; that is, it cannot affect any creature who has been reduced to 0 hit points.
- A *limited wish* can temporarily restore life to any creature or person who was reduced to 0 hit points or less within the previous 24 hours. The *limited wish* restores the subject to exactly 1 hit point. Success is not automatic; the subject is required to make a resurrection survival check. However, the effect lasts for only a limited time (1-4 hours is a good range). At the end of this time, the creature reverts to the number of hit points he had before the *limited wish* was cast (0 hit points or less).
- A *limited wish* can inflict damage on any single character. A good range is 20-40 (5d4 + 15) hit points of damage. The victim can save vs. spell for half damage.
- A *limited wish* can duplicate the effects of any spell of 7th-level of less.

- A *limited wish* can change the outcome of any action the wizard took within the past 24 hours, as long as the change is reasonably minor. For instance, the wizard could wish to search the body of an opponent he defeated earlier that day, but he could not wish to single-handedly have fought and defeated an entire army. All of the general restrictions that apply to wish (see below) also apply to *limited wish*. The suggestions regarding the selection of appropriate durations, casting times, and areas of effect also apply.

## 8th Level

**Sink**

This spell is a terrific way to help a character who is on the verge of falling off the edge of a cliff or losing his grip when hanging from the edge of a building. While the subject clings to the cliff, the wizard casts *sink*. If the spell is successfully cast, the subject becomes stuck to the cliff and won't fall. However, the spell expires in four turns, at which time the subject risks falling.

## 9th Level

**Wish**

Since it can theoretically have any effect, no spell is more difficult for the DM to adjudicate than *wish*. The DM can save himself a lot of headaches if he decides the limits of wish before his campaign begins. The DM is not obligated to discuss the ramifications of wishes with his players before a campaign begins. In fairness, however, he should be willing to give his players a general idea of his approach. While it is impossible to anticipate every conceivable use of a *wish*, there are a few key areas the DM should consider:

- How far can a *wish* move a character from one place to another? How many characters or creatures can be affected? Must the conjurer have first-hand knowledge of the destination?
- What types of items can a *wish* create? How much treasure? Are such creations permanent?
- How many creatures can a single *wish* bring back to life?
- How many creatures can a single *wish* destroy? Could a wish automatically destroy, for instance, a 20th-level wizard? How about a dragon? Are there alternatives to eliminating creatures other than *wishing* them dead?

Following are some guidelines for what *wishes* can accomplish. As always, the DM is free to alter these suggestions in any way he sees fit. Suggestions noted with an asterisk (*) typically require a penalty for the caster. The nature of the penalty is up to the DM; possibilities include 2d4 days of bed rest, a temporary loss of 1-4 Strength points, a permanent loss of 1 Constitution point, damage of 2d10 hit points, or any combination of these penalties.

- A *wish* can create a random amount of treasure for the caster. A good range is 1,000 - 10,000 gp (1d10 x 1,000). The treasure can include gold pieces, jewelry, gems, items, or any combination desired by the caster within the randomly determined monetary value. Magical items are excluded (they require a separate

*wish*).

- A *wish* can heal damage for the caster, his companions, or any characters or creatures of the caster's choice. A good range is 45-70 hit points (5d6 + 40) healed. These recovered hit points can be spread among as many characters as the caster desires; for instance, if a *wish* heals 50 hit points, the caster could heal 20 hit points of his own damage and heal 10 hit points for three of his companions. If a *wish* is used to heal damage in this way, it cannot be used to restore life; that is, it cannot affect any creature who has been reduced to 0 hit points.
- * A *wish* can restore life to any creature who was reduced to 0 hit points or less within the previous 24 hours. The *wish* restores the subject to exactly 1 hit point. Success is not automatic; the subject is required to make a resurrection survival check.
- * A *wish* can destroy any single creature of 10 HD or less, or any character of 10th level or less within the caster's visual range. The affected creature or character is allowed a saving throw vs. death magic; if the check is successful, the creature is unaffected. (Be careful with this--in many cases, it is a better idea to advance the spellcaster to a future time period in which the target creature no longer exists, as described on page 197 of the *Player's Handbook*).
- A *wish* can *teleport without error* the caster and up to a dozen companions to any location. The caster must have been to the location previously. The location can be in any plane of existence.
- * A *wish* can permanently add one point to any ability score of the caster or any person of the caster's choice, as long as the score is not raised above 16. It takes 10 *wishes* to permanently raise any ability score each point beyond 16. (For instance, it takes 20 *wishes* to raise a character's Strength from 16 to 18.)
- A *wish* can temporarily raise an ability to 18 for 1-6 hours.
- A *wish* can duplicate the effects of any other spell.

What can't a *wish* do? Aside from the restrictions above, a *wish* should never grant experience points or extra levels to a character. Nor should *wishes* be able to duplicate artifacts or create extremely potent magical items (a *potion of invisibility* might be acceptable, but a *sword +4* might not). The DM retains the right to disallow any wish he believes is too potent. He can also bestow an interpretation of the *wish* that follows the literal instructions of the wizard, and not the wizard's intended meaning (greed and gross manipulation of the rules should not be rewarded).

Examples:

- If the wizard *wishes* for an entire castle of his own, the DM might have the castle appear in mid-air, then crash to the ground in a heap of rubble.
- If the wizard *wishes* "to never again suffer damage from bladed weapons," the DM might turn him into a stone statue.
- If the wizard *wishes* for a dragon to vanish, the dragon might pop out of sight, then abruptly reappear in another location, perhaps a few yards from the dragon's original position.
- If the wizard *wishes* for a fortune in gold, the DM might teleport this fortune from a king's private treasure vault. The king will then send his best men to arrest the thieving wizard.

The DM is responsible for determining the components, duration, casting time, and area of effect each time a *wish* is to be cast. The DM should first determine what effect the wizard intends to achieve with his *wish*, then decide the components, casting time, and so forth, basing his decisions on his limitations for *wishes* in his campaign. The elements should be logical and reasonable. Here are some guidelines:

**Components:** *Wishes* have only verbal components. Keep them simple. A short, spoken phrase is usually sufficient.

**Duration:** In most cases, the effects of a *wish* will be permanent. The DM should decide in advance if there are any exceptions.

**Casting Time:** If the *wish* mimics the function of another spell, use that spell's casting time as a guideline, perhaps making it a little longer if the wish effect is significantly more powerful than the mimicked spell. For instance, if a *wish* is used to *teleport* a party (as described above), note that the *teleport without error* spell has a casting time of 1. Since the *wish* has a more powerful effect, a casting time of 4 or 5 for a teleporting *wish* is appropriate. When in doubt, use the casting times for other 9th-level spells as guidelines, or use a casting time of 1 round.

**Area of Effect:** In most cases, common sense will determine the area of effect. For instance, if a *wish* is to be used to heal damage, the affected persons should be within sight of the caster. The DM can be reasonably generous with areas of effect. If the caster *wishes* for 5,000 gp to be deposited in a chest 1,000 miles away, that is within reason. As an example of how all of these elements might be determined, imagine that the wizard *wishes* to *teleport* himself and his party to the wizard's home town. The DM determines the elements of the spell as follows:

Verbal Component: Speak the name of the desired location.

Duration: Instantaneous.

Casting Time: 1 round.

Area of Effect: All characters within a 20-yard radius of the caster.

## More About Adjudicating Illusions

Whether an NPC is able to disbelieve a PC wizard's illusion or whether a PC is able to disbelieve an NPC illusion is ultimately up to the DM. The DM should allow a saving throw against an illusion if the subject has any reason at all to doubt the existence of what he is experiencing. To account for the degree of realism in a given illusion, as well as any information available to the subject about the perceived illusion, the DM should modify the subject's saving throws with appropriate bonuses and penalties.

How does a DM make these decisions? There are a number of factors that can be considered to help determine bonuses and penalties for saving throws. It's unrealistic to expect the DM to meticulously evaluate every aspect of an illusion before he decides on the modifiers, but the following can be used as general guidelines

### Complexity--Non-Living Objects

The most important element in determining an illusion's believability is its complexity. The more complex the illusion, the more difficult it is for the caster to get all the details

right, and the more likely it is for a subject to notice a mistake. There are more details to a fire-breathing dragon than there are to a stationary boulder, so it is no surprise that a subject would be more likely to disbelieve the illusionary dragon than he would the illusionary rock.

An illusion can be a re-creation of a non-living (inanimate) or a living (animate) object. These need to be treated in different ways.

In general, the complexity of non-living objects depends on size (a pebble vs. a boulder), number (a single boulder vs. a dozen boulders scattered over an area), and appearance (a smooth gray boulder vs. a sparkling, multi-colored gem). External forces affecting the object also affect its complexity (wind blowing pebbles along the ground or an avalanche of boulders tumbling down a hill).

If the illusion has an excessive number of sensory elements, the subject's saving throw may receive a positive modifier. What constitutes an excessive number of elements? A single color or texture (for instance, a smooth gray boulder) is not excessive. Multiple colors and textures (a pile of various types of gems or minerals) or several different sensory elements (a field of variously colored flowers that have a variety of fragrances) could be considered excessive, as could the illusion of motion, such as boulders tumbling down a hill.

These factors are not necessarily cumulative; in fact, only in the most exceptional cases would an illusion of non-living objects result in a saving throw modifier of more than +2.

Examples:

- An illusion of a single blue diamond. Saving throw modifier: 0. Nothing about this illusion is particularly difficult since it is a single, stationary item.
- An illusion of ten thousand sparkling blue diamonds tumbling in an avalanche down a hillside. Saving throw: +2. There are a large number of items, they're sparkling, and they're in motion. The comparatively high saving throw bonus is also justified by the extremely unusual effect--a character might accept an avalanche of boulders, but an avalanche of diamonds is likely to arouse suspicion.

### Complexity--Living Objects

Generally, the higher the Hit Dice or level of the illusionary creature, the more complex it is to convincingly create and the more likely it is for a subject to disbelieve. An illusion of an ant is easier to create than the illusion of a dragon. This also applies to illusionary NPCs--a 15th-level warrior is harder to create than a peasant with 3 hit points. Similarly, the more creatures included in the illusion, the harder it is to create; an illusion of 20 peasants would be more difficult than a single peasant.

Illusions of active creatures are more difficult to create than illusions of relatively inactive creatures. If the illusionary creature is executing a simple action, such as standing still, polishing its sword, or grazing in the grass, no special modifier for the subject's saving throw may be required. However, if the illusionary creature is executing a complex series of actions, such as singing a song while dancing and juggling, or attacking with two weapons while shouting a war cry, a modifier may be in order.

If the illusionary creature is a generic monster or NPC--that is, it is a "typical" orc or NPC warrior--there is no need for a special modifier for the subject's saving throw.

However, if the illusionary creature is a specific, one-of-a-kind monster or NPC that the subject is familiar with--such as a friend of the subject, or the subject's pet dog--the subject should receive a special modifier.

As with the modifiers for inanimate objects, these factors are not necessarily cumulative. Only in exceptional cases would an illusion result in a saving throw modifier of more than +3.

Examples:

- An illusion of a single orc standing still, polishing his sword. Saving throw modifier: 0. Nothing is particularly difficult about creating an illusion of a single, low HD creature engaged in a relatively simple action.
- An illusion of King Sluz, the famous orc ruler, brandishing his five-pronged trident, screeching a war cry, and leading a squad of six snarling orc soldiers. Saving throw modifier: +3. The modifier assumes the subject is familiar with King Sluz. Casting a believable illusion of a well-known NPC is always extremely difficult, particularly when he is executing a complex action and is accompanied by other creatures.

## Magical Effects and Special Attacks

Magic is common in most AD&D® campaign worlds, so opponents are not necessarily suspicious of extraordinary effects that appear to defy natural laws. However, in certain instances, illusions that incorporate magical effects or special attacks will require saving throw modifiers. In general, a wizard cannot create excessively bizarre magical effects in his illusion without arousing the suspicion of the subject, adding a saving throw modifier of as much as +2.

Example:

- An illusion of a pile of sticks that abruptly bursts into flames. Saving throw modifier: 0. This is not an unusual magical effect.
- An illusion of a pile of sticks that bursts into green flames; the flames then change into a miniature replica of a purple castle with frog's legs; the castle tap dances, and finally turns into a pumpkin with the subject's face before disappearing in a puff of pink smoke, and the sticks are unburned. Saving throw modifier: +2. This is downright bizarre, easily justifying the higher modifier.

## Flaws

Illusions are seldom perfect, and wary subjects will always be alerted to an image's illusionary nature by its imperfections. For instance, if a wizard uses a spell such as *phantasmal force* to create an illusionary creature, the creature might lack one or more obvious sensory elements, such as sound, aroma, or body temperature, which can be a dead giveaway that the creature is only an illusion. In extreme cases, the subject's saving throw can be modified by as much as +4. If the wizard is using a better spell, such as improved *phantasmal force*, any sensory elements lacking in the illusion will not be as obvious, and the subject's saving throw rarely will be modified by more than +2.

Examples:

- An illusion of a bee. Saving throw modifier: +1 (*phantasmal force*), 0 (*improved*

*phantasmal force*) . The illusionary bee won't buzz in a lower-level illusion, but it will in the higher-level spell.

- An illusion of a hissing fire lizard covered with filth. Saving throw modifier: +4 (*phantasmal force*), +1 (*improved phantasmal force*). The lower-level illusion won't be able to duplicate the lizard's hiss, body heat, or the smell of the filth. The higher-level spell will do a better job, but the modifier assumes that at least one of these elements is imperfect or missing.

## Revealed Illusions

As explained on page 84 of the *Player's Handbook*, if one subject successfully disbelieves an illusion and informs another subject of the illusion, the second subject receives a modifier to his saving throw. The amount of this modifier depends on the reliability of the informant and the magnitude of the illusion. If the informant in unreliable and the illusion is formidable (for instance, an illusion of a deadly monster), the subject might ignore the informant entirely; in this case, no special saving throw modifier applies. If the informant is reliable (the subject's commander or friend), and the illusion is relatively minor (such as the image of a small fire), the subject's saving throw can be modified by as much as +4

## Intelligence

It makes sense that a highly intelligent wizard would be able to create more effective illusions. It also makes sense that subjects with low intelligence would be less likely to disbelieve an illusion. Therefore, if the caster's Intelligence is exceptionally high (18 or more), the subject's saving throw might be modified by -1. If the subject's Intelligence is exceptionally low (7 or less), his saving throw might be modified by -1. A -2 modifier is possible if both the caster's Intelligence is high and the subject's Intelligence is low.

Remember also that characters with exceptionally high Intelligence are automatically immune to low-level illusions. These immunities are summarized on Table 4 of the *Player's Handbook*.

## The Illusion-Casting Subject

Characters and creatures who can cast illusions themselves are much harder to fool. If the subject is an illusionist NPC or a creature with illusion-casting abilities, he receives a +1 bonus to his saving throw

## Summary of Modifiers

For quick reference, Table 14 summarizes all of the situations described above, giving a range of possible modifiers to the subject's saving throw. Again, these are sugggestions only, not hard and fast rules, and the DM is free to tinker with them as he sees fit. These modifiers are not necessarily cumulative; in fact, modifying any saving throw for disbelieving illusions by +4 is unusual, while modifying a throw by +6 (or more) should occur only in the most exceptional circumstances

### Table 14: Summary of Possible Modifiers for Saving Throws vs. Illusions

| Factors of Illusion | Modifier Range for Subject |
|---|---|
| Complexity (use one of the following): | |
| Non-living | 0 to +2 |
| Living | 0 to +3 |
| Magical effects | 0 to +2 |
| Flaws (use one of the following): | |
| *phantasmal force* or similar spell | 0 to +2 |
| *improved phantasmal force* or similar spell | 0 to +4 |
| Intelligence of caster and subject | -2 to 0 |
| Illusion-casting subject | +1 to 0 |

## Spell Research

Wizards can research new spells by following the rules on pages 43-44 of the *Dungeon Master's Guide*. Most of the details are left to the DM so he can customize spell research according to the needs of his campaign. If a DM is having trouble devising a useable system or is not exactly sure how to proceed, some suggested rules are given below. These rules apply to researching new spells; rules for researching existing spells can be found at the end of this section. Again, all of these rules are optional--the DM can make any adjustments or additions that seem reasonable to him

## Defining a New Spell

The first step in researching a spell is defining exactly what the spell is intended to accomplish. The player begins by making a rough draft of the proposed spell, including its effects, school, range, duration, and area of effect. The DM will then adjust these elements, making sure the proposed spell does not duplicate the effects of an existing spell, or is not a minor variation of an existing spell. The DM, working with the player, will establish the spell's casting time, saving throw, and, most importantly, its level. (For help with determining the elements of a new spell, see the Spells section in Chapter 2.)

Every proposed spell is not automatically acceptable. The DM can veto a proposed spell for any of the following reasons:

- The player character already knows the maximum number of spells of the proposed spell's level. (This is allowable if the optional Researching Extra Wizard Spells rule on page 44 of the *DMG* is being used.)
- The proposed spell is not of a level allowed by the player character's Intelligence, as per Table 4 of the *Player's Handbook*. (For instance, a wizard with an Intelligence of 9 cannot cast 4th-level spells. Therefore, he cannot research them.)
- The proposed spell belongs to a school in opposition to the player character's school.
- The player proposes to research a spell of 10th-level or higher. (No spell can exceed 9th- level.)

## Spell Components

If the DM is using the optional rules for spell components (page 44 of the *Dungeon Master's Guide*), the components for the proposed spell should be established before the research begins. If the spell is of a relatively low level, the components should be fairly simple, but higher-level spells might require unusually obscure components, such as the cloak of a spectre, the freshly-clipped toenail of a troll, or a handful of dust from the Abyss. (The quest for a needed component makes for an excellent adventure springboard.) In any case, the wizard must have all necessary components in hand before he can begin his research

## Cost of Research

Page 44 of the *DMG* gives a general range of costs for researching new spells (100-1,000 gp per spell level, plus 1,000-10,000 gp for a laboratory). Following is an alternate way to establish research costs.

There are two categories of expenses required for research: the Basic Investment, and the Operational Cost.

The Basic Investment is a one-time expenditure, representing the funds spent to buy the scrolls and books needed, as well as the funds necessary to assemble a suitable laboratory.

The library costs for each spell level are summarized in Table 15. There are two ways a wizard can avoid the Basic Investment for a library.

1. The wizard already has a suitable library of his own (see the Wizard's Library section below).

2. The wizard has access to a large library, such as those existing in major cities or in academies of magic. (The DM decides if a library of acceptable size is available to the wizard).

The Basic Investment for a laboratory is 1,000-6,000 (1d6 x 1000) gp. The DM determines the cost of the laboratory, either by rolling randomly or setting a specific price. As with the library, there are two ways a wizard can avoid paying the Basic Investment for a laboratory:

1. The wizard has purchased a laboratory previously. Once a wizard purchases a lab, it becomes a permanent part of his possessions. He never has to buy another one unless, of

course, it blew up in a lab accident or is otherwise destroyed.

2. The wizard has access to a laboratory in a major city or at a magical academy. A city or academy that has a suitable library will usually have a suitable laboratory, but the decision belongs to the DM. The DM might also require the wizard to pay a modest weekly rental fee--say, 20-120 (2d6 x 10) gp--for the use of the lab.

The Operational Cost is an ongoing expense necessary to sustain the research. The Operational Cost must be paid every week and mainly represents the price of additional books, supplies, and scrolls. The weekly Operational Cost is equal to 200-1,200 (2d6 x 100) gp. The DM determines the Operational Cost, either by rolling randomly or choosing a fixed price. There is no way for a wizard to avoid paying the weekly Operational Cost

## The Wizard's Library

Before a wizard can begin research on any spell, he must have a sizeable library of arcane books and scrolls. The size of the library is expressed in terms of its value. The value of the library necessary for each spell level is summarized in Table 15

### Table 15: Library Values Necessary for Spell Research

| GP Value of Library | Can Research Spells of This Level |
|---|---|
| 2,000 | 1st |
| 4,000 | 2nd |
| 8,000 | 3rd |
| 14,000 | 4th |
| 22,000 | 5th |
| 32,000 | 6th |
| 44,000 | 7th |
| 58,000 | 8th |
| 74,000 | 9th |

For instance, before a wizard can begin researching a 4th-level spell, he must have access to a library worth at least 14,000 gp. If he has no books at all in his library (perhaps because he has never researched a spell before), he must spend 14,000 gp on books before he can begin. If he has a library of lesser value (for instance, if his library is worth 4,000 gp), he must spend whatever money is necessary to increase the value of his library to the appropriate level. (If he has a 4,000 gp library, he must spend an additional 10,000 gp before he can research a 4th-level spell.)

For the most part, books that are suitable for research are hard to find. If a wizard is assembling his library prior to research, assume that it takes 5-10 (1d6 + 4) weeks of searching to locate 1,000 gp worth of books.

Books can sometimes be purchased in the bookshops of any major city or from NPC book collectors. A fortunate wizard may stumble upon such books during his adventures

and keep them as he would any other discovered treasure; these books, of course, don't cost him any money. The quest for a particular book can be the basis for an entire adventure. (The DM determines the value of any discovered books.)

For the purposes of spell research, whether a library is of suitable size depends on its value, not its actual number of books. However, as a point of interest, assume that the cost of a single research book varies between 100-1,000 (1d10 x 100) gp. Therefore, a library suitable for researching 4th-level spells is valued at 14,000 gp and contains 14-140 books.

Once a wizard has assembled a library of sufficient value, he can begin research, but he still must pay the weekly Operational Costs. The Operational Costs correspond to the purchase of additional books and supplies. Half these Operational Costs can be considered to be new tomes. Therefore, over the course of his research, the wizard's library will increase in value. For instance, assume that a wizard with a 14,000 gp library has a weekly Operational Cost of 400 gp to research a 4th-level spell. After he has researched for four weeks, he'll have spent a total of 1,600 gp in Operational Costs and his library will have increased in value 800 gp. (Buying books with Operational Cost funds is assumed to be part of the research process and requires no extra time.)

As his research progresses, a wizard can opt to spend more than the minimum amount of money required for his Operational Costs in order to buy additional books to increase his chances of successfully researching his spell. The effects of these additional expenditures are explained in the Research Time and Chance of Success section below.

When a wizard spends money on library books, whether spent as part of the Basic Investment or as Operational Costs, the books then become part of his permanent library. Therefore, once he has assembled a library valued at 14,000 gp, he will never need to make another Basic Investment in library books when he wants to research 4th-level spells. Once he has assembled a library valued at 74,000 gp, he can research spells of any level without ever making another Basic Investment in books. Clearly, a wizard's library is one of his most precious possessions. The prudent wizard will go to great lengths to keep his library safe and protected.

### Initial Preparation

After the Basic Investment is made (or avoided, if the wizard already owns or has access to a suitable library), the wizard must spend preparation time before the actual research begins. This initial preparation involves basic reading and reviewing of notes; in addition, the wizard must prepare himself mentally and physically for the grueling task ahead. This initial preparation lasts a number of weeks equal to the level of the proposed spell, plus one. Therefore, a wizard attempting to research a 5th-level spell must spend six weeks in initial preparation

### Research Time and Chance of Success

According to page 44 of the *Dungeon Master's Guide*, a wizard can check to see if he has successfully researched a spell after he has spent the minimum number of weeks required in research. The success check is the same as his chance for learning any new spell. Though this is a simple, straightforward method for checking success, it does not

consider the researcher's experience level (a more experienced wizard would probably be more successful at researching spells than a less experienced wizard) or the level of the spell (a high-level spell would be more difficult to research than a lower-level spell). Nor does it consider any extra funds the wizard is willing to invest to increase his chances of success.

Following is an alternate method of checking for research success. While more complicated, it produces results that the DM might find more realistic.

The minimum amount of time needed to research a spell is two weeks per spell level; for instance, a minimum of eight weeks is required to research a 4th-level spell. During this time, the wizard is poring over old texts, cross-checking references, taking notes, and conducting experiments.

It is essential that the wizard is free from interruption during his research. Since 10-12 hours per day of intensive study are required, a wizard engaged in research is precluded from participating in adventures or any other time-consuming activity. If a wizard's study is interrupted, the DM can rule that the research has suffered a set-back, requiring an additional amount of research time before success can be checked.

While engaged in research, the wizard must pay the required Operational Cost every week. If he runs out of funds, he must interrupt his research to earn more money before he can resume. At the DM's discretion, this interruption might also require that the research time be lengthened. If the wizard's research is interrupted for an extended period--say, a week or more--the DM might require the wizard to start his research all over again. When the minimum research period is over, the wizard can check to see if he has discovered his spell. If he fails to discover it, he can continue with his research and check again every week thereafter.

The following formula is used to check for a successful discovery:

Success chance = {10% (base chance) + researcher's Intelligence + researcher's experience level} -(level of spell being researched x 2)

As an example, assume that a 7th-level wizard with an Intelligence of 10 is researching a 3rd-level spell. His success chance is equal to 10 percent (base chance) + 10 (his Intelligence) + 7 (his experience level)-6 (the level of the spell, multiplied by 2). Therefore, his chance of success is 21 percent. If the DM rolls 21 or less on percentile dice, the wizard has learned the new spell and can add it to his spell books; the new spell is then treated like a normal spell for all purposes. If the wizard fails the check, he can continue his research and check for success again in another week. (Note that this chance of success is somewhat lower than it would be if the wizard were trying to learn an existing spell. But this is logical since the uncertain nature of a new spell makes learning more difficult.)

The wizard can increase his chance of success by spending more than the required amount of money for his weekly Operational Costs. For every extra 2,000 gp he spends per week (this is in addition to his weekly Operational Costs), his base chance increases by 10 percent. The base chance of 10 percent can be increased to a maximum of 50 percent in this way (the wizard can spend as much as 8,000 extra gp per week). In our example above, if the wizard had spent an extra 8,000 gp, his chance of success would have been 61 percent (50 + 10 + 7-6). The extra expenditure applies to the current week

only--if he wants to increase his chance again next week, he'll have to spend extra money again

### Example of Research

Following is a step-by-step example of spell research. In this example, an 8th-level wizard with an Intelligence of 12 is attempting to research a 3rd-level spell. This is his first attempt at researching a spell. He has no library or laboratory, but he has plenty of money. The DM has decided that no special components are necessary to research this spell.

1. The wizard has no lab, so the DM determines that the wizard must spend 1,000 gp to establish a suitable lab.
2. The wizard has no library, so he spends 8,000 gp over the next eight weeks locating the appropriate books. (The wizard must have an 8,000 gp library to research a 3rd-level spell.)
3. The DM establishes the Operating Costs to research this spell at 500 gp per week.
4. The wizard spends four weeks of preparation time before beginning his research. (The preparation time is the number of weeks equal to the level of the spell plus 1.)
5. The wizard begins his research. He spends six consecutive, uninterrupted weeks in research, the minimum number required to research a 3rd-level spell. During this period, he invests 3,000 gp in Operating Costs (500 gp for six weeks). At the end of six weeks, he's ready to check whether his research has been successful. Note that the value of his library has grown to 9,500 gp during this period.
6. The DM determines that the wizard's chance of success is equal to 10 (the base chance) + 12 (the wizard's Intelligence) + 8 (the wizard's level)-6 (the level of the spell, multiplied by 2), which is 24 percent. The DM rolls percentile dice, and the result is 66. The check fails. (If the wizard gives up at this point, he won't be able to learn the proposed spell unless he starts from scratch at some point in the future; in the meantime, he can console himself with the fact that he has acquired a nice library.)
7. The wizard continues his research for another week. He spends the required 500 gp for his Operating Costs, but also spends an additional 4,000 gp to raise his success chance by 20 percent (the cost is 2,000 gp per 10 percent boost). The increased investment affects the percentage chance for this week only.
8. At the end of the week, the DM checks again to see if the wizard has been successful. This time, the wizard's chance of success is 44 percent (the 20 percent increase represents the additional investment of 4,000 gp). The roll is 34, so the wizard is successful--he can add the new spell to his spell book.

If the check had failed again, the wizard could continue the research for as many weeks as he is willing, until either his patience or his money run out. He must pay the Operational Costs each week.

## Researching Existing Spells

In addition to researching new spells, a wizard can research existing spells (those listed in the *Player's Handbook* and--if the DM allows them--the new spells from Chapter 8 of this book). Since it makes sense that information about existing spells is easier to

find than information about spells that do not yet exist, it is easier for a wizard to research them.

To account for this difference, make the following adjustments in the above procedures when a wizard is researching an existing spell:

1. The Operational Cost is reduced to 100-600 (1d6 x 100) gp per week.
2. The base chance of success is increased from 10 percent to 30 percent.

The lab costs, library costs, preparation time, and minimum number of weeks for researching existing spells are the same as research of new spells. The cost of increasing the base chance is also the same (2,000 gp per 10 percent increase), as is the total amount that can be spent (8,000 gp). Notice, however, that spending the 8,000 gp maximum increases the base chance to 70 percent (20 points higher than the 50 percent limit when researching new spells.)

### Limiting the Success Chance

Notice that a wizard's chance of successfully researching a spell could exceed 100 percent, particularly when a high-level wizard is researching an existing low-level spell. Although automatic success is certainly in the spirit of the game (according to Table 4 of the *Player's Handbook*, all wizards of 19th level and above have a 100 percent chance of learning new spells), some DMs might prefer to eliminate any chance of automatic success. If so, we suggest requiring that all wizards must roll for success, even if their calculated chance exceeds 100 percent; a roll of 95 or higher is treated as failure.

## More About Magical Item Research

Magical item research is discussed in detail on pages 84-88 of the *Dungeon Master's Guide* and needs little elaboration here. However, a few points are worth mentioning:

**Laboratories:** The laboratory requirements for researching magical items are different than those for researching spells. Spell research requires shelving, easels, writing tools, files, and similar supplies, while item research requires test tubes, beakers, burners, chemicals, and other equipment.

Consequently, a wizard who invested in a spell research laboratory will still need to buy equipment to research an item. For example, assume that a wizard just spent 5,000 gp on a laboratory for spell research, and now wants to research a new potion. The basic cost for an alchemical laboratory is 2,000 gp (see page 87 of the *DMG*). Since the 5,000 gp laboratory is useless for potion research, the wizard must spend 2,000 gp for alchemical equipment.

**Libraries:** Just as a wizard's spell research lab is relatively useless for item research, so is his spell research library. However, a sizeable library of magical tomes probably contains short-cuts, hints, and formulas that will help the wizard in his item research. At the DM's discretion, access to a sizeable library (say, with a value of at least 74,000 gp) can increase a wizard's chance of success by as much as 10 percent. Access to a library doesn't change the amount of time it takes to research and create an item, nor does it change the amount of money that must be spent.

**Specialist Bonus:** If a specialist is researching an item that duplicates an effect of a

spell from his school, his chance of success can be increased by as much as 10 percent. If the DM uses this rule, he should also deny a specialist the chance to research an item that duplicates a spell effect from any of the specialist's oppositional schools. The researcher's school has no effect on the amount of research time required, nor does it affect the amount of money that must be spent.

# Chapter 8: New Spells

This chapter includes a variety of new spells that can be used to supplement the choices provided in the *Player's Handbook*. These spells expand the options for the schools of abjuration, divination, and necromancy, thus making these specializations more attractive to player characters

## Spell Descriptions

The game statistics listed for the spells below follow the guidelines on page 129 of the *Player's Handbook*. All of these spells are acquired, memorized, and recorded in spell books as described on page 41 of the *Dungeon Master's Guide* and page 81 of the *Player's Handbook*.

## Spell Components

### Material Components

In accordance with the listings in the *Player's Handbook*, material components are given below for the spells that require them. The DM must decide the precise amounts of these materials, as well as any other details about them. For instance, *color spray* requires a "pinch" of colored sand--the DM decides what exactly constitutes a "pinch." Likewise, *dancing lights* requires a glowworm--must the glowworm be alive, or can it be a preserved specimen? Less fussy DMs can allow their wizards as much latitude as they wish with material components, as long as they meet the general requirements of the spell description

### Verbal and Somatic Components

The DM makes the decision regarding precise verbal and somatic components for any spell, although suggestions from players should be considered; specific verbal and somantic components are not required, but they add color to the game by giving players a clearer idea of exactly what procedures must occur in order for their PC wizards to cast spells. Requiring specific components can also make for some challenging game situations. For example, if a wizard is gagged, he may be prevented from casting spells with spoken verbal components. Similarly, a wizard with his hands bound behind him may have problems casting a spell whose somatic component requires specific hand gestures. (See Chapter 6 for more information about impaired casters and spell components.) Verbal components can be single words, brief phrases, snatches of poetry,

chants, or nonsense syllables. They can be spoken, whispered, shouted, or sung. Verbal components can also be groans, grunts, coughs, whistles, or any other vocally-produced sound.

Often, the verbal component will relate to the effect of the spell. For instance, the verbal component for *feather fall* might be the whispered word "float," while a low, eerie moan might work for *detect undead*. *Dimension door* might be the spoken word "open," while the verbal component for *gust of wind* might be a slow exhalation of air. Somatic components can be any type of physical gesture. For some spells, merely touching or pointing at the target or subject is sufficient. More elaborate gestures are suitable for higher-level spells. In many cases, the somatic component will relate to the spell's effect. For instance, the somatic component for *audible glamer* might require the caster to put his hand to his ear as if he were listening. Rapidly rubbing the hands together might suffice for *chill touch*, while wiggling the fingers like a spider might serve as the somatic component for *web*.

## First-Level Spells

### Copy (**Evocation**)

Range: Special
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: One object
Saving Throw: Special

*Copy* enables the caster to make a perfect copy of a map, letter, or any other written or drawn document. The caster must have a blank parchment or a book with blank pages of sufficient size to hold the *copy*. The caster holds the blank object over the object to be copied, then casts the spell; the *copy* immediately appears on the formerly blank object. The *copy* is permanent and is a perfect duplicate of the original.

*Copy* can also be used to copy spells from a new spell book into the caster's spell book, assuming the caster's spell book is of sufficient size to contain the new spells. The caster must first roll to see if he can learn the new spells; if so, he can cast *copy* to instantly copy them into his spell book.

The material components for this spell are a piece of blank parchment (or a book with blank pages, as described above), and a drop of black ink

### Chromatic Orb (**Alteration, Evocation**)

Range: 0
Components: V, S, M
Duration: Special
Casting Time: 1
Area of Effect: One creature
Saving Throw: Neg.

This spell causes a 4-inch-diameter sphere to appear in the caster's hand. Within the limits described below, the sphere can appear in a variety of colors; each color indicates a different special power. The caster can hurl the sphere at an opponent up to 30 yards away, providing there are no barriers between the caster and the target. If the target is no more than 10 yards away, the caster's to hit roll is made with a +3 bonus. If the target is 10-20 yards away, the caster's roll is made with a +2 bonus. If the target is 20-30 yards away, the caster's roll is made with a +1 bonus.

If the *chromatic orb* misses its target, it dissipates without effect. If the target creature makes a successful saving throw, the chromatic orb is also ineffective. Otherwise, the color of the *orb* determines the amount of damage inflicted and its special power, as summarized on Table 16; details about the special powers are listed below. The caster can create a single *orb* of any color listed for his level or lower; for instance, a 3rd-level wizard can create an orange, red, or white *orb*. The material component for this spell is a gem of the appropriate hue or any diamond. The gem must have a value of at least 50 gp.

*Light* from the *orb* causes the victim to become surrounded by light to a radius of 20 feet, as if affected by a light spell. The effect lasts for 1 round, during which time the victim makes his attack rolls and saving throws at a -4 penalty, and his AC is penalized by 4.

*Heat* from the *orb* is intense enough to melt 1 cubic yard of ice. The victim suffers a loss of 1 point of Strength and 1 point of Dexterity (or for victims without these attributes, -1 to hit and a penalty of 1 to AC) for 1 round.

*Fire* from the *orb* ignites all combustible materials within 3 feet of the victim.

*Blindness* from the *orb* causes the victim to become blind as per the spell. The effect lasts for 1 round/level of the caster.

*Stinking cloud* from the *orb* surrounds the victim in a 5-foot-radius noxious cloud. The victim must save vs. poison or will be reeling and unable to attack until he leaves the area of the vapors. *Magnetism* from the *orb* has an effect only if the victim is wearing armor made from iron. The iron armor becomes magically magnetized for 3-12 (3d4) rounds. Other iron objects within 3 feet of the caster will stick tight to the magnetized armor; only *dispel magic* or a similar spell can release the stuck items. At the end of the spell's duration, the stuck items are released.

*Paralysis* from the *orb* causes the victim to become paralyzed for 6-20 (2d8 + 4) rounds; a successful saving throw vs. paralyzation halves the number of rounds.

*Petrification* from the *orb* turns the victim to stone. If the victim successfully saves vs. petrification, he avoids turning to stone and instead is slowed (as per the spell) for 2-8 (2d4) rounds. *Death* from the *orb* causes the victim to die. If the victim successfully saves. vs death magic, he avoids death and instead is paralyzed for 2-5 (1d4 +1) rounds.

### Table 16: Chromatic Orb Effects

| Level of Caster | Color of Orb Generated | Hit Points of Damage | Special Power |
|---|---|---|---|
| 1st | White | 1-4 | Light |

| | | | |
|---|---|---|---|
| 2nd | Red | 1-6 | Heat |
| 3rd | Orange | 1-8 | Fire |
| 4th | Yellow | 1-10 | Blindness |
| 5th | Green | 1-12 | Stinking Cloud |
| 6th | Turquoise | 2-8 | Magnetism |
| 7th | Blue | 2-16 | Paralysis |
| 8th | Violet | *slow* | Petrification |
| 9th | Black | *paralysis* | Death |

**Corpse Visage** (**Illusion, Necromancy**)

Range: Touch
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: Creature touched
Saving Throw: Neg

This spell transforms the caster's face or the face of any creature touched by the caster into the horrifying visage of a rotting corpse. The effect of this illusion is so startling that when it is viewed by opponents, the wizard's party adds a modifier of +2 to their surprise roll. Creatures with low Intelligence or higher (Intelligence of 5 or greater) and with 1 Hit Die or less (or who are 1st level or lower) must make a successful saving throw when first viewing *corpse visage* or flee in terror for 1-4 rounds.

*Corpse visage* does not distinguish between friend and foe, and all who view it are subject to its effects. If the spell is cast upon an unwilling victim, the victim is allowed a saving throw to avoid the effect.

The material component is a rag or piece of cloth taken from a corpse. The cloth must be prepared by dotting it with paints of assorted colors.

**Detect Disease** (**Divination**)

Range: 10 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 1
Area of Effect: 1 creature or object
Saving Throw: None

*Detect disease* reveals to the wizard whether a subject creature or object carries a disease, whether normal or magical. Additionally, there is a 10 percent chance per level of the caster that he is able to identify the exact type of disease.

The material component for this spell is a twig or small branch from any tree

**Divining Rod** (**Divination, Enchantment**)

Range: 60 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell enables the caster to enchant the branch of a ginkgo or fruit tree to locate a common item that is hidden from view. Unlike *locate object*, the caster does not need to have a specific mental image of a particular item; rather, he only needs to state the name of the general type of item he wishes to locate, such as buried treasure, edible plants, or fresh water. However, *divining rod* will not locate invisible or magical items, nor will it locate items protected by *obscure item* or a similar spell.

Once the branch is enchanted, the caster holds the branch with both hands. If the desired item is within the range of the spell, the enchanted branch points in the direction of the item and gently pulls the caster along. The spell is not blocked by lead or any other substance. However, if an impenetrable obstacle is reached, such as the ground or a wall, the branch presses against it and stops. If there is no item matching the description within the spell range, the branch does not react, although the caster can move about and continue to search.

The material component for this spell is the branch from a ginkgo tree or a fruit tree, such as peach, apple, or lemon. The branch must be shaped like the letter Y, so that the caster can grasp a fork of the branch in each hand.

### Protection from Hunger and Thirst (**Abjuration**)

Range: Touch
Components: S, M
Duration: 1 day/level
Casting Time: 1
Area of Effect: One creature
Saving Throw: None

When *protection from hunger and thirst* is cast, the recipient requires no food, water, or nourishment of any kind for the duration of the spell. The recipient can be the caster or anyone he touches. Each day the caster (or the subject of the caster's choice) is under the effect of the spell, he is fully nourished as if he had eaten and drunk normally. At the end of the spell's duration, the subject is no more hungry or thirsty than he was when the spell was originally cast.

The material components for this spell are a small piece of dried meat and a cup of water.

## Second-Level Spells

### Choke (**Necromancy, Conjuration/Summoning**)

Range: 30 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 2
Area of Effect: One creature
Saving Throw: 1/2

By means of *choke*, the caster causes a pair of ghostly hands to appear around the throat of a single victim. The victim must be a human, demihuman, or humanoid, and must be within 30 yards of the caster. The hands will choke and strangle the affected victim for the duration of the spell; each round, the victim suffers 1-4 hit points of damage from the choking hands. If the victim makes a successful saving throw, he suffers half-damage each round.

*Choke* can be negated by *dispel magic* or a similar spell; the victim cannot wrench the ethereal hands away from his neck. The victim makes all attack rolls at a -2 penalty while affected by *choke*.

The material component for this spell is a handkerchief or similarly-sized piece of cloth that has been tied in a knot

**Death Recall** (**Necromancy, Divination**)

Range: Touch
Components: V, S, M
Duration: Special
Casting Time: 1 round
Area of Effect: One corpse
Saving Throw: None

This spell enables the caster to visualize the final minutes of the life of any creature or person that died within the previous 24 hours. When the caster touches the subject's corpse, the caster goes into a trance. The caster then has a vision of the final 10 minutes of the subject's life as seen by the subject himself. The vision ends with the last scene the subject saw before he died, at which time the caster awakens from his trance and the spell is over.

The material component for this spell is a fragment from a shattered mirror

**Detect Life** (**Divination**)

Range: 10 feet/level
Components: V, S, M
Duration: 5 rounds
Casting Time: 2
Area of Effect: One creature
Saving Throw: None

By use of this spell, the caster can determine if a creature is alive, including creatures in a coma or trance, or under the influence of *feign death*. Any form of mental protection prevents the effectiveness of this spell, as does any thickness of metal. An inch of stone or wood is treated as 10 feet of open space for the purpose of determining whether the spell functions.

The material components for this spell are a holy symbol and a hair from the head of a newborn animal

**Filter** (**Abjuration**)

Range: Touch
Components: V, M
Duration: 1 turn/level
Casting Time: 2
Area of Effect: 10-foot radius sphere around creature touched
Saving throw: None

This spell creates an invisible globe of protection that filters out all noxious elements from poisonous vapors; therefore, a creature protected by *filter* takes no damage and suffers no penalties from poison gas of any kind, including those created magically (such as *stinking cloud*). The exceptions are poisonous vapors created by a dragon's breath weapon (such as the chlorine gas of a green dragon); in these cases, the creature protected by filter suffers half-damage.

The material components for this spell are a strand of spider web and a scrap of cotton cloth approximately one inch square

**Ghoul Touch** (**Necromancy**)

Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 2
Area of Effect: One person
Saving Throw: Special

When this spell is in effect, the caster's touch causes any single human, dwarf, gnome, half-elf, or halfling to become rigid for 3-8 (1d6 +2) rounds unless the victim makes a successful saving throw vs. paralyzation. Additionally, the paralyzed victim exudes a carrion stench in a 10-foot radius that causes retching and nausea. Those within this area who fail to save vs. poison will make their attacks with a -2 penalty until the spell reaches the end of its duration.

The material component for this spell is a small scrap of cloth taken from the clothing of a ghoul or a pinch of earth from a ghoul's lair.

**Ice Knife** (**Evocation**)

Range: Special
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: Special
Saving Throw: Neg

This spell fires a dagger of ice at the target. The caster makes a normal attack roll as if attacking with a missile weapon, factoring in the range from the attacker to the target (the *ice knife* has a long range of 30 yards, a medium range of 20 yards, and a short range of 10 yards). A successful hit causes 2-8 (2d4) hit points of damage. If the *ice knife* misses its target, consult the rules for grenade-like missiles on pages 62-63 of the *Dungeon Master's Guide* to determine where it lands.

When an *ice knife* strikes a solid object or a creature, the knife shatters, releasing a wave of numbing cold. All creatures within a 5-foot radius must make a successful saving throw vs. paralyzation or suffer 1-4 hit points of cold damage and become numb for 1-3 rounds. Numbed creatures have their movement rates reduced by half and their chance to hit reduced by 2. Proximity to major sources of heat, such as a roaring bonfire, improves a creature's saving throw by +2.

An *ice knife* that misses or is lost cannot be picked up by the caster (or anyone else) and thrown again. If the *ice knife* is touched, it instantly shatters, releasing a wave of cold as described above. If a lost *ice knife* is not touched, it melts away in a pool of water 1 round after it was originally created; this melting occurs regardless of the environmental temperature.

The material components for this spell are a drop of water from melted snow and a tiny silver dagger.

**Vocalize** (**Alteration**)

Range: Touch
Components: S, M
Duration: 5 rounds
Casting Time: 1 round
Area of Effect: One spell-casting creature
Saving Throw: None

This spell allows the recipient to cast spells that normally require a verbal component without the caster needing to make a sound. Such spells must be cast within the duration of the *vocalize* spell. This spell is also useful in situations where quiet is desired, or when the recipient is under the influence of a silence spell.

*Vocalize* does not negate a silence spell, but merely offsets it for the purpose of spell casting; if a spell caster under the effect of *vocalize* casts a spell that has some audible effect, that sound will be masked for as long as *silence* remains in force. *Vocalize* does not affect normal vocal communication.

The material component for this spell is a small golden bell without a clapper

## Third-Level Spells

### Bone Club (**Enchantment, Necromancy**)

Range: 0
Components: V, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: One bone
Saving Throw: None

A wizard can use this spell to enchant a bone, causing it to become a magical club. This magical weapon acts as a *club +4* against undead, inflicting 5-10 (1d6 +4) hit points of damage, and a *club +1* against all other opponents, inflicting 2-7 (1d6 + 1) hit points of damage. The bone can be from any animal, providing the bone normally could be wielded as a club; for instance, a human femur could be enchanted by this spell, but a skull could not. At the end of the spell's duration, the *bone club* reverts to a normal bone.

If the proficiency rules are being used, characters with a weapon proficiency with a club also have a profiency with a *bone club*. Those wielding a *bone club* without the club profiency suffer the penalties described on page 52 of the *Player's Handbook*.

The material components for this spell are an appropriately-sized bone and a pinch of dirt from a grave

### Delay Death (**Enchantment, Necromancy**)

Range: 30 yards
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: None

This spell enables one person or creature to postpone death. If *delay death* is cast before the indicated creature or person reaches 0 hit points, he is able to fight, cast spells, communicate, and take all other normal actions until he reaches -10 hit points. However, from the time he reaches 0 hit points until he is reduced to -10 hit points, the affected person or creature makes all attack rolls and saving throws at a -2 penalty, and his movement rate is reduced by half.

When the subject reaches -10 hit points, he is dead and *delay death* is no longer in effect. Note that the spell has a limited duration; if the spell expires after the affected subject has reached 0 hit points but before he has been reduced to -10 hit points, the subject dies instantly. A deceased subject previously under the effect of *delay death* can be raised normally by raise dead and similar spells.

The material component for this spell is a chip from a tombstone or a sliver of wood from a coffin

### Hovering Skull (*Necromancy*)

Range: Special
Components: V, S
Duration: 2 rounds/level
Casting Time: 4
Area of Effect: Special
Saving Throw: None

This spell creates a glowing human skull with sharp fangs. The skull hovers about a foot above the caster's shoulder; as the caster moves, the skull hovers along with him. If the caster stops moving and concentrates, he can mentally command the *hovering skull* to move in any direction within a 30- foot radius.

The caster can see through the skull's eyes as if they were his own; for instance, *the hovering skull* could be ordered to investigate a dark cave or peek over a high wall. Additionally, the caster can order the *hovering skull* to attack victims with its razor-sharp teeth. If the caster's concentration is interrupted while controlling the skull, the skull immediately drops to the ground (but it takes no damage). If the caster resumes concentration, he can continue to command the skull. The *hovering skull* has the same statistics as the caster, except the skull has 3 hit points and inflicts 1-6 hit points of damage with its bite. Attacks directed at the skull do not harm the caster, nor does damage directed at the caster affect the skull.

The material component for this spell is the tooth from a human skull.

**Invisible Mail** (**Evocation, Abjuration**)

Range: 0
Components: V, S, M
Duration: Special
Casting Time: 2
Area of Effect: The caster
Saving Throw: None

A variation of the *armor* spell, this spell enables the caster to cover his body with an invisible suit of plate mail to temporarily raise his AC to 3. Its effects are not cumulative with other armor or magical protection (a character cannot improve his AC better than 3 through use of this spell), but Dexterity bonuses still apply.

For each level of the caster, the *invisible mail* absorbs 1 hit point of damage that would normally hit AC 3; however, the *invisible mail* offers no protection against magical weapons or attacks. When the *invisible mail* has absorbed as many hit points of damage as the wizard has levels of experience, the invisible mail disappears. The *invisible mail* does not hinder movement, nor does it add weight or encumbrance. It does not interfere with spell casting.

Example: A wizard with a normal AC of 10 has shielded himself with *invisible mail*. The first opponent attacks with a normal dagger; the attack is made against the AC 3 of the *invisible mail*. The attack is successful, causing 2 hit points of damage, but this damage is absorbed by the *invisible mail* and the wizard is unharmed. A second attack is

made with a *sword +1*. The invisible armor offers no protection against this magical weapon, so the attack is made against the wizard's normal AC of 10.

The material component is a small fragment of plate mail.

**Iron Mind** (**Abjuration**)

Range: Touch
Components: S, M
Duration: 1 hour
Casting Time: 3
Area of Effect: One creature
Saving Throw: None

The person or creature affected by *iron mind* is immune to all charm and hold spells for a full hour. Additionally, he automatically disbelieves all illusions cast by 3rd-level wizards (or their equivalent) or lower.

The material component for this spell is a small chunk of iron ore or any small item made of solid iron, such as a nail.

**Pain Touch** (**Divination**)

Range: Touch
Components: V, M
Duration: 1 round/level
Casting Time: 3
Area of Effect: One creature
Saving Throw: None

*Pain touch* enables the caster to touch an opponent in such a way as to induce extreme pain. The spell works if the caster touches any exposed part of an opponent's body. The caster must be within arm's length of the opponent for the spell to work. The spell requires a normal attack roll.

The pain causes no damage, but for the next 1-4 rounds, the victim will be -2 on his chance to hit and his AC is worsened by 2. The caster can cast the spell and touch the victim in the same round. *Pain touch* is only effective on human, demihuman, and humanoid opponents.

The material components for this spell are a needle and the finger from a scorched glove.

**Snapping Teeth** (**Conjuration, Alteration**)

Range: Touch
Components: V, S, M
Duration: 1 turn/level
Casting Time: 3
Area of Effect: 1 creature or object

Saving Throw: None

By means of this spell, the caster causes a set of teeth to appear on a person or object; the teeth appear in the exact location touched by the caster. The *snapping teeth* are contained in a mouth-like orifice about 6 inches in diameter and are capable of snapping at victims within 1 foot. A person or creature with the *snapping teeth* can cause them to snap at will, effectively giving him an extra attack per round. A normal attack roll is made, and a successful hit inflicts 1-4 hit points of damage. Note that the victim must be within range of the teeth and that normal facing considerations must be accounted for (for instance, *snapping teeth* in the back of a person's head can only attack victims that are behind the person).

*Snapping teeth* can also be placed on a non-living object, such as a tree or a door. In such cases, the *snapping teeth* are invisible until they make an attack. The *snapping teeth* will attack any victim that comes within 1 foot; they attack as a 4 HD monster, and each successful hit causes 1-4 hit points of damage. These attacks are automatic and are not controlled by the caster. Attacks cannot be directed against the *snapping teeth,* but *dispel magic* causes them to vanish.

The material component for this spell is a tooth from any carnivorous animal, such as a wolf, shark, or serpent.

## Fourth-Level Spells

### Duplicate (**Conjuration**)

Range: Touch
Components: S, M
Duration: 1 hour/level
Casting Time: 1 round
Area of Effect: One object
Saving Throw: None

This spell creates an exact copy of any single item the caster touches. The item to be copied must fit inside a 20-foot cube. The spell has no effect on living creatures, including undead, nor will it copy magical items. The *duplicated* item is identical to the original in every way--for instance, a duplicated sword can be wielded to inflict damage as a normal sword--but detect magic can reveal its true nature and *dispel magic* can cause it to disappear. The *duplicated* object exists for 1 hour/level of the caster, at which time it vanishes; *permanency* does not affect duplicated items.

The material component for this spell is a pinch of coal dust.

### Fire Aura (**Abjuration**)

Range: 0
Components: V, S, M
Duration: 2 rounds/level
Casting Time: 4

Area of Effect: Caster
Saving Throw: Special

By means of this spell, the caster surrounds his body with an aura of magical green fire. The *fire aura* extends 1 foot from the caster's body and provides illumination in a 10-foot radius. The *fire aura* provides complete immunity to all forms of fire, both natural and magical; the flames can be extinguished only by *dispel magic* or a similar spell. Those touching the *fire aura* suffer 2-8 (2d4) hit points of damage; additionally, if the touched victim fails to make his saving throw, his body is set afire with green flames.

The flames persist for 2-8 (2d4) rounds and can be extinguished only by *dispel magic* or a similar spell. Each round the victim is engulfed in these flames, he suffers an additional 1-6 hit points of damage; the victim's attack rolls are made with a -2 penalty during this time.

The material components for this spell are a scrap of singed paper and a piece of flint

**Halo of Eyes** (**Abjuration, Conjuration**)

Range: 0
Components: V, M
Duration: 1 turn/level
Casting Time: 4
Area of Effect: Special
Saving Throw: None

*Halo of eyes* creates a halo of functional eyeballs that sits atop the caster's head, enabling the caster to see in all directions at the same time. Additionally, these magical eyes all have infravison to a distance of 60 yards. The caster can see opponents on all sides of him, providing they are not *invisible*, and therefore can never by struck from behind or suffer a penalty for a back attack. Under normal conditions, the caster cannot be surprised. Attacks cannot be directed against the magical eyeballs, but their vision is obscured by *blindness* and other magical and natural effects that would hinder the wizard's normal sight.

The material components for this spell are the feather of an eagle and an eyelash from the corpse of any creature.

**Otiluke's Dispelling Screen** (**Evocation, Abjuration**)

Range: 5 yards/level
Components: V, S, M
Duration: 1 round/level
Casting Time: 5
Area of Effect: 20-foot square
Saving Throw: None

This spell creates a shimmering screen of violet energy in any shape the caster desires. Any creature passing through the screen is affected by *dispel magic* with the same level

of effectiveness as that spell cast by the wizard.

The material components for this spells are a sheet of fine lead crystal and a chysolite gemstone worth 1,000 gp (both vanish after the spell is cast).

### Wind Breath (Evocation)

Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: Cone 60 yards long and 30 yards wide at the base
Saving Throw: 1/2

A variation of *gust of wind*, this spell allows the caster to fill his lungs with air and expel a powerful wind. The strength of this wind is about 5 miles per hour for every level of the caster. Those outside the area of effect do not notice the tremendous winds, though objects may be blown out of the spell's area into their path. The DM should determine the precise effects of the *wind breath* using the following parameters as guidelines.

If the *wind breath* is 30-50 miles per hour, there is a 10 percent chance that small boats capsize, a 1 percent chance that ships capsize, and a 10 percent chance that a man is knocked down. There is a 20 percent chance that branches snap, light articles are blown away, and tents and sails tear. Creatures caught in the cone of the wind breath suffer 1 hit points of damage from blown sand and grit.

If the *wind breath* is 50-70 miles per hour, there is a 70 percent chance that small boats capsize, a 20 percent chance that ships capsize, and a 50 percent chance that a man is knocked down. Trees bend and there is a 70 percent chance that branches snap, and a 20 percent chance that a trunk snaps. Medium-sized articles are blown away, and there is a 50 percent chance that tents and sails are torn, and a 40 percent chance that shacks are blown down. Creatures caught in the cone of the *wind breath* suffer 1-4 hit points of damage from sand and grit. Flying creatures are blown back 10-40 (10d4) feet.)

If the *wind breath* is 70 miles per hour or more, there is a 100 percent chance that small boats capsize, a 70 percent chance that ships capsize, and a 70 percent chance that a man is knocked down and blown 10-40 (10d4) feet to suffer 1-6 hit points of damage per 10 feet blown. There is a 70 percent chance that tree trunks snap, and a 100 percent chance that branches are ripped from trees. Heavy articles are blown away, medium articles are ripped from fastenings, and tents and sails have a 70 percent chance of being destroyed. There is a 20 percent chance that common buildings are blown down and a 60 percent chance that shacks are flattened. Creatures caught in the cone of the *wind breath* suffer 1-8 hit points of damage from blown objects. Flying creatures are blown back 50-100 (40+10d6) feet.

The material component for this spell is a handmade silk fan with a value of at least 1 gp.

## Fifth-Level Spells

### Force Shapechange (Necromancy)

Range: 10 yards/level
Components: V, S, M
Duration: Instantaneous
Casting Time: 1
Area of Effect: One creature/level
Saving Throw: 1/2

With this spell, the caster can force any shapechanger or magic-wielder using any form of a *shapechanging* spell to instantly revert to his true form (or his most common form). To use the spell, the caster points at creatures he knows or believes to be shapechangers. If the creatures are indeed shapechangers, they must make a successful saving throw or immediately revert to their true form and suffer 3-30 (3d10) hit points of damage from the wracking pain caused by the forced change. The change takes a full round, during which time a victim can take no other actions. If the saving throw was successful, the victim does not change form, but still suffers half damage (2d10/2).

The material components for this spell are a hair from the hide of any lycanthrope and a live butterfly, released when the verbal component is uttered.

### Invulnerability to Normal Weapons (**Abjuration**)

Range: 0
Components: V, M
Duration: 1 round/level
Casting Time: 2
Area of Effect: 5-foot radius
Saving Throw: None

This spell creates an immobile, faintly shimmering magical sphere around the caster that cannot be penetrated by non-magical blunt weapons, edged weapons, or missile weapons. The caster can use these weapons from inside the sphere to attack opponents normally. Spells can also be cast through the sphere. The sphere can be negated by *dispel magic*.

The material components for this spell are a piece of a broken non-magical weapon and a scale from a dragon

### Know Value (**Divination**)

Range: 10 yards
Components: V, M
Duration: Instantaneous
Casting Time: 3
Area of Effect: 10-foot cube
Saving Throw: None

*Know value* enables the caster to know the total value of all coins, gems, and jewelry

within the area of effect, within the limits that follow.

The items must be clearly visible. They cannot be concealed on people, hidden in a chest, or buried in the ground. The items must also be contained within an area no larger than a 10-foot cube, and this area can be no farther than 10 yards from the caster.

Further, *know value* will only reveal the value of 75% of the total number of objects in a treasure pile, up to a maximum of 10 pieces; the DM determines which pieces the spell affects, and the caster does not know which particular pieces have been appraised. The spell does not detect the presence or value of magical items, and it ignores the value of personal property, such as clothing, weapons, and other equipment. *Know value* does not reveal the number or nature of any type of hidden objects.

The material components for this spell are a copper piece and a phony gem

**Mordenkainen's Private Sanctum** (**Alteration, Abjuration**)

Range: 0
Components: V, S, M
Duration: 1 hour/level
Casting Time: 2 turns
Area of Effect: One room
Saving Throw: None

With this spell, privacy is ensured in a room of up to 1600 square feet (40 feet x 40 feet, or the equivalent). From the outside, the windows of the room appear to be dark and cloudy, preventing those with normal vision, infravision, or any other type of vision from seeing inside. Those inside the room can see out the windows as they normally would. No sounds of any kind can escape from the room. Scrying attempts, such as *ESP*, *clairaudience*, *clairvoyance*, and *crystal balls* cannot penetrate the room, and a *wizard eye* cannot enter. The caster can leave the room without affecting the spell.

The material components for this spell are a thin sheet of lead, a piece of opaque glass, a wad of cotton or cloth, and a pinch of powdered chrysolite.

**Mummy Rot** (**Necromancy**)

Range: Touch
Components: V, S, M
Duration: 1 round/level
Casting Time: 5
Area of Effect: One victim
Saving Throw: Special

This spell allows the caster to attack with a rotting touch similar to that of a mummy. If the caster touches a human, demihuman, or humanoid victim, the victim immediately loses 2-12 (2d6) hit points and is infected with a rotting disease which is fatal in 1-6 months. For each month the rot progresses, the victim permanently loses 2 points of Charisma. While infected, the victim recovers lost hit points at 10 percent of his normal rate.

The rotting disease can be cured only with a *cure disease* spell; *cure wounds* has no effect. A *regenerate* spell will restore damage but will not otherwise affect the course of the disease. If a victim makes a successful saving throw, he is not infected, but he still suffers 2-12 hit points of damage.

The material components for this spell are a piece of rotten fruit and a piece of a mummy's cloth wrapping.

### Rary's Telepathic Bond (Divination, Alteration)

Range: 20 yards
Components: V, S, M
Duration: 2 turns per level
Casting Time: 1 round
Area of Effect: Two or more creatures
Saving Throw: None

With this spell, the caster forms a telepathic bond between two or more creatures with Intelligence of 6 or higher. The bond can be established only between willing creatures who are within 20 yards of each other. The creatures need not speak the same language to communicate via the bond. The bond can be placed upon one creature for every three levels of the caster; therefore, a 9th-level caster can forge a bond among three creatures. The bonded creatures can remain in mental contact as long as they remain on the same plane of existence. If either creature enters a different plane, the spell is terminated.

*Rary's telepathic bond* can be cast only once to affect a single pair of subjects. However, if the caster is able to cast the spell twice, the same subjects can be affected again. Example: A wizard can cast *telepathic bond* twice. The first casting links Subject A to Subject B. The second casting can affect Subject A again, linking him with Subject C.

The material components for this spell are two pieces of eggshell; the pieces must be from the eggs of two different species of egg-laying creature.

### Throbbing Bones (Necromancy)

Range: 10 yards
Components: V, M
Duration: 1 round/level
Casting Time: 3
Area of Effect: One creature
Saving Throw: 1/2

This spell causes the bones of the affected creature to throb and pulsate inside his body. The spell can be cast upon any single living creature or person within the caster's range, providing the creature has a physical form and has bones inside its body; for instance, *throbbing bones* will not affect insects, ghosts, or worms.

For the duration of the spell, the affected creature's AC is worsened by 2, its movement rate is halved, and all its attacks are made with a -2 penalty. Additionally, it

suffers 1-4 hit points of damage per round; this damage is halved if the creature makes a successful saving throw. However, a successful saving throw has no affect on the movement, attack, and AC penalties.

The material components for this spell are both pieces of a small bone that has been snapped in half

### Wall of Bones (**Conjuration, Necromancy**)

Range: 60 yards
Components: V, S, M
Duration: 1 turn
Casting Time: 1 round
Area of Effect: 10-foot square/level;96-inch thickness/level
Saving Throw: None

This spell causes a *wall of bones* to erupt from the earth in whatever shape the caster desires within the limits of the area of effect. The wall is a random construction of bones from many types of creatures. The wall need not be vertical, but it must rest upon a firm foundation or it will collapse. Since the wall has many small openings and gaps, it provides only 50 percent cover. Missiles can easily be fired from behind the wall, and creatures of small size (less than 4 feet tall) can wriggle through openings in the wall at the rate of 10 feet per round. However, the wall has many sharp edges and creatures wriggling through it suffer 1-8 hit points of damage per 10 feet traveled.

If the spell is cast in an area occupied by creatures, the *wall of bones* appears everywhere except where the creatures stand. Creatures in the affected area suffer an immediate 2-16 (2d8) hit points of damage when the wall appears. The wall can be smashed by creatures wielding blunt weapons with a Strength of 18 or greater. Every 10 hit points of damage causes a 5 foot x 5 foot x 6 inch section of the wall to collapse. The *wall of bones* is unaffected by *animate dead*.

The material component for this spell is the branch of a withered tree taken from a cemetery

## Sixth-Level Spells

### Blackmantle (**Necromancy, Enchantment**)

Range: 60 yards
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 round
Area of Effect: 15-foot radius
Saving Throw: Neg
.

*Blackmantle* creates a shimmering aura around all creatures within the affected area that negates all healing and regeneration, both natural and magical. For instance, a *potion of healing* has no effect on a creature under the influence of *blackmantle*, a troll cannot

regenerate lost hit points, and *cure light wounds* is useless.

*Blackmantle* is negated for any target creatures who make successful saving throws. Otherwise, it persists for 1 turn per level of the caster. If the creatures are still alive at the end of the spell's duration, any active curative forces will operate normally; for instance, a *ring of regeneration* will resume its function. However, consuming a *potion of healing* or applying a *staff of curing* while *blackmantle* is in effect will have no affect when *blackmantle* wears off, since these types of magic work instantly. In such cases, the dose of *potion of healing* and the charge from a *staff of curing* are not only wasted, but the aura generated by *blackmantle* actually negates the *potion of healing* or the *staff of curing*, rendering it useless. If a *potion of healing* or *staff of healing* is applied after the spell wears off, the healing magic works normally.

The material component for this spell is a small mummified animal, such as a mouse or a toad

## Dead Man's Eyes (**Necromancy**)

Range: Special
Components: S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: Special

*Dead Man's Eyes* causes the whites of the caster's eyes to turn black and his pupils to reshape themselves into small white skulls. The caster can affect one victim per round, providing the victim is within 3 feet of the caster and meets his gaze. Victims are affected as follows:

- Victims with 2 Hit Dice or fewer (or victims of level 2 or lower) instantly die. No saving throw is allowed.
- Victims with 2+ to 5 Hit Dice (or victims of level 3-5) instantly die unless they save vs. death magic at a -2 penalty. Those who succeed in their saving throws suffer 2-12 (2d6) hit points.
- Victims with 5+ Hit Dice or more (or victims of level 6 or greater) suffer 2-12 (2d6) hit points of damage unless they save vs. death magic.

If the caster's gaze is reflected back on him (by a mirror, calm water, etc.), he must make a saving throw vs. spells or suffer the same effects as a 5+ Hit Dice victim. At the end of the spell's duration, there is a 5 percent chance that the caster will become blind for the next 5-10 (1d6 + 4 hours).

The material components for this spell are two eyeball-sized glass marbles. The marbles must be the same color as the caster's eyes

## Dragon Scales (**Abjuration**)

Range: Touch
Components: V, S, M
Duration: 1 turn/level

Casting Time: 1 round
Area of Effect: One creature
Saving Throw: None

This spell causes the body of the caster (or any single person or creature touched by the caster) to become completely covered with dragon scales, effectively raising the subject's Armor Class by 2 for the duration of the spell; this modification is in addition to the subject's normal AC (for instance, if the subject's AC is 6, *dragon scales* raises it to 4).

The color of the *dragon scales* is the same as that of the scale used as the spell's material component; however, the color has no bearing on the effect of the spell. *Dragon scales* also temporarily reduces the subject's Charisma by 2 points.

The material component of a spell is a scale from any dragon.

### Invulnerability to Magical Weapons (**Abjuration**)

Range: 0
Components: V, M
Duration: 1 round/level
Casting Time: 3
Area of Effect: 5-foot radius
Saving Throw: None

This spell creates an immobile, faintly shimmering magical sphere around the caster that cannot be penetrated by magical blunt, edged, or missile weapons; all such weapons are harmlessly deflected (missile weapons strike the sphere, then immediately fall to the ground). However, the sphere offers no protection against magically-created creatures (such as golems) or from creatures whose attacks are magically based (such as the gaze of a medusa). The sphere offers no protection against spells such as *magic missile*, or spells that simulate the effects of weapons.

The caster can use magical weapons from inside the sphere to attack opponents normally. Spells can also be cast through the sphere. The sphere can be negated by *dispel magic*.

The material component for this spell is a piece of a broken magical weapon.

### Tentacles (**Conjuration, Alteration**)

Range: 0
Components: V, M
Duration: 1 turn/level
Casting Time: 1 round
Area of Effect: The caster
Saving Throw: None

By means of this spell, the caster causes two 10-foot-long greenish tentacles to grow from his body. One tentacle grows on each side of the caster's body, centered between his

armpit and his thigh. The caster can use the tentacles as normal appendages to grasp tools, use weapons, or help with climbing.

Each tentacle can make an attack, effectively giving the caster two extra attacks per round; a tentacle can strike to inflict 1-6 hit points of damage, or it can wield a sword, dagger, or other weapon (at the same ability of the caster). The flexible tentacles can easily reach victims on any side of the caster's body.

If an unarmed tentacle makes a successful strike against a victim who is man-sized or smaller (less than 7 feet tall), it also grabs and holds the victim to inflict an automatic 2-8 (2d4) hit points of damage in every subsequent round. To free himself, the victim must sever the tentacle; there is no way to loosen the grip other than severing the member, killing the caster, or negating the spell with *dispel magic*. A tentacle is severed if it takes 10 hit points of damage; damage directed at the tentacle has no adverse effects on the caster.

A caster with two intact *tentacles* adds a 40 percent bonus modifier to his climbing success rate (see page 122 of the *Player's Handbook*, ) and adds a 20 percent modifier if he has only one intact tentacle.

The material component for this spell is a dried tentacle from a small octopus

## Seventh-Level Spell

### Zombie Double (**Necromancy**)

Range: 0
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

This spell creates a ju-ju zombie duplicate of the caster. The *zombie double* has the same memories, consciousness, and alignment as the caster; essentially, the caster now exists in two bodies simultaneously. In all other respects, the *zombie double* is the same as a normal ju-ju zombie (AC 6; MV 9; HD 3+12; #AT 1; Dmg 3-12; SA strike as a 6 HD monster; SD immune to all mind-affecting spells, including illusions; immune to *sleep, charm, hold, death magic, magic missiles,* electricity, poisons, and cold-based spells; edged and cleaving weapons inflict normal damage while blunt and piercing weapons inflict half- damage; magical and normal fire inflicts half-damage); THAC0 16.

The *zombie double* cannot cast spells, but it can use any weapons that the caster can use. It is also able to climb walls as a thief (92 percent). The *zombie double* can be turned as a spectre. If it strays more than 30 yards from the caster, the *zombie double* becomes inactive and collapses to the ground; it becomes active again the instant the caster moves within 30 yards.

The material components for this spell are a bit of wax from a black candle and a lock of hair from the caster

## Eighth-Level Spells

**Defoliate** (**Necromancy**)

Range: 30 yards
Components: S, M
Duration: Special
Casting Time: 1 round
Area of Effect: 50-foot square/level
Saving Throw: None

By means of this spell, the caster causes all vegetation within the affected area to wither and die, crumbling into black ashes. All vegetation is affected, from the tallest tree to the tiniest blade of grass. Intelligent plant life, such as treants, are also destroyed. The power of a *wish* or its equivalent is required to restore the destroyed vegetation; otherwise, nothing can grow in the *defoliated* area for a full year. Note that since *defoliate* causes plants to crumble to ash, there is no danger of a creature being struck by a toppling tree; however, creatures hiding in trees will find themselves plummeting to the ground when this spell is cast.

The material components for this spell are the petal from a withered flower and a sliver of charred wood.

**Fear Ward** (**Abjuration**)

Range: 0
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 round
Area of Effect: 5 foot radius
Saving Throw: None

*Fear ward* creates an aura around the caster that makes him immune to all forms of fear, including that caused by dragons. Additionally, *fear ward* protects the caster from attacks by all forms of undead; the spell is equally effective against physical and magical attacks. *Dispel magic* has no effect on *fear ward*, but a *wish* will negate it.

The material components for this spell are the fangs of a spider and a hair from the head of a ghoul.

**Shadow Form** (**Necromancy**)
Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: The caster
Saving Throw: None

By means of this spell, the caster temporarily changes himself into a shadow. The

caster gains the movement rate, Armor Class, hit dice, and all abilities of a shadow. His chilling touch (requiring a normal attack roll) inflicts 2-5 (1d4+1) hit points of damage on his victims as well as draining one point of Strength. Lost Strength returns in 2-8 (2d4) turns after being touched. If a human or demihuman victim is reduced to 0 hit points or 0 Strength by the caster in shadow form, the victim has lost all of his life force and is immediately drawn into the Negative Material Plane where he will forever after exist as a shadow.

All of the caster's weapons and equipment stay with him, but he is unable to use them while in *shadow form*. He is also unable to cast spells while in *shadow form*, but he is immune to *sleep, charm,* and *hold* spells, and is unaffected by cold-based attacks. He is 90 percent undetectable in all but the brightest of surroundings. Unlike normal shadows, a wizard in shadow form cannot be turned by priests. At the end of the spell's duration, there is a 5% chance that the caster will permanently remain as a shadow. Nothing short of a *wish* can return the caster to his normal form.

The material components for this spell are the shroud from a corpse at least 100 years old and a black glass marble.

# Chapter 9: Wizardly Lists

This chapter contains a potpourri of ideas, items, and rule variations that can be incorporated into existing campaigns or used as springboards for new adventures

## Twenty-five Helpful Familiars

As explained in the 1st-level *find familiar* spell, summoned familiars are not restricted to the choices listed in the spell description. To expand the number of possibilities, substitute Table 17 below for the list on page 134 of the *PH.* If the find familiar spell is successful, the DM rolls percentile dice and consults this table to determine the results.

All details of the spell still apply as stated; if the roll indicates a creature not commonly found in the immediate area, the DM can roll again or simply choose a more appropriate creature from the list. The DM can also substitute different small animals suitable to the area; for instance, the DM might substitute a duck for a crow, a mink for a raccoon, or a bluebird for a raven. (In general, summoned creatures should have 1-4 hit points and, if able to make attacks, should be able to inflict no more than 1 or 2 hit points of damage per round. Armor Classes for creatures of this size range from 6-8.)

### Table 17: Summoned Familiars

| d100 Roll | Familiar |
|---|---|
| 1-3 | Bat |
| 4-10 | Cat |
| 11-14 | Chipmunk |
| 15-18 | Crow |
| 19-22 | Dog |
| 23-24 | Fox |
| 25-26 | Gull |

| | |
|---|---|
| 27-30 | Hawk |
| 31-33 | Hare |
| 34-37 | Lizard |
| 38-40 | Monkey |
| 41-42 | Mouse |
| 43-44 | Otter |
| 45-46 | Owl |
| 47-48 | Parrot |
| 49-50 | Raccoon |
| 51-52 | Rat |
| 53-54 | Rooster |
| 55-57 | Raven |
| 58-59 | Skunk |
| 60-61 | Snake |
| 62-63 | Squirrel |
| 64-66 | Toad |
| 67-70 | Weasel |
| 71-74 | Wolverine |
| 75-00 | No familiar available within spell range |

## Five Unusual Sources For Spells

When a wizard learns a new spell, he usually acquires it from a teacher, a discovered spell book, another wizard, or his own research. But there are many more ways to learn new spells--some of the more unusual possibilities are listed below (in all cases, the wizard must successfully learn a new spell once it is revealed to him)

### 1. Dragons

Most dragons are masters of magic. A friendly dragon might teach a wizard a new spell as a reward for helping him or as a bribe to leave him alone.

The DM should note that the magic of dragons is significantly different from the magic normally wielded by wizards, so it is unlikely that a wizard could learn to cast a spell in the same manner as a dragon; however, a dragon of exceptional intelligence might know the formula for a spell useable by humans (or know where to find it) and reveal the information to a wizard

### 2. Monuments

Ancient obelisks, monoliths, and other structures are occasionally inscribed with the formulas of spells. Locating such a monument can be an adventure in itself. For instance, a wizard who died thousands of years ago may be entombed in a pyramid in the heart of an unexplored jungle; prior to his death, the wizard inscribed the formulas of his spells on the walls of his tomb so he could have access to them in the afterlife

### 3. Other Planes

The alternate planes of existence are filled with an unending variety of weird phenomena, strange landmarks, and bizarre entities. A wizard might find a magic formula spelled out in giant runes stretched across an entire plane of the Abyss. Or he might stumble across a horde of ape-like creatures in the plane of Elysium chanting the formula of a spell. The inhabitants of the elemental plane of Fire might know the secrets of a variety of fire-related spells, while the occupants of the elemental plane of Earth might be willing to share the formulas for earth-related spells in exchange for a favor

### 4. Summoned Creatures

A creature summoned as a result of *invisible stalker*, *monster summoning*, or a similar spell might negotiate for his freedom by offering to teach the caster a spell or show him where to find a spell formula. If the summoned creature is exceptionally knowledgeable, it might be able to dictate a formula to the wizard; it might even be able to cause a spell formula to magically appear in his spell book (in which case, the wizard has his normal chance to learn it; if he fails, the spell formula disappears).

### 5. Gems, Crystals, and Mirrors

Magic-using creatures from other planes of existence sometimes use gems, crystals, or mirrors as substitutes for spell books to record the formulas of their spells. Although wizards from the prime material plane are ordinarily unable to use such items to record their own spells, a DM might allow that a wizard could stumble across such a gem or mirror; if the wizard studied the item, a cloud of mist might materialize inside it, containing the symbols of a spell formula

## Nine Magical Items That Have Not Yet Been Invented

If your wizard is interested in researching new magical items and is looking for an unusual project, he might consider one of the choices listed below. All of these items have been proposed by wizards over the years, but none has yet been successfully researched. The DM and the player must establish the exact effects for these items as well as the details of the research. Keep in mind that if the research was easy, some other wizard would surely have completed it by now

### 1. Seeds of Wealth

These are seeds that grow trees that bear gems instead of fruit

### 2. Portable Bridge

This is a bridge that can be folded up and carried in a pocket. When unfolded, the bridge can span a river or chasm without the use of pillars or other supports. The *portable*

*bridge* is as strong as a bridge made of stone

### 3. Iron Heart

This is a mechanical heart capable of replacing a damaged or aging human heart. No surgery is required; the mechanical heart is merely placed on the recipient's chest and it is absorbed into his body. Presumably, the mechanical heart would increase the owner's endurance and resistance to disease

### 4. Paper of Writing

Any words that the user speaks or thinks will magically appear in writing on this paper

### 5. Scope of Seeing

This is a portable viewing scope with unlimited range. No physical barriers block the view of a person using the *scope of seeing*. The scope enables the user to observe the details of the sun, the moon, and distant worlds. It also allows the user to see completely through the earth to observe locations on the opposite side

### 6. Liquid Iron

When kept inside a container, this substance remains liquid. When poured from the container, the liquid turns to iron. Before the iron hardens, it can be formed into any number of useful items

### 7. Cold Fire

This type of fire looks the same as normal fire, but it generates no heat. Cold fire would be useful for torches in cramped quarters, and also would be a safe light source for homes, since there would be no danger of accidental fires.

### 8. Dark Fire

The antithesis of cold fire, dark fire generates heat the same as normal fire, but it produces no light. With flames as black as shadows, dark fire would be useful in making campfires for soldiers or other travelers who did not wish their location to be revealed by bright flames

### 9. Mirror of Recall

Staring into this device enables the user to recall with precise detail any book he has read or any sight or conversation he has ever experienced

## Five Debilitating Afflictions

Following are several afflictions that affect only wizards. These afflictions can occur as a result of a curse, a side-effect of magical research, or a penalty from a wish. Assume that an affliction can strike at any time--short of a wish, there is no way a wizard can inoculate himself to prevent the onset of these afflictions.

Unlike some organic diseases, suffering from one of these afflictions does not render a caster immune to future bouts with one of these conditions. A spell caster who survives one of these diseases is equally as likely to suffer the disease again in the future as a caster who has never contracted the disease.

The DM can use these afflictions to temporarily handicap a powerful PC wizard or to liven up a dreary stretch of a campaign. Unless indicated otherwise, all afflictions can be cured by *cure disease* or a similar spell. Unless the DM decides that a particular affliction was a result of a magical attack or effect, *dispel magic* will not help.

### 1. Bertrek's Amnesia

**Description:** The wizard afflicted with Bertrek's Amnesia has trouble remembering all of the details of his memorized spells. Just as he attempts to cast the spell, he suddenly forgets a crucial element of its formula, and the spell fails to work. The onset of Bertrek's Amnesia is usually preceded by a day or two of mild headaches. The mild headaches persist as long as the wizard is afflicted with this condition.

**Susceptibility:** Bertrek's Amnesia can strike any wizard, but it seems to affect wizards with Intelligence scores of 14 or less.

**Prognosis:** A full day of bed rest usually cures this condition, presuming the wizard refrains from casting spells, studying texts, or engaging in other strenuous mental activities. Without rest, the affliction can persist indefinitely.

**DM's Notes:** When a wizard is afflicted with Bertrek's Amnesia, he must make an Intelligence Check when attempting to cast a spell. If the check is successful, the spell is cast normally. If he fails the check, the spell is lost in a fizzle of useless energy and is wiped clean from the memory of the caster until it can be rememorized.

After every full day of rest, the DM rolls 1d20 to see if the wizard is cured; if the roll is less than or equal to the wizard's Intelligence score, the wizard is cured. Otherwise, the wizard is automatically cured after he has been afflicted for 2-8 (2d4) days

### 2. Chronic Incandescence

**Description:** The wizard afflicted with chronic incandescence continually radiates light from his body. The glow is bright enough to penetrate any thickness of clothing and extends to a radius of 20 feet. The glow persists regardless of whether the wizard is resting, casting spells, or performing other actions.

The onset of chronic incandescence is usually preceded by a day or two of sporadic glowing, particularly while the wizard is asleep.

**Susceptibility:** Chronic incandescence can strike any wizard.

**Prognosis:** *Darkness* cast on the afflicted wizard sometimes cancels this condition. *Dispel magic* has also been known to work. Otherwise, the affliction usually passes within a few days.

**DM's Notes:** A wizard with this affliction glows as if affected by a 1st-level *light*

spell. This does not affect his ability to cast spells, but he will find it difficult to hide from enemies. *Cure disease* and similar spells have no effect on chronic incandescence. If *darkness, 15' radius* is cast on the afflicted wizard, he can make a save vs. magic; if he fails the check, his condition is negated. Likewise, if he fails a check against *dispel magic*, his condition is cancelled. These spells can only be attempted once each on an afflicted wizard. The afflicted wizard cannot cast these spells on himself. If these spells are unavailable, or if he successfully saves in both cases, the condition disappears in 1-4 days

### 3. Conjuritis

**Description:** A wizard afflicted with conjuritis produces bizarre and unexpected effects when attempting to cast any conjuration or summoning spell. Usually, there is no warning of the onset of this affliction.

**Susceptibility:** Conjurers are the most likely wizards to be affected, but any wizard who knows one or more conjuration/summoning spells can be stricken with conjuritis.

**Prognosis:** Conjuritis is difficult to treat. *Dispel magic* has no effect on conjuritis, nor does *cure disease* or similar spells. Fortunately, conjuritis eventually clears up after running its course.

**DM's Notes:** When a wizard afflicted with conjuritis attempts to cast any conjuration/summoning spell, the DM rolls 1d20 and consults Table 18 for the result of the spell

### Table 18: Conjuritis Results

| d20 Roll | Result of Conj. /Summ. Spell |
|---|---|
| 1 | The immediate area is filled with the sounds of thunder, while lightning flashes overhead. The thunder and lightning persist for 1-4 rounds, but have no effects on the characters or their abilities. |
| 2 | A plush toy animal 10-40 feet high appears in an area in front of the caster. The toy animal can be a rabbit, a dragon, a cow, or any creature of the DM's choice. The toy animal crumbles to dust immediately if it is touched or disturbed in any way. |
| 3 | Dozens of mushrooms of various sizes suddenly pop up everywhere within a 10-40 foot radius of the caster (this occurs even if the caster is indoors). Each mushroom has an image of the caster's smiling face on its cap. As soon as any of the mushrooms are touched, all of them crumble into dust. |
| 4 | The area within a 10-40 foot radius of the caster fills with multi-colored soap bubbles. On the side of each bubble is an image of the caster's smiling face. |

| | |
|---|---|
| 5 | The temperature within a 10-40 foot radius of the caster suddenly rises or drops (DM's choice) 20 degrees Fahrenheit. The change persists for 1-4 rounds, then the area reverts to its previous temperature. |
| 6 | The immediate area fills with the sounds of human shrieks and screams. There is no apparent source of the sounds. The screams persist for 1-4 rounds, then fade away. |
| 7 | The caster's flesh turns purple (or green or blue or any other color or combination of the DM's choice). The effect persists for 1-4 rounds, then the caster's flesh reverts to its normal color. |
| 8 | The area within a 50-foot radius of the caster is filled with a thin mist, light green in color (or light purple or light orange, or any other color of the DM's choice). The mist smells of cinnamon (or mint or rotten fish or any other aroma of the DM's choice). The mist dissipates in 1-4 rounds. |
| 9 | The area within a 50-foot radius of the caster abruptly turns pitch black, as if it were affected by a *darkness* spell. If the area was already dark, it abruptly becomes bright, as if affected by a *light* spell. This effect persists for 1-4 rounds. |
| 10 | An image of whatever the caster was attempting to conjure appears 10 feet in front of the caster, hovers in mid-air for a few seconds, then disappears. If the caster was attempting a spell that did not conjure or summon an item or creature, the hovering image is of the caster. |
| 11-20 | The caster's spell works normally. |

A wizard probably will not know that he has conjuritis until he first experiences an unexpected result from a conjuration/summoning spell; (that is, when he first receives one of the results numbered 1-10 on Table 18.) After he experiences this first unexpected result, there are two ways he can be cured.

1. As soon as the wizard casts two consecutive conjuration/summoning spells with normal results (that is, the DM rolls 11-20 on Table 18), he is cured of the affliction.
2. As soon the wizard casts four normal conjuration/summoning spells (a result of 11-20 on Table 18), he is cured of the affliction; these spells need not be consecutive

### 4. Barlow's Blacksickness

**Description:** An extremely dangerous disease, blacksickness causes the afflicted wizard to weaken every time he attempts to cast a necromancy spell. In extreme cases, afflicted wizards have died from this disease. The affliction is accompanied by stomach cramps, blurred vision, and nightmares. Its onset is usually preceded by several days of nausea.

**Susceptibility:** Barlow's blacksickness primarily affects necromancers. It can also strike any wizard who knows and uses necromancy spells.

**Prognosis:** This is a difficult affliction to treat. Strangely, the very act of casting the spells associated with the disease also seems to help cure it. Otherwise, the affliction can linger anywhere from a few days to several weeks.

**DM's Notes:** A wizard afflicted with blacksickness risks suffering damage whenever he casts a necromancy spell. When an afflicted wizard casts a necromancy spell, he must make a Constitution Check, with the level of the spell used as a negative modifier. (For instance, if the wizard has a Constitution of 13 and casts a 4th-level necromancy spell, he adds 4 to his 1d20 roll when he makes his Constitution Check. ) If he passes the check, there are no ill effects. If he fails the check, he suffers 1-4 hit points of damage. Regardless of whether he fails his Constitution Check, the spell is cast normally.

There are two additional side-effects of blacksickness.

1. If the afflicted wizard suffers 6-10 hit points of damage in the same day as a result of failing Constitution Checks required for casting necromancy spells, he will experience wracking nightmares when he sleeps that night. Throughout the following day, he will experience blurred vision and stomach cramps, and will make all attack rolls at a -2 penalty. *Cure disease* or similar spells have no effect on this condition.

2. If the afflicted wizard suffers 11 or more hit points of damage in the same day as a result of failing Constitution Checks required for casting necromancy spells, he will immediately collapse. He will be unable to cast spells, engage in combat, or undertake any other strenuous activities for the next 24 hours. (He can still walk without assistance, but his movement rate is halved.)

*Cure disease*, *dispel magic*, and similar spells have no effect on blacksickness. Aside from a wish, there are two known cures.

1. The DM secretly rolls 2d6. This is the number of necromancy spells the afflicted wizard must cast in order to purge his system of the blacksickness. The necromancy spells can be of any level; for instance, if the wizard needs to cast four spells, they could all be 1st-level spells, they could all be 9th-level spells, or they could be any combination of necromancy spells from any level. Each time a necromancy spell is cast, the afflicted wizard must still make a Constitution Check and suffer the effects as described above. (Obviously, the wizard's health is safer if he refrains from casting more than one or two necromancy spells in the same day.)

The DM does not reveal to the wizard the total number of spells he needs to cast to cure himself--instead, the DM should tell the wizard that he's gradually getting better after he casts each necromancy spell. The DM can tell the wizard that he is cured after he has cast the last required spell, then has cast one subsequent necromancy spell that gives him no ill effects.

2. Blacksickness persists for 4-32 (4d8) days. The DM should determine the length of the affliction at its outset, but not reveal the information to the wizard. If the wizard has not yet cured himself, the affliction is over at the end of this period.

## 5. Immaterialism

**Description:** The wizard afflicted with immaterialism gradually fades away until his body is transparent, making him appear as if he were made of glass. In this condition, he is unable to fight, cast spells, or perform any other ordinary actions. The onset of immaterialism is preceded by a gradual lightening of the victim's skin color.

**Susceptibility:** Immaterialism usually strikes illusionists, but any wizard who knows or uses illusionist spells can be a victim.

**Prognosis:** If treated early, immaterialism can usually be cured with cure disease or a similar spell. However, the condition becomes harder to treat as it progresses. Untreated, immaterialism can last for several weeks.

**DM's Notes:** Immaterialism progresses over three distinct stages, each with different symptoms. The affliction can be cured at any stage.

1. In Stage One, the afflicted wizard's skin turns white, as if it had been bleached. He suffers a -1 penalty to his Charisma, but there are no other ill effects. At this stage, immaterialism can be cured with *cure disease* or a similar spell; no saving throw is required. Otherwise, Stage One persists for 2-8 (2d4) days.

2. In Stage Two, the afflicted wizard's skin remains white, but his body has the consistency of firm gelatin. He continues to suffer the -1 penalty to his Charisma. His natural Armor Class is also increased to 7. Because of this improved AC, some afflicted wizards allow their condition to advance to Stage Two before attempting a cure. At this stage, immaterialism can be cured with *cure disease*, but the afflicted wizard must make a saving throw vs. spells; if the wizard succeeds in his saving throw, he resists *cure disease* and remains afflicted with immaterialism. Untreated, Stage Two persists for 2-8 (2d4) days.

3. In Stage Three, the wizard and all of his gear become insubstantial; he appears as if he were made of glass, but he has no substance. The afflicted wizard cannot cast spells, engage in combat, or take any other action aside from moving and speaking. He has a -4 penalty to his Charisma. However, the wizard is affected only by magical or special attacks, including weapons of +1 or better (such attacks are made against the wizard's normal AC). The afflicted wizard is able to pass through small holes or other narrow openings as long as Stage Three persists. At this stage, immaterialism cannot be cured with *cure disease* or any other spell short of a *wish*. Stage Three persists for 2-8 (2d4) days

## Nine Principles of Conduct For Academy Graduates

As a condition of graduation in many magical academies, a new wizard is obligated to promise to uphold the academy's principles of conduct. A sampling of these principles are listed below.

Not all academies subscribe to all of these principles, while others might include principles other than the ones given here. Further, these principles primarily apply to academies who accept students of good and lawful alignments; the principles of evil and lawless academies will probably be significantly different from these. The DM must decide which principles apply to specific academies and what penalties--if any--might apply to a graduate who violates them.

1. The wizard will operate discreetly. He will reveal the secrets of his teachings to no one.

2. The wizard will operate within the laws of his country.

3. The wizard will meet all of his expenses from his own funds. He will not accept charity.

4. The wizard will live in seclusion. He will strive to minimize his social contact with

non-wizards.

5. The wizard will minimize his contact with kings, princes, and other rulers.

6. The wizard's home will include at least one room reserved exclusively for research and study.

7. The wizard will be patient. He will persevere in the face of adversity.

8. The wizard will not attempt to circumvent accepted magical procedures.

9. The wizard will strive to add to the existing body of magical knowledge through original research.

## Six Common Alchemical Processes

While the creation of potions and other magical substances often involves a complex series of laboratory techniques, there are a number of basic processes common to most experiments.

### 1. Calcination

This is the process of reducing substances (usually minerals and metals) to ash by first crushing or grinding them to powder, then subjecting them to high heat.

### 2. Sublimation

This is the process of heating a solid substance until it is vaporized, then quickly cooling the vapor to return it to a solid form.

### 3. Distillation

This is the process of boiling a liquid until it turns to vapor, then cooling the vapor until it condenses back into a liquid, thus purifying the liquid.

### 4. Absorption/Adsorption

This is a method for purifying gases or liquids by exposing them to charcoal particles or other filtering substances; the impurities are attracted to the particles, thus purifying the gas or liquid. If the impurities are actually taken inside the particles, then absorption has taken place. If the impurities remain on the surface of the particles, then adsorption has occurred.

### 5. Flame Test

This is a method of identifying unknown substances by holding them in a hot flame. The color of the flame indicates the nature of the substance; for instance, a green flame indicates the presence of copper.

### 6. Chromatography

This is a simple method for analyzing certain types of unknown substances. The substance is first dissolved in water or other liquid. A sample of the liquid then is poured into a glass tube lined with filter paper, and a solvent is added. Because the components of the substance move through the filter at different speeds, each will appear as a different colored band in the tube.

## Eleven Useful Additions to a Wizard's Laboratory

A wizard's laboratory typically includes a variety of books, crucibles, flasks, jars, tripods, herbs, and even a skeleton or two. Following are several less common but extremely useful items that might be found in an especially well-furnished laboratory. The cost of each item is given in parentheses,

### 1. Granite Table Top

This is an ordinary desk with a top made of polished granite or quartzite to resist staining and damage from acids and other potent substances. (150 gp)

### 2. Glass Mask

This is a face mask made of glass designed to protect the wizard from inhaling poisonous fumes and to protect his face from splashed chemicals. (10 gp)

### 3. Alchemist's Globe

This 3-foot-diameter glass globe separates into two sections. When assembled, the sections form a tight seal that prevents air from entering. Items and substances can be locked inside the globe to isolate them from outside conditions. Small and large globes are available. (150-250 gp)

### 4. Athanor

A small furnace consisting of an oven and a deep pan of sifted ashes. Substances to be heated are placed in a sealed container and covered in ashes for slow, even heating. (80 gp)

### 5. Descensory Furnace

This is a medium-sized furnace primarily used for heating liquids. The liquid is poured down a funnel on the top which runs into a container in the belly of the furnace. (100 gp)

### 6. Heat Bath

This is a small furnace holding a deep pan of water containing metal rings to hold variously sized flasks and tubes. The substance to be dissolved is placed in a glass tube, which in turn is placed in an appropriately-sized ring in the pan. The furnace gradually

heats the water and thus the substance. (75 gp)

### 7. Dung Bed

This item consists of a box made of glass or other non-flammable material with a tight-fitting lid. The box is filled with hot dung or clean, dry sand. Treated substances are placed in the dung bed to keep them warm. (25 gp)

### 8. Analytical Balance

An extremely precise scale for weighing solid materials, the balance is sensitive enough to distinguish a blank piece of paper from a paper with writing on it. To keep it dust-free, the balance is covered with a glass case. (400 gp)

### 9. Burette

This is a thick tube with a valve on one end used to measure liquids precisely. (1 gp)

### 10. Filter Paper

This is a specially treated paper that filters solids from liquids. A funnel is lined with the paper, then the liquid to be filtered is poured in the funnel. Solid material will not pass through the paper. (1 gp/10 sheets)

### 11. Hand Centrifuge

This is a machine consisting of several rings for holding test tubes with a hand pump on the top. Test tubes filled with liquids are placed in the rings, then the wizard rapidly works the pump, causing the tubes to spin in a circle. The spinning causes the heavier substances in the tubes to sink to the bottom, while the lighter substances remain near the top of the tube. (100 gp)

## Four Prerequisites For Admission to an Academy of Magic

While some wizards are self-taught and some acquire their skills from a private tutor, many wizards learn the art of magic at a training academy. Most large cities have such academies; some specializing in a particular school of magic, while others offer training in all of the schools. Usually, there are a minimum of three requirements for admission to an academy.

### 1. Sponsorship

All applicants to an academy must be recommended by a sponsor known by one or more of the faculty members. Exceptions are made if an applicant is an orphan or demonstrates extraordinary aptitude, but in these cases, a faculty member must agree to

sponsor the applicant; the faculty sponsor is then personally held responsible for the applicant's failure or success.

### 2. Personal Interview

Because training a wizard requires a major investment of time and effort, academies screen their applicants carefully to make certain that a prospective student is sufficiently dedicated to persevere through years of rigorous education. Typically, a panel of faculty members interviews each applicant individually, quizzing him at length about his background, his interests, and his reasons for wanting to become a wizard. The panel then votes in secret; a single negative vote results in the rejection of the applicant.

### 3. Entrance Examination

Following a prospective student's successful interview, he is given a battery of examinations to measure his aptitude in a variety of academic areas. The student must demonstrate a basic competence in philosophy, literature, and history, and exceptional skills in writing, science, and mathematics. He must also pass a physical examination to make sure he is in good health.

### 4. Tuition Fees

If a prospective student passes his entrance examinations, he must then make arrangements with the academy administration to pay tuition fees. The tuition fee ranges from 5-20 gp per day, depending on the academy's reputation. The tuition can be paid daily, weekly, or monthly, but it must be paid in advance. Failure to pay tuition results in immediate suspension, unless the student has made previous arrangements with the administration.

The tuition covers the cost of books, laboratory fees, faculty salaries, and room and board, but it does not include expenses for spell components, research materials, or damage caused by the student in his research. Occasionally, scholarships are available for unusually promising students.

After a student is admitted to an academy, he must undergo a probationary period lasting a minimum of six months. During this time, the student's classroom performance is evaluated on a weekly basis and his behavior both on and off campus is closely monitored. If the student is not performing adequately in the opinion of any faculty member or adminstrator, he may be dimissed from the academy. Except in the most extreme circumstances, he is not eligible to apply for readmission. No amount of the tuition paid prior to his dismissal is refundable.

## Nineteen Courses in a Typical Academy Curriculum

The course of study varies from academy to academy, but most include the classes described below. Usually, all of these classes are required to graduate, but the DM might decide to vary them according to the needs of a specific student or the educational philosophy of a particular faculty. The length of time necessary to graduate also varies

from school to school, depending on the student's aptitude, the intensity of the training, and the quality of the faculty, but generally, four to six years of full-time study are required to graduate from an accredited academy. This period can be lengthened by as much as two to four additional years if the student specializes in a particular school.

A student usually takes four to six courses per quarter, with each quarter lasting three months. A minor course, such as Survey of Literature, might last only a single quarter, while a major course, such as Spell Tutorial, might be taken every quarter until the student graduates. An average course lasts one to two hours per day, four to six days per week.

The curriculum of a typical academy of magic includes the following courses.

**1. Physical Training:** Various exercises and activities to improve physical fitness, with an emphasis on dexterity training for manipulation of spell components.

**2. Philosophy of Magic:** The study of logical methods of thinking with applications to practical problems of spell use. Exploration of metaphysics, theory of knowledge, and ethics.

**3. Basic Astrology:** The relationship of the stars, planets, and other heavenly bodies to magical processes. Topics include lunar phases, astral movement, and the influence of deities.

**4. Spell Theory:** How spells function; spell interaction with physical laws.

**5. Fundamentals of Meditation:** Basic techniques for reaching higher levels of intellectual perception. Topics include transcendence, self-actualization, and dream analysis.

**6. Language Instruction:** Grammar, phonetics, and conversational idioms of human, humanoid, and demihuman languages.

**7. History of Magic:** Overview of wizards and magic throughout the ages with an emphasis on historical breakthroughs in spell research.

**8. Magic and Society:** The wizard as viewed from a cultural perspective. A survey of societal relationships and cross- cultural comparisons of wizards around the world(s).

**9. Power Thinking:** Emphasis on increasing the student's understanding of thinking as a process to increase the strength of his cognitive skills. Topics include creativity, memory, concentration, and problem solving.

**10. Survey of Literature:** An introduction to the study of magic literature, with an emphasis on analysis. A broad range of authors from a variety of cultures and historical periods are examined in detail.

**11. Library Instruction:** A survey of research techniques, including classification

systems, spell indexing, basic reference books, and assembling a personal library.

**12. Fundamentals of Spell Transcription:** Topics include penmanship techniques, paper and ink selection, proper structure, revision, basic calligraphy, and proofreading.

**13. Principles of Casting:** An introduction to basic casting techniques of low-level spells. Includes component theory, spell design, and safety procedures. Instruction for specific schools of magic are available for prospective specialists.

**14. Spell Tutorial:** An individualized course tailored to meet the needs of individual students. Students can concentrate on improving skills in specific schools of magic or explore techniques from all schools.

**15. Spell Seminar:** A discussion group addressing topics of special interest to students, with an emphasis on problem areas. Students are expected to conduct demonstrations for the group, with criticism periods to follow.

**16. Spell Practicum:** Addressing low-level spells, the practicum provides students with the opportunity to practice their skills in both a laboratory setting and in the field. Emphasis is on creative application.

**17. Formula Analysis:** Theory of spell formulas, emphasizing techniques applicable to original research. Topics include elementary spell functions, tabular and graphical presentation, variability, and metaphysical equations. Basic alchemical principles are covered in subsequent sessions of this course.

**18. Laboratory Techniques:** Practical application of the principles covered in Formula Analysis. Topics include herbalism, alchemical reactions, natural and unnatural metabolism, and basic scientific procedures (all alchemical processes described earlier in this chapter).

**19. Introduction to 1st-Level Magic:** 1st-level spell instruction. Includes casting techniques, practical applications, and general theory. Individualized instruction available.

## Nine Organizations For Wizards

Wizards are most comfortable in the company of their fellow practitioners, especially those with whom they share common interests, and often form their own associations and organizations. A few such groups are listed below. The DM is encouraged to design variations of these groups; for instance, a Necromancy Syndicate, a variation of the Diviners Syndicate, might exist in a particular DM's campaign world.

Each organization's description includes the following information:

**Description:** The purpose of the group.

**Membership:** The types of wizards belonging to the group.

**New Member Requirements:** Conditions a prospective member is expected to meet

in order to join the group. Usually, this consists of paying an entrance fee or being sponsored by a current member.

**Annual Dues:** The fee that a member must pay each year to remain an active member.

**Benefits:** The advantages of being a member.

### The Brotherhood of Alchemy

**Description:** This group consists of wizards whose primary interest is alchemical research, particularly the research of new magical potions. The group compiles and exchanges information about their current projects, with the implicit understanding that such information will not be shared with outsiders. Violation of this rule results in immediate expulsion from the Brotherhood.

**Membership:** The bulk of the members are transmuters, though a few enchanters and invokers are also included.

**New Member Requirements:** New members must pay an entrance fee of 100 gp and show evidence of original magical item research within the last year.

**Annual Dues:** 20 gp

**Benefits:** The Brotherhood can help its members obtain hard-to-find research supplies and laboratory equipment. They can also offer assistance to members who have reached a dead end in their research.

### Legal Defense Front

**Description:** This group provides legal defense to wizards unjustly accused of criminal activity. Their services include legal representation, financial support, and personal counseling.

**Membership:** Any wizard of lawful good alignment can be a member.

**New Member Requirements:** A new member must be sponsored by a current member and must pay an entrance fee of 200 gp. The entrance fee may be waived on a majority vote.

**Annual Dues:** 50 gp

**Benefits:** If a member is accused of a crime, the Front will provide 1,000 gp or more toward his defense. The Front can also provide expert witnesses and legal representation if necessary. Their counseling service advises members about the acceptance of magic-users in various cities and cultures, giving special attention to places where magic-users are routinely persecuted and imprisoned for minor infractions of the law.

### The Silver Swan Club

**Description:** Primarily a social organization for unmarried wizards, the Silver Swan Club holds regular dances, picnics, and other social events for its members. The highlight of the year is the annual Harvest Moon Festival, when the club stages an all-night party in a rented castle.

**Membership:** All wizards are welcome, but the membership comprises mainly young, low-level wizards.

**New Member Requirements:** A new member pays an entrance fee of 20 gp.

**Annual Dues:** 5 gp

**Benefits:** The club provides its members with excellent opportunities to meet potential friends and mates.

### Wizards' Liberation Society

**Description:** This organization seeks to further the interests of wizards through political pressure on local and national governments. Their methods include negotiation, demonstrations, and one-on-one lobbying. Some factions are rumored to use violence to underscore their messages.

**Membership:** All wizards are eligible.

**New Member Requirements:** A new member must be sponsored by a current member and pay an entrance fee of 50 gp. The fee is waived if the prospective member has exploitable political connections (for instance, if he is related to a government official).

**Annual Dues:** 10 gp

**Benefits:** The Society can exert considerable influence on governments to adopt laws beneficial to wizards. The Society can also put its members in contact with government officials and assist them in working with government bureaucracies.

### Foes of the Wand

**Description:** This is an organization of purists who adamantly oppose the use of magical wands or any other magical devices. Such devices are perceived to be a threat to the craft of magic; only the use of spells is acceptable to the Foes of the Wand. If a member is ever caught using a magical item, he is immediately expelled.

**Membership:** All wizards are eligible, but the membership is primarily composed of older mages of higher levels.

**New Member Requirements:** The only requirement for a prospective member is the donation of a magical item to the Foes. The Foes then destroy the item in a solemn ceremony, after which the prospective member vows never to use a magical item again.

**Annual Dues:** None

**Benefits:** Once per year, each member can exchange a magical item for a spell of comparable power. The magical item is destroyed, then the Foes allow the member to copy one spell (of their choice, not the member's) from their spell books.

### Diviners Syndicate

**Description:** More of a business than a fraternal organization, the Diviners Syndicate sells advice, predictions, and omen interpretations to members of the aristocracy. Their fees are expensive, but because the syndicate pools the talents of a sizeable number of skilled wizards, their advice and predictions are extremely accurate.

**Membership:** Only diviners of eighth lever or higher are eligible.

**New Member Requirements:** The prospective member must pay an entrance fee of 500 gp and bring at least one new client to the syndicate.

**Annual Dues:** There are no annual dues. However, to remain in good standing, a

member must spend a minimum of eight weeks per year working exclusively for the syndicate.

**Benefits:** Members in good standing split the syndicate's profits at the end of the year. A member's annual share is usually 5,000-30,000 (1d6 x 5,000) gp.

### Center for Monster Control

**Description:** This organization compiles information about magical monsters and makes this information available to its members at no charge.

**Membership:** All wizards who have first-hand knowledge of magical monsters are eligible.

**New Member Requirements:** A new member must pay an entrance fee of 10 gp. Additionally, the prospective member must have first-hand knowledge of a magical monster or a monster wielding magical powers (such knowledge is usually acquired as a result of a battle). The membership votes on whether the prospective member's knowledge is of sufficient usefulness to the organization to allow him membership.

**Annual Dues:** None if the member attends all bi-monthly meetings. The member may be assessed a fine if too many meetings are missed without good reason.

**Benefits:** The organization supplies information to its members about magical monsters, including their abilities, their weaknesses, and suggested strategies for defeating or avoiding them.

### League of Extraplanar Travelers

**Description:** Similar to the Center for Monster Control, this organization compiles information about alternate planes of existence and makes this information available to its members at no charge.

**Membership:** All wizards who have visited one or more alternate planes of existence are eligible.

**New Member Requirements:** A new member must pay an entrance fee of 20 gp. Additionally, the prospective member must have proof of a visit to at least one alternate plane of existence. The membership votes on whether the prospective member's knowledge of that plane is of sufficient usefulness to the organization to allow him membership.

**Annual Dues:** None if the member attends all bi-monthly meetings. A fine may be assessed if a member misses too many meetings without good reason.

**Benefits:** The organization supplies information to its members about the alternate planes, including inhabitants, physical laws, and how spell casting is affected (the DM should consult Chapter 6 for details about magic in other planes--the league has all of this information available to its members).

### Fellowship of Sages

**Description:** This is an organization of sages who are expert in a wide variety of subjects. The sages charge for their advice, giving a percentage of their fees to the Fellowship for its upkeep.

**Membership:** All types of wizards belong to the fellowship, each with one or more areas of expertise.

**New Member Requirements:** A prospective member must pay an entrance fee of 100 gp, plus he must have a nonweapon proficiency in one or more of the fields of study listed on Table 61 of the *Dungeon Master's Guide*. If the wizard is a recognized authority in one of the fields of study not available as a nonweapon proficiency in the DM's campaign, he can still be admitted to the fellowship with the DM's permission.

**Annual Dues:** None. However, each member must provide 15 percent of the fees he charges for his sage advice to the fellowship.

**Benefits:** As long as a member spends a minimum of eight weeks per year working exclusively for the syndicate, he has access to the advice of the other members at no charge. If he fails to spend the minimum of eight weeks per year, he must pay their normal fees. Advice is given according to the rules for sages on pages 106-107 of the *DMG*. However, the chances listed on Table 61 (page 107 of the *DMG* ) of finding a sage in the fellowship who is expert in a given field are doubled; for instance, there is a 20 percent chance of finding an expert in alchemy. When using the Sage Modifiers table (Table 62 of the *DMG* ), assume that a fellowship sage always has access to a complete library.

## 400 Fantastic Materials

Occasionally, the DM will need to introduce a fantastic magical material into his campaign. Such a material might be required as an ingredient for a PC wizard's magical research (especially if the DM is using the fantastical approach to magical fabrication described on page 84 of the Dungeon Master's Guide), it might be the focal point of a quest, or it might be a necessary component to remove a curse.

If the DM has no specific material in mind, he can generate one by rolling 1d20 two times on Table 19. The first die roll selects an element from Category A; the second die roll selects an element from Category B. The selected elements become part of this phrase: "The (Category A) of a (Category B). " For instance, if the first die roll is 3 and the second die roll is 5, the fantastic material is "the breath of a butterfly."

If he desires, the DM can simply pick elements from each category to form specific materials. He can also substitute similar elements for the choices in Category B. For instance, he might substitute "bumblebee" for "butterfly" (so the example above becomes "the breath of a bumblebee") or "diamond" for "stone."

If random rolls produce results that seem inappropriate or frivolous (such as "the breath of a stone"), the DM can roll again for either category or substitute any category choice he wishes. Unless the DM has a specific meaning in mind, the players must discover the precise meaning of a fantastic material or the means to produce or locate it. Discovering the meaning of a fantastic material can easily become the premise for a new adventure.

### Table 19: Random Generation of Fantastic Materials

| D20 Roll | Category A | Category B |
|---|---|---|
| 1 | song | stone |

| | | |
|---|---|---|
| 2 | dream | flower |
| 3 | breath | meadow |
| 4 | memory | child |
| 5 | heart's desire | butterfly |
| 6 | teardrop | mountain |
| 7 | strength | grain of sand |
| 8 | smile | snowflake |
| 9 | blessing | flickering candle |
| 10 | touch | widow |
| 11 | courage | eagle |
| 12 | scent | tombstone |
| 13 | whisper | dragon |
| 14 | kiss | skeleton |
| 15 | shadow | mermaid |
| 16 | wisdom | river |
| 17 | secret | unicorn |
| 18 | sorrow | goddess |
| 19 | epitaph | giant |
| 20 | gratitude | city |

## Five Incredible Locations

There are a vast number of magical places that are rumored to exist throughout the world; a few of them are listed below. Whether they actually exist remains to be discovered (and is up to the discretion of the DM), but the search for any one of them could be used as the basis for an adventure or a springboard for a campaign

### The Island of Ghothar

This island is the former stronghold of the master conjurer Ghothar. Ghothar mysteriously vanished several centuries ago, and left the bulk of his magical treasures secured in a chamber in the deepest recesses of his island. Not only is the treasure cache rumored to be of incomparable value, it is also said to include one of Ghothar's spell books, containing the formulas for many high-level conjuration spells.

The Island of Ghothar is enchanted to continually drift in random directions at speeds up to 25 miles per hour. There have been no confirmed sightings in over a century, meaning that the island conceivably could have drifted anywhere in the world

**About the Island**

Refer to Map 1.

The island resembles a cylinder about 50 yards in diameter and about 165 yards tall. Nearly three-fourths of it is submerged, meaning that only about 35 yards of the island is above sea level. The island is made of granite; the granite is permanently surrounded with a *wall of force*, making it virtually invulnerable to damage.

The island is divided into five levels, each about 25 yards tall from top to bottom (except for Level 1, which corresponds to the surface of the island). The floors are solid

granite nearly 10 feet thick, permanently covered with *wall of force*.

The only passageways between levels are the magical portals located at various points on the floors (see map). The portals are 5-foot-diameter rings made of black and white pearls imbedded in the granite. The portals are completely airtight. When a creature or person touches the granite area inside the ring of pearls, the creature or person is instantly transported to a specific location on the island. The destination of each portal is indicated in the Map Key

**Map Key**

**Level 1:** This is the surface of the island, the only portion that is visible above sea level. There is a portal on the center of the island. Those stepping on the portal are instantly transported to a random area in Level 2, abruptly finding themselves underwater.

**Level 2:** This level is completely filled with sea water. There are two 10-foot-diameter openings on either side of this level leading to the open sea. Depending on where in the world the island happens to be, this level could contain various forms of dangerous sea life who have taken shelter here; such sea life might include sharks, giant eels, or giant octopi.

**2a. Portal:** Those stepping on this portal are instantly transported to the top of the island (to the area marked with an X on the Level 1 map).

**2b. Portal:** Those stepping on this portal are instantly transported to the floor of Level 3 (to the area on the Level 3 map marked with an X).

**2c. Portal:** Those stepping on this portal are instantly transported to the floor of Level 4 (to the area on the Level 4 map marked with an X).

**Level 3:** This level is completely filled with a noxious yellow gas that smells like dead fish. The gas is so dense that normal vision is reduced to 10 feet. Characters entering this level must save vs. poison; those who fail suffer 1-2 hit points of damage per round of exposure to the gas.

**3a. Portal:** Those stepping on this portal are instantly transported to a random area in Level 2, finding themselves suddenly underwater.

**3b. Portal:** Those stepping on this portal are instantly transported to the top of the island (to the area marked with an X on the Level 1 map).

**3c. Portal:** Those stepping on this portal are instantly transported to the floor of Level 4 (to the area on the Level 4 map marked with an X. )

**Level 4: This** level has floor-to-ceiling walls of granite that divide the level into various sections. The walls are one foot thick and are permanently covered with *wall of force*.

**4a, 4b, 4c. Fake Portals:** These circles of pearls resemble the portals found on other levels of the island, but they are not portals. Instead, when any character steps on one of these fake portals, he activates a special *monster summoning III* spell. The spell instantly summons 1d4 3rd-level monsters (selected by the DM from his 3rd-level encounter tables). The summoned monsters appear near the ring's perimeter and attack everyone in sight. If the monsters are killed, they disappear; otherwise, they fight for 2-8 (2d4) rounds, after which time they vanish. There is no effect if the monsters step inside one of

the fake portals. The monsters will avoid the real portal (4d).

**4d. Portal:** Those stepping on this portal are instantly transported to the floor of Level 5 (to the area on the Level 5 map marked with an X. )

**Level 5:** This is Ghothar's treasure cache. The exact composition of the treasure is the decision of the DM, but a suggested cache includes a spell book with a dozen conjuration/summoning spells of various levels, five magical items, and an assortment of gold and gems worth 20,000 gp. (Rumors abound that Ghothar found the secret of eternal life and still exists in an alternate plane of existence; if this is true, Ghothar might return someday to restock his cache with a different assortment of treasure. He might also change the traps in his island, especially if his previous treasure has been stolen.)

Those stepping on the portal on this level are instantly transported to the top of the island (to the area marked with an X on the Level 1 map).

## The Sphere of B'naa

The Sphere of B'naa is located in a cavern beneath one of the world's highest peaks. Its precise location is not known. The sphere was created eons ago by a consort of wizards led by a high-level mage named B'naa. The sphere supplied transport for the wizards to alternate planes of existence. Because of the magic involved in creating and sustaining the sphere, it is extremely difficult to use and virtually impossible to use by non-wizards

### About the Spheres

Refer to Map 2.

The sphere is located in an immense cavern at the end of a 200 yard long passage winding deep inside the earth beneath an ancient, towering mountain range. The sphere consists of several layers (like an onion), each about 20 feet thick. The layers are separated from one another by bands of shimmering white light. The portal to the alternate planes lies in the center of the sphere; to get to the portal, a person must pass through each layer.

Once the magical requirement for a layer has been met, characters may pass through the layer of shimmering light to the next layer. If any character passes back through a light layer that he has already passed through, the magical condition must be met again in order to re-enter that light layer. Characters may pass freely toward the outer spheres (for example, from layer 4 to layer 3).

Each layer is permanently enchanted with special features representing the various levels of wizard magic; for instance, the first layer of the sphere represents 1st-level wizard magic, the second layer represents 2nd-level wizard magic, and so on. If the proper level of spell is cast on a layer, its features change dramatically; these spells can either be cast on the layer itself or on any subject inside the layer. Magical items that duplicate the effects of spells do nothing to change the features of the plane, nor do priest spells. The effects are explained in detail in the Map Key.

### Map Key

**Layer 1:** This layer is filled with brightly blinking lights of all colors. Those in contact

with this layer must save vs. spells or become blinded for the next 2-8 (2d4) rounds. If any 1st-level wizard spell is cast at the layer or at a character inside the layer, the layer instantly fills with *dancing lights* and characters no longer risk being blinded. The *dancing lights* persist for one turn, after which the layer reverts to its original features.

**Layer 2:** This layer is filled with greenish-yellow fog that obscures all sight, normal and infravision, beyond two feet. Those in contact with this layer suffer 1-4 hit points of damage per round (save for half-damage). If any 2nd-level wizard spell is cast at the layer or at a character inside the layer, the fog instantly becomes harmless, similar to the fog produced by *fog cloud*, and characters no longer risk suffering damage. The harmless *fog cloud* persists for one turn, after which the layer reverts to its original features.

**Layer 3:** This layer is dark and empty, but a powerful *gust of wind* of about 30 m.p.h. blows from the inner wall toward the outer wall, rendering man-sized creatures unable to proceed to Layer 4. If any 3rd-level wizard spell is cast at the layer or at a character inside the layer, the wind subsides to a gentle breeze and characters can proceed normally. The gentle breeze persists for one turn, after which the strong wind begins to blow again.

**Layer 4:** This layer is filled with roaring red flames similar to those produced by a *fire trap*. Those in contact with this layer must save vs. spells or suffer 5-8 (1d4+4) hit points of damage (save for half damage). If any 4th-level wizard spell is cast at the layer or at a character inside the layer, the flames turn green and no longer generate heat; characters suffer no damage from the green flames. The green flames persist for one turn, after which the layer is again filled with roaring red flames.

**Layer 5:** This layer is solid granite, similar to that produced by *wall of stone*. If any 5th-level wizard spell is cast at the layer, the granite disappears, revealing the bands of shimmering white light that border the final layer (Layer 6) of the sphere. The granite reappears in one turn.

**Layer 6:** This is a 20-foot-diameter hollow sphere containing a structure made of shimmering white light. The structure rests at ground level (relative to the cavern that the entire sphere lies within). The shimmering structure has four openings, all leading to a central area containing a golden chair. A character can walk to the chair through one of the openings, sit down, and instantly be transported to another plane of existence.

**Opening A:** If a character walks through this opening, he will be transported instantly to the Ethereal planes when he sits in the golden chair. He will be transported to any specific location in the Ethereal planes he has in mind; otherwise, he will be transported to a random location in the Ethereal planes.

**Opening B:** If a character walks through this opening, he will be transported instantly to the inner planes when he sits in the golden chair. He will be transported to any specific location in the inner planes he has in mind; otherwise, he will be transported to a random location in a randomly chosen inner plane.

**Opening C:** If a character walks through this opening, he will be transported instantly to the outer planes when he sits in the golden chair. He will be transported to any specific location in the outer planes he has in mind; otherwise, he will be transported to a random location in a randomly chosen outer plane.

**Opening D:** If a character walks through this opening, he will be transported instantly to the Astral plane when he sits in the golden chair. He will be transported to any specific location in the Astral plane he has in mind; otherwise, he will be transported to a random location in the Astral plane.

## The Sage Tree

The Sage Tree is a huge oak tree about 10 feet in diameter and over 100 feet tall. It grows somewhere in one of the world's densest forests. The Sage Tree contains the spirits of a dozen of the wisest scholars who ever lived. After the scholars died, the gods of good rewarded their devotion to pure knowledge by placing their spirits in this oak so they could engage in philosophic discussions for all eternity.

If a wizard locates this oak (recognizable by a slight pulsation near its trunk that resembles a heart beat), he can ask it any question as if he were consulting a wise sage for information (the wizard can ask any question relating to the fields of study listed on Table 61 of the *DUNGEON MASTER Guide*). The Sage Tree will only respond to wizards of lawful good alignment, and it will answer only one question per day.

If these requirements are met, two to five (1d4 + 1) human faces will sprout from the tree in an area five to ten feet above the base of the trunk. The faces appear to be carved from wood. One of the faces will politely ask the wizard to repeat the question, then another face will offer an answer. Immediately, a second face will offer a different answer. If there are additional faces, they too will offer different answers.

After all of the faces have offered their answers, they will ignore the wizard and engage in a heated argument as to who is wrong and who is right. The argument will continue for at least 2-8 (2d4) rounds, during which time the argument will drift off into topics completely unrelated to the wizard's question. At some point in the argument, one of the heads will abruptly ask the wizard for his opinion to settle their argument--the head will ask for the wizard's opinion on a subject totally unrelated to the wizards' original question. Typical questions asked by a head might include:

- If a star falls from the sky and lands in the ocean, should the star still be considered part of the heavens, or has it now become part of the earth?
- If a large animal kills a smaller animal for sport, should it be held accountable for its actions?
- If two men share equally in a business and one of them dies, should the widow of the dead man receive his share of the profits, even if she does not participate in the business herself?
- Are a wizard's skills more important than those of a craftsman? Than those of an artist?
- In what ways is a dragon the equal of a man?

If the wizard refuses to answer the head's question, all of the heads withdraw into the

tree trunk and disappear. They cannot be summoned again for another 24 hours.

If the wizard makes a reasonable effort to answer the head's question (the DM decides if the wizard has made a reasonable effort), the heads will nod in agreement, saying they will discuss the issue further at another time. One of the heads will then ask the wizard to repeat his original question. The heads will consult briefly with each other, then one of them will answer the question. To determine if the heads have arrived at the correct answer, the DM should roll 1d20. On a roll of 18 or less, the heads have answered correctly. On a roll of 19 or 20, the heads have answered incorrectly. The DM should create an incorrect answer that will be believable and consistent with what they players already know about the adventure.

After the heads answer the wizard's question, they bid him farewell and withdraw back inside the tree. The heads will not answer another question until 24 hours have passed.

If the tree is cut down or otherwise destroyed, the essences of the sages will be transported to another tree somewhere else in the world. As with the previous tree, the new Sage Tree will be recognizable by a slight pulsation near its trunk

## The Garden of Jertulth

This in a clearing in an uncharted jungle; its precise location is not known. The garden is only about 10 feet by 10 feet square, but its enchantment is so strong that it radiates magic for a radius of one mile.

The garden appears to be a normal bed of wild flowers of various types. However, if a non-magical weapon is buried in the garden beneath three feet of soil and left undisturbed for a year and a day, there is a good chance that it will change into a magical weapon. No more than two weapons can be buried in the garden at the same time; if more than two weapons are buried, the enchantment will not work and the weapons will be unaffected.

If a weapon is removed from the garden before a year and a day have passed, the magic is negated; the weapon must be buried again, and another year and a day must pass before the enchantment takes hold. If a weapon remains buried in the garden for a year and a day, roll 1d20 and consult Table 20 for the result.

### Table 20: Results from the Garden of Jertulth

| D20 Roll | Result |
|---|---|
| 1-3 | The weapon is unaffected. |
| 4-6 | The weapon has become a *weapon +1*. |
| 7-10 | The weapon has become a *weapon +2*. |
| 11-12 | The weapon has become a *weapon +3*. |
| 13 | The weapon has become a *weapon +4*. |

14-15 The weapon has become a *weapon +1, +2 vs. magic-using and enchanted creatures*. This weapon always provides a +1 bonus. The +2 bonus takes effect when the sword is employed against wizards, spell-casting monsters, and conjured, gated, or summoned creatures. (The +2 bonus will not operate against a creature magically empowered by an item that casts spells, such as a *ring of spell storing*.

16 The weapon has become a *weapon +3*. However, 2-8 (2d4) days after it is taken from the garden, the weapon loses its enchantment and reverts to its non-magical form. *Permanency* or a similar spell cannot prevent the weapon from losing its enchantment, although a *wish* could.

17 The weapon has become a *weapon +3*. However, 2-8 (2d4) days after it is taken from the garden, the weapon disintegrates into dust. This enchantment is so powerful that nothing short of a *wish* can prevent the weapon from disintegrating; however, if a *wish* is cast on the weapon, it will lose its +3 bonus and revert to a normal weapon.

18 The weapon has become a *weapon +1, cursed*. It performs in all respects as a +1 weapon, but when it is used to attack an enemy, the sword will weld itself to the welder's hand and force him to fight until the enemy or the wielder is slain. After its first use, the wielder can never rid himself of the cursed weapon--it will always appear in his hand whenever an opponent is faced. The wielder can be freed of the weapon by *remove curse, limited wish, wish,* or a similar spell.

19 The weapon has become a *weapon -2, cursed*. The weapon gives off a magical aura and performs well in practice, but when it is used against an opponent in combat, it lowers its wielder's attack rolls by 2. Only by careful observation can this lowering be detected. All damage scored is reduced by 2 hit points, but a successful hit will always inflict at least 1 hit point of damage. As with the, *weapon +1, cursed* the weapon -2, cursed will always appear in the hands of the wielder and force him to fight until the enemy or the wielder is slain. The wielder can be freed of the weapon only by a *limited wish* or a *wish*.

20 The weapon has turned to dust.

## The Shadow Trees

This is a grove of spindly, leafless trees growing somewhere in a dark jungle. The trees have black bark, and their uppermost branches always sway as if being blown by a breeze; they sway even in the absence of wind.

On nights with a clear sky and a full moon, the shadows of the branches spell out one or more omens and warnings on the ground. The omens appear as shadowy runes of any number of ancient languages; a wizard can translate the runes with *comprehend languages* or a similar spell. The omens and warnings are always 100 percent accurate, though their phrasing may be ambiguous. Rumors tell that once per year, the shadow

trees spell out the formula of a wizard spell of a random level which can be translated by *comprehend languages, read magic*, or a similar spell

## Twelve New Magical Items

If the DM wishes to determine the discovery of the following items at random, he can use the magical item tables on pages 135-139 of the *DUNGEON MASTER Guide*. Each item below belongs to a particular table; when a DM's Choice result is rolled on the appropriate table, the DM can use the indicated item as one of his options. For instance, the *potion of elasticity* listed below belongs to Table 89 (page 135, *DMG* ). If a 20 is rolled, the DM can use the *potion of elasticity* as an option for the DM's Choice

## Potion of Elasticity

A character consuming one dose of this potion is able to stretch his legs, arms, neck, or any other appendage up to a distance in feet equal to twice his Constitution score; for instance, a character with a Constitution of 15 can stretch up to 30 feet. A character can stretch only one appendage at a time; for instance, he can stretch one arm, one finger, or his neck. Whenever he stretches any appendage, he must make a Constitution Check; if he fails, the stress of the stretch causes 1d6 hit points of damage. The potion lasts for 1-4 turns; during this time, the character can make as many stretches as he likes, as long as he checks for damage for each stretch.

Add to: Table 89 (page 135, *DMG* ).

XP Value: 300

## Candle of Everburning

This resembles a normal wax candle about 6 inches tall. However, once the candle is lit, the flame can be extinguished only by the spoken command of whomever is holding it. Otherwise, the flame continues to burn; it will burn underwater, in any alternate plane of existence, or in the strongest of winds. *Dispel magic* and similar spells have no effect on the flame. The *candle of everburning* can burn for 24 hours before all of its wax melts away.

Add to: Table 101 (page 138, *DMG* ).

XP Value: 300

## Medallion of Steadiness

This is a silver medallion of a horse's head. While wearing it, a character can never be thrown from his mount, whether a horse, a dragon, or any other creature suitable for riding.

Add to: Table 96 (page 137, *DMG* ).

XP Value: 1,000

## Dragon Slippers

These slippers are made of green silk. The magic of the *dragon slippers* is activated if the wearer concentrates and speaks the word "change." If activated, the *dragon slippers* cause the wearer to appear as a 20-foot dragon with bright yellow scales, a barbed tail, and long green fangs; the wearer does not gain any of the abilities of a dragon. While the illusion is in effect, the wearer retains his normal abilities and statistics. The effect lasts for one hour, but can be canceled any time by the command of the wearer.

Add to: Table 98 (page 138, *DMG* ).

XP Value: 3,000

### Parchment of Monster Holding

This 1-foot-square piece of parchment can hold any monster summoned by a *monster summoning I* spell. The wizard unfolds the parchment and lays it before himself prior to casting the spell. If the spell is successfully cast, the summoned monster is immediately absorbed into the parchment, appearing there as a colored image. The caster can then refold the parchment and carry it with him, holding the summoned monster indefinitely. When the parchment is unfolded and laid on the ground, and the wizard speaks a command word, the monster appears, remaining active for the normal duration of the *monster summoning I* spell. Any single parchment of monster holding can be used only once; after the monster is released, the parchment crumbles to dust. The parchment also crumbles if it is torn or defaced in any way.

Add to: Table 104 (page 139, *DMG* ).

XP Value: 150

### Singing Skull

This item resembles a small human skull, about 3 inches in diameter, made of ivory. Once per day, the owner can command the skull to sing. The *singing skull* sings eerie, depressing tunes for one hour (or less, as ordered by the skull 's owner). All those within 50 feet of the *singing skull* must make a successful saving throw vs. spells or suffer the effects of a fear spell. The owner of the *singing skull* is immune to its effects.

Add to: Table 103 (page 139, *DMG* ).

XP Value: 2,000

### Airboat

This appears to be a canoe made of stone and measures 3 feet tall, 12 feet long, and 4 feet wide. Inside are five evenly spaced stone planks, each capable of seating two human-sized passengers. A plank on one end of the canoe is marked with a star symbol in the center. The *airboat* is also fitted with two sets of stone oars that fit in ridges carved in both sides of the craft.

The *airboat* responds to the mental orders of its commander (the character sitting on the plank with the star symbol). Only a wizard or priest can serve as an *airboat* commander.

The *airboat* can move in any direction in any medium. While moving, the *airboat* is surrounded by an aura of light that allows all of its passengers to breathe normally, even

when traveling through water or airless space. The aura surrounds the craft to a distance of 10 feet.

The *airboat* has a movement rate of 40. It can move only if it is being rowed with at least one set of the stone oars. If only one set is used, the craft has a maximum movement rate of 20; if both sets are used, the craft has a maximum speed of 40. A single character can operate two oars, or two characters can sit side by side on a plank, each operating an oar. To move at maximum speed, the rowers must complete a stroke every two seconds; if the stroking rate is less than this, the maximum speed decreases proportionately. For instance, if one set of oars is stroking once every four seconds, the *airboat* has a maximum movement rate of 10.

The commander must remain seated on the star plank. He can take no actions other than commanding the craft. If he moves from his seat, attempts to operate the oars, or takes any other action, the *airboat* stops moving. Similarly, if his concentration is interruped, the craft stops. If it stops moving while in the air, it hovers in place. The *airboat* can hover in place for only 1 turn, after which it sinks gently to the ground. If it stops moving while on water, the boat simply drifts.

Add to: Table 104 (page 139, *DMG* ).

XP Value: 20,000

### Ring of Resistance to Breath Weapons

This ring gives the wearer complete immunity to all breath weapon attacks from creatures other than dragons; the wearer suffers half damage from dragon breath.

Add to: Table 91 (page 136, *DMG* ).

XP Value: 5,000

### Collapsing Spell Book

This resembles an ordinary traveling spell book, except that it can be folded over and over until it is a square one inch on each side. The book can be unfolded when its owner wishes to consult it, then folded back into its small size for easy carrying.

Add to: Table 95 (page 137, *DMG* ).

XP Value: 1,500

### Spoon of Mixing

This spoon increases the chance of successfully combining potions to create a new effect. When combining potions as per the rules on page 141 of the *DUNGEON MASTER Guide*, the percentile dice roll on Table 111 is modified by +10 when using the *spoon of mixing*. Treat all results greater than 00 as 00. Note that by using the *spoon of mixing*, there is no chance that the combined potions will cereate an explosion, a lethal poison, or a mild poison.

Add to: Table 102 (page 138, *DMG*. )

XP Value: 1,500

## Pen of Excellence

A *pen of excellence* grants the user the following abilities:

- He can write at twice his normal speed (particularly helpful for wizards copying new spells into their spell books).
- He can draw accurate pictures of anything he sees with the precision of the finest artist.
- If the user has a sample of another person's handwriting, he can create a perfect forgery of that handwriting. Any type of ink can be used with a pen of excellence.

Add to: Table 102 (page 138, *DMG* ).

XP Value: 1,200

## Bracelet of Scaly Command

This coral bracelet enables the wearer to control water-dwelling creatures with animal intelligence or lower (mainly fishes and reptiles). The creatures must be within a half-mile radius of the caster in order to be controlled, and they must be within 30 feet of each other. The number of creatures that can be affected is a function of Hit Dice. The spell affects 1-10 Hit Dice of monsters. Monsters with 5+3 Hit Dice or more are unaffected.

The center of the area of effect is determined by the spellcaster. The creatures with the fewest Hit Dice are affected first, and partial effects are ignored. The caster does not have to be in the water to command the creatures.

This control lasts for 2-12 (2d6) turns and cannot be dispelled. No saving throw is allowed against the magic of the *bracelet*. The wearer can use this ability once per week.

Add to: Table 96 (page 137, DMG ).

XP Value: 2,500

# Introduction

Since the creation of the ADVANCED DUNGEONS & DRAGONS® game system, the cleric has been one of the most popular character classes. He has been a happy bridge between warriors and mages: Capable of armoring up and wielding heavy weapons, capable of casting useful magics, he was a very versatile adventurer and the favorite choice of countless players.

With the release of the AD&D® 2nd Edition game, none of that has changed. The cleric is the same magic-hurling, mace-wielding hero that he always was. And in *The Complete Priest's Handbook* , we're going to see to it that he's even more than that.

In this supplement, we're going to elaborate on what the priest (including the cleric) *is* to the campaign, to the setting's civilization, and to the adventuring party.

We'll be providing guidelines for the DM to work up the cleric's faith: The god or philosophy he serves, the rules and mores he follows, the duties he practices, the restrictions he suffers, the powers he possesses, and the relations he and the others of his faith have with the followers of other faiths.

We'll show you how to work up priests devoted to specific mythoi. The druid, from the AD&D® 2nd Edition *Player's Handbook*, is one example; this supplement describes many, many more, and provides rules for the DM to create new priesthoods of his own design.

We'll talk about priestly orders. Some priesthoods have soldierly orders, scholarly orders, missionary orders, oracular orders, and many other types. If your priest character belongs to a faith with several orders, he may choose one of them, which will give him special abilities and duties beyond those of ordinary priests.

We'll talk about role-playing the priest character. Certainly, priest characters don't have to have the same sort of identical personality (the kindly father-confessor with the bloody mace in his hand) which many players imagine them all to have.

We'll describe whole campaigns devoted to priests: How to run them, how to give them a purpose, how to determine what goals and interests are most appropriate.

And we'll talk about the sort of equipment that priests use in their devotions and adventures, including weapons, armor, holy symbols, priestly vestments, and other items.

*The Complete Priest's Handbook* is equally useful if you're a Dungeon Master or a player. It will add depth to the campaign world and the range of NPCs for Dungeon Masters, and add detail to the abilities, backgrounds, and responsibilities of player-character priests.

* * *

In the text, for reasons of simplicity, we normally use masculine nouns and pronouns inclusively. When we say "god," "priest," or "man," we're normally also implying "goddess," "priestess," and "woman."

In order to be able to use this supplement, you must use the Weapon and Nonweapon Proficiencies rules from the AD&D® 2nd Edition game. If you're not yet familiar with them, you ought to read them before continuing in this rulebook.

A special note for those of you who are using this *Complete Priest's Handbook* with your original AD&D® game instead of the new edition: This supplement mentions a lot of page numbers from the *Player's Handbook* and the *DMG*. The page numbers cited are for

the newest edition, not the original; they won't be correct for those of you using the old books.

## Priests, Gods, and the World

This chapter is for DMs who want to design the mythic history of their campaign world(s). It's not prohibited for the campaign's players to read this . . . but not all of them will find it useful. Players may wish to skip on to the third chapter, "Sample Priesthoods."

One of the first things the DM can do to add color and detail to his campaign world is to work up that world's *mythic history*. Such a history will help establish, in his mind and those of his players, the relationships between the gods, and between gods and men. It will help set the tone of the campaign and the attitude of the player-characters' culture. It will give the players some idea of what their characters expect from their gods and their future. And once it's done, the DM can then elaborate on it and decide how each individual god relates to other gods and to the sentient races of the world.

In this chapter, we'll discuss some of the common themes that run through myths; the DM can use these topics as a framework for his own mythic history.

## Creation

The first place to start is the creation of the universe and the world.

In most creation stories, there was usually some disinteresting, stable condition in effect at the dawn of time. It might have been a formless void, or darkness, or unending ice and snow.

Then, we have the first great being, the one who brings about creation of the world. Note that this great being doesn't have to be the god who is now dominant in the campaign world. The myths are packed with tales of gods who created their worlds, became oppressive, and were then cast down by other gods, even their own children, who now rule in their place.

Nor does the creation have to have been a deliberate event. It might have been an accident; the god could have been dreaming and his dreams became reality.

The creator could be a tremendous monster, one which began the process of creating the world, but was overthrown before it finished making the world to its own satisfaction . . . and one which, legends say, will return some day to finish the job.

It could be a simple creature, one not necessarily deserving of worship, which shapes the world simply by acting as the animal it is. As one example, if the original state of the universe were a giant block of salt, this creature could be a giant cow which licks it into the shape of the world.

In some mythologies, the great being that shapes the world stays around after that task is done; he or she might be the principal deity of the world. More often, that great being perishes, or is cast down by descendants, or settles for a lesser role once creation is accomplished.

### Basic Astronomy

What is the shape of the world and the universe once they are created? What are suns, moons, planets and stars?

The entire universe could be a single huge world, with a dome overhead which holds the stars and confines the sun(s) and moon(s). The world could be a disk, a sphere, a bowl, or an unending surface continuing in all directions to infinity.

The sun and moon could be glowing chariots, or bright gods continually flying across the sky (perhaps as a service to the world, perhaps because they're being chased). They could be worlds unto themselves, and the player-characters might someday have the opportunity to visit and walk the bright surface of the sun in search of adventure. They could be the great, glowing eyes of the most powerful deity. They could be gigantic, fiercely-burning lamps created by the craftsman-god, lamps which circle the world on some giant mechanism. (Perhaps, instead of circling the world, they just shut off each day when the time is due; the sun just turns off, and the moons just turn on.) They could even be suns and moons as we understand them, though some of the charm of fantasy lies precisely in making such things *different* from our cold, modern explanations of them.

The planets and stars could be holes in the dome of the sky, suggesting that there is a great brightness beyond. They could be decorations placed in the sky by the gods. They could be worlds unto themselves. They could be glowing creatures forced to trace paths through the sky every night. They could be the suns of distant worlds.

And, of course, the DM can choose for all these astronomic bodies to be one thing, but for the prevailing belief of the people to be different, an incorrect belief; nothing says that the world's deities want the humans and demihumans to know the truth.

### Effects of Terrain on Creation

In the real world, the terrain of the human culture to which a mythology belonged often had a strong effect on the myths. Norse mythology started with a huge abyss filled with ice, for instance.

If one race's religion is dominant in the campaign world, the DM should decide whether or not their creation-story has a setting like the land where that race originated.

In a fantasy world, this situation could come about from one of two reasons:

The gods, having emerged from a particular type of terrain, would find similar terrain in the mortal world to be their favorite land for creating new races, exploring, and interacting with humans; or

The sentient races might have erroneously re-interpreted the story of the world's creation as a reflection of the terrain in which they live, and the legend is simply wrong.

## Propagation

Once creation of the world and universe are established, the DM can move on to the propagation of the gods. In other words, once the setting is in place, the cast of gods gets larger and larger.

Naturally, the DM can always do this the other way around. Perhaps all the gods were in place before they decided to create the world. There's nothing wrong with this choice; it's simply backward from the way the best-known Earth mythologies operated.

Regardless, unless the DM is creating a monotheistic faith (one dedicated to only one

deity), he must now begin creating the other gods of the faith.

These gods could be children of the first great being. They could be that being's creations instead. They could be representations of natural forces brought to awareness and life by the catalyst of Creation. They could emerge from some less wholesome process (for example, they could be created by the decay of the body of the first great being, or could merely spring forth whole from its corpse: One god from the bones, one from the brain, one from the heart, etc.).

Each god should have some special *attribute* , an area where he or she is dominant. Some can have several attributes. Such attributes include Thought, Strength, War, Love, Craftsmanship, Earth, Sea, Sky, Sailing, Farming, Hunting, and many, many others. Any activity that is important to humans (or demihumans) can be an attribute for a god.

Not all these gods need to have been "first-generation," or born to/created by that first great being. Obviously, some should be. But they, too, can create or become parents to other gods.

In some mythoi, the god of a particularly important attribute will have children who bear lesser forms of that attribute. For instance, the god of Love might have children who represent Passion, Marriage, Infatuation, and Unrequited Love. The god of Sleep might have children who represent Dreams and Nightmares. The god of Intellect might have children who represent Memory, Poetry, Song, and Riddles or Puzzles.

## Characteristics of the Gods

The DM can create as many gods for his pantheon as his imagination will allow him. He doesn't have to work up an extensive set of legends about every god; even in the real world, many gods of various mythologies were scarcely more than a name and an attribute. As his campaign continues, the DM can flesh out the descriptions of these gods to his heart's content.

Some of the traits which characterize the gods, and can be defined by the DM for each god or pantheon, include:

**Immortality:** Are the gods immortal? In most pantheons, the gods are certainly *ageless*; that is, they do not grow old. But in some, they are not just ageless, they also cannot be killed; regardless of how severely they might be wounded, with time they will always fully recover from injury. In others, the gods can be killed by sufficient force. For example, in the Greek myths, the gods are undying, while in the Norse myths the gods face eventual certain death at the battle of Ragnarok.

**Indestructibility:** As a further level of what was just described, some gods which are immortal are also described as indestructible. No force on heaven or Earth can hurt them (except by hurting their feelings, by betraying them). This is sometimes the trait of the greatest god of a pantheon, and is usually the trait of the only god of a monotheistic religion (one which believes in only one god).

**Influence on the World:** How much influence does the god have on the mortal world, the world of animals, the world of plants? With some gods, there is very little of such influence. A god whose attribute is the unchanging stars, for instance, might exert a little influence on the sailors who navigate by stars, but could have very little effect on anyone or anything else. On the other hand, gods relating to powerful human emotions or preoccupations (such as love, war, creativity, and so forth) might exert a great deal of

influence on the world, especially if it is said that every application of his attribute requires the god's help or permission. For instance, if it requires the aid or permission of the god/goddess of childbirth for every human birth to take place, then that deity is exerting a profound effect on the world.

**Interest in the World:** Additionally, some gods are very interested in what goes on in the mortal world, while others are entirely disinterested. Naturally, those who are interested are more prone to meddle in mortal affairs than those who aren't. In fact, gods who are disinterested in the world might punish characters who are bold enough to call upon them.

**Intentions Toward the World:** Finally, there's the question of what the god's intentions are toward the world . . . especially toward the sentient races of the world. Some gods are content just to pursue their attributes and make sure they are properly worshipped and recognized. Others may have more far-reaching plans. This is especially true of evil gods, who wish to bring about the destruction of races, other gods, or the entire world; it is also true of ambitious gods, who wish to cast down the ruling gods, take their place, and reshape the world to their own liking.

**Inhibitions:** Some gods and pantheons had limitations placed upon them. These might have been limitations placed by some greater power of the universe, or merely enforced by the greatest of the gods. Often, these inhibitions dictate how much aid or hindrance the gods can offer to mortals, whether or not they can help their favorite men and beasts directly or indirectly, etc.

### Example

As an example of how a familiar god matches these characteristics, let's look at the Greek goddess Aphrodite.

She was immortal, as were most or all of the Greek gods. She certainly was *not* indestructible, and was in fact once wounded in battle by the Argive hero Diomedes.

She had a very profound influence on the world, for it was she who put all varieties of the emotion of love in the breasts of man and beast. Even the other gods, with the exception of Hestia, Athena, and Artemis, were regularly affected by her power.

Her interest in the world was limited to a couple of areas: Making sure that all humankind respected her (which generally meant that all humans knew love at one time or another, and thus did not deny her); and making sure her special favorites, such as her mortal son Aeneas, survived and prospered. Other than that, she appeared to have no special intentions toward the world.

Aphrodite had a couple of inhibitions restricting her: First, she and all the Olympians were subject to a higher destiny, which not even Zeus could thwart. Second, physically, she and most other gods could be hurt or even defeated in battle by the mightiest Greek heroes. Third, the god-king Zeus obviously preferred for gods to help their favorites indirectly rather than by showing up in person. All these inhibitions affected the way Aphrodite and the other Olympians related to their favorite "player-characters."

## Humans, Humanoids, Animals, Plants

At some point in the history of the gods, they probably created all living things. (It's

possible for the flora and fauna of the world to have been created by some other factor. For example, they might have just *been* there when the great ice-cap melted. But it's a more common element of the story that the gods created them.)

This creation process might have involved an accident; for instance, the greatest god sneezed, and blew fully-formed living things all over the world.

More commonly, it's a deliberate process, and the gods or one particular god methodically created all the living things known to man.

When working up this aspect of the story for his own campaign world, the DM can use this to help define the way the gods look upon specific forms of life. Was Man created so the gods would have something entertaining to watch? To fulfill a higher destiny? So that his brightest and best might one day add to the ranks of the lesser gods, or accompany the gods on one last, great battle? This kind of decision helps define man's view of the gods and their requirements of mankind.

It can also be used to define mankind's opinions on certain matters. If, for instance, animals in general were created to serve Man, then Man might have little regard for them, except as pets and beasts of burden. However, if each god created one or more animals to serve as totems for the god, then Man might have a lot more respect for certain animals.

If the story of creation says that one sex of the sentient races was created subordinate to the others, then there will be a crushing social pressure to keep that sex "in its place." If the story of creation does no such thing, then any such attitudes will be have been created by mortals and may vary from place to place. Additionally, with the added complication of *several* sentient races around (humans, elves, dwarves, etc.), the DM can make this decision several times and choose a different approach each time. Perhaps, on his world, dwarves are strongly male-dominated, elves are female-dominated, and humans are more or less equal? Any such arrangement is possible.

Note, however, that when one sex is oppressed, players are less likely to want to play members of that sex. Few players want their escapism to involve this sort of prejudice directed at them.

## Fall From Grace

In some stories, humans or sentient races in general start out with an exalted relationship with their deities and then fall out of the deities' favor. In Greek myth, for example, the humans were well-beloved of the gods until the god Prometheus gave them the secret of using fire, which they had lacked until then; this so offended Zeus that he afflicted mankind with all sorts of ills.

This sort of thing could be a characteristic of your campaign world's story; or, mankind might never have had a closer relationship with its gods.

## The Challenge

In many faiths, the gods, deliberately or not, visit a challenge on the humans. One of the commonest challenges involves the afterlife. In many faiths, the better one

lives one's life, the better the afterlife to which he progresses. The usual sorts of afterlives tend to fall into one of the following categories; in some faiths, a character might face the possibility of reaching more than one of these choices, depending on his actions in life.

**Oblivion:** No afterlife at all, this is when the human's spirit perishes and becomes nothingness.

**Torture:** An afterlife where torture, either permanent or temporary (until the spirit repents, recants, or otherwise improves) is the order of the day.

**Boredom:** An afterlife where there's nothing to do, nothing to see, nothing to entertain.

**Rebirth:** An afterlife which involves rebirth in the physical world and the living of a new mortal life.

**Pleasure**: An afterlife where the things man most loves in life are visited upon him in abundance.

**Ascension:** An afterlife where the best of the best are granted great powers, making them heralds and messengers of the gods . . . or even gods themselves.

In such faiths, humans usually have a good idea of what it takes to get into these specific afterlives. To get into the "good" ones may require strict adherence to a certain life-style, or may require that the human somehow impress the gods with his deeds or personality, or may merely require that the gods like the character . . .which is not something the character can necessarily bring about deliberately.

Other challenges are possible: Humankind as a whole might be challenged to achieve a certain level of civilization by a certain time, to achieve a certain level of artistic or philosophic ability, to defeat a certain spirit of evil, to evolve to a certain enlightened state, etc.

## The Future

Some, but not all, faiths make predictions for the future. Sometimes they're grim, such as the Norse belief in Ragnarok, the destruction of the gods and man. They could also be happy and cheerful . . . though this isn't usually the case in a world involving great heroes.

The DM, when deciding whether or not to "predict the future" for his world, should try to figure out what this choice will do to the attitudes of his intelligent races.
A future which is bleak and gloomy will sometimes make the campaign bleak and gloomy. The characters can hope for success and glory in the short-term, but certain death awaits them, and they can't count on the world being there "when they get back." This sort of approach does make for the greatest of heroism, though. It's the greatest hero who strives on knowing that ultimately he must fail, yet fights for his goals anyway.

A future which is happy and bright will sometimes make the campaign a little more goofy and irresponsible. Characters, believing that whatever their mistake, they'll be preserved or rewarded, may behave in a foolish manner. Acts of bravery are often nothing of the sort; they're just short-term sacrifices in anticipation of a long-term reward. This is not to say that such a campaign can't be rewarding . . . it's just harder for it to be serious.

A future which is neither doomed nor excessively happy will tend to have less of an effect on the player-characters. For instance, if holy writings say that a thousand years in

the future, the gods will "start over" and reshape the world, populating it with the survivors from the last world and the best spirits in the halls of the afterlife, that's all very interesting . . . but its effects on the current campaign are minimal. On the other hand, if this reshaping is supposed to take place in only ten years, or one, it becomes *very* interesting to the PCs. They'll work very hard to make sure that they're either among the survivors from this world, or among the brighter spirits of the afterlife, so they can experience the new world.

Of course, the DM doesn't *have* to specify future events for his campaign. It's often better if he doesn't, because it makes for more uncertainty in the minds of the PCs.

## The Pantheon

Once the DM has created the individual gods, he ought to relate them to one another # that is, establish how they feel about one another. This can affect how their mortal followers, especially priesthoods, feel about one another and work together.

These relationships don't have to be very detailed. It's quite sufficient to say that one god loves another, hates another, likes another, dislikes, respects, holds in contempt, whatever. Then, simply apply that sentiment to the priesthoods of the gods.

And when that sentiment is applied to mortals, it can turn out to be greater or less than the emotion actually felt by the gods in question.

For instance, let us say that two gods dislike one another. Their respective priests may dislike one another with similar intensity. On the other hand, they *might not dislike one another at all*. They might, in fact, recognize that their gods have certain foibles (human-like failings of personality), and might look upon those foibles with amusement and affection but without following them themselves.

However, these priesthoods instead *might loathe one another*. They could hate one another with an intensity which far surpasses that of the gods in question. They could, in fact, start wars on the earth because of their hatred for one another.

So, for many gods, the DM may wish to decide how the gods feel about one another, and then may choose a slightly different view of how their priests react to one another.

## Events

Once all the principal characters (i.e., gods) are in place, the DM can create the *events* of the faith.

The creation of the world was one such event; it described "characters" (gods) acting or interacting, and something happening. The fall from grace of the sentient races was another: How did that happen? But these shouldn't be the only events known to the believers. What else has happened?

Do the gods mate with mortals to produce heroic characters who go on adventures? If so, then the conception of these heroes and their adventures in life are all events of the faith. (Note: If this process is still going on, some of the campaign's player-characters could be the mortal children of the world's gods.)

How do specific gods get along together? Having determined that, the DM can next determine why. If two gods hate each other, why? Did one steal from the other, or

embarrass him? That's an event.

Have the gods ever warred on one another? If so, that was certainly an event.

The DM can create as few or as many events as he wishes; the more there are, the richer his campaign setting will be for it.

## Forces and Philosophies

The mystical history of the world is somewhat different if it is driven by a *force* or a *philosophy*.

As we'll discuss in more detail next chapter, a *force* is a mystical power which strongly affects the world . . . but which probably is not a sentient being like gods are. It has drives, it has a goal, but it probably does not have a mind.

On the other hand, a *philosophy* is a compelling idea or set of ideas which can capture the imagination and influence the actions of communities or whole civilizations. It might exert enough popular appeal that it can support magical powers for priest-philosophers. But it is still not precisely a god, for it has no independent mind.

If your campaign world is driven by a force or philosophy, its mystical history is going to be somewhat different. It will mostly be a history of men or other sentient races and their relationships with the force or philosophy: How they came to recognize it or create it, how they came to believe in it, how they introduced it to others, and so forth.

In short, the DM won't have to create an entire separate history as he would have to do for distinct pantheons of gods. He will, however, have to decide for himself what effects these forces or philosophies have had on the human and humanoid histories of his world, and take these factors into account for every part of those histories.

## Mythic History Creation Sheet

The DM can photocopy and fill in the following sheet to give him a starting-place for the creation of his world's mythic history. The sheet follows the order of subjects from this chapter.

* * *

In this chapter, we discussed creation of the *history* of the campaign's gods. In the next chapter, we'll talk about individual faiths, how they're put together, and what effect they have on priest-characters.

# Designing Faiths

This chapter is for DMs who want to design detailed faiths and cults for their campaign worlds. It's not prohibited for the campaign's players to read this . . . but not all of them will find it useful. Players may wish to skip on to the next chapter, "Sample Priesthoods."

As the *Player's Handbook* points out (page 34, first column), "In the simplest version of the AD&D®game, clerics serve religions that can be generally described as 'good' or

'evil.' Nothing more needs to be said about it; the game will play perfectly well at this point."

That's true enough. But DMs who work to make their campaign settings into interesting, detailed backgrounds for the campaign, won't be satisfied with that simple approach. A big part of the color of any fiction setting, including campaign settings, is the relationship of the supernatural world to the "real" world . . . and gods, with priests as ambassadors to the human world, form a big part of that supernatural element.

So, eventually, most DMs will want to work up at least the basic details of who the gods are in his campaign world, how they relate to one another, and what their goals are (especially those pertaining to the mortal world). This, in turn, will let them enhance the role of cleric, druid and other priest player-characters in the campaign . . . and that's what this chapter is all about.

In this chapter, you'll learn how to create specific faiths (related to specific gods, natural forces, and philosophies); how to create the priests of these specific mythoi; and how to relate the gods together into a full-sized pantheon for your game world. In the next chapter, you'll find many examples of this priesthood creation process.

## God, Force, or Philosophy

For each faith you establish in your campaign world, you have to decide what it is that's being worshipped and venerated: A God, a Force, or a Philosophy.

A **God** is a powerful being, usually of human or greater intelligence, usually desiring to impose its will or characteristics upon the world. A god is often devoted to a single attribute or set of attributes (e.g., warfare, love, agriculture, marriage, etc.) and so most of his interactions with the world will deal with the god's promotion of that attribute among humankind. Gods do not have to be anthropomorphic (i.e., manlike in form or personality characteristics), and so one faith's god is often another faith's monster. However, most of the gods worshipped by player-characters are likely to be anthropomorphic and not monstrous.

A **Force** is some sort of natural (or unnatural) process which influences the world. It isn't necessarily intelligent, but it is magically powerful . . . and humans who accept the dictates and goals of this force can become its priests and use spells based on that magical power. Some Forces which can be so worshipped include Entropy, Nature, the Life-Death-Rebirth Cycle, and Magic. Druids tend to be priests of the Force of Nature, instead of specific Gods of Nature. (There are exceptions to that generalization, of course.)

A **Philosophy** is an idea, or set of ideas, which (in these magical worlds) is so compelling that it attracts magical energy and faith to it, much as a Force does. Philosophies are usually created by man or other sentient races, spread throughout cultures, and gain such widespread acceptance and belief that they do become much like Forces. When no one believes in a Philosophy any longer, it can generate no magical power and support no priests, so the priests' duty is to embody its attributes and to teach the philosophy so that it will never die. Sample philosophies include Oneness With Nature, Peace, the Divinity of Mankind, the Sanctity of Life, Nihilism, and so on.

In the AD&D® game, the God, Force, and Philosophy are identical in the way they are treated by the game mechanics. All three provide spells and powers to their priests. All three demand personal requirements and services of their priests and of their non-priest

followers. And all three, to a lesser or greater degree, shape the world, both through their own powers and through their agents, the priests.

## Ethos and Requirements of the Faith

Each faith requires certain codes of behavior, beliefs, and even abilities of its followers and of its priests. When creating a faith, you have to decide what those requirements are and how they're to be implemented in your campaign.

### Goals and Purposes

First, what are the goals and purposes of the god (or force or philosophy), and therefore of the faith?

Often, that's self-evident, because it's usually tied to the attribute of the god, or the explanation of the force or philosophy.

For example, if the faith's god is a God of Love, then the goals and purposes of the faith will probably include:

**Promotion of Love**, which might include the helping along of lovers, opposition to those who interfere in the development of romantic relationships, punishment of those who defy the god and refuse to love, etc. This could also include "social services" to the community, through the god's temples: Counseling to young lovers, for instance.

**Promotion of the God**, which includes the building of temples or churches, carrying the word of the god to those who have not heard it, and keeping the stories of the god ever-present in the ears of the population.

**Opposition of Enemies**, which means subtle or direct opposition to enemy gods and their followers; obviously, a god of Love is likely to be opposed to a god of Hatred, Misanthropy, Misogyny, etc.

Those are some basic goals, but you obviously aren't limited to goals which are that direct and simple.

For instance, a god may represent only a small part of his attribute. A God of War does not have to be just a god of all types and elements of warfare. He could be the God of the Chaos of War, the God of Intelligent Warfare, the God of Naval Warfare (in which he might share traits with a god of Oceans), the God of the Sword (in which case he might share traits with a god of Metalworking), and so forth. If you choose, you can always make a god's personal attribute more specialized, and can choose more specialized goals for the faith based on that choice.

In addition, a god isn't defined just by his attribute. In the campaign history, he also has a personal history, likes and dislikes, relationships with other gods, and ambitions, all of which can provide more goals for the faith.

As one example, Zeus, the king of the gods of Greek mythology, had many attributes and associations. He was the king of the gods, a sky-god, a god whose emblem and weapon was the lightning bolt, a god of Wisdom (he had swallowed and absorbed the wisdom-goddess Metis, mother of Athena), a god of oracles (though he was eventually supplanted by Apollo in this role, he had a major oracle at the city of Dodona), a protector of fugitives, a lover of many goddesses and women . . . In short, he had many characteristics and attributes, and in an AD&D® game campaign his priesthood would

embody and promote most or all of them.

## Alignment

A faith will often demand that its priests belong to a specific alignment or a limited range of alignments. The DM determines this, usually basing the choice on the attributes and character of the god, force or philosophy in question.

But don't be too restrictive in this regard. Even if, personally, you're opposed to War, the God of War and his followers don't have to be Chaotic/Evil.

## Alignment Guidelines for the Priesthood

Here are some general guidelines to go by:

The first, and most important, note is this: The gods usually do not insist that their priests be of *identical* alignment to the god. The alignment may not be so dissimilar that the priest cannot serve the god, but it does not have to be identical.

If the faith does not promote any sort of harm to living beings, or promotes benefits to living beings, then it probably excludes Evil alignments among the priesthood. If the faith allows for harm to living beings but does not promote wanton cruelty, then it can include Good, Neutral, and Evil priests. If the faith does promote cruelty, then it probably excludes Good alignments among its priests.

If the faith demands ordered thinking, strict obedience to laws, and unquestioning acceptance of policy, then it leans toward Lawful behavior. (Now, every faith requires rituals and devotions of its priests, but this *isn't* the same thing, and doesn't require any alignment choice.) If the faith demands more free-willed and spontaneous behavior, defiance of social conventions or restrictions, and so forth, then it leans toward Chaotic behavior. If it promotes neither approach strongly, then it can probably include Lawful, Neutral, and Chaotic choices.

Here are some sample choices:

**God of Love:** This type of faith usually promotes no harm to living beings, and promotes the benefits of love; it often promotes free-willed and spontaneous behavior, but not strongly. Therefore, its priests will probably be required to be Good, and may be of Lawful, Neutral, or Chaotic alignments, though the tendency is toward Chaotic. However, if the god is a god of passionate affairs and selfish love, regardless of who gets hurt, and if he promotes revenge on romantic competitors and ex-lovers, then the faith could well include Evil and Neutral priests, thus giving its priesthood the full range of alignment choices.

**God of War:** This faith generally allows for harm to living beings without promoting wanton cruelty; and warfare runs the gamut from carefully-reasoned strategy to wild, bloodthirsty battlefield chaos. Therefore, the faith probably places no restriction on the alignment of its priests. However, a specific god can be devoted to one aspect of war. For example, a god who promotes the bloody destruction of all enemies, including sacrifice of prisoners and innocents, will probably have an Evil priesthood. A god who is the god of military planning will probably have a Lawful, or Lawful and Neutral, priesthood.

## Alignments of the Worshippers

Most faiths define various acts and types of behavior as evil and demand that their followers not perform those acts. Some few make those same definitions and demand that their followers do perform them. Almost no faiths demand that their followers belong specifically to Lawful or Chaotic alignments.

Therefore, most faiths require of their (non-priest) worshippers that they be anything but Evil. A very few faiths require instead that their worshippers be any sort of Evil (Lawful/Evil, Neutral/Evil, or Chaotic/Evil).

## Ability Scores

Most priesthoods demand some sort of minimum ability scores of their priests.

The prime characteristic of priests is Wisdom. To be a priest of any sort whatsoever, the character must have at least a wisdom of 9. Some priesthoods will require that the wisdom score be higher, though usually not higher than 13.

Generally, if the priest's Wisdom is 16 or better, he gets a +10% bonus to his earned experience.

Many priesthoods will require a second prime requisite. For example, priests of a god of War may have to have a certain Strength score, while priests of a god of Magic might have to have a certain Intelligence score. Usually, this second prime requisite must have a score of at least 12; up to 15 is not an excessive requirement.

In such cases, the DM may decide that the character, if he has *either* the Wisdom score or the other Prime Requisite at a score of 16, gets a +5% bonus to earned experience, but if he has *both*, he gets a +10% bonus.

In the next chapter, you'll find numerous examples of such priesthoods and recommended minimum ability scores for them.

## Races Allowed

The DM may wish to limit certain priesthoods to certain races.

This is almost always a choice based on the history of his own campaign world. There is no game-related reason why most races can't have priests for any god, force or philosophy; but there are often campaign-related reasons why a certain race can't belong to a certain priesthood.

For example, if the halflings of a specific campaign world are pacifists, they'll be excluded from priesthood in the faith of the war-god. If dwarves are pragmatic, unromantic sorts who arrange all their marriages and don't conduct affairs of the heart, they'll be excluded from priesthood in the faith of the love-god.

In the next chapter, we provide numerous examples of priesthoods of specific mythoi. With each, there's a recommendation for allowed races. These recommendations are based on the most common and popular conceptions of these races, and the DM is free to change them for his specific campaign.

Players beware: When the *Complete Priest's Handbook* says one thing about allowed races, and the DM says another, the DM is always right.

## Experience and Spell Progression

It would be possible to come up with an Experience Levels Chart and Spell Progression Chart for every priesthood of specific mythoi, but it would also be crazy; there's no reason to have the extra complication in your campaign.

All new priesthoods introduced in the next chapter use the Cleric experience progression and the basic Priest spell progression, both from page 33 of the *Player's Handbook*. If your DM, when creating a new priesthood, decides that it is observably less powerful than the Cleric or the priesthoods written here, he can choose to use the Druid experience progression, which allows for faster acquisition of experience levels.

### Gender Requirements

In the worlds of the AD&D® game, most priesthoods should allow both priests and priestesses. However, in fantasy worlds and the real world, some faiths have required that all their priesthood be of just one sex. If there is such a restriction on a given priesthood, the DM will make note of it and tell the players.

### Nonweapon and Weapon Proficiencies

Various priesthoods will require priests to know certain skills (nonweapon proficiencies) and be able to wield certain weapons (weapon proficiencies). For example, a priest of the god of Agriculture must know the Agriculture proficiency, while a priest of the god of Fire must know Fire-Building.

Every priesthood should require one nonweapon proficiency of its priests and priestesses; it's a sign of their devotion. It's permissible, but not recommended, for them to require more than one.

A priesthood *may* require one or more weapon proficiencies of its priests and priestesses, but we don't recommend this for most priesthoods. Many faiths allow their priests so few weapon choices anyway that it's pointless to *require* they be taken. An exception is when a god is noted for wielding a specific weapon; for instance, it's quite reasonable to require Weapon Proficiency in War-Hammer for priests of the god Thor, whose principal weapon and symbol was the hammer.

## Duties of the Priest

Now, we get to a topic which adds a lot of color to the priesthood and the campaign world.

All priesthoods have certain duties to perform, duties to the god and duties to the community or civilization. The DM needs to decide what each priesthood's duties are, and will often be able to use those duties to tie the priest character in to specific adventures and role-playing situations.

Following are some sample ideas for priestly duties. The DM can use as few or as many of these as he wants when designing a new priesthood; he can also invent new ones to suit his campaign.

### Devotions

These are ordinary prayers and rituals which the priest conducts on a regular basis. They might include the saying of prayers at specific times of the day, upon observation of specific incidents or natural phenomena, and so forth.

The DM can decide what these are and when they're undertaken, but the campaign shouldn't devote a lot of time to them; it's annoying and disconcerting to interrupt the adventure every so often so that the priests can pull out their holy symbols, kneel to the sun, and lead the faithful in prayer. Just knowing that they do this sort of thing on a regular basis is enough for most players.

## Guidance

In most civilizations, priests are supposed to act as counselors to everyone in need of advice. (This is one reason that Wisdom is a prime requisite.)

Therefore, the priest character should not be surprised when he finds NPCs seeking him out and consulting him on troubling moral and ethical problems. These are good role-playing opportunities; they are often leads to specific adventures; and, with especially knotty problems, they can be difficult puzzles for the players to solve, all without using their swords and maces.

Often, priests are posted to specific noble leaders in order to be their personal advisors. Naturally, this is only done when those noble leaders desire it, are willing to allow it, or (because of the priesthood's political strength) cannot afford to refuse it. This is a way to establish some sort of bond between new player-characters: The priest player-character could be assigned as advisor to the noble player-character.

## Marriage

In many human cultures, only the priest can perform marriages, so the DM may wish for this to be a duty of priests in his campaign.

The DM will need to decide for his campaign whether or not marriages require the ministrations of priests, and might make a different choice for each sentient races. If humans require priests for marriage, do dwarves? (Perhaps they use advocates and notaries instead.) Do elves? (Perhaps their marriages are officiated by bards, who write songs commemorating the event as a sort of "marriage certificate.") Do halflings? (Perhaps they prefer ceremonies presided over by sheriffs or judges.)

Also, the DM can always decide that priests of certain faiths cannot perform marriages. What, for example, does the god of weaponmaking have to do with marriage? On the other hand, it's equally appropriate for priests of *any* god to be able to perform marriages. This is especially true if, in the campaign, marriage constitutes permission or recognition from "higher forces," and any god, including those with attributes unrelated to marriage, may bless a marriage.

## Missions

The duties of priesthood often involve going on missions important to the welfare of the god or the priesthood in general.

One of the most common missions involves going somewhere and trying to convert the local population to worship of the priest's god. Usually, this involves religious education and what amount to social services; sometimes, it involves conquering that culture and ruthlessly suppressing all signs of its old religion.

Other, more exciting missions can involve recovery of artifacts, transportation of persons or goods (such as temple money) through dangerous territory, interpretation of phenomena in distant places, and holy war with the followers of another god.

It's important for the DM to remember that the god himself isn't the only one who sends priests out on missions. For most missions, it's the upper ranks of the priesthood who do the assigning, and priests are supposed to follow the orders of their superiors. So it's possible for any priesthood to have a "bad egg," a priest who issues orders which are contradictory to the tenets of the faith or designed to promote only his personal power. This should, however, be a very rare campaign event, unless the campaign revolves around uncovering and purging a corrupt element of the sect.

## Omen-Reading

In some campaigns, priests will be charged with the duty of reading omens for the future.

If a campaign's priests have that duty, the DM has to decide how they do it, what it is they're actually doing, and who they're doing it for.

### How They Do It

Omen-Reading always requires some sort of ritual, usually a public one.

The priests may sacrifice animals and examine their entrails for clues to the future. They may read tea-leaves. They may inhale dangerous fumes and prophesy while under their influence. They may listen to whispering in the trees, babbling of brooks, or the singing of birds and interpret that noise. They may enter meditative states and wait for inspiration from the gods. Each cult could do it a different way, and the DM can choose the method which he feels will add the most appropriate color to the cult in question.

### What They're Doing

Then, the DM has to figure out what it is the priests are actually doing when prophesying. Here are some choices:

**They're Receiving the Word of Their God:** The priests are actually receiving some inspiration from their deity. Naturally, such omens are usually clouded in imprecise terminology and symbolism, so that it's easy for the recipient of an omen to misinterpret the results.

**They're Following Ritual Interpretation:** The priests have a set of techniques of interpretation which they follow rigidly. These techniques may or may not have any basis in campaign reality; they might have been granted by the god, or created through ignorance.

**They're Analyzing Based On Their Knowledge:** The priests aren't actually prophesying at all, but supplying answers based on their understanding of the situation and of the ways of the world. If they are then pretending that their answers come from a

higher source, they are obviously being dishonest; only a corrupt branch of a priesthood will do this. However, it's possible for such a method to be very accurate, especially if it concerns itself mostly with questions of warfare and human nature.

**They're Telling the Audience What It Wants to Hear:** The priests are acting primarily as cheerleaders and telling the people precisely what they want to hear: That they'll win the war, they're always right, they've done no wrong, love conquers all. Again, priests acting in this manner are being dishonest to their flocks, but it will often be difficult to convince the flocks of that.

**They're Working for Gain:** Some very corrupt sects or branches of sects manipulate their answers to gain in power or money. This usually takes one of two methods.

In the first, the priests supply answers which favor their purposes. If representatives of one city ask, "When we attack our enemies, will we prevail?" the priests then decide whom they want to win that war. If they want the attackers to win, they answer "Yes." Then, the attackers will be encouraged by the reply, and the defenders discouraged, which weighs the war in the attackers' favor. If they want the defenders to win, they answer "No," with precisely the opposite effect; the discouraged attackers might not even launch the attack.

In the second, the priests accept bribes in order to put their god's stamp of approval on the activities of certain men. For instance, a king might secretly pay the priests a lavish amount, then publicly approach the oracle and ask, "Shall I not execute the traitor so-and-so now without benefit of trial?" or "Should I marry so-and-so against her wishes?" or any other such question. The answer he receives, of course, will be the one he paid to get, and because the god has "made his wishes known," the citizens will probably not dispute the choice.

In both these approaches, the god may eventually notice that one branch of his priesthood is corrupt, and set about correcting matters, either through his own intervention or by alerting other branches of the priesthood. On the other hand, a particularly disinterested god might never notice.

## But Are They Right?

As part of deciding what they're doing, the DM has to decide how often they're right.

The priests will often be right if they're receiving the word of their god; this word may be misinterpreted, but it's always *correct*.

They could have any sort of accuracy the DM decides if they're following some pattern of ritual interpretation; perhaps the ritual is effective, perhaps it is not.

If they're analyzing the situation based on their current knowledge, then their accuracy depends mostly in their interpretive abilities; a priesthood might have enough knowledge of the world and human nature to be able to supply consistently-correct answers to supplicants.

If they're telling the audience what it wants to hear, they could be very accurate for a time, especially if they're prophesying for a warlike state which is on the rise and mostly asking about upcoming victories. Eventually, however, the tides of fate will turn and the prophecies will become unreliable, which will disillusion the populace.

If they're working for gain, they could be very successful for quite a while. Eventually, though, the scandal will break, and the population will learn the truth . . . which could be very bad for those greedy prophets.

## Who It's For

Finally, the DM has to decide who is able to receive these prophecies. Here are some typical choices:

**Anyone:** Anyone who asks a question will receive some sort of reply.

**Anyone With the Means:** Some temples require a sacrifice of animals or wealth in order for the supplicant to receive a prophecy. (This isn't necessarily a sign of corruption; it's often just a means of ensuring the temple's upkeep and the faith's continuing secular, or worldly, power.)

**Nobles Only:** In this arrangement, only members of noble houses can ask questions of the oracle.

The DM can also make more peculiar choices for specific oracles. An oracle might only be for slaves, for adventurers, for people who have at least once travelled to a specific holy site, for people of specific alignments, for members of one race, etc.

## Vigilance

Finally, priests have to be vigilant against powers or elements which threaten their faith or their followers.

These powers and elements don't usually take the direct approach, such as attacks by armies or monsters. The priest needs to be vigilant against more subtle intrusions, including:

**The Agent Provocateur:** This is someone who falsely joins the priesthood, spends a long time becoming a trusted member or even a leader of it, and then persuades members of the faith to perform actions which will get the faith into trouble. For example, in times when the priesthood is in conflict with another faith, the Agent Provocateur might encourage outright war with that faith. When a conflict with the local rulers could be sorted out by calm diplomacy, the Agent Provocateur will instead recommend or issue ultimatums and demands. And, naturally, the Agent will keep his true masters apprised of the priesthood's secret movements and activities at all times.

**Corruption in Specific Orders:** Sometimes priests go bad and use the priesthood for their own gain. In addition to methods mentioned above, they may also secretly defy requirements of their priesthood, steal temple funds, use their duties of guidance to influence others to profit these priests, etc. No such corruption goes unnoticed forever, but the unwillingness of people to believe that they've put their faith in crooks and thieves can ensure that this corruption can go on for a long, long time.

**Libels:** At times, members of rival priesthoods will persuade their followers that other priesthoods perform acts which are profane and evil. In a culture where religious prejudice is a strong factor, this is often easy to do. For instance, it might prove simple to convince one's flock that the priests of a more despised faith are kidnapping young women (only women of the libeller's faith, of course) to serve as unwilling temple concubines, then killing them. It's especially easy to do when the libeller secretly arranges for the kidnapping and murder of several young women in his own faith. When this sort of thing goes on, it's vital that the priests of the accused faith prove the truth. They can't do it just by giving local authorities a tour of their temple to show there are no unwilling concubines here -- and even if they do, a particularly clever enemy will have

concealed the body of one of the kidnapped girls there for the authorities to find! It requires capture of the killers and demonstration that they were serving someone else . . . all of which is a good basis for a priest-oriented adventure.

Obviously, it's the duty of faithful priests to combat all these situations these when they're noticed. However, it's a characteristic of the greatest priest-heroes to notice these trends *well ahead of the time that they become critical* , and to deal with them early in their development, before they can result in serious harm to the priesthood.

For the DM, this is a good way to give the PC priest an opportunity for rapid advancement in his priesthood: If he's the first to notice such a trend and is able to spearhead the movement to correct it, he will be well-regarded by his peers. This is also a good way to establish that an NPC priest is a hero of his faith, if he, in the past, has thwarted such situations.

## Rights of the Priesthood

At the DM's discretion, priesthoods can have special rights and powers, too. These rights usually depend on the amount of influence the priesthood wields in the campaign setting; a minor priesthood may not enjoy any of these benefits, while a dominant one could have all of them.

### Church Trial

In some cultures, the secular (non-priestly) authorities cannot put priests on trial for any sort of crime. That doesn't mean a priest can perform a crime and laugh at the law, however: Most priestly orders police themselves, and will try (or punish without trial) transgressions.

Priestly orders don't ordinarily flaunt this power in order to defy secular authorities. When priests commit crimes, priesthoods usually punish them. Exceptions occur when the priest was acting at the priesthood's behest, particularly when the god requires actions which are against the law of the land. In these cases, the priest sometimes goes unpunished; sometimes he receives a "slap on the wrist" punishment to quiet the secular authorities.

The DM, not the player, gets to decide whether priests have the right to church trial.

### Coronation

The most powerful priesthood in a given land will probably have the right to crown kings when they ascend the throne. The DM has to decide whether this is merely an honor bestowed on the priesthood, or whether it is a right which the priesthood can use to influence the throne.

If it's the former, then the chief priest is accorded the right to officiate at the coronation ceremony. However, if the priest refused to officiate, the crowning will take place anyway; the king can choose another priesthood for the honor, or he can be crowned without the priesthood's sanction.

If it's the latter, then the priesthood can deny someone the right to take the throne by refusing to crown him. This is a very powerful right, and through it the priesthood can

exert considerable influence on the nation.

That's not to say that, by refusing to crown a certain candidate, the priesthood can stage a bloodless coup and choose the king.

Let's assume a priesthood does such a thing and refuses the chief candidate for the throne, then spreads the word they will support a certain other candidate.

The refused candidate may decide to mount a war against the priesthood. The new candidate, if crowned, may find that none of the other nobles in the nation support his kingship. All of this can result in a bloody civil war which could tear the nation apart and wreck the priesthood's power.

Therefore, when the priesthood decides to exercise this power, it does tend to make compromises, to negotiate secretly with the parties involved, to plan things carefully so that trouble is kept to a minimum. Only the most arrogant of priesthoods would try to take for itself the full right to choose the king . . . and such priesthoods are likely to lead their nation into war or chaos.

## Other Confirmations

It could be that confirmations other than coronation are the special province of one priesthood. For example, in one nation, any priest might perform marriages for commoners, but only the priests of a specific god might perform marriages for nobles.

This would give that priesthood great power, because by collectively deciding or refusing to marry certain couples, this priesthood has the power to influence which families unite and which do not.

Again, abuse of this right could lead to harm, but careful application of it would allow the priesthood to affect the growth and development of the nation.

## Tithes

Some priesthoods, the most powerful ones in a culture, are able to demand *tithes* of their followers. A tithe is an amount of money, often represented as a fraction of the money-earner's regular wage, which the follower is required to pay to the priesthood. Theoretically, it is used for upkeep of churches and temples, purchase of supplies and equipment for the priests, etc. Some priesthoods also use these moneys for influence with the government; a very few corrupt priests dip into it for personal gain.

In an AD&D® game campaign, only the religion of a monotheistic state, or the state religion, will be able legally to demand tithes of its followers. Such tithes will usually run from 5% to 15% of the character's income, with 10% being most common.

Priesthoods of other faiths will ask their followers to tithe a like amount. Naturally, not all their followers will tithe and so such religions bring in less tithed income than those who can demand it.

Player-character priests don't get to see that money; it is recorded by church accountants, stored in church treasures, and distributed or spent by superior priests.

## Separation from the Faith

Some priesthoods can exert considerable influence on their followers by being able to

separate them from the faith. If, for instance, all followers are promised a certain role in the afterlife, and separation from the faith would deny them that role (and replace it with something far more frightening or ghastly), then the followers of the faith are likely to obey the priesthood.

Naturally, most priesthoods visit this punishment only on those followers who most flagrantly defy the requirements of the faith. Just as naturally, the occasional corrupt priest would threaten followers with this punishment unless they are blindly, absolutely obedient to him.

However, this punishment doesn't work so well in a culture which worships many gods and which has a separate, independent priesthood for each god. If you threaten a follower of the war-god with separation, he might be just as happy to switch over to worship of the sea-god. This is a balancing factor which helps keep down abuse of this right in many cultures. However, monotheistic cultures (those which worship only one god) don't have this balancing factor; they have to rely on the honesty of the priesthood.

## Rule

Some cultures are *theocracies* , which means they are ruled by their priestly classes. Naturally, in such a culture, one priesthood will be dominant; the culture may worship only one god, or may tolerate other worships but be mainly devoted to one specific god.

In a theocracy, the nation may be ruled by a board of priests from the state religion, but it's more common for it to be ruled by a single king who is also a priest and the head of his priesthood. Such an arrangement may be benevolent, with a wise cleric ruling the land; or it may be particularly nasty, with a power-mad priest or the priest of an evil god in charge.

Many "lost worlds" (i.e., nations hidden away from the rest of the world, secluded in a lost valley or cavern or other distant place) are theocracies ruled by evil priests; adventurer-heroes stumbling into such cultures often find themselves having to stir up revolution and cast down these rulers so that justice can return to these lands.

## The State Religion

For any culture, the DM will have to decide if there is a State Religion. The State Religion is the official faith of the nation, as sanctioned by the government.

Its priesthood will have the following rights: Right to church trial, right to coronation (though not necessarily the right to deny coronation to the chief candidate), right to demand tithes. If the culture is monotheistic, the State Religion will also have the right to separate offenders from the faith. The DM can assign other rights to the State Religion as he sees fit.

State Religions are not limited to big nations. Any independent city or city-state could have its own state religion. Thus, cities mere miles apart might have different state religions. This could cause trouble if both are monotheistic, or both belong to enemy priesthoods; on the other hand, the priesthoods could be neutral or friendly to one another, causing no such trouble.

However, a nation does not have to have a state religion. In fact, the most powerful faith in a nation will not necessarily be a state religion; it will just exert considerable

influence.

## Restrictions on the Priest

Priesthoods are also restricted, usually by decree of the god himself. Below are examples of many typical sorts of restrictions: Note that most priesthoods will only have a *few* of these restrictions, and each faith may employ different ones.

Gods make these requirements of their priesthoods for four principal reasons: Commemoration, Function, Philosophy, and Sacrifice.

*Commemoration* means that the action is a reminder of some important event from the history of the faith. For example, the cross and crucifix are symbols of the Crucifixion.

*Function* means that if the requirement is not met, the priest cannot for some reason function as a priest. For instance, if, in a specific campaign world, clerical magic will not work if the caster has consumed alcohol, then the priesthood will have a requirement that its priests not drink.

*Philosophy* means that the choice is bound up with other elements of the faith. If certain creatures are held to be unholy, unclean, or otherwise taboo, for instance, there will be many secondary requirements derived from that thought. A priest wouldn't be able to wear armor made from its hide or eat its meat. To be buried in or with its skin might even result in involuntary separation from the faith!

*Sacrifice* means that the god requires this behavior to test the mettle of his followers. Those who can't make the sacrifice are obviously not cut out to be his priests.

At his discretion, the DM can make any of these requirements apply to the worshippers of the god in addition to the priesthood. Especially appropriate are restrictions involving Contamination (see below).

### Armor

Priests may be limited in the types of armor they wear. Some sample limitations:

May not wear non-metal armor
May not wear metal armor
May not wear magical armor
May not wear *any* armor
May not use shields
May not use certain types of shields
May only wear armor made by priests of the same faith

Any of these restrictions could be made for any of the four reasons given above. If metal armor disrupts clerical magic, then it could not be worn by priests. If the religion's philosophy forbids harm to animals, then leather armor may be forbidden. And so on.

Armor restrictions don't just reflect the god's attributes or prohibitions; they help define the combat roles of priests in the campaign. A priest who can wear full metal armor is more likely to be a combat force in the campaign than one who can't.

You can be more sure that a player who picks a priest-type which is limited to less efficient armor is a player who wants to role-play a priest, rather than one who merely

wants to play a fighting machine who is efficient in both combat and magic.

## Celibacy

Though in modern times the terms Celibacy and Chastity have become confused, here we're only using the older meaning of the word Celibacy: The state of being unmarried. Priests who are required to be celibate must remain unmarried. A DM must decide individually for each celibate priesthood if its priests must also remain chaste (see below).

A priesthood could require celibacy as a sacrifice to the god, because it was philosophically opposed to the state of marriage, or for many other reasons. The fighting priesthood of a war-god might require its priests to stay celibate so that they won't be distracted by thoughts of home and family while engaged in warfare.

## Chastity

Chastity involves not engaging in sexual relations. A priest could be celibate but not chaste; one could even be chaste but not celibate, though that would be pretty strange.

Priesthoods require chastity as a sacrifice to the god, or when its priests are supposed in some way to be spouses of the god (either in a symbolic or genuine sense).

In some faiths, chastity is required of its priests except for during specific events or times of the year. For instance, priests of an agricultural deity might be required to remain chaste except during the planting season, when chastity is revoked in order to magically "encourage" the fertility of the fields.

## Clothing

Priests are often required to wear distinctive costumes proclaiming their status. They may only have to do so during the performance of their official functions, or might have to wear their priestly vestments during all waking hours.

Such items don't have to be full costumes. A priest might be only required to wear the specific holy symbol of his faith; otherwise, he could wear what he wished.

In some faiths, priests cannot wear certain types of clothing. Historically, some priest-kings of earth-goddess were forbidden to wear clothes with knots in them; if they wore textile garments, they had to have ragged, unknotted hems.

Priests might also be required to conceal certain parts of their bodies by clothing. Beyond restrictions imposed by society for modesty's sake, priests might have to conceal other parts not considered immodest by the general population.

## Contamination

Many faiths regard certain items or substances as unholy, unclean, or taboo. Its priests are not permitted to handle such things. If they come in contact with them accidentally, they must undergo holy rituals of purifications to cleanse themselves of the taint.

Some sample items or substances include:

Animals (specific animals or whole classes of animals)
Blood
Gems or Jewels (specific types)
Iron
Plants (specific plants or whole classes of plants)
Water (from specific bodies of water)

## Hit Points

Clerics and Druids receive 8-sided dice for hit point progression (see *Player'sHandbook*, Chapter Two). The cleric does a lot of fighting, and the druid has a very demanding existence, living as he does in the wilderness; both need to have comparatively high hit point totals.

The DM can, if he wishes, make any priesthood of a specific mythos take six-sided dice for hit points (like rogues) or even four-sided dice (like wizards). But this is only appropriate for priestly orders which are not very demanding physically.

Most priesthoods should have eight-sided dice for hit points. If a DM decides that a priesthood will have less robust dice, then he must compensate the priesthood with enhanced access to spells and (especially) numerous Granted Powers (discussed below).

*A priesthood should only receive six-sided dice* if it has medium to poor combat abilities, and belongs to a deity with very few physical demands.

For example, a god of dawn has no intrinsic orientation toward combat, and "dawn" does not imply any specific physical demands.

*A priesthood should only receive four-sided dice* if it has poor combat abilities, and belongs to a deity whose attribute implies soft living.

For example, a god of peace or love could have priests with little or no combat abilities and with four-sided dice. However, it's *important* to note that this does not *have* to be the case . . . It is only the case when the DM insists upon it. Priests of the god of peace could be pacifists, but still be good at combat . . . which they may only employ in self-defense. A god of love noted for weapons use, as Eros was noted for his archery, could have priests who specialized in that weapon, and would *not* have to be stuck with a measly 1d4 for hit points.

## Magical Items

Priests are already limited to using magical items usable by all classes or by priests only. But they might also be further restricted by their faiths.

For example, priests of a specific faith might be required to use only magical items made by priests of their order, or might be required to use no magical items whatsoever.

## Mutilation

Occasionally, a priesthood will demand a sacrifice of mutilation of its priesthood. This is most common among evil priesthoods, but could theoretically occur with any priesthood, regardless of alignment.

For example, devotees of a blind god of prophecy might be forced to blind themselves.

(However, it would be more appropriate for them merely to have a Clothing restriction that required them to wear blindfolds when performing official duties.)

When this sort of thing does take place, the priesthood is often compensated for its loss: The god often grants them an extra power (as described below, under "Powers of the Priest"). A priesthood required to be blind, for example, might have an extra power of analysis, identification or prophecy.

### Weapons

Many priesthoods require their priests to use only a certain category of weapons. Some only restrict them *from* using a certain narrow category of weapons. Some require their priests to use no weapons at all. Commonly, a god identified with a certain type of weapon will require his priests to use that weapon and a certain number of similar or related weapons.

The DM should assign the priesthood a weapons restriction based on two choices.

First, weapons restrictions reinforce the special attributes and character of the worshipped god; limiting priests of the god of Death to sickle-like weapons certainly establishes flavor for them.

Second, weapons restrictions, like armor restrictions, help define the combat roles of priests in the campaign. If a priest is limited to daggers and creampuffs, he's not going to be the campaign's combat monster, so magic and his priestly duties will be much more important to the character.

Many examples of this are given in the next chapter, "Sample Priesthoods."

## Spheres of Influence

As you'll recall (from the **DMG**, pages 33, 34), priest spells are divided into categories called *spheres of influence*. Each spell belongs to one of 16 categories. Those categories include:

All, Animal, Astral, Charm, Combat, Creation, Divination, Elemental, Guardian, Healing, Necromantic, Plant, Protection, Summoning, Sun, and Weather.

Priests can't cast spells from all spheres of influence. Any specific priesthood can have *major access* to one or several spheres, and thus eventually learn to cast spells of any level from that sphere, and can have *minor access* to one or several other spheres, and learn to cast spells from only 1st through 3rd level in that sphere.

When designing a new priesthood, the DM decides which spheres of influence the priesthood has.

All priesthoods should have major access to the All sphere. Beyond that, the DM should choose a number of spheres, and the access to each, based on the attributes of the god being served, and on how combat-efficient the priest is already.

If a priesthood currently has access to good armor and a wide range of weapons, the DM should limit the range of spells available to them. If, however, the priests do not have access to mighty engines of war, the DM may want them to have a greater ability with magic, reflected by access to more spheres, and major access to a greater proportion of them.

Priests should have Major access to just about any sphere that has any bearing on the

primary attribute of their god, and at least Minor access to spheres which have a lesser relationship to their god. (For instance, priests of a God of War who is noted for his protectiveness might have minor, or even major, access to the Guardian and Protection spheres.)

Here are some rules of thumb to go by when assigning Spheres of Influence to specific priesthoods:

### The Priesthood Has Good Combat Abilities

If a priesthood is allowed to use metal armors and a good range of weapons, we consider that it has good combat abilities. Therefore, it should have less effective magic, including:

*Major Access To:* The "All" Sphere, and two other Spheres.
*Minor Access To:* Two Spheres.

### The Priesthood Has Medium Combat Abilities

If a priesthood is allowed to use metal armors but restricted to a poor range of weapons, or is not allowed to use metal armors but has access to a good range of weapons, we consider that it has medium combat abilities. It should have a more average access to magic, including:

*Major Access To:* The "All" Sphere, and four other Spheres.
*Minor Access To:* Four Spheres.

### The Priesthood Has Poor Combat Abilities

If the priesthood is not allowed to use metal armors (or even *any* armors) and has access to a poor range of weapons, we say that it has poor combat abilities. It should have an enhanced access to magic, including:

*Major Access To:* The "All" Sphere, and six other Spheres.
*Minor Access To:* Six Spheres.

### Some Definitions

"A good range of weapons" is not a very precise definition, but it's harder to be more precise; what is and is not considered a good range varies with each individual DM. In general, if the priesthood is allowed access to five or more different types of weapons (a bow isn't that different from a crossbow for our purposes, but a mace is different from a spear), or if the priesthood is limited to a few efficient and high-damage (1d8 and better) weapons (such as swords), we say that it has a *good* range of available weapons.

"A poor range of weapons" is just as imprecise. In general, if the priesthood is allowed access to four or fewer different types of weapons, or has access to a greater number of weapons which do no more than 1d6+1 damage, we say that it has a *poor* range of available weapons.

If a priesthood doesn't allow the priest access to the full number of spheres appropriate to that type of priesthood, then the DM should supplement the priesthood with extra Granted Powers. For instance, if a priesthood has Good Combat Abilities but is designed with major access to the All sphere and *only* one other sphere, and minor access to two spheres, then the priesthood is receiving less abilities than it should; it should be given some minor Granted Power to compensate.

Now, this valiant effort to keep combat abilities and magical abilities balanced is substantially thwarted by the original Cleric class himself. The Cleric has major access to 12 Spheres, minor access to one, and the ability to wear metal armors. In short, he is more powerful than just about any more restrictive priesthood.

If the players in a campaign are likely not to take priests of specific mythoi simply because the original Cleric class is more powerful, the DM may wish to revise the Cleric in his campaign. For more on this, see "Toning Down the Cleric" in the Role-Playing chapter.

## Granted Powers

Many types of priests also have special Granted Powers. The basic Cleric, for instance, can turn undead. The Druid starts out with bonuses to specific saving throws and speaks an additional specific language, and gains other granted powers as he gains in levels.

The DM should add at least one Granted Power to the abilities of a priest of a specific mythos; this gives the priest more individual flavor and character. The DM could add several, if this specific priest-class is weak compared to other priests.

Additionally, as with the Druid, the DM can arrange things so that the priest acquires new Granted Powers at certain experience levels, instead of receiving all of them at first level.

Granted Powers come in three levels: High Powers, Medium Powers, and Low Powers.

As with all the priest's special abilities, Granted Powers should be chosen for the priest based on the attributes of the worshipped god. It's not inappropriate to give a water-breathing ability to the priest of an ocean-god, but is quite inappropriate for the priest of a god of the desert winds.

Some Granted Powers may be used any time the priest wishes and when circumstances allow. For example, normal clerics can try to Turn Undead as many times in a day as they wish (but it can only work when they're facing undead, naturally). Other Granted Powers may only be used a certain number of times per day. When the DM first adds a Granted Power to the listing of a priest's abilities, he must define how often and under what conditions the Granted Power may work.

### High Powers

High Powers are those which are of great use in situations which arise frequently in the campaign. Here are some examples of High Powers appropriate to various types of priests:

#### Charm/Fascination

This power works just like the third-level Wizard spell *suggestion*, except that the priest does not have to use material components to the spell.

The DM may define this Power as working one of two ways. Either it can be used in combat (in which case it can be used against only one target at a time), or it cannot be used in combat (in which it can be used against a number of targets equal in HD to two times the Priest's experience level).

In either case, the Priest can use the ability three times per day. If the target makes his saving throw, he may choose to reject the suggestion, but will not recognize that priestly magic was being used against him.

This power is most appropriate to priests of the gods of love, mischief and trickery, music, and peace, but can be given to any priesthood which has an influential position in the society.

### Immunities

This power gives the priest an automatically-successful saving throw against certain types of damage, attacks, or broad classes of spells.

Examples of appropriate categories for immunity:

Certain types of priests might have automatically successful saves against **all Evocation spells.** This is a very powerful ability; it means the priest will automatically take half damage from most damaging spells. (Those spells which don't allow a saving throw are not stopped or affected by this immunity.)

Others might have automatic success against all **Enchantment/Charm spells.** This is equally powerful; it means that the priest will be completely unaffected by most spells of this sort, as well as other powers such as the vampire's hypnotic gaze.

Immunities may be taken against any one wizardly **School of Magic,** against any one priestly **Sphere of Influence,** or against all **Poisons,** as a High Power. There are other, lesser, immunities, discussed below.

Immunities can work *against* a character, though. Immunity to **all priestly Necromantic spells** means that the character does not benefit as much from Healing spells. He automatically makes his saving throw against them, whether he wishes to or not, and so gets only half the healing value of the spell.

The Immunity must be appropriate to the attributes of the god being served. The priest of a god of healing might have an Immunity to all poisons, while the priest of the god of love might have an Immunity to Enchantment/Charm spells.

The most important thing to remember about Immunity is that it isn't complete protection. It merely gives the character an automatically-successful Saving Throw. In most cases, this means that he will still take half damage from the attack or spell.

There is no limit on the number of times per day a character can use this ability; whenever he is struck with the appropriate attack, his Immunity helps protect him.

### Inspire Fear

This power is similar to the wizard's fourth-level *fear* spell, though the cleric does not have to use material components.

A priest with this power can use it twice per day.

This power is most appropriate to priests of gods with dark or fearsome aspects: Death, for example.

### Shapechanging

This power is very similar to the druid's shapechanging Granted Power, not to the ninth-level wizard spell; read the description of that power in the *Player's Handbook*.

The power can be used three times per day; it is the DM's decision whether the priest can change into three different types of animal, each once per day, or only into one specific type of animal three times per day.

This power, though it would seem to be most appropriate to priests of gods of nature, is actually appropriate for any priesthood . . . if the god in question has an animal symbol or totem. For instance, if the god of the sky has as his symbol the eagle, it's appropriate for his priests to have this power and turn into an eagle three times per day.

### Turning Undead

This is identical to the cleric's ability. It is most appropriate to priests of the gods of birth, dawn, fertility, fire, good, guardianship, healing, light, love, magic, and the sun. There is no limit to the number of times per day a priest can use this ability.

## Medium Powers

Medium Powers are those which are of some usefulness in situations which arise frequently in the campaign, or are of great use in situations which only arise occasionally. Here are some examples of Medium Powers:

### Defiance of Restriction or Obstacle

With this power, the priest can simply ignore some aspect of the physical world which normally slows, impedes, or prevents passage.

For example:

The priest of a nature god might be able to ignore heavy underbrush: He can travel through the thickest undergrowth as fast as he could normally walk, while other humans are slowed or even stopped completely.

The priest of the god of winter or the north wind might not find ice slippery; he could move at a normal rate across the slipperiest frozen rivers or glaciers with no chance of falling.

The priest of a god of wind might be able to walk into the fiercest headwind without being slowed.

The priest of the god of mischief might be able to climb walls and hillsides at his normal walking-speed, and without the need to make a roll for success.

There is no limit to the number of times per day a priest can use this ability.

### Immunities

You read about Immunities above, under "High Powers." The Medium Powers

immunities are not so strong. A single immunity will give a priest an automatically-successful saving throw against:

A narrow category of spells (for example, all Fire spells of the Evocation school);

A narrow category of special powers (all Paralysis, including Hold spells and ghoulish paralysis; or all Energy Drains; or all dragon-breath powers); or

A narrow category of poisons (all snake venoms, for example).

Again, each type of Immunity is appropriate to a different type of priest. Priests of the god of Fire could be immune to Fire spells. Priests of the god of Earth, whose symbol is often the snake, could be immune to all snake venoms.

And, again, Immunity isn't complete protection; it just gives the character an automatically-successful Saving Throw.

### Incite Berserker Rage

This power allows a priest to inspire a fighter (anyone belonging to the warrior class) to a state like berserker rage. The warrior must be willing to have this war-blessing bestowed upon him.

It takes one round for a priest to incite a single warrior to berserker rage; the rage last six turns. A priest can use this power on any number of warriors per day, one at a time. A warrior may only be incited to berserker rage once per day; even if a different priest tries it on him, it cannot incite a warrior to a second rage in the same day.

The rage isn't identical to the abilities of the true berserker (see the description for the berserker in *The Complete Fighter's Handbook).* However, it does give the warrior a +2 to hit and damage for the duration of the rage. While enraged, the warrior cannot flee from a fight; he cannot leave the field of battle until no enemies face him. Once he does leave the field of battle, he can choose whether or not he will emerge from the rage or sustain it; a warrior would sustain it if he felt that another fight was likely to take place soon. When he emerges from the rage, the warrior takes no extra damage or ill effects.

This power is most appropriate to priests of the god of war.

### Language and Communication

The priest with this power gains one extra language *per experience level* he gains. This power is often granted only after a certain experience level is attained; for example, with the druid, this power is granted at 3rd level.

If nonweapon proficiency rules are used, then the priest gains one *extra* nonweapon proficiency slot each level, and must use that slot to acquire a language.

The types of languages learned with this power should be restricted by the DM. Priests of the gods of nature are limited to learning the languages of woodland creatures, while priests of the gods of the earth are limited to learning the languages of serpents, dragons, and other cthonian reptiles; priests of the gods of the sky are limited to the languages of birds and other aerial creatures, while priests of the gods of the seas are limited to the languages of sea-dwelling creatures.

The number of languages learned with this power may likewise be limited. Six to ten extra languages learned this way is a practical limit.

If the campaign is using the optional weapon and nonweapon proficiency rules, then priests might, instead of being limited to languages, receive proficiency slots limited to

certain categories of languages, weapon proficiencies, and nonweapon proficiencies pertinent to their faith.

*Example:* The priest of a specific war-god might, at third level, start receiving one extra weapon proficiency slot every experience level up to 12th.

### Laying On of Hands

This power is identical to the paladin's ability; the priest can, once per day, heal himself or another for 2 hit points per experience level.

This constitutes a little extra healing ability. It's most appropriate to priests of the god of healing. It's also appropriate to priests who don't have access to healing spells, but who should have a little bit of healing ability anyway.

A *reversed* version of the power, where the priest lays on his hands and inflicts 2 points of damage per experience level, or 1 point of damage per level if the victim makes a saving throw, is appropriate for priests of the god of disease. A priest cannot have a healing Laying On of Hands that is also *reversible* to a harmful Laying On of Hands; it must be defined as either healing or harmful.

### Prophecy

With this power, the priest can sometimes see visions of the future. A priest with the Prophecy power can use it two different ways.

First, the priest may sink into a meditative trance and try to receive visions of the future. This trance lasts ten turns; if the priest is interrupted before the ten turns are done (struck with a weapon, shouted at by someone within six feet of him, or knocked over), the trance is prematurely broken and the priest gets no vision.

Second, visions may just come to the priest, at the DM's discretion. When the priest is hit with such a vision, for a single combat round he no longer perceives the real world; he sees, hears and experiences nothing but his vision.

The priest receives no vision of the future if the DM doesn't have one for him to see. Therefore, the priest who deliberately sinks into a receptive trance gets absolutely no vision if the DM doesn't want him to see one. Therefore, this power is only partly an ability which gives the priest an advantage of future sight; it's primarily a tool for the DM to give the priest clues about the future, clues which guide the adventure without giving the priest an overwhelming advantage in the campaign.

The visions which the priest receives should be short and easy to misinterpret. They may be highly symbolic; if he sees a rat fighting a serpent to the death, the animals may represent mighty armies which bear those creatures on their flags, or may represent two characters with traits similar to those animals.

Also, the DM must decide whether, in his campaign, prophetic visions are *changeable* or *unchangeable*. If they're changeable, then the priest will sometimes see events which can be prevented. This tells him which way the winds of fate are currently blowing, but he knows that enough effort can change the future he sees. If they're unchangeable, then nothing he can do will alter this vision; however, it's still possible that the vision is deceptive and not exactly what he thinks it is. (For instance, when he sees his best friend plummeting to his death from a clifftop, he may actually be seeing his friend's twin or doppleganger dying in this manner.)

This is a particularly tricky power to use within the scope of the campaign. Always remember that it's a tool for the DM to give a slight advantage to the character and to guide the story, and not a weapon for the priest character to use against the DM or the story. The priest character can't sink into a trance, receive no vision, and then immediately sink into another one and expect to receive a vision then. The endowing of visions is strictly at the DM's pleasure, just as, in the campaign, visions are granted to characters strictly at the god's pleasure.

This power is most appropriate to priests of the god of prophecy. However, it's appropriate to priests of any god. In Greek mythology, for example, there were famous prophetic temples devoted to the gods Zeus (a god of the sky, lightning, oaks, and wisdom), Apollo (a god of light, the sun, and music), and Gaea (the ancient earth-goddess).

There is no limit on the number of times per day this power may be used. A character can try to entrance himself several times per day, though this is usually fruitless and annoying. However, the DM can supply a priest-character with visions any number of times per day. To keep prophecy from becoming a dominant part of the campaign, it's best to limit the number of visions received, through either of the two methods, to once or twice per *month*.

## Low Powers

Low Powers are those which are of some usefulness in situations which arise occasionally in the campaign, or are of great usefulness in situations which hardly ever arise. Here are some examples of Low Powers:

### Analysis, Detection, Identification

With this power, the priest can identify a category of persons, places, or things. He must be within 10' of the object in order to identify it correctly; he does not have to see it, and the object can be hidden. In some cases, it could even be buried.

If the DM designs it as part of the ability, the priest can also *analyze* the object and get additional details about it. The type of information brought about by this analysis varies from object to object, as we'll discuss below.

Here are some examples:

A priest of the god of **healing** could identify and analyze injury and illness. He could look at an injury and see not just where it hurts, but also if it is infected or poisoned, how long ago it was inflicted, etc. He could look at a sick person and determine which disease afflicts him, what stage of advancement the disease is in, and what the sick person's chances of recovery are.

A priest of the god of **good** could *detect evil* , as per the first-level Priest spell; analysis would let him know whether the evil were lawful, neutral, or chaotic in orientation.

A priest of the god of **goldsmithing** could *detect gold* , including refined gold that has been hidden or unmined gold still under the earth.

Some of these powers of identification and analysis are especially useful, such as those which duplicate *detect good, detect evil* , and *detect magic* spells. These may only be used three times per day. Other powers may be used any number of times per day. These powers are not automatic; the priest must concentrate for a full round in order to use this

power.

### Immunities

As a Low Power, Immunity can act in one of two ways.

A granted Immunity can give the priest an automatically-successful saving throw against one specific type of poison or magic spell. For example, a priest could automatically save against cobra venom, or against the *fireball* spell.

Alternatively, such an Immunity could give the priest a +2 bonus to Saving Throws against a narrow category of spells; a narrow category of special powers; or a narrow category of poisons. These are the same categories the Medium Power immunities are broken down into; the difference here is that the Low Power immunity only grants a +2 bonus to saves vs. those attacks, instead of providing an automatically successful saving throw.

Therefore, a Low Power immunity could give a priest automatic success against the *charm* spell; a different one could give the priest automatic success against the paralysis brought on by the ghoul's touch; a different one could provide a +2 bonus to all saving throws vs. all enchantment spells; another one would provide a +2 bonus to all saving throws vs. any sort of paralysis ability or spell.

### Language and Communication

As a Low Power, the priest receives one extra language appropriate to the priesthood. If the campaign uses the nonweapon proficiency rules, this power consists of an extra nonweapon proficiency slot which must be used to take one specific extra language.

### Soothing Word

With this power, the priest can remove the effects of the *fear* spell or can sway the attitude of a hostile crowd or mob.

The priest can use this power three times per day. A single use can either: Dispel one application of the *fear* spell on one victim; eliminate one warrior's berserker rage; or momentarily calm down a number of characters or monsters (equal to 2x the priest's experience level in hit dice; therefore an 8th level priest could momentarily calm 16 HD of angry mob, for instance).

This power is primarily useful for getting the attention of an angry group of people and allowing the priest to address them. The combination of the *soothing word* , the respect that many cultures have for their priests, and the speaking abilities of many priests can often defuse an angry mob.

As described above, this power is most appropriate to priests of the gods of healing, love, music, peace, and wisdom.

If the DM limits this power still further, it becomes appropriate to other classes of priest. For instance, if the *soothing word* only works on animals, it becomes appropriate for priests of the gods of animal protection, the earth, fertility, and hunting. If it only works on dwarves, it is appropriate for priests of the god of the dwarven race.

### Other Powers

Just about any spell can be adapted to a priest's Granted Power.

## Which Spells Can Be Used

Priest Granted Powers may not be derived from every spell on the books. Some wizard schools and priest spheres are not permitted for adaptation to granted powers. Normally, when a spell belongs to two schools or spheres, where one is permitted and the other is not, the spell can still be adapted to a granted power; but some exceptions are noted below.

Priest Granted Powers may be derived from wizard spells of the schools of Abjuration, Alteration, Charm, Greater Divination, Invocation, Lesser Divination, and Necromancy. They may also be derived from priest spells from the spheres of All, Animal, Charm, Creation, Divination, Guardian, Healing, Plant, Protection, Sun, and Weather.

Priest Granted Powers may *not* be derived from wizard spells of the schools of Conjuration, Summoning, or Conjuration/Summoning; from Enchantment (spells listed as Enchantment/Charm are permissible, but those listed as belonging to Enchantment and any other school are not; for instance, *Leomund's Secure Shelter* , usable by Alteration and Enchantment, is not allowed); from Illusion or Illusion/Phantasm; from Evocation (if a spell can belong to the school of Evocation, it cannot be taken as a granted power even if it can be used by other schools; for instance, *Melf's Minute Meteors*, usable by evocation and alteration, cannot be taken as a granted power).

Neither may they be derived from priest spells of the spheres of Astral, Combat (even if a spell belongs to Combat and one other sphere, as *shillelagh* belongs to Combat and Plant, it cannot be used to make a Granted Power), Elemental, Necromantic, or Summoning.

Note that priest spells are listed with wizard-school designations and with spheres of influence (for example, *Animal Friendship* is shown as an Enchantment/Charm school and of the Animal sphere). When making granted powers from priest spells, ignore the wizardly school and pay attention only to the sphere of influence.

## Maximum Levels

Granted Powers may not be derived from wizard spells of fifth level or higher, or from priest spells of fourth level or higher.

## Limitations on Use

The DM must determine limitations on the use of the Granted Power. (There's no call for a priest to be using his power all the time, every day.)

If it's a power which is very useful in a lot of situations (for example, a healing ability), it should be usable once, twice, or three times per day. The more useful it is, the less a priest should be able to use it; thus, a healing power would be usable once per day, while a detection ability might be usable three times per day.

The DM can also choose for the power to take considerable time to use; special powers should take a minimum of one round to use; more commonly, they should take a complete turn.

### High, Medium, or Low

Once the DM knows which spell the power is derived from and how often and easily it may be used, he can decide whether it is a High, Medium, or Low Power.

High Powers are those which frequently can dramatically affect the course of a combat or otherwise affect an adventure. The examples of High Powers listed above (charms, major immunities, the ability to inspire fear, shapechange, or turn undead) can all have dramatic and powerful effects on an adventure in progress.

Medium Powers are those which frequently give an advantage to the priest, or which occasionally will dramatically affect the course of a combat or adventure. The examples of Medium Powers listed above (defiance of obstacles, medium immunities, inciting berserker rages, enhanced language abilities, laying on of hands, and prophecy) all do these things.

Low Powers are those which only occasionally give an advantage to a priest, but which are also very much in character for the priest and his god. The examples of Low Powers listed above (detection and analysis, minor immunities, minor enhancements to language abilities, soothing word) all meet that definition.

So, when a DM creates a new granted power, he must decide which of these three sets of criteria the power meets, and define the power as High, Medium, or Low.

In any case, this definition is only a rule-of-thumb guideline to how powerful the granted power is. It helps the DM when he's assigning powers to priests of specific mythoi. For instance, if he has created a description of a priesthood and decides that it's just almost powerful enough, and only needs a little bonus (a Low Power) to make it just right, he'll be able to choose from his list of available Low Powers and can ignore his listings of High and Medium Powers, which would make that priesthood too powerful.

## Followers and Believers

At a certain level, priests receive *followers* and *believers* , men and women of the same faith who serve the priests.

To receive their followers and believers, priests must achieve a certain experience level (8th or above, with 9th as the most common level). Soon after (the same experience level or during the next-higher level), the priests must assume the duties of a church leader by building a church or temple (whatever is appropriate to the faith) and ministering over a specific geographic area. At that time, their followers begin showing up, and arrive over a period of several weeks.

### What Are They?

Followers and Believers are non-player characters who are supposed to help promote the priest's faith. But *what* they are in terms of character classes, levels, and duties varies from faith to faith.

The DM decides what character classes the followers belong to (based on the needs and orientations of the player-character priests and the beliefs he promotes).

For example, let us say that the priest serves the God of Strength. The followers are

likely to be all Warriors and Priests of the same god.

If the priest serves the God of Mischief, the followers are likely to be primarily Rogues and priests of the same god. There may be some Warriors and Wizards among the followers, men and women who are particular admirers of this god and his attributes as they pertain to combat and magic.

If the priest serves the God of Agriculture, the followers could be Normal Men and Women who don't belong to a specific class, with a few priests of the same god among them.

Now, it could be that the priest player-character is trying to create a specialized *order* within the more generalized faith. A priest of the God of Everything might want to create a militant order. Though the broad worship of the god includes every subject and attribute possible, this priest is devoted to the god's warrior-aspect. Therefore, with the permission of the elders of his faith (and, by inference, the permission of the DM), all this priest's followers would be warriors and some priests, probably at higher than first level, whose mission is to bring war to the enemy and then religious enlightenment to the conquered.

This sort of thinking is to be encouraged among player-characters. A player who's thinking of creating a specific religious order is thinking in character and within the scope of the campaign rather than just thinking about how to acquire more spells and magical items.

## Who Are They, and How Do They Know to Arrive?

The answers to these questions vary from faith to faith. The DM has at least three ways to approach this:

(1) The followers are local people who are already worshippers of the priest's god. When they hear that there will be a new priest of that god in their area, they arrive and offer him their services.

(2) The followers already belong to another church or temple of the same faith. When the PC announces his intent to build his own temple, his faith's superiors send him followers and believers to help him.

(3) The god subtly inspires people from near and far to journey to the new temple and offer their services to the priest.

## How Many and How Strong Are They?

As a general rule of thumb, the priest should receive anywhere from 10 to 100 experience levels worth of followers, with the average being around 30. The DM should decide how many levels of followers show up rather than having the priest-character roll a die.

These followers can all be of the same level, or can be of different experience levels. Zero-experience characters (i.e., normal men and women) count as 0-level characters. No follower can be of higher level than three levels below the priest (thus, an 8th-level priest cannot have a follower higher than 5th level).

Here are some examples of arrangements of followers that different types of priests can have. With each arrangement, we're presuming 30 levels' worth of followers.

The priest-leader of a militant order could have 24 first-level fighters, one second-level

fighter, and two second-level priests.

The priest-leader dedicated to the common man could have 56 normal men and women, and two first-level priests.

The priest-leader who is part of a bureaucratic hierarchy could have five fifth-level priests and five first-level priests.

The priest-leader of a temple which is supposed to guide, protect, and teach a community could have one fifth-level priest, one second-level priest, three first-level priests, ten first-level warriors, two second-level warriors, and sixteen normal men and women.

The DM can assign even more esoteric followers to a priest. The priest of a woods-god might have nymphs and centaurs among his followers, in which case the HD of the monster corresponds to its level (a 2HD monster corresponds to a second-level character, while a 2d6+2HD monster corresponds to a third-level character).

All these followers constitute priests, warriors, and workers (the normal men and women) belonging to or assigned to the priest's temple or church. Their entire job is serving the temple or church; they are housed, fed, and sometimes paid by the temple or church. They aren't the "flock" or whatever you choose to call the populace of the area the priest is supposed to serve.

## How Much Control Does the Priest Have?

The priest's command over these followers varies from faith to faith. A player-character priest cannot assume that he has a tyrant's powers of life and death over this followers and believers. The DM decides what sort of command the priest has over them based on the nature of the campaign's culture and on the dictates of the faith.

In a normal faith, the priest will be able to order his followers to work and effort like any employer (and, in a medieval or fantasy setting, employers have more power over their employees than in contemporary society). He can advise them and (if he chooses) put considerable pressure on them regarding the people they associate with or even marry.

## Punishments

When he is displeased with their actions or performances, he can punish them by restricting their activities and movements, applying corporal punishments (beatings which may not reduce them below three-fourths their starting hit points), and assigning them particularly nasty tasks and duties. If their offenses are sufficiently great, he can fire then from service in his church or temple, or even separate them from the faith (as described earlier in this chapter).

Customarily, he cannot incarcerate them for any great length of time (i.e., over a week), seriously injure them (perform any punishments which reduce them below three-fourths their starting hit points), kill them (killing them and restoring them to life is still forbidden), or use harmful magic on them, including magic which denies them free choice.

Spells which are normally forbidden for purposes of punishment or even "guidance" include *create light wounds, magical stone, shillelagh, charm person or mammal,*

*enthrall, flame blade, heat metal, produce flame, spiritual hammer, call lightning* (except when used to frighten instead of damage), *cause blindness or deafness, cause disease, curse, summon insects* (except when used to frighten instead of damage), *cause serious wounds, poison, produce fire, cause critical wounds, flame strike, insect plague, quest* (except when the target willingly undertakes the quest to atone for his misdeeds), *spike stones, wall of fire, fire seeds, harm, creeping doom, earthquake, fire storm, wither, energy drain, destruction , or symbol.*

Spells like *command, entangle, cause fear, hold person ,* and *confusion* are permissible, because they last only a short time, or do not change a character's belief about any subject.

However, in evil faiths, the priest may be able to order the execution of followers for anything which displeases him. In particularly bureaucratic faiths, a priest may not be able to assign any punishment without a process of trial and conviction, or without permission from a higher-ranking priest at the faith's main temple or church. The DM will decide whether or not a particular faith has these characteristics . . . but most don't.

## Important Followers

The DM should create many of these followers as fully-developed NPCs, including names, personalities, ability scores, equipment, etc.

When a large group of followers are "identical" in class and level (for example, if you have sixteen Normal Men and Women), one or two should be singled out and fully developed. When followers are already more individual (for instance, if you only have two second-level priests or one fifth-level fighter), such followers should be fully developed.

When possible, it's a good idea to role-play the arrival of such characters within the temple, the better to give the priest PC an idea of what his followers are like.

All of this work will make the temple and its inhabitants more immediate and real to the priest character (and the other player-characters).

## What If They Die or Gain Experience?

When followers die, they are replaced by whatever means brought them to the temple in the first place. A new local will volunteer his service, or the church hierarchy will send a replacement, or the god will inspire a new NPC to volunteer his service.

It's all right for followers to gain in experience. A soldier who defends his temple from attackers can be expected to gain experience points; a follower who accompanies his priest on adventures can, too.

Only followers who have been given individual names and personalities should gain in experience. An anonymous first-level fighter guard can be expected to remain so; but a named character could rise through levels and become guard-lieutenant, guard-captain, personal bodyguard to the priest, etc.

Named followers gain experience at normal rates based on what they do in their adventures. The only limits placed on all this personal growth are these: No follower can be higher than three experience levels below the level of the priest; and the levels of all followers of a specific temple or church cannot add up to more than 100.

If a group of followers becomes so experienced that it adds up to more than 100 levels, the DM can take steps to reduce the number of levels. For instance, a senior guard-captain may leave the temple when offered captaincy of a guard-unit in another temple (one closer to his family, one more prestigious, etc.). He'd be replaced by a captain of lower level, thus adjusting the available experience levels downward.

Whenever a follower dies or leaves, he is replaced by a follower who was at the experience level the original character held when he first became a follower.

For instance, let us say that a temple starts with a third-level wizard who acts as the priest's advisor. Through adventuring, this wizard rises to sixth level, and then is killed in an adventure. He will be replaced by a third-level wizard.

If a guard-captain rises from second to sixth level in the course of adventuring, and then leaves for service elsewhere, he'll be replaced by a second-level fighter. This doesn't mean that the new fighter is the guard-captain. The priest may prefer for some other follower, who is higher than second-level, to be the new guard-captain. But the replacement character always arrives at the experience level the original character held *when he first became a follower*.

## What If The Priest-Character Is Scum?

Inevitably, some campaign priests, including some player-character priests, will see their followers as a resource to be exploited and abandoned for the priest's amusement. For example, a priest might seduce and cruelly abandon attractive followers, or might send soldierly followers into certain-death situations in order to enhance his own glory.

If the faith is not an evil one, the priest is not following the dictates of his faith and will eventually suffer for it. The first few followers who perish or feel compelled to leave will be replaced normally. After twenty experience levels' worth of followers have left in this manner, however, the other temples of the faith and the local population will "catch on" and the priest will find replacements slowing.

At that point, the priest will receive one experience level of replacement follower for every two he loses. (This doesn't even count experience levels gained by followers through adventuring. If a second-level guard-captain rises to sixth level and then is wasted in this manner, he'll be replaced by a soldier half his *original* experience level, i.e. a first-level fighter.)

If the priest loses another twenty levels through neglect or maliciousness, he will receive one experience level of replacement follower for every five he loses. If he loses another ten levels through neglect or maliciousness, he will receive one experience level of replacement follower for every ten he loses. If he loses any more through his misbehavior, they are not replaced.

That isn't the only result of evil behavior. The higher-ranking priests of the faith will launch an investigation, assigning a priest of level equal to the offending priest to his temple to conduct the investigation. If it is this priest's conclusion that the priest has behaved badly, he could find himself punished; he could have his temple taken away and could even lose experience levels (if his god is offended by his misbehavior and decides to punish him).

Also, the other followers and the flock could become disillusioned. Surviving followers could leave or even betray the priest. The local population could gradually

cease to attend the priest's church, and seek their spiritual fulfillment elsewhere.

How long does all this take? That's a role-playing consideration. A priest can be corrupt and hide his behavior from the faith and from his following for years. If he does "waste" followers, but does so at a very slow rate, it could be years or decades before the population catches on. If he's overt, and flaunts his corruption or wastes his followers at a more advanced rate, he could find himself in trouble mere weeks or months after first attracting his followers.

However, if the faith is an evil one, such behavior is normal. Wasted followers will be replaced normally. (They are not, however, likely to be *loyal* followers, and may conspire to eliminate and replace the priest.)

## Role of the Faith

The DM must decide what role an individual faith has within the campaign's culture. This role breaks down into four parts:

How the faith relates to other faiths;
How the faith relates to the aristocracy;
How the faith relates to the people; and
How the faith relates to foreign faiths.

### Relations With Other Faiths

Most fantasy cultures tends to fall into one of the following categories:

Monotheistic By Demand
Monotheistic By Dogma
Pantheistic, Chief Faith Dominant By Charisma
Pantheistic, Chief Faith Dominant By Strength
Pantheistic, No Chief Faith

Here's what those terms mean within a campaign.

**Monotheistic By Demand:** The faith's god acknowledges that there are other gods, but demands that everyone worship him or her alone and not those other gods. If a culture is Monotheistic By Demand, it means that this one faith is the only one legally permitted within the culture. This faith is able to demand a tithe (discussed earlier in this chapter) of its followers.

**Monotheistic By Dogma:** Whether it is true or not, the faith claims that there is only one god or goddess and that everyone must worship that one being. If a culture is Monotheistic By Dogma, only the one faith is permitted within the culture. Typically, the worshippers are sufficiently inflexible in their belief that they often participate in religious wars in order to extend the domination of their own faith or suppress faiths they consider dangerous or heretical. This faith is able to demand a tithe of its followers.

**Pantheistic, Chief Faith Dominant By Charisma:** This culture concedes that there are several gods with individual faiths or cults associated with them. One, however, is the special favorite of the population, because they consider that god's attribute, personality, or blessings superior to any other god's. Most citizens of the culture worship this chief

god and any other gods they choose. In this type of culture, the dominant faith typically asks but is unable to demand a tithe of its followers.

**Pantheistic, Chief Faith Dominant By Strength:** This culture concedes that there are several gods with individual faiths or cults associated with them. One, however, is supreme in power, either because it has a strong hold on the culture's ruling aristocracy or because the chief god has a power or promises rewards that make his worship necessary. (For example, even in a culture where many gods are worshipped, the god who decides how each person's afterlife is to be spent could be the dominant god; or the king of the gods, who rules the god of the afterlife, could instead be dominant.) In this type of culture, the dominant faith is able to demand a tithe of its followers.

**Pantheistic, No Chief Faith:** This culture concedes that there are several gods with individual faiths or cults associated with them. Though individual cults may be stronger or weaker than each other, none is dominant throughout the culture. Each faith can only ask, not demand, a tithe of its worshippers. Within the culture, individual *communities* may have dominant gods; and within those individual communities only, the chief god's worship will correspond to one of the "Pantheistic, Chief Faith Dominant By Charisma" or "Pantheistic, Chief Faith Dominant By Strength" categories. Some cities will not have dominant gods, or may have two or more dominant gods who have joint worship here but not elsewhere. All the gods worshipped within the culture will be perceived to belong to the same family, or pantheon, of gods.

### Relations With the Aristocracy

Once the DM makes the decision about the sort of hold the faith has on the culture, he can decide what sort of relations the faith has on the country's rulers. This was discussed earlier in this chapter, under the heading "Rights of the Priesthood."

### Relations With the People

Then, the DM can determine what sort of relationship the faith has with the population. All faiths exert some control over the flock, by helping interpret or define what the flock believes; some faiths exert more power, some less. Some abuse that power, and some don't. Some faiths rule the people, while others *are* the people.

The DM needs to ask himself these questions:

### Is There A Priestly Caste?

That is, is Priest the full-time job of the priest, making priesthood something a little distant from ordinary humanity; or do most priests only act as priests part-time, having other occupations most of the time, and making priesthood something that any ordinary person can attain?

Just because Priest is a character class in the AD&D® game doesn't mean that the campaign culture has a priestly caste. In a specific culture, a character could be a blacksmith and also priest of the god of metalwork, or a soldier and also priest of the god of the sun, or a scribe and also priest of the god of death. The character's profession does not have to have any bearing on his priestly role . . . though it would be inappropriate to be a soldier and a priest of the god of peace, for instance.

In such an arrangement, the character lives in his home, works to make his living, and is an everyday fellow. On occasion, he puts on his priestly vestments and attends to his priestly duties (performing marriages, arranging and performing rituals, giving guidance to those who ask it of him, praying to the god for favors). Most of these events take place at the god's temple or church, but most of the faith's priests do not live there; only priests with no other quarters, and followers of the chief priest, would live there. (A priest could live in his own home while his followers lived in the temple!) With this sort of arrangement, priests are very definitely men and women of the people. They are not supported by tithes (though tithes probably led to the building of the temple), and just about anyone in the culture can become a priest.

However, if priests are a distinct caste in the society, then priesthood is (in addition to everything else) a *job*. It is the priest's principal occupation. Most priests live in the temple or in properties owned by the faith. It may be considerably more difficult to become a priest; someone intending to become a priest may have to go through years of education and enlightenment before becoming a priest. (This isn't all that important from a campaign perspective; player-character priests still start out at first level, but with the understanding that they've gone through all this teaching and training before they enter the campaign.)

### Can The Faith Inflict Serious Punishments On Non-Believers?

This is a reflection of the faith's political power in the campaign culture. Does the faith have the power to inflict punishment on those who do not follow the faith's principals? Can they imprison, interrogate, or even torture or execute non-believers or worshippers of other faiths?

If they can, they're a very powerful faith in the culture, and one which can guide the culture into periods of religious terror (whenever they try to purge the land of heretics, or to conceal elimination of political enemies by pretending they're heretics and purging them) or into all-out wars with cultures of different faiths.

Giving a faith this right in a campaign means that there's always the danger of religious persecution in the campaign. If it's the campaign's main setting where a faith has this power, the player-characters may find themselves hired to oppose or even to help such an effort of persecution. If it's a foreign power, the heroes may find themselves helping fugitives escape that land, or may even face the oncoming juggernaut of an army when that faith decides it's time for a holy war.

### Is The Faith Indigenous To This Population?

Did the faith in question spring from this culture, or was it introduced to this culture by immigration or war?

If it sprang from this culture, that's fine.

However, if it was introduced into this culture and supplanted an earlier faith, the DM has the opportunity to introduce some interesting story elements because of friction between the two faiths.

If the new faith conquered and eliminated the old faith almost completely, then there will be hidden, secret sects of the old faith still in existence . . . sects which plan to re-establish the preeminence of their god.

If the new faith has dominated and absorbed the old faith without destroying it, you can deal with changes to the culture resulting from that absorption. What if, in the old culture, female priestesses and their goddesses were dominant, while in the new faith male gods and their priests are in power? Or, what if the reverse is true? Or, what if the old faith oppressed one gender and the new faith treats them as equals? In any case, there will be ongoing struggles, especially struggles of politics and traditions, where believers in the old faith try to keep things traditional and familiar while believers in the new faith try to impose their own beliefs on the population.

As a variant of that, a campaign setting, or even an entire campaign, can be built around a missionary situation, where priests of one faith have been introduced into a setting where a different faith reigns . . . and have appeared with the intent of converting the local population to their beliefs. This is especially interesting where missionaries of a more sophisticated culture are sent to a more primitive region.

The priests of the new, intruding faith are sent with the purposes of educating the "natives," challenging and defeating their priests (if any), and converting the native population to the new belief. The priests might have to oppose soldiers of their own land, who are raiding and exploiting the natives, or may cooperate with them for the glory and profit of their own temples, depending on whether the DM considers this a "good" or a "bad" faith and cause.

In such a setting, player-characters could take on any number of tasks. They could be the new priests, spreading the new faith. They could be enemies of the new priests (perhaps they're priests of another faith altogether!) working to defeat the missionary efforts of the new priests. They could be warriors or foreign defenders of the native population, fighting the soldiers who steal the native culture's treasures and take natives as slaves. They could be those exploitative soldiers. In as complicated a situation as this one is, there are many opportunities for adventure . . . and for tough ethical questions for the DM to introduce into the campaign.

### What Secondary Roles Does The Faith Fill?

The DM also needs to decide if a faith fills one or more cultural niches which are not intrinsically religious.

For example, a faith could be the principal educator of a society. Each temple would then also serve as a school, and all priests would have nonweapon proficiencies which allowed them to teach subjects or preserve knowledge. A faith with this privilege will be a powerful one in the culture, because it influences the thinking of each new generation.

A faith might have a secondary function as a shelterer of travellers. Each temple would have a wing or annex which was a sort of hotel for travellers, with many of the brothers and sisters of the faith "running the hotel." This makes this faith a principal waystation for rumors, and the church would be the first place that people would turn to for news.

The faith of the god of Wisdom might be the only one which could supply judges and advocates in trials. The faith of the god of Strength might supply all judges and marshals to athletic events. Perhaps only priests of the god of metalwork can mint coins.

It's extra work to introduce these small cultural elements into a campaign setting, but they add a depth of detail to a campaign for the DM who is willing to do that extra work.

### Relations With Foreign Faiths

Once he's decided how the campaign's chief culture is arranged, the DM can make the same decisions about all the other, foreign, cultures in his world.

Then, if he wishes, he can add still more detail to the religious fabric of his campaign setting by defining how different cultures regard one another's religious practices.

Some cultures avidly welcome the introduction of new religious elements into their own. Pantheistic cultures, especially those which have no dominant faith, are likely to welcome worship of each foreign god that is encountered.

Some cultures violently oppose such an introduction. For example, a culture might be pantheistic, worshipping many gods, and yet still believe that its pantheon is the only true pantheon . . . and that all foreign gods and foreign pantheons are lies or demons.

Foreign cultures often worship some of the same gods as the campaign's principal culture, but do so under different names, with different rites, and believing in different stories about those gods. A tolerant culture will welcome new interpretations of their gods. An intolerant one will, at best, seek to educate the foreign culture to "correct its misunderstandings"; at worst, it will insist that the foreign land be conquered and forcibly "corrected."

This, then, is another way to add detail and texture to a campaign: By deciding how foreign faiths regard one another, and what effect that regard has on the cultures involved. These effects range all the way from increased trade and exchange of knowledge through war, conquest, and even genocide.

## Rites and the Calendar

Most faiths have regular rites and rituals tied in to the calendar. This is discussed more fully in the "Role-Playing" chapter later in this supplement.

## Hierarchy of the Faith

Most faiths have a definite organization, with more experienced priests leading less experienced ones. In some faiths, bribery and corruption can allow a less experienced priest to gain power and influence over more experienced ones, but this is uncommon.

In the AD&D® game, most faiths are organized based on the experience levels of their priests. The higher in level a priest is, the higher he may be in the faith's organization.

But the DM needs to note a couple of important facts.

First, most NPC priests start at first level and never rise any higher than second. The player-character priest, who gains levels throughout a career that is mostly characterized by *adventure* is an exception to the usual rule.

Second, the PC priest, with his (comparatively) meteoric rise through levels, may not wish to or may not be able to enjoy the benefits and responsibilities of most priests. Many priest PCs will wish to forego the duties of running a temple and stay on the road, acting as a mobile agent for their faith. This is a viable option for a priest in a campaign.

More on this subject is discussed in the "Role-Playing" chapter.

### Experience Levels and Hierarchy

Below is the usual arrangement of priesthoods in a campaign. First is the organizational structure which NPC priests usually follow; then, we'll talk about player-characters and their place in the structure.

### Level Zero (Normal Men and Women)

A "level-zero" priest is someone who has just been accepted into a priestly order and is receiving his initial training. Player-characters do not have to start out at zero-level; the only zero-level priests that the PCs will ever encounter will be NPCs undergoing training.

### Level One-Level Two

First-level priests are typically assigned as aids, clerks, and assistants to higher-level priests, and keep that assignment through second experience level. During this time, the low-level priests will be getting practical field experience in the execution of their duties, in the way the priesthood works with the population, and in the way the priesthood's organization works in the real world.

Most first-level priests are assigned to priests of third to fifth level, but some few (especially very capable ones) will be assigned to much more powerful priests.

### Level Three-Level Five

At third level, the priest will be assigned to a single community (a village, a small town, a broad tract of land containing many scattered farms, or a single small neighborhood in a large city).

If he asks for one, and the faith's leaders (i.e., the DM) agree that he needs one, he will be assigned a first-level priest as an assistant. This priest isn't a follower in the same fashion as the followers he receives at a higher level, and might wish to be re-posted elsewhere if his superior is unlikable or difficult. (However, if this assignee is still with the priest when that priest reaches eighth or ninth level, the DM might decide for him to become one of the priest's official followers.) If he doesn't ask for a subordinate priest, he won't receive one.

The priest is assigned a small building to serve him as a temple or church. (This is not the same as a stronghold.) The priest is supposed to finance repairs to the building, food and supplies for himself and any assistants, and salaries for any servants he chooses to hire through tithes and donations. Half of all tithes and donations are sent on to the superiors, and the rest go to the priest's own temple for these purposes. If the priest doesn't receive enough tithes and donations, the faith will probably not help him; his mission is to inspire his flock, and inadequate tithes and donations are merely evidence that he needs to work harder at it.

### Level Six-Level Seven

At around sixth level, if the priest has done a good job of maintaining his church and seeing to the needs of his flock, he may be given a more important assignment. He could become the chief priest of a large town (one with more than one church; the third-level priests operating those churches would report to him), or the central church authority over

several villages.

He may keep any subordinate he has had previously. He will automatically be assigned two additional first-level priests as subordinates. Again, they do not precisely constitute "followers," though those specific characters could become followers when the priest reaches the appropriate level.

If the priest's work does not merit a better posting, he won't lose his experience levels or his subordinate, but he'll be stuck in the little church that he has been operating all this time. When a priest reaches sixth or seventh level and is still the priest of a one-horse town, it's often a sign that he is not held in high regard by his superiors. It may merely be a sign that there are too many priests in the priesthood and advancement is slow.

Naturally, a higher-level priest can ask to be posted to or remain posted to such a small community. Some people will snicker at his lack of ambition while others will admire his dedication and his care for the common man.

### Level Eight-Level Nine

At around eighth or ninth level, again assuming that the priest has done well in his priestly career so far, he will be allowed to build a stronghold. The faith will finance half its cost, and it remains the property of the faith when the priest retires his post.

However, the stronghold is semi-autonomous; the priest's superiors seldom interfere in its operations. They might interfere, especially by sending another priest to investigate, if they receive rumors of incompetence, greed, or trouble from the stronghold. Otherwise, the priest is free to operate it much as he pleases.

The priest's assigned area may remain the same. He might continue to be chief priest over a large town or collection of villages. At his request and with his superiors' permission, or solely at his superiors' wish, he may instead build his stronghold in some other place: In a frontier where he is supposed to defend the peace, in a wilderness area where he and his subordinates are supposed to work undisturbed by the secular world, etc.

At this same time, the priest will receive his followers, as we have discussed earlier this chapter. The followers manage the stronghold and its duties under the priest's administration. As discussed earlier, the levels, classes and goals of these followers will depend on the attributes of the faith and on the specific goals of the priest for his stronghold. If it's to be a military post manned by holy warriors, the followers will mostly be capable fighters; if it's to be an educational monastery, most of the followers will be Normal Men and Women or first-level priests with appropriate scholastic talents.

During this time, the priest's progress and efficiency will be carefully measured by his superiors, who are considering what role the priest will play in the higher-level politics of the faith.

### Level Ten-Level Twelve

Sometime between tenth and twelfth levels, the priest may find himself promoted to prominence over a much larger area; he will be administering a bigger chunk of the religious "map." Priests of numerous cities and regions in his vicinity (at least a fifty-mile radius) will be reporting to him, and of course he will still be reporting to his superiors. By twelfth level, he may be the high priest over an entire nation (assuming that the faith

spans several nations, as many faiths do).

He does not, however, receive any more followers.

### Level Thirteen-Level Fifteen

The most powerful of a faith's leaders belong to these experience levels: The high priest of the faith and his immediate advisors. If the DM wishes, politics or the god's preference alone may decide who the high priest is, and the high priest might then not have to be the highest-level priest of the faith. The faith's high priest might be chosen by vote or omen, and could be a thirteenth-level priest while all his immediate advisors are of higher level.

### Level Sixteen-Level Twenty

These experience levels don't have any effect on the priest's ranking within his faith. They are reflections of additional knowledge that he has learned . . . but don't grant any additional benefits within the structure of the faith.

## PC Priests and the Hierarchy

Now, just how do player-character priests relate to this whole organization? Many campaigns are set "on the road;" the player-characters spend much of their time travelling from place to place in search of adventure, and it's hard to keep a church-bound priest active in such a campaign. So, here's how to keep the priest in the campaign.

In a campaign, it's often not appropriate for **first and second level priests** to be assigned as scribes to some small-time village priest. If the DM wants to avoid this, he can assign the character to a third-level priest (especially a physically harmless one, who won't contribute much combat ability to a PC party) who travels. This third-level priest may be a friend and travelling companion of one of the PCs, or may be an unusual priest who prefers to train his subordinates by life on the road.

When the PC reaches **third level** and is supposed to be assigned his own village, he may instead be given a special mission which will keep him on the road and with the other PCs. For instance, if the PC party typically encounters new monsters or magic, the faith may want the PC priest to stay with them to benefit himself (and the faith as a whole) with these new experiences and knowledges. The PC priest could keep this assignment all the way from **third to seventh levels.**

At **eighth or ninth level,** when the PC is supposed to be "settling down" and building a stronghold, he should do so. The DM should work up a whole series of adventures centered around the stronghold, its construction and defense. After the stronghold is built and settled with followers, if the PC priest wants to remain on the road with his allies, he should be able to do so. He must leave most of his followers at the church to operate it, and should take no more than two followers with him. Naturally, the stronghold was built and organized with this in mind, and the priest will still have to return to the stronghold a few times per year in order to sign important papers and set new policies . . . but for the rest of the year he's doing the temple's business on the road.

This can remain the situation for the rest of the priest's career in the campaign. Alternately, as the priest reaches higher levels, the DM may wish to orient the campaign around him and the concerns of his faith; we discuss this in the "Role-Playing" chapter.

## Finances of the PC's Temple

We mentioned tithes and donations above, and there's always a temptation to provide some sort of lengthy and involved money-management scheme for the campaign, so that the DM can keep track of every copper piece that flows through the temple coffers.

But that doesn't contribute to the spirit of adventure that AD&D® game campaigns are supposed to promote. So we're going to provide you with a much simpler system for keeping up with a temple's tithes and donations.

## The First Temple Assignment

When the priest character is first assigned a temple or church, the DM decides, entirely arbitrarily, whether the faithful who attend that temple contribute enough for the priest to lead a mean, average, or comfortable existence.

"Mean" indicates that he gets barely enough to eat and cannot afford repairs or salaries for servants; "Average" means that he and one subordinate get an ample diet and can afford one servant; "Comfortable" means that the temple can house more than just its one or two priests (it can, for example, house one or two horses per priest) and can afford two or more servants per priest.

Then, the DM decides whether or not this economic condition is one that will change with the priest's management. If the local population isn't contributing as much as it could, the new priest might be able to inspire them to a better performance. If the last priest was a very charismatic leader, then perhaps the new priest will start out with a Comfortable or Average existence but then see it start to slip away.

Then, from time to time, the DM can confront the priest with situations which can affect his standing.

**Example:** An unpopular man seeks sanctuary in the priest's church; if the priest denies sanctuary, he'll be more popular with the locals, but will not have done his priestly duty; if he provides sanctuary, he'll have done his duty, but will see contributions slip or dry up altogether.

**Example:** A young man of the area asks the priest's advice on a difficult problem: Should he marry the girl of his choice, and alienate his father, or acquiesce to his father's arranged marriage, and wed the wealthy girl he does not love? If the priest answers one or the other, it has no effect on his standing in the community. But if he can suggest and implement a plan which will allow the youth to marry his love, keep his father's affection, and not alienate the family of the spurned girl, the priest's standing will be improved, and so will the economics of his temple.

## Later Assignments

As the priest is given larger and more important postings and assignments, the DM should assign him to temples which are always compromises for him. The DM decides how many men and women these temples have on their staffs, what the standard of living

is for the temple-dwellers (usually modest, though not uncomfortable, etc.). And these temples simply do not receive enough from tithes and donations normally to live up to all his expectations, much less to build up a large treasury of available coins.

**Example:** If the priest dreams of having a body of soldiers decked out in full plate and riding trained warhorses, what he has is a squadron of foot soldiers in chain.

**Example:** If the priest wants to live a luxurious existence, with expensive furnishings and many servants and a hedonistic lifestyle, what he gets is dull stone walls, used furnishings, and one scruffy servant (or none).

In all situations like this, the priest must either:

(1) Re-structure the temple's budget, which results in shortages elsewhere in the temple's existence (taking from the kitchen to pay the armory results in poorer food and worse cooking; taking from the armory to redecorate makes for brighter and less-defensible temples; taking from the repair fund to improve the kitchen makes for better meals and buildings which start to fall apart; etc.);

(2) Finance the changes from his adventuring treasures (which means that the priest will find it hard to save up a "retirement fund" of any consequence); or

(3) Tap into the monies which are supposed to be sent on to the higher ranks of the faith (which will work for a time, perhaps a very long time, but will eventually result in a temple investigation . . . which is very bad for the faith as a whole, as it causes disillusionment among the populace when the true facts emerge).

### Notes on Economics

By presenting temple economics as choices of lifestyle ethics, rather than numbers on a column-sheet, the DM encourages role-playing within his campaign and doesn't have to devote a lot of time to keeping track of silver pieces.

### Non-Priests Working For the Faith

One last note about levels of priests within the faith: There are many non-priest characters who belong to the administrative organization of any faith in a campaign world.

Most are Normal Men and Women who work in individual temples, as servants, messengers, grooms, and sometimes as teachers, scribes, and consultants.

Many are warriors hired to protect temples in dangerous areas, to act as bodyguards for travelling priests, and to train priests in the finer points of combat.

Some are mages, bards, and even thieves hired as consultants and specialists.

## PCs, Forces and Philosophies

Some players will eventually ask themselves, "If the gods are sentient but forces and philosophies are not, then if I become priest of a force or philosophy, I don't have some god dictating what I can and can't do. I can do anything I want to."

The DM needs to step on this sort of foolishness when it crops up. Though forces and philosophies are not sentient beings, they can still enforce their ethos and tenets on their

priests.

For example, if a priest of the Philosophy of Good does evil things, the natural power of the philosophy will abandon him (denying him all his priestly until he repents, makes amends, and again follows the restrictions of the priesthood).

## Sample Priesthoods

The next chapter contains more than sixty individual priest classes. Each has been built according to the guidelines discussed in this chapter, and can be introduced as written or with modifications into most DMs' campaigns.

## Faith Design Sheet

On page *39* is the Faith Design Sheet, a worksheet which will help the DM design his own faiths. You can use any of the Sample Priesthoods from the next chapter as a template, or create a faith from the ground up.

The Faith Design Sheet is arranged to follow, more or less in order, the subjects of this chapter.

# Sample Priesthoods

Here, we're providing examples of what we described in such detail in the previous chapter.

In the pages that follow, you'll find more than sixty priesthoods. Each of these priesthoods constitutes a complete character class of the "priest of a specific mythos" type. The *druid* presented in the *Player's Handbook* is one type of a priest of a specific mythos, and is written up there in greater detail than the priesthoods presented here. But each of these priesthoods can be fine-tuned by your DM and adapted more fully to the campaign world.

Each of these priesthoods follows the normal Priest rules (*Player's Handbook*, page 33) for experience level progression and spell progression. Most follow the normal Priestly eight-sided dice progression for hit points; those which don't will be singled out in the text.

For each of these priesthoods, your DM will ultimately have to supply the campaign-specific details of what the deity's name is, what his family and relationships are, what his history is, etc. However, players don't have to know all these details in order to create priest characters; just use the priesthood class descriptions below, and, when options are provided (for skills, requirements, powers, etc.), the players can ask the DM which options they should take.

This section supplements the material from the "Weapons Allowed" chart from the *Player's Handbook*, page 34.

## Priesthoods

Below are the priest character classes. The description of each is arranged in this

fashion:

## Sample Faith Writeup

We start out with a quick explanation of the god's attribute. The first paragraphs talk about what the god's goals may be, what his priest's goals will be.

Next, we discuss what kinds of variations there may be to his attribute. (Example: A god of the arts may be devoted to only one specific kind of art -- painting, for instance).

Sometimes these variations on the god's attribute might change your opinion of what the god's nature and alignment are. (Example: A god of death might be a frightening Grim Reaper sort of deity, or might be a gentle god of a cheerful sort of afterlife.)

We also describe the gender that gods of this attribute usually belong to. *This isn't a limitation for your campaign.* Any attribute shown below can be represented by a god or goddess, or even by a sexless deity. However, in real-world mythologies, various godly attributes are usually represented by one sex or the other, and so here we describe which one that is.

We also talk about the other types of priests this priesthood is on especially good terms with. (Just because a priesthood isn't mentioned here doesn't mean that there is bad feeling between them, however.)

**Alignment:** This paragraph describes the usual alignment of such a god, and the alignment choices available to his priests.

**Minimum Ability Scores:** This text explains what minimum ability scores (always Wisdom, and often one other) the priest must possess to be a priest in the first place.

**Races Allowed:** This paragraph describes which player-character races may belong to this priesthood.

**Nonweapon and Weapon Proficiencies:** This paragraph describes which nonweapon and weapon proficiencies a priest must have, and which additional nonweapon proficiencies are recommended for him. The proficiencies required of the priest must be taken from the normal proficiency slots he starts play with; he does not receive *extra* slots with which to take these proficiencies. Also listed here are the "Nonweapon Proficiency Group Crossovers" for this specific priest-class (see Table 38, *Player's Handbook*, page 55 for more on the Proficiency Group Crossovers).

**Duties of the Priest:** This talks about the duties typically demanded of this sort of priest. Almost all priests are supposed to provide Guidance to the flock; generally, that guidance is related to the god's attribute. (In other words, members of the flock come to the priest of the god of love for questions of love, to the priest of the god of justice on questions of revenge, etc.) All priests except for the priests of the god of Death can perform the marriage ceremony, and this is a duty most don't mind performing. Many priesthoods have other duties as well.

**Weapon and Armor Restrictions:** Here, we talk about which weapons and armor the priest can and cannot use. Mentioned in these paragraphs are some weapons which do not appear in the *Player's Handbook*. The belaying pin, bo stick, cestus, chain, daikyu, lasso, main-gauche, net, nunchaku, sai, shuriken, stiletto, and swords such as cutlass, katana, rapier, sabre, and wakizashi appear in *The Complete Fighter's Handbook*. The bill, lasso, maul, net, nunchaku, and scythe appear later in this supplement, in the "Equipment" chapter (note that the bill is the same as the gaff/hook from *The Complete Fighter's*

*Handbook*; "gaff" and "hook" are its nautical names). Of the armors mentioned, banded mail, brigandine, bronze plate mail, chain mail, field plate, full plate, plate mail, ring mail, scale mail, splint mail, and studded leather constitute metal armor (not all of them are all-metal, but all of them have metal elements); hide armor, leather armor, and padded armor constitute non-metal armor.

**Other Limitations:** Here, we discuss other limitations and restrictions which are typically placed on this type of priest.

**Spheres of Influence:** This paragraph describes the priest's access to spells of different spheres of influence. You'll remember from the previous chapter that priesthoods which have Good Combat Abilities tend to get three major accesses (including All) and two minor, that those which have Medium Combat Abilities tend to get five major accesses (including All) and four minor, and that those which have Poor Combat Abilities tend to get seven major accesses (including All) and six minor. In the examples below, not all priesthoods follow those guidelines *exactly*; some have one major access to few and a couple of minor accesses to many, for instance. But if a priesthood comes up notably short on the number of spheres it can access, it is given extra Granted Powers.

**Powers:** This paragraph talks about which Granted Powers the priest receives, and when this occurs during the course of his career. Most priesthoods have at least one; some have several. Unless the text says otherwise, each Granted Power is available to the priest at first experience level; some, specifically listed, will become available at other levels.

**Followers and Strongholds:** Here, we talk about how many followers the priest receives, what they are, when he receives them, and when he is allowed to build his own stronghold. We also describe how many and which of his followers can take with him when adventuring "on the road." Normally, most of the followers are supposed to stay at the priest's temple and operate it for him; in spite of many priest-PCs' preferences, the priest can't just bring along all his followers with him on every adventure. The numbers given here are for the maximum number of followers the priest can take with him on adventures; naturally, he can always take fewer.

**Possible Symbols:** This is a set of recommendations for the symbols that the priesthood uses. Usually, they're representations of the god's attribute. They are also used upon the priesthood's Holy Symbol.

**Notes:** Finally, if there are any further items important to the description of this character class, we place them in this paragraph.

## Important Notes

Most godly attributes (Love, War, Agriculture, etc.) don't specifically say that they are enemies of Evil. This just means that these attributes are not of themselves distinctly opposed to Evil; some have no relationship with Evil whatsoever (for example, Agriculture). You can assume, unless the text lists Evil among the friends of an attribute, or says that priests of this other god can be evil, that the priests of the other god don't care for the Philosophy of Evil.

We haven't included a paragraph which discusses the rights the priesthood has in the culture. That's because we don't know what sort of culture the DM will be placing the priesthood within. The DM determines what special rights the priesthood has; special

rights, as discussed last chapter, include Church Trial, Coronation, Other Confirmations, Tithes, Separation from the Faith, Rule, and being the State Religion.

Also, the guidelines we're providing in this chapter are based on the most common views of these sorts of gods, priests, and races. Any campaign may have a different view of these topics, and so the DM may change these limitations and requirements to suit his campaign. Especially prone to re-interpretation are: races allowed, proficiencies required or forbidden, rights, weapon and armor restrictions, other limitations, and spheres of influence.

## Agriculture

Agriculture concerns Man harvesting Nature. The god has shown man how to plant, grow, reap, and utilize crops; man, in turn, worships the god as thanks for this bounty. The gods of agriculture is different from the other gods of nature and natural forces in that he represents the elements of growing that man utilizes and can control.

The priesthood of this god is principally interested in making sure that mankind continues to appreciate the agricultural god. An angry god of this sort can decide that crops fail, either on a local level or even worldwide, resulting in mass starvation and (eventually, if the god is not appeased) a destruction of civilization; man would return to a hunter-gatherer culture, living in small nomadic tribes and following herds of beasts, if this were to take place.

A god of Agriculture doesn't have to be the god of all agriculture. He could be the god of a specific crop (especially wheat, barley, corn, vines, olives, and other principal crops) or of a specific, lesser attribute of agriculture (sowing, reaping, brewing, etc.).

Most agricultural deities are female.

The priests of this god are on good terms with Druids and the priests of Community, Earth, Fertility, Fire, Life-Death-Rebirth Cycle, Nature, Seasons, and Vegetation.

**Alignment:** The deity is true neutral. His priests may be true neutral or neutral good; most are neutral good. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 11, Constitution 12. Wisdom or Constitution 16 means +5% experience; Wisdom *and* Constitution 16 means +10% experience.

**Races Allowed:** Gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Agriculture. Nonweapon Proficiencies Recommended: Local History, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Observation of annual celebrations at the start of winter and start of spring. Vigilance against any threat to the community's ability to grow its food, including magical blights and droughts brought on by evil magicians or priests, artifacts or enemy gods.

**Weapon and Armor Restrictions:** Weapons Permitted: Bill, flails (both), hand-throwing axe, scythe, sickle. Armor Permitted: All non-magical non-metal armor, all non-magical (non-metal) shields. Oriental Campaigns: Also nunchaku. All together, these constitute Poor combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Creation, Divination, Plant, and Summoning (can only use *wall of thorns* , *weather summoning* , and *creeping doom* from

this sphere). Minor Access to Animal, Healing, Protection, Sun, and Weather. This does not give the priest all the spheres indicated for a priest with Poor Combat Abilities, so he'll also have more than one Granted Power.

**Powers:** *Analysis, Detection, Identification* (as described in the Designing Faiths chapter) of any sort of domesticated grain or garden plant; the priest can look at a field and tell what's being grown, how far along it is in the harvest year, what the state of the crop is (healthy, diseased, drought problems, etc.), and even what species is growing it (this can be handy when the party is sneaking up on the dwelling of an unknown monster and there is a garden nearby, for instance). *Create Food & Water*: The Priest can cast this spell once per day in addition to all other spells that he can cast. *Immunity:* The Priest is immune to the harmful effects of spoiled vegetable or fruit substances; he will never be laid low by normal food poisoning. (He's not immune to deliberate poisoning of food, or of food poisoning in meats.) *At 8th Level:* The Priest can cast the *heroes' feast* spell once per day in addition to all other spells that he can cast.

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, one third-level priest, one second-level priest, and ten first-level priests, all of the same god, plus one second-level warrior and eight first-level warriors to act as guards. The priest may take the following on adventures: Three priests and two warriors of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must act as a central source of information about agricultural techniques for the farmers of the area; the priests must not turn away farmers who come for advice.

**Possible Symbols:** Sickle, scythe, sheaf of wheat.

**Notes:** The weapons chosen for this priesthood are those which have some bearing in agriculture.

### Ancestors

This is a god devoted to man's communion with and honoring of his dead ancestors. As such, this is a god of civilization and learning, even of courtesy.

The priests of this god keep the deeds of ancestors and heroes in the minds of the population. They commune with and honor the dead, and are also devoted to learning from them # not just reading their writings, but communicating with them magically, even exploring alternate planes to understand the meaning of life and death.

They are also devoted to the protection of new generations, whom they teach to appreciate the previous generations of this race.

This priesthood places a high value on truth.

Priests of the god of ancestors *hate* the undead, regarding them as a mockery of true and noble death. These priests seek to eradicate the undead whenever encountered.

Lesser gods of this attribute would be devoted to subsets of the broad field of Ancestors. Such subsets include: Ancestors of a particular race, of a particular city, of a particular extended clan; all male ancestors, all female ancestors, all warrior ancestors, all scholar ancestors, etc. It would be appropriate for a civic deity (see **Community**, below) also to be a god of the city's ancestors, for instance.

Ancestor deities are not inclined toward either sex.

The priests of this god are on good terms with the priests of Birth/Children, Community, Divinity of Mankind, Fate/Destiny, Race, and Sites. The priests of this god

dislike the priests of Disease.

**Alignment:** The deity is neutral good. His priests may be chaotic good, neutral good, or lawful good. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 12. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Local History. Nonweapon Proficiencies Recommended: Reading/Writing, Heraldry, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Education: These priests must teach new generations the value of veneration of ancestors, and are therefore also repositories of a lot of historical knowledge. Missions: To investigate old mysteries, find out what really *did* happen to famous ancestors who disappeared or perished mysteriously, sort out the truth from old legends of the city's heroes, etc. Prophecy: Listening to the omens whispered by the dead.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, dagger/dirk, dart, knife, quarterstaff. Armor Permitted: None; no shields. Oriental Campaigns: Also bo stick. All together, these constitute Poor combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Astral, Creation, Divination, Guardian, Necromantic, Protection. Minor Access to Charm, Healing. This does not give the priest all the minor accesses to spheres indicated for a priest with Poor combat abilities, so he'll also have some Granted Powers.

**Powers:** *Detection* (as described in the Designing Faiths chapter) of graves and undead. The priest can detect graves where remains lie, and the presence of undead, within 60'; he can tell the difference between the truly dead and the undead, but has no other analytical ability (i.e., he cannot tell that the undead detected is a vampire); through wooden or thin stone walls, he can only detect them at a distance of 30', and through thick stone or the earth can only detect them at 10' distance. (Therefore, when he walks over a grave, he will only detect its presence if it is 10' or less down.) *Immunity* (as described in the Designing Faiths chapter) to the charm abilities of undead creatures such as the vampire. Turn undead (same as the Cleric ability). *At 8th level: Prophecy* (as described in the Designing Faiths chapter); the priest cannot actively try to prophesy; when receiving prophecies, he is hearing the voices of the dead advising him.

**Followers and Strongholds:** The followers are received at 8th level, and consist of five third-level priests and fifteen first-level priests, all of the same priesthood. The priest may take the following on adventures: Five priests, no more than two of whom may be chosen from the third-level priests. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must also act as a genealogical library for the surrounding communities, and will constantly be visited by scholars looking for information on families and ancestry (or who come with information to contribute).

**Possible Symbols:** Tree.

### Animals

This god is the protector of animals. He could intend to protect animals from all harm,

and thus be the enemy of all hunters, rangers, and carnivores of all descriptions. Most often he's primarily interested in keeping animal species intact, not allowing them to be hunted to extinction, etc., and thus allows a reasonable amount of hunting and trapping to take place.

The priests of this god also work hard to keep excess hunting and trapping in check, and to remind the flock that the god will avenge abuses. Typically, this god is content to be counted as one of many gods and almost never insists on being the primary deity worshipped by the flock.

A lesser type of animal-god is one who is the protector of a single species or group of species. Such a deity might be the lion-god, or the god of all felines, or the god of elephants, or the god of porpoises and dolphins. In a primitive society, all members of a nomadic tribe might worship the god of the herd animal the tribe hunts (bison, for example).

Animal deities are often male.

The priests of this god are on good terms with Druids and the priests of Earth, Fertility, Hunting, Life-Death-Rebirth Cycle, Nature, Oceans/Rivers (only if priesthood has some association with aquatic animals), and Race (Elven).

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 9, Charisma 13. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Animal Handling. Nonweapon Proficiencies Recommended: Animal Training, Riding (either or both), Reading/Writing, Religion, Animal Lore, Tracking. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Vigilance: Protection of animal life against unnecessary slaughter, especially by humans and other sentient races. Missions: Acts of war against those who do harm to the animal world or to the priest's totem animal. (Normal and recreational hunters do not incur this sort of attack, but those who hunt or trap in mass quantities and threaten the survival of whole species in an area *do*.)

**Weapon and Armor Restrictions:** Weapons Permitted: Bill, cestus, club, dagger/dirk, knife, mace, main-gauche, stiletto, swords (all), warhammer. Armor Permitted: all non-metal armor; no shields. Oriental Campaigns: Also katana, sai, wakizashi. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Animal, Charm, Divination, Protection. Minor Access to Combat, Creation, Healing, Plant.

**Powers:** *Identification* (as described in the Designing Faiths chapter) of any natural monster or animal the priest sees. (A "natural" monster or animal is one which exists as a species, within an ecological niche, spawns and rears its young, and has so existed as a species for at least five years. Newly-created animal species, fiends, constructs, and similar monsters do not fall into this category; when the priest sees them, he will only be able to identify them if he has encountered them before.) *Language/Communication* (as

described in the Designing Faiths chapter): The priest can communicate with three specific animal species (for example, lion, raven, wolf) *or* one category of animals (for example, all felines, all canines); the DM decides which ones based on the god's attributes, but if the god's attributes do not dictate specific choices the DM can give the choice to the player. *Soothing Word* (as described in the Designing Faiths chapter, but only usable on "natural" monsters or animals). *At 5th Level: Shapechanging* (as described in the Designing Faiths chapter; again, the DM decides which shape or shapes are changed into according to the god's attributes, or can give the choice to the player).

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, one third-level priest, and twelve first-level priests, all of the same order, plus one third-level ranger and seven first-level rangers. The priest may take the following on adventures: Three priests and two rangers of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level. The temple acts as an animal hospice, a "hospital" for sick or injured animals brought in by the rangers; many scholars also visit these strongholds in order to learn, from the rangers, more about animals and monsters in their natural habitat.

**Possible Symbols:** Any animal; claws.

**Notes:** The weapons allowed for this priesthood were chosen for their similarity to animal attacks. That's why there are lots of weapons with piercing and slashing attacks, but no ranged weapons or cleaving attacks.

### Arts

This god celebrates the arts, particularly the visual arts (such as painting and sculpture).

The priests of this god are devoted to encouraging the visual arts of every sentient race; and though they seem to be devoted to a non-violent cause, they have to learn so many different types of magic (especially Divination, to learn, and Creation, to create), they are very powerful magically, even in combat situations.

Lesser gods of this attribute would be devoted to specific arts: A God of Sculpture, for example.

Gods of the arts are equally likely to be of either sex.

The priests of this god are on good terms with the priests of Community, Crafts, Culture, Divinity of Mankind, Light, Literature/Poetry, Metalwork, Music/Dance, and Sun.

**Alignment:** The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but tends to be neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 13, Intelligence 12. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Artistic Ability (DM can choose which art form, or can let player choose). Nonweapon Proficiencies Recommended: Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Encouragement of people, even those not in

the flock, who exhibit artistic abilities. Participation in semiannual events where artists' works are displayed (in shows, or before the local rulers, or in displays in the marketplace). Punishment of those who defile or destroy great works of art. Vigilance: Art often shocks the sensibilities of those who do not appreciate certain of its forms, so these priests must be vigilant against censorship.

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all). Armor Permitted: None; no shields. Oriental Campaigns: Also daikyu. All together, these constitute Poor combat abilities.

**Other Limitations:** Priests of the Arts gain only 6-sided hit dice, not 8-sided.

**Spheres of Influence:** Major Access to All, Astral, Creation, Divination, Elemental, Plant, Protection, Sun. Minor Access to Healing, Necromantic. This gives the priest one extra major access and four too few minor accesses, for a priest with Poor Combat Abilities; this is nearly balanced, but he'll also have some Granted Powers.

**Powers:** *Identification* of and *Immunity* vs. (as described in the Designing Faiths chapter) certain spells. Because of the priest's superior insight into creativity and art, he is Immune (receives an automatically-successful saving throw) to all first-level wizard Illusion spells for which a saving throw is possible, and gets a +2 saving throw vs. all other Illusion spells for which a saving throw is possible (he can't make a saving throw against someone else's *invisibility*, for instance). Additionally, even when he fails a saving throw or a saving throw doesn't apply, he can still tell when the following spells are being used (if he can see the area affected by the spell): *change self , spook , Leomund's trap , fear , hallucinatory terrain , and vacancy*. This ability does not allow the priest to tell which spell is being used. Also, this does not make the priest immune to the effects of the spell (for example, he'll still be scared by *spook* ), but he'll know it was an illusion.

**Followers and Strongholds:** The followers are received at 8th level, and consist of five third-level priests and five first-level priests, all of the same order, plus twenty Normal Men and Women with artistic Nonweapon Proficiencies. The priest may take the following on adventures: Four priests (no more than two of whom may be third-level) and four Normal Men and Women. The priesthood will pay for half of the cost of stronghold construction at 8th level. The priest must act as a patron of the arts for the surrounding area, and must work to make his stronghold a center for the teaching of those who show artistic promise.

**Possible Symbols:** Chisel, pallet, paint brush.

**Notes:** The bow, the only weapon allowed for these priests, was chosen because it is a symbol representing inspiration.

### Birth, Children

This god's interest is in the safe and successful birthing of children and, subsequently, their protection and nurturing.

His priests take those interests to heart, and, because of the god's protective aspects, tend to learn fairly powerful combat magics.

One lesser god of this attribute would be the god of Youth, representing children and youths of all ages from birth to the verge of adulthood.

Gods of birth, children, and youth tend to be female.

The priests of this god are on good terms with the priests of Ancestors, Community,

Fertility, Healing, Love, Marriage, and Race. The priests of this god dislike the priests of Death, Disease.

**Alignment:** The deity is neutral good. The priests may be any sort of good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 10. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Non weapon Proficiencies Required: Healing. Non weapon Proficiencies Recommended: Herbalism, Reading/Writing, Religion. Weapon Proficiencies Required: None. Non weapon Proficiency Group Cross overs: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Education: Teaching medicine, especially the arts of midwifery, to the flock. Vigilance, in some areas of the world, against the type of monsters who prey on babies and children: Dark elves, who sometimes steal human children and leave *changelings* (baby dark elves) in their place to be raised in their steads; or night-spirits who snatch away the breath of babies and kill them (treat as vampires).

**Weapon and Armor Restrictions:** Weapons Permitted: Lasso, net. Armor Permitted: None; no shields. All together, these constitute Poor combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Astral, Charm, Creation, Elemental, Healing, Protection, Summoning, Sun. Minor Access to Animal, Combat, Divination, Guardian, Necromantic. This priesthood has two extra major accesses and is only short one minor access; therefore, it is far superior in magical power.

**Powers:** *Turn undead* (same as the Cleric ability); the priests of this faith, which is symbolic of life, are therefore enemies of and have some power over the undead.

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests, all of the same order, plus one third-level paladin and seven first-level fighters to act as guards and soldiers. The priest may take the following on adventures: Two priests and two fighters of his choice, and the paladin. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must act as a maternity hospital for the local community, and may turn away no woman who is close to having her child.

**Possible Symbols:** Cradle.

**Notes:** This is a nonviolent order, which is why no damaging weapons were included in its choices.

## Community

When a god's principal interest is in one city (its growth, defense, and prosperity), he's called a god of community or, more commonly, a *civic deity*.

The priests of the civic deity are responsible for making sure that the god receives worship from the city's inhabitants, and promote all sorts of plans and efforts to improve the city: Civic improvement plans, improvement of the city walls and army, etc.

One god may be the civic deity of several cities, or each city could have its own, lesser god.

The DM may not wish for there to be so many gods in his campaign world. If this is the case, then a civic deity should also (and primarily) be the god of some other attribute,

and would be a given city's civic deity in addition. For example, in Greek mythology, Athena was primarily the goddess of wisdom, and had secondary attributes as a goddess of war, of crafts, and of the city of Athens.

Civic deities are just as commonly male as female.

The priests of this god are on good terms with the priests of Agriculture, Ancestors, Arts, Birth/Children, Death, Guardianship, Marriage, Messengers, Peace, Prosperity, Race, Rulership/Kingship, Sites, Trade, and War.

**Alignment:** A deity whose sole attribute is that he is the protector/patron of a single community has an alignment appropriate to that community. Most are true neutral; their interest is in the survival of the community by any means, whether by law, chaos, good, or evil. Their priests may be of any alignment, but evil priests gather in one cult, neutral priests in another, and good priests in a third; at the DM's discretion, they don't have to get along. The flock may be of any alignment. The DM can decide that a particular civic deity is neutral good, in which case there will be no evil priests or flock; or that he is neutral evil, in which case there will be no good priests or flock.

**Minimum Ability Scores:** Wisdom 10, Charisma 12. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans. If a community has only one type of sentient race inhabiting it (or is principally devoted to one race), then the priests may be only of that race; if the population consists of several types of sentient races, then the priests of the community god may be of any race.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Local History. Nonweapon Proficiencies Recommended: Etiquette, Heraldry, Ancient History, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Education: The priest must preserve the history of the city, teach it to the young of his flock, and never let it be forgotten. Vigilance: Against any threat to his city. This is why priests of community deities often wander the wider world: They are acting as an intelligence network for the city, keeping their ears open for any hint of threat or danger to the city from outside.

**Weapon and Armor Restrictions:** Weapons Permitted: Dagger/dirk, knife, and any two from the following list (the DM decides based on which weapons are most representative of the city in question; at least one weapon should be in the 1d8 or greater damage range): Battle axe, bows (all), crossbow, flails (both), harpoon, lance, mace, morning star, net, polearm, quarterstaff, spear, sword/bastard, sword/cutlass, sword/long, sword/rapier, sword/sabre, sword/short, sword/two-handed, trident, warhammer. Armor Permitted: All armor and shields. Oriental Campaigns: Also added to choices list: Bo stick, daikyu, katana. All together, these constitute Good combat abilities.

**Other Limitations:** Priests of a civic deity must always wear clothing indicating their priestly status when appearing in public.

**Spheres of Influence:** Major Access to All, Creation, Healing.

Minor Access to Combat, Protection. These choices don't give the priest access to very many spells, so this priesthood will have good Granted Powers. Note that the DM may wish to substitute some other choice for the Major Access to Creation and the Minor Access to Combat if the civic deity that he has created has secondary attributes not reflected in this listing.

**Powers:** *Incite Berserker Rage* (as per the Designing Faiths chapter). *Soothing Word* (as per the Designing Faiths chapter). *Turn Undead* (the Community is a gathering of the living, and so priests of this sect are no friends to the undead).

**Followers and Strongholds:** The followers are received at 7th level, and consist of three third-level priests and six first-level priests, of the same order, and one third-level fighter and twelve first-level fighters to act as guards. The priest may take the following on adventures: Two priests and three fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 7th level. The stronghold must be built within the city, and it must act as a library specializing in the history of the city and the arts and literature created by important artists and writers from the city.

**Possible Symbols:** Whatever is used as the symbol for the community also serves as the symbol for this priesthood; if the civic symbol is a lion, so is the god's.

## Competition

This is the god of competition, especially of athletic competition. This god stresses fairness, impartiality, and truth in his followers. He is also a proponent of health, exercise, and physical self-improvement.

His priests follow the same goals, and support these goals by conducting regular athletic exercises and games, and by acting as impartial judges for those games.

Gods of lesser parts of the Competition attribute might be gods of specific events; for example, to be the god of Boxing or Wrestling might be a very honorable thing. It would be far less dramatic to be the god of the Broad Jump or the god of Synchronized Swimming, however.

Gods of competition are usually male.

The priests of this god are on good terms with the priests of the Divinity of Mankind, Fortune/Luck, Justice/Revenge, Peace, and Strength.

**Alignment:** The deity is lawful good; so must be his priests. The flock, who tend to turn to the god only in times or events of competition, may be of any alignment.

**Minimum Ability Scores:** Wisdom 12, Intelligence 10. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Endurance. Nonweapon Proficiencies Recommended: Reading/Writing, Religion, Gaming. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Judgement: Priests of this god are asked to be judges at all athletic events, to help ensure fairness in the sport. (A given event won't necessarily have *only* priests of this god as judges, but the later rounds of events, and especially the finals, will be judged only by these priests.) Vigilance: Against unfairness. Priests of this god loathe unfairness and dishonesty above all other human traits. This isn't just unfairness in the sports arena: They also oppose unjust rule. Additionally, when two forces of basically equal honor and righteousness clash, these priests, if they choose to become involved, tend to support the weaker side, the underdog.

**Weapon and Armor Restrictions**: Weapons Permitted: Bows (all), crossbow, dagger/dirk, hand/throwing axe, javelin, knife, lance, spear, sword (DM chooses *one* sword type from following list; choice should be the type of sword most commonly used

in organized competitions in the campaign culture: Bastard, cutlass, khopesh, long, rapier, sabre, short, two-handed). Armor Permitted: All non-magical armor and non-magical shields. Oriental Campaigns: Also daikyu; katana would automatically be the sword choice. All together, these constitute Good combat abilities.

**Other Limitations:** A priest of the god of competition may use magical items in normal combat and warfare *but* he may not use them in competition matches, and he may not use them in challenge matches with enemies unless he declares their presence to the enemy in question. If he violates this rule, he offends his god; this is an "inappropriate weapon and armor use" from the "Priests and Punishment" section of the "Role-Playing" chapter, later in this book.

**Spheres of Influence:** Major Access to All, Divination, Elemental. Minor Access to Combat, Healing.

**Powers:** *Analysis, Detection, Identification* (as per the Designing Faiths chapter) of cheating in athletic competition and challenge fights. If the competition is set up with rules in advance, the priest of this sect, if he is watching the fight or competition from within 60', will always be able to detect when the rules are broken, and be able to tell whether it was deliberate or accidental; they are also 100% accurate when telling whether someone stepped out of a boundary, telling who reached the finish line first, etc. (This power is the principal reason that these priests are always asked to judge events.) *Bless*: The priest can cast this spell three times per day in addition to all other spells he can cast. At eighth level, he can cast it six times per day in addition to all other spells he can cast.

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and sixteen first-level priests, of the same order. The priest may take the following on adventures: Three priests of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must include athletic fields, and youthful athletes from the local communities must be admitted regularly so that they might use those fields.

**Possible Symbols:** Laurel wreath.

### Crafts

This god represents the crafting and creation of all sorts of non-metal goods: Wooden art objects, furniture, textiles, clothing, leather goods, glassware, porcelain ware, and so forth. He may also be the god of engineering and stonemasonry.

This god's priests try to support and aid young craftsmen, to encourage the exchange of ideas and techniques between different cities and different guilds, and to improve the state of sophistication of all crafts and related arts.

Lesser gods of this attribute would be gods of specific craftsman arts. One might be the God of Woodworking; one might be the God of Leatherworking.

Gods of crafts are equally likely to be male or female.

The priests of this god are on good terms with the priests of Arts, Community, Culture, Divinity of Mankind, Light, Literature/Poetry, Metalwork, Music/Dance, Race (Dwarven), Race (Elven), Sun, and Trade.

**Alignment:** The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but tends to be neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 10, Dexterity 12. Wisdom or Dexterity 16 means +5% experience; Wisdom *and* Dexterity 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Any one from this list # Carpentry, Cobbling, Engineering, Leatherworking, Pottery, Seamstress/Tailor, Stonemasonry, Weaving, Appraising, Gem Cutting, Bowyer/Fletcher. Nonweapon Proficiencies Recommended:Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Rogue.

**Duties of the Priest:** Guidance, Marriage. Education: Teaching of craftsmanship to the flock; promotion of all sorts of craftsmanship in the community and society. Must participate in semiannual events where crafts are displayed and promoted (before the throne or in market). Investigation: These priests are keen on history and seek to re-discover lost craftsman techniques and arts; this often leads them into old ruins and lost cities on expeditions of discovery. Vigilance against any enemy, ruler or private enterprise who seeks to suppress learning, especially of craftsman learning. (However, these priests encourage competitive thinking between guilds, or between the craftsmen of different cities; though this results in hard feelings sometimes, it does advance the state of craftsmanship.)

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), club, crossbow, quarterstaff, sling, staff sling. Armor Permitted: All non-metal armor, all shields. Oriental Campaigns: Also bo stick, daikyu, nunchaku. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Creation, Divination, Healing. Minor Access to Combat, Elemental, Guardian, Plant, Protection, Sun. This priesthood has one too few major accesses, and two extra minor accesses; we'll consider it balanced.

**Powers:** *Analysis* (as per the Designing Faiths chapter) of workmanship quality in crafted goods. The priest will be able to tell whether a crafted good is of poor, average or superior quality. This gives him a +2 to his Appraising proficiency check if he has that nonweapon proficiency, but does not give him the ability to rate crafted goods as to their gold piece value of he does not have that nonweapon proficiency. *Detect Secret Doors* (same as Elf ability: Success on roll of 1 on 1d6 when passing within 10', 1-2 on 1d6 to find secret doors and 1-3 on 1d6 to find concealed portals when actively searching; elven priests of this order have success on a roll of 1-2 when passing within 10', 1-3 to find secret doors and 1-4 to find concealed portals when actively searching).

**Followers and Strongholds:** The followers are received at 7th level, and consist of three third-level priests and six first-level priests of the same order, one third-level fighter and two second-level fighters to act as guards, and twenty Normal Men and Women, each with a craft-related Nonweapon Proficiency. The priest may take the following on adventures: Three priests, only one of whom may be third-level); plus two fighters, and four Normal Men and Women of his choice. The priesthood will pay for half of the cost of stronghold construction at 7th level. The stronghold must provide workshops for its craftsmen, including the Normal Men and Women.

**Possible Symbols:** Loom, Pottery Wheel, Drop-Spindle, Needle.

**Notes:** The weapons chosen for this priesthood were chosen because they are weapons

that can be made by craftsmen instead of smiths, especially by woodcraftsmen.

### Culture (Bringing Of)

This god's interest is in the education and "improvement" of other cultures... especially those considered "lesser" cultures by the principal culture of the campaign.

The priests of this god are charged with the education of the population in whatever subjects the god espouses. If the god wants everyone to be literate, the priests teach Reading/Writing, free of charge, to as many students as they can teach at a time.

However, if the god is simply of the opinion that one whole culture is the best culture of all, then his priests are charged with turning every other culture into this best culture. Consequently, the priesthood invades other nations, peacefully if possible, setting up missions and trying to convert the population wholesale to the worship of this god, and to the cultural behavior of the god's favorite civilization.

When peaceful intrusion is not possible, the priesthood agitates for war with the other civilization; if the civilization can be conquered, they move in to convert is population by force. In these situations, we see mass destruction of the temples and sanctuaries of the "lesser" gods of this culture, elimination of their priesthoods, and ruthless suppression of the cultural elements which the culture-god's priesthood wants to change.

Not all culture-gods have to be racist or contemptuous of other cultures. Sometimes they're just education-minded gods who want to bestow *godly* cultural elements on the human population; in such cases, the priesthood is not one that proposes war or holds inquisitions to suppress other sects.

Culture-gods are most likely to be male.

The priests of this god are on good terms with the priests of Arts, Crafts, Literature/Poetry, Marriage, Metalwork, Music/Dance, Race, Rulership/Kingship, Trade, and War.

**Alignment:** The deity is lawful neutral. His priests can be of any lawful alignment. The lawful evil priests' sect is separate from the sect of lawful good and lawful neutral priests. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Reading/Writing. Nonweapon Proficiencies Recommended: Ancient History, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Missions: Conquest of new lands and education of the conquered population in the one true way to think and behave. Vigilance: The priests must be ever alert to the sign that old, bad ways and customs are re-emerging in the conquered population (or, if conquest was not involved, in the flock).

**Weapon and Armor Restrictions:** Weapons Permitted: Dagger/dirk, javelin, knife, lance, polearm, spear, stiletto. Armor Permitted: All armor; no shields. All together, we consider that this priesthood has Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Divination. Minor Access to Combat, Creation.

**Powers:** *Inspire Fear* (as per the Designing Faiths chapter). *Soothing Word* (as per the

Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests, of the same order, and one fifth-level fighter and five second-level fighters to act as soldiers. The priest may take the following on adventures: Two priests and two fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Book, Quill, Scroll.

### Darkness, Night

This god is a god of some forces that humans fear. However, this doesn't mean the god is evil. Generally, he's not. He's just the embodiment of darkness, including all its benefits and all its dangers. The god of Darkness and Night would be the god of sleep, of dreams, of nightmares, and of nocturnal predators; some of these traits are considered good, some ill.

The priests of this god are interested in making sure that man regards Darkness and Night with a reverential awe # making sure that the sentient humanoid races appreciate the virtues of night while still respecting or fearing its more frightening aspects. These priests tend to be more aloof from the common man than priests of many other gods.

Lesser gods of this attribute would be gods of only one of these factors. One might be the god of Sleep, and another the god of Nightmares. In these cases, the DM can choose to vary the god's alignment; the god of Sleep, much beloved of men, could be lawful good, while the god of Nightmares, hated by men, could be chaotic evil.

Gods of darkness or night are most likely to be female.

The priests of this god are on good terms with the priests of Dawn, Death, Elemental Forces, Hunting, Light, Magic, Moon, Oracles/Prophecy, and Sun. Some DMs may be surprised that the gods of Darkness and Night are not listed here as being opposed to those of light and sun. It's because they don't have to be; in Greek mythology, for instance, the sun-god, moon-goddess, and dawn-goddess were all siblings who never opposed one another. Naturally, the individual DM can decide for his campaign that the deities of darkness and light, moon and sun are enemies.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 11, Intelligence 11. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Astrology. Nonweapon Proficiencies Recommended: Reading/Writing, Religion, Spellcraft. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), crossbow, dagger/dirk, dart, knife, stiletto, sword/rapier, sword/short. Armor Permitted: All non-metal armor; no shields. Oriental Campaigns: Also shuriken. All together, we consider this priesthood to have Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Divination, Necromantic, Summoning, Sun. Minor Access to Animal, Elemental, Guardian, Protection. This priesthood has one extra major access.

**Powers:** *Infravision* (same as the Elf ability; an elven or half-elven priest of this faith has Infravision of doubled range, to 120'). True neutral and neutral good priests can *turn undead*; neutral evil priests can *control undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and twelve first-level priests of the same order, and one third-level fighter and six first-level fighters to act as guards. The priest may take the following on adventures: Three priests, only one of whom may be third-level; plus three fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Black banner, owl, wolf.

### Dawn

The god of dawn represents the border between Night and Day, Darkness and Light, Moon and Sun. He's a friend of mankind, a bringer of inspiration, an enemy of dark things.

The priests of this god work mostly to keep the flock appreciating the god's virtues. These priests, like their allies, the priests of the god of the Sun, are also enemies of the undead.

Deities of the dawn are mostly likely to be female.

The priests of this god are on good terms with the priests of Darkness/Night, Elemental Forces, Fire, Healing, Hunting, Light, Magic, Moon, Oracles/Prophecy, and Sun.

**Alignment:** The deity is lawful good. Priests may be of any good alignment; the flock may be of any good or neutral alignment.

**Minimum Ability Scores:** Wisdom 10, Charisma 13. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Direction Sense. Nonweapon Proficiencies Recommended: Reading/Writing, Religion, Spellcraft. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Vigilance against evil creatures of the night, especially undead.

**Weapon and Armor Restrictions**: Weapons Permitted: Bows (all). Armor Permitted: None; no shields. Oriental Campaigns: Also daikyu. All together, these constitute Poor combat abilities.

**Other Limitations:** Priests of the god of Dawn earn 6-sided, not 8-sided, dice for hit points.

**Spheres of Influence:** Major Access to All, Charm, Divination, Elemental (only spells involving heat, fire, or air; earth and water spells may not be used), Healing, Summoning, Sun. Minor Access to Animal, Creation, Necromantic, Plant, Protection, Weather.

Powers: *Charm/Fascination* (as per the Designing Faiths chapter, cannot be used in combat). *Immunity* (as per the Designing Faiths chapter) to experience level drain from undead creatures. *Turn Undead* (same as the Cleric ability). *At 10th level, chariot of*

*Sustarre*; the priest can use this spell once per day in addition to his other spells.

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same order, plus one third-level mage and two first-level mages to act as consultants and one third-level ranger and two first-level rangers to act as guards and soldiers. The priest may take the following on adventures: Three priests, one mage, and one ranger of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Chariot; pattern of rosy colors.

**Notes:** The bow was chosen as this order's only weapon because it is representative of light (shafts of light being equivalent to arrow-shafts).

## Death

The God of Death is, naturally, a terrifying figure whom man regards as an enemy, an unavoidable doom.

But this doesn't mean that death-gods are evil. Most, in fact, are true neutral. A death-god can be the King of the Land of the Dead, the Grim Reaper who cuts down the living, or the Guide of the Souls who helps the departed spirit on to its reward or next existence.

Priests of the death-god are often agents who must "help" people on to the afterlife, especially if such people have successfully thwarted Death in the past. This duty may take the form of assassination, or of mercy-killing. In some campaigns, spirits sometimes escape the afterlife and return to the land of the living; the death-god's priests must hunt them down and capture them for return to their proper place.

Death-gods are equally likely to be male or female.

The priests of this god are on good terms with the priests of Ancestors, Community, Darkness/Night, Disease, Justice/Revenge, Life-Death-Rebirth Cycle, and Time. Priests of this god are sometimes (at individual DM discretion) allies of the priests of the philosophy of Evil, but this is actually not common, regardless of how scary the god of Death might be. The priests of this god dislike the priests of Fertility and Healing, and (at the DM's discretion) Strength.

**Alignment:** The deity is usually completely neutral. His priests may be of *any* alignment: Some will be evil-doers who serve him by sending souls to him as fast as possible, while others could be good priests guiding their followers to their inevitable destiny. The flock can be of any alignment, but the evil ones will specifically be followers of evil priests.

**Minimum Ability Scores:** Wisdom 9. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Religion. Nonweapon Proficiencies Recommended: Reading/Writing. Weapon Proficiencies Required: Scythe. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance. Vigilance against any being which is unnaturally keeping Death at bay. The key word here is *unnaturally*, meaning in defiance of the gods. Wizards using *potions of longevity* are okay, until they reach an age of three hundred or so, at which time these priests become their enemies. Healers who cure injury and disease are accepted, unless they stumble onto some technique or magic that allows them to imbue immortality. Even priests who can *resurrect* or *reincarnate* are acceptable,

because if the gods didn't want them to be able to, they wouldn't have given them the ability to do this.

**Weapon and Armor Restrictions:** Weapons Permitted: Battle axe (usually styled as a headman's axe), dagger/dirk, knife, lasso (often tied in the fashion of a noose), scythe, sickle, stiletto, sword/khopesh, sword/short. Armor Permitted: None; no shields. All together, these constitute Medium combat abilities.

**Other Limitations:** Priests of the god of Death must remain celibate. They need not remain chaste.

**Spheres of Influence:** Major Access to All, Astral, Charm, Divination, Protection. Minor Access to Guardian, Necromantic, Sun, Weather. Option: Evil priests can substitute major access to Healing for major access to Protection, but can only use the reversed versions of the Healing spells.

**Powers:** *Inspire Fear* (Designing Faiths chapter). *Command Undead* (same as the evil Cleric ability). The priest of the Death-god does *not* have to be evil in order to use this power. This is a rare exception to the rule that only evil priests can command undead.

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same order, plus special agents whose class is determined by the specific aspect of the god; these agents consist of one fifth-level character, two third-level characters, and four first-level characters. If this is a fearsome, terrifying god of death, these agents will be thieves who act as assassins. If it is a god of the collection of the dead, one who escorts the dead souls to their final rewards, the agents will be specialist wizards: Necromancers. If it is a god of rulership, one who presides over the afterworld, they will be fighters. The priest may take the following on adventures: Two priests and three agents of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols**: Gates, Gravestone, Scissors, Scythe, Shroud, Skull.

### Disease

This is an evil god which dislikes mankind and other sentient races. It creates new and ever-more-terrifying illnesses to inflict upon the sentient races.

The priests of this god spread illness and ignorance. They carry infected victims and rats infested with disease-bearing insects to new ports. Through their actions, they deny their victims an honorable death and can sometimes topple entire civilizations. This is not a character class for PCs to take unless the campaign is very unusual.

Lesser gods of disease would be gods of specific ailments. It's entirely appropriate, for instance, for the Black Plague to have its own representative god.

Gods of disease are just as likely to be male as female.

The priests of this god are on good terms with the priests of Death and Evil. The priests of this god dislike the priests of Birth/Children, Fire, Healing, and Strength.

**Alignment:** The deity is neutral evil. So must be his priests and their flock.

**Minimum Ability Scores:** Wisdom 9, Constitution 15. Wisdom or Constitution 16 means +5% experience; Wisdom *and* Constitution 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Herbalism. Nonweapon Proficiencies Recommended: Reading/Writing, Religion, Ancient History. Weapon Proficiencies Required: None. Nonweapon Proficiency Group

Crossovers: Priest, General.

**Duties of the Priest:** Missions: To bring illness to communities which are too healthy and joyous.

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), dart, scourge, scythe, sickle, whip. Armor Permitted: All non-magical armor, all non-magical shields. All together, these constitute Medium combat abilities.

**Other Limitations:** Priests of the god of Disease must remain celibate and chaste.

**Spheres of Influence:** Major Access to All, Animal, Healing (reversed forms of spells only), Summoning, Weather. Minor Access to Combat, Divination, Necromantic (reversed forms of spells only), Protection (reversed forms of spells only, where applicable).

**Powers:** *Immunity* (as per the Designing Faiths chapter) to all diseases. *Laying On of Hands* (same as the Paladin ability, but reversed -- it does damage, rather than curing damage).

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same order, and ten first-level fighters. The priest may take the following on adventures: Three priests (only one of whom can be third-level) and three fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level. In most cultures, to keep the priesthood safe from the wrath of the people, the priests will have to keep the location of the stronghold secret; it must either be built in the wilderness, or may be built in a community if it is disguised as some other facility (for example, the front rooms may ironically be a healer's guild, while the back rooms are where the real temple activities take place).

**Possible Symbols:** Mice, Rats.

### Divinity of Mankind (Philosophy)

This is not a god, but a philosophy, and one so compelling that it generates magical energy which priests of the philosophy can tap like a true god's priests are granted energies by the god.

This philosophy states that mankind (specifically, the human race, including half-elves reared among humans, but excluding dwarves, elves, gnomes, halflings) is nearly a divine being, and should do as much as he can to achieve perfection # physical, mental, and emotional perfection, always and in all ways. The philosophy encourages men to strive for the physical ideal and to learn as much as possible of the world.

So that's the idea that the priests promote. They cooperate in all sorts of educational, artistic, and competitive enterprises, seek to counsel people in every aspect of living their lives, and provide sanctuaries for people to meditate on the priesthood's teachings.

The priests of this philosophy are on good terms with the priests of Ancestors, Arts, Competition, Crafts, Literature/Poetry, Metalwork, Music/Dance, Good, Love, Race (Human), Strength, and Wisdom. The priests of this philosophy dislike the priests of Evil.

**Alignment:** The philosophy is true neutral. Priests may be lawful good or lawful neutral. The flock may be of any Good or Neutral alignment.

**Minimum Ability Scores:** Wisdom 12, Strength 12. Wisdom or Strength 16 means +5% experience; Wisdom *and* Strength 16 means +10% experience.

**Races Allowed:** Half-elves, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Reading/Writing. Nonweapon Proficiencies Recommended: Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Encouragement of the flock (and of mankind in general) always to improve itself spiritually and physically.

**Weapon and Armor Restrictions:** Weapons Permitted: Dagger/dirk, knife, stiletto, swords (all). Armor Permitted: All armor, all shields. Oriental Campaigns: Also katana, wakizashi. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Healing. Minor Access to Combat, Creation, Divination, Protection. This priesthood has two extra minor accesses and so will not have especially strong Granted Powers.

**Powers:** *Soothing Word* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one third-level priest and seven first-level priests of the same order, one third-level paladin and seven first-level paladins, and one third-level and seven first-level bards. The priest may take the following on adventures: Two priests, two paladins, and two bards of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must include large discussion rooms or halls, where priests and those interested in debating the subject may convene and discuss their philosophy, and meditation chambers where visitors may meditate in peace.

**Possible Symbols:** Human silhouette.

### Druid

The Druid, too, is a priest of a specific mythos. It has been worked up in more detail than the priests presented here, but is still counted one of their number. The Druid priesthood has much in common with those of the gods of Agriculture, Animals, Earth, Fertility, Life-Death-Rebirth Cycle, Nature, and Vegetation.

### Earth

This deity is the manifestation of the world in all its aspects. He's not just a god of growing things, plants and animals; he also represents weather, volcanoes, earthquakes, flood, and many other powerful natural forces. Many earth-gods are also makers of monsters.

This god's priests are a vigorous sect who insist that everyone worship the god, for without the god all creatures on the face of the world could not exist.

Lesser gods of this attribute would represent only one aspect of the earth. One might be a god of earthquakes, one a god of stony mountains, one a god of caves and caverns. The gods of Agriculture, Animals, Nature and Vegetation can also be considered lesser gods of the Earth attribute.

Lesser gods are as likely to be male as female, but the comprehensive god of all the earth is probably female.

The priests of this god are on good terms with Druids and the priests of Agriculture, Animals, Fertility, Life-Death-Rebirth Cycle, Nature, Seasons, Sky/Weather, and

Vegetation.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Any one from the following list--Agriculture, Brewing, Mining, Stonemasonry. Nonweapon Proficiencies Recommended: Ancient History, Ancient Languages, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, dagger/dirk, knife, mace, maul, morning star, picks (all), scythe, sickle, sling, staff sling, stiletto, warhammer. Armor Permitted: All non-magical non-metal armor, all non-magical non-metal shields. Oriental Campaigns: Also nunchaku. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Creation, Elemental (the priest may only use spells dealing with dust, stone, rock, mud, and earth, plus *transmute metal to wood* ), Plant, Summoning. Minor Access to Animal, Divination, Healing, Protection.

**Powers:** *Detect grade or slope* in passage on 1-5 on 1d6 (same as Dwarf ability; dwarf-priests and gnome-priests of this faith will detect slopes automatically when they try). Determine *approximate depth underground* on 1-3 on 1d6 (same as Dwarf ability; dwarf-priests and gnome-priests of this faith succeed on a 1-5 on 1d6). *Immunity* (as per the Designing Faiths chapter) to all snake venoms.

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same order, plus one third-level fighter and seven first-level fighters to act as guards. The priest may take the following on adventures: Three priests (only one of whom can be third-level), plus two fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Snakes; stones.

**Notes:** The weapons chosen for this order come in three types: Agricultural/harvesting type weapons (such as the scythe), those which sometimes use stones (such as slings, or primitive maces and axes), and those which simply suggest heavy beating, pounding, or the earth (picks and mauls, for example).

### Elemental Forces (Force)

This force is a representation of all pure, natural power, including forces of nature (such as waterfalls) and magical energies.

The priests of this force learn as much as they can of magic and try to pass that learning along. They also don't like to see natural forces extensively channelled by man; they often destroy dams, for instance.

Because they are devoted to powerful natural forces, priests of this force tend to be magically powerful.

Lesser attributes of the Elemental Forces could be represented by actual gods. The

gods of Darkness, Fire, Light, and Lightning might be considered lesser gods of this attribute.

The priests of this god are on good terms with the priests of Darkness/Night, Dawn, Fertility, Fire, Light, Lightning, Love, Magic, Seasons, Sky/Weather, Sun, Thunder, and Time.

**Alignment:** The forces being worshipped and protected are chaotic in nature, so all its priests must be chaotic; they may be chaotic good, chaotic neutral, or chaotic evil. Each branch has its own cult, so good priests don't have to be friends with evil ones. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10, Intelligence 13. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

Nonweapon and Weapon Proficiencies: Nonweapon Proficiencies Required: Spellcraft. Nonweapon Proficiencies Recommended: Fire-building, Astrology, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Wizard.

**Duties of the Priest:** Guidance, Marriage. Education: These priests help in the education of the flock in both priestly doings and magical learning. Missions: These priests often go on voyages to observe phenomena and learn more about the forces that bring them about. Vigilance against any beings that might interrupt, divert, or channel great natural forces for those beings' own gain.

**Weapon and Armor Restrictions:** Weapons Permitted: Battle axe, bows (all), cestus, club, hand/throwing axe, harpoon, javelin, mace, net, picks (all), scourge, scythe, sickle, spear, trident. Armor Permitted: All armor and shields. Oriental Campaigns: Also daikyu. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Combat, Elemental. Minor Access to Creation, Sun, Weather. This priesthood has access to many powerful spells and to one extra minor access, so it will not have much in the way of Granted Powers.

**Powers:** *Immunity* (as per the Designing Faiths chapter-- +2 to all saving throws) to all priest spells of the Elemental sphere.

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same priesthood, plus one third-level mage and two first-level mages to act as consultants, and five first-level fighters to act as guards. The priest may take the following on adventures: Two priests, one mage, and two fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level. Part of the stronghold must be a library devoted to elemental magics and the elemental planes, and scholars interested in these subjects will visit the stronghold in order to learn from the library or contribute to it.

**Possible Symbols:** Fire, Lightning.

### Everything

This deity represents all godly attributes. He is usually the god of a monotheistic culture, and is either (a) the creator of all the world and the only true god in existence, or (b) a powerful god who demands that everyone accept him as the only real god and intends to demote all other gods to the status of lesser demons, devils, or servants-beings.

Priests of this god seek to convert all the world to the worship of this god. They persuade whole populations that all other gods are false, or lesser beings. They sometimes agitate for and initiate wars so that conquered populations may be reeducated in this doctrine. In such times, they are much like priests of Culture.

This god is just as likely to be male as female. If male, he'll probably have some sort of sky aspect; if female, she'll have an earth aspect.

The priests of this god can, at the DM's discretion, be on good terms with the priests of the philosophies of the Divinity of Mankind and Good, for these are philosophies and not gods. The priests of this god dislike the priests of all other gods, and also hate priests of the philosophy of Evil.

**Alignment:** The deity is lawful good. The priests may be any sort of good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 10. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Religion. Non-weapon Proficiencies Recommended: Reading/Writing, Ancient History. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Missions of conversion and education in populations which don't belief in this god's supremacy. Vigilance against evil and decadence.

**Weapon and Armor Restrictions:** Weapons Permitted: Belaying pin, club, flails (both), mace, mancatcher, maul, morning star, net, quarterstaff, sling, warhammer. Armor Permitted: All armor and shields. Oriental Campaigns: Also bo stick, chain, nunchaku. All together, these constitute Good combat abilities.

**Other Limitations:** Priests of the God of Everything must wear their priestly vestments whenever they appear in public.

**Spheres of Influence:** Major Access to All, Creation, Healing. Minor Access to Divination, Protection.

**Powers:** *Soothing Word* (as per the Designing Faiths chapter). *Turn Undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one third-level priest and two first-level priests of the same priesthood, plus one fifth-level fighter, two third-level fighters, and twelve first-level fighters to act as soldiers, plus four Normal Men and Women with the Reading/Writing nonweapon proficiencies to act as scribes and recorders. The priest may take the following on adventures: One priest, three fighters, and two Normal Men and Women of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Staff, Sceptre.

**Notes:** This priestly order is very similar to clerics (though with reduced magic); if you decide to remove clerics from your campaign, based on the advice from the Role-Playing chapter, you may wish to recommend that players who still want to play clerics take this priest-class instead.

### Evil (Philosophy)

All evil thoughts and deeds generate negative energies, and priests of the Philosophy of

Evil can tap into those energies, much as a "real" priest receives energies from his god.

The goal of these priests is to spread as much evil as possible throughout the universe. They especially delight in causing suffering among the sentient races (humans, elves, dwarves, etc.). They kidnap, torture, murder, steal, humiliate, and degrade in the name of their philosophy.

The priests of this philosophy are on good terms with the priests of Disease. They are sometimes (at the DM's discretion, based on the nature of his campaign) allies of the priests of Death and Mischief/Trickery. The priests of this philosophy dislike the priests of Divinity of Mankind, Everything, Fortune/Luck, Good, Healing, Love, Redemption, and Wisdom.

**Alignment:** This philosophy is evil, and its priests may be of any evil alignment (chaotic evil, neutral evil, lawful evil). All belong to the same sect, so the lawful, neutral, and chaotic priests have to cooperate. Members of the flock may be of any evil alignment.

**Minimum Ability Scores:** Wisdom 9. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Religion. Nonweapon Proficiencies Recommended: Reading/Writing. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Missions: These priests are dedicating to spreading evil and misery across the world, and their whole lives are spent in missions against happiness, goodness, contentment, and beauty. Vigilance against the doings of any good priests, especially priests of the Philosophy of Good.

**Weapon and Armor Restrictions:** Weapons Permitted: Bill, crossbow, dagger/dirk, dart, knife, net, picks (all), polearm, scourge, scythe, sickle, stiletto, sword/long, sword/rapier, sword/sabre, sword/short, whip. Armor Permitted: All armor and shields. Oriental Campaigns: Also katana, shuriken, wakizashi. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Necromantic. Minor Access to Animal, Protection (may only use reversed forms of the spells).

**Powers:** The priest can cast the *detect good* spell (the reversed *detect evil* ) three times per day in addition to all other spells. *Inspire Fear* (as per the Designing Faiths chapter). *Control Undead* (same as the evil Cleric ability).

**Followers and Strongholds:** The followers are received at 9th level, and consist of one third-level priest and two first-level priests of the same order, plus one fifth-level fighter, three third-level fighters, and six first-level fighters to act as soldiers, and one third-level thief and two first-level thieves to act as special agents; all will be of the exact same alignment as the priest they follow. The priest may take the following on adventures: Two priests, two fighters, and one thief of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level. Temples of Evil typically have torture chambers and dangerous, trapped dungeons as part of their construction, but this is a tendency, not a requirement of the order.

**Possible Symbols:** Skeleton.

**Notes:** It is easy to make this into the priesthood of a specific *god* of evil. You don't

need to change any of the requirements and abilities of the priest; the only difference is that the priest of a god of evil will receive orders from the deity all the time, instead of being always able to cook up his own schemes of destruction.

### Fate, Destiny

This god cautions the mortal races to accept whatever fate that the gods or even a higher Destiny have in store for them. This is the god of acceptance, of resignation, of coping without struggling.

Priests of this faith believe that everything that happens is predestined. They preach a doctrine of acceptance of the will of the gods, including gods other than their own. When two gods are in opposition, these priests do not interfere in the mortal doings resulting from that struggle (unless one of the gods is the god of fate/destiny, in which case they support him); but when a single god is pursuing a goal and mortal beings are trying to oppose him, these priests work on behalf of the god and against the mortals. This takes place even when the god is evil; these priests take the side of gods against mortals regardless of the god's motives. In short, this is a very strange priesthood, one that is philosophical but joyless.

Lesser gods of this attribute might be gods of specific future events: The war that destroys all the gods, for instance. Such gods will strive to make sure that the events they represent do take place, and their priests will dutifully help.

The god of this attribute is as likely to be male as female.

The priests of this god are on good terms with the priests of Ancestors, Fortune/Luck, Oracles/Prophecy, and Time.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 13. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Astrology. Nonweapon Proficiencies Recommended: Ancient History, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance (doctrine of acceptance of the will of the gods). Missions against those who defy the gods. Vigilance against those who defy the gods.

**Weapon and Armor Restrictions:** Weapons Permitted: Dagger/dirk, knife, lasso, mancatcher, net. Armor Permitted: All armor and shields. Oriental Campaigns: Also chain. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Divination, Guardian, Protection, Summoning. Minor Access to Combat, Necromantic, Sun, and Weather.

**Powers:** The priest can cast the *commune* spell once per month, even at first level, in addition to all other spells (obviously, at first level, he can only ask one question per application of the spell). *Soothing Word* (Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and 16 first-level priests of the same priesthood. The priest may take the following on adventures: Three priests (only one of them may be third-level) of his choice. The priesthood will pay for half of the cost of

stronghold construction at 8th level.

**Possible Symbols:** Book, Pen/Stylus, Chains.

**Notes:** This order uses the net and lasso because those weapons represent the inevitability of fate and destiny.

### Fertility

This god represents the fertility of beasts, crops, and sentient races. He represents new generations of each species, defiance of death, and sexuality.

Priests of this god conduct rituals which are supposed to interest the god in the fertility of the celebrants, their fields and animals. Through the rituals of the priests, childless couples pray for children, farmers pray for good crops, ranchers and animal handlers pray for their herds to grow fast and strong. In addition to routine prayers, the priests conduct great, semiannual celebrations (usually at the start of the planting and the harvesting season).

Lesser gods of this attribute would be gods of the fertility of specific species or groups of living things; one might be the god of cattle fertility, one of human fertility, one of elf fertility, one of wheat fertility. The god of Agriculture could be considered a deity of one specific part of the fertility attribute.

Fertility gods are as likely to be male as female. Those representing animal life are more likely to be male, those representing plant life more likely to be female.

The priests of this god are on good terms with Druids and the priests of Agriculture, Animals, Birth/Children, Earth, Elemental Forces, Life-Death-Rebirth Cycle, Nature, Seasons, Sky/Weather, and Vegetation. The priests of this god dislike the priests of Death.

**Alignment**: The deity is true neutral. The priests may be true neutral or neutral good. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12, Charisma 12. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Herbalism. Non-weapon Proficiencies Recommended: Agriculture, Animal Handling, Brewing, Dancing, Musical Instrument, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. These priests are bound to conduct ceremonies which celebrate and promote fertility in all living beings; these ceremonies occur at the start of spring and at harvest-time, and in some places are characterized by orgiastic behavior. Vigilance against the doings of the priests of death, whom they regard with suspicion and dislike.

**Weapon and Armor Restrictions:** Weapons Permitted: Javelin, polearm, spear. Armor Permitted: Hide armor and leather armor (normal or magical), all non-metal shields. All together, these constitute Medium combat abilities.

**Other Limitations:** Priests of the god of Fertility *are not allowed* to remain chaste.

**Spheres of Influence:** Major Access to All, Healing, Necromantic, Plant, Summoning. Minor Access to Animal, Charm, Creation, Divination, Protection, Weather. This priesthood has two extra minor accesses; it will not have very strong Granted Powers.

**Powers:** *Charm/Fascination* (as per the Designing Faiths chapter, but never in combat, and only once per day). *Incite Berserker Rage* (as per the Designing Faiths chapter). *Language/Communication* (as per the Designing Faiths chapter): The priest may choose one species of animal with whom he can communicate, from the following list: Cattle, goats, horses, rabbits, sheep, snakes. (This does not give him any control over the animal; he may merely talk with it.)

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same alignment, plus fifteen first-level fighters. These fighters act as guards during the more somber of the god's rituals but participate in the more chaotic rituals. The priest may take the following on adventures: One priest (it may not be the fifth-level priest) and six fighters. In some sects, the fighters are all women of any chaotic alignment, and they are called *maenads*. For others, the DM can substitute intelligent wood-beings such as satyrs, centaurs, dryads, and nymphs, up to 10 HD of them, and they can accompany the priest on woodland adventures. (Nymphs are identical to dryads with these exceptions: They are not bound to specific trees, and can voyage in any forested realm; and when they *charm* victims, there is no chance that the victims will disappear forever; after a day in the company of the nymph, the victim can choose to stay as long as he and the nymph collectively wish, or to leave whenever he wants.) The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Bull, Corn, Cow, Goat, Pine-cone, Ram, Snake, Wheat.

### Fire

This god is the deity of fire in all its aspects: The spark of civilization, the cleanser of sickness and evil, the terrifying natural force, the special gift of the gods to man, the principal force behind some sorts of magic.

The priesthood is devoted to celebrating fire and honoring the god of this most useful gift. They make burnt sacrifices to the god and learn as much as they can of fire-magic.

Lesser gods of this attribute will be gods of just one aspect of fire. One might be a god of forest-fires, one a god of the fires used by metalworkers and pottery-makers, one a god of the hearth-fire that represents home and shelter.

Fire-gods are as likely to be male as female.

The priests of this god are on good terms with the priests of Dawn, Elemental Forces, Justice/Revenge, Light, Lightning, Magic, Metalwork, Race (Dwarf), and Sun. They are not that fond of, but also not *enemies* of, the priests of Oceans/Rivers. The priests of this god dislike the priests of Disease.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10, Intelligence 10. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Fire-building. Nonweapon Proficiencies Recommended: Reading/Writing, Religion, Spellcraft. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Wizard.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Bill, dagger/dirk, knife, stiletto, swords (all). Armor Permitted: All metal armor, all metal shields. Oriental Campaigns: Also chain, katana, shuriken, wakizashi. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Elemental (the priest may only use the spells whose names include the words Fire, Flame, Heat, Pyrotechnics, and the spell *chariot of Sustarre* ), Sun. Minor Access to Charm, Divination, Healing, Necromantic, Protection, Weather. This priesthood receives extra minor accesses because its two major accesses are limited in significant ways: Its Elemental sphere is limited to fire-spells and the Sun sphere has only six spells to start with.

**Powers:** *Defiance of Restriction/Obstacle* (as per the Designing Faiths chapter): The priest can pass unharmed through any *wall of fire* spell. *Immunity* (as per the Designing Faiths chapter): The priest gets a +2 saving throw vs. all priest spells of the Elemental sphere and vs. all wizard spells of the Alteration and Evocation schools with the words *fire, burning, flaming, pyrotechnics*, and *incendiary*.

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same order, plus five first-level fighters to act as guards, one third-level mage and two first-level mages acting as consultants, and ten Normal Men and Women, half with Reading/Writing proficiency and half with Fire-Starting proficiency, who act as temple functionaries. The priest may take the following on adventures: Two priests (only one of whom may be third-level), two fighters, one mage, and two Normal Men and Women of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Torch.

### Fortune, Luck

This is a god of the good fortune and good luck that all sentient beings hope will come their way. This is not a god of bad luck or ill fortune.

The priests of this god are practical, common-sense people. They'll help the flock pray for luck. But they also recognize that a lot of luck is self-made. They try to analyze the situations of supplicants who seem to have bad luck all the time, and suggest ways for them to change their lives so that good luck is more likely to shine on them. They even meddle to give luck a little push; they'll contrive so that two people who can help each other accomplish a mutual goal will meet, for example.

Lesser gods of this attribute will be gods of one particular type of luck. The most popular gods of this type would be gods of gambling luck or luck with romantic affairs.

Gods of luck are most likely to be female.

The priests of this god are on good terms with the priests of Competition, Fate/Destiny, Mischief/Trickery, and Trade. The priests of this god dislike the priests of Evil.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12, Charisma 12. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Astrology. Nonweapon Proficiencies Recommended: Gaming, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Rogue.

**Duties of the Priest:** Guidance, Marriage. Missions to bring luck to the unlucky: Priests are often required to go to communities and places which seem to be suffering a series of bad-luck events and improve matters there. (Some priests of this sect adopt a "fairy godmother" attitude and try to improve peoples' lot through mischievous meddling.) Vigilance against the deeds of priests of disease or the philosophy of evil, who are always bringing bad fortune to the people.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, lasso, net, quarterstaff, sling, staff sling. Armor Permitted: None; no shields. Oriental Campaigns: Also bo stick. All together, these constitute Poor combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Divination, Elemental, Healing, Protection, Summoning. Minor Access to Animal, Creation, Guardian, Plant, Sun, Weather.

**Powers**: *Charm/Fascination* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 7th level, and consist of one fifth-level priest, three third-level priests, and sixteen first-level priests of the same order. The priest may take the following on adventures: Three priests (only one of whom may be third level) of his choice. The priesthood will pay for half of the cost of stronghold construction at 7th level.

**Possible Symbols:** Cornucopia, Rudder, Wheel of Fortune.

**Notes:** This order's weapon choices reflect "weapons of opportunity," the sort of weapons characters can make from things found on the road. A priest of this order doesn't have to find his weapons on the road, but the weapons permitted him are the sort of things he could make from found items.

### Good (Philosophy)

Just as evil thoughts and deeds create evil energies (see Evil, p. 57), good thoughts and deeds create good energies, resulting in priests of the philosophy of Good.

The goal of these priests is to counter the spread of evil throughout the universe. They work primarily to anticipate the deeds of evil beings, head them off, and counter them whenever possible. They may or may not believe in Law; some of them, chaotic good priests, break all sorts of laws and restrictions of society in order to realize their good intentions.

The priests of this philosophy are on good terms with the priests of Divinity of Mankind, Everything, Peace, Race, Redemption, and Wisdom. The priests of this philosophy especially dislike the priests of Evil.

**Alignment:** This philosophy is good. Its priest may be of any good alignment (chaotic good, neutral good, and lawful good); they all belong to the same sect, so the chaotics, neutrals, and lawfuls must all get along together. The flock may be of any good alignment.

**Minimum Ability Scores:** Wisdom 9. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Religion. Nonweapon Proficiencies Recommended: Reading/Writing. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Missions: Priests of this philosophy spend most of their lives in ongoing missions against priests of the philosophy of evil, not to mention the plots of evil men, priests of the god of disease, etc.

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), dagger/dirk, hand/throwing axe, javelin, knife, lasso, polearm, spear, staff sling, stiletto, swords (all). Armor Permitted: All armor and shields. Oriental Campaigns: Also daikyu, katana, wakizashi. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Healing, Protection. Minor Access to Charm, Divination.

**Powers:** The priest can cast the *detect evil* spell three times per day in addition to all other spells. *Turn Undead* (same as the Cleric ability). *Permanent +1 to hit and damage* vs. all evil enemies, above and beyond all other bonuses.

**Followers and Strongholds:** The followers are received at 9th level, and consist of one third-level priest and two first-level priests of the same order, plus one fifth-level paladin, three third-level paladins, and six first-level paladins to act as soldiers, and one third-level mage and two first-level mages to act as special agents; the priests and mages will be of the exact same alignment as the priest they follow, while the paladins will automatically be lawful good. The priest may take the following on adventures: One priest, two paladins, and one mage of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level. Such strongholds are often built with hospitals and libraries as part of their construction, but this is not a requirement of the order.

**Possible Symbols:** Ray of light, Ankh.

## Guardianship

This god is the protector of causes and endangered individuals. He's an appropriate deity for bodyguards, other guardsmen, martyrs, and heroes who espouse lost causes.

Priests of this god meddle in politics, stand up for noble causes, aggravate kings and viziers, supply troops to the underdogs of certain fights and wars, and often provide bodyguards for famous public figures (especially those who are championing causes) who need them. (This is a great way to get priest-PCs into interesting adventures.)

Whether or not this god is more likely to be male or female depends on the culture; if there are few women warriors, then the god is probably male, while if women are often warriors, the god is just as likely to be female as male.

The priests of this god are on good terms with the priests of Community, Healing, Strength, and War.

**Alignment:** The deity is neutral good; at the DM's discretion, he may be chaotic good or lawful good. His priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 10, Strength 12. Wisdom or Strength 16 means +5% experience; Wisdom *and* Strength 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies**: Nonweapon Proficiencies Required: Set Snares. Nonweapon Proficiencies Recommended: Riding Land-Based, Healing, Reading/Writing, Religion, Blind-fighting. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Missions: A priest of this god is almost always on some sort of mission, a simple one -- to protect a specific person, place, or thing. The priest might have chosen his current mission, or might have been assigned to it by his priesthood. That mission might change between adventures, but he's almost always on one. Note: Priests of this sort do not maintain temples for small communities; they spend most of their time on mission. Only when they reach eighth level do they build their own temples and send subordinate priests out on missions.

**Weapon and Armor Restrictions**: Weapons Permitted: Battle axe, dagger/dirk, javelin, knife, polearm, spear, swords (all). Armor Permitted: All armor and shields. Oriental Campaigns: Also katana, wakizashi. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Necromantic, Protection. Minor Access to Guardian, Healing.

**Powers:** *Infravision* (same as the elf ability; an elven or half-elven priest of this faith has Infravision of doubled range, to 120'). *Laying On of Hands* (same as the Paladin ability).

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same order, plus five third-level fighters to act as temple guards. The priest may take the following on adventures: Three priests (only one of whom may be third-level) and two fighters. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold *must* be built in the fashion of a castle or fortress, even if it is in a city: It must be constructed so that it can easily repel invasion.

**Possible Symbols:** Crossed Swords; Crossed Polearms; Shield.

**Notes:** This priesthood represents a god who is a defender, not an aggressor; therefore, the priesthood can use or make no ranged weapon attacks. The priests may not even throw their spears, javelins, daggers or knives.

## Healing

This god is the champion of doctors, medicine and other healing functions. He cures the sick and passes on his healing knowledge to his mortal doctor/priests. He is the enemy of disease and injury, and no admirer of war.

The priesthood is devoted to healing and are not allowed by their order to turn away a patient in need; if they can help him, they must.

Lesser gods of this attribute are gods of specific types of healing. One might be a god of combat injuries, one a god who heals illnesses of the mind. The god of childbirth could be considered a lesser god of healing.

Healing gods are as likely to be male as female.

The priests of this god are on good terms with the priests of Birth/Children, Dawn, Guardianship, Light, Love, Peace, and Sun. The priests of this god dislike the priests of

Death, Disease, and Evil.

**Alignment**: The deity is lawful good. The priests may be any sort of good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 10, Intelligence 10. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Healing. Nonweapon Proficiencies Recommended: Herbalism, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest**: Guidance, Marriage. Curing the sick and injured. Education: Teaching the flock, indeed anyone who is interested, the arts of medicine, sanitation, and healing. Missions to sickness-infested lands to help in the healing process. Vigilance against the activities of the priests of the god of disease.

**Weapon and Armor Restrictions:** Weapons Permitted: Lasso, mancatcher, net, quarterstaff. Armor Permitted: All non-metal armor; no shields. Oriental Campaigns: Also bo stick. All together, these constitute Poor combat abilities.

**Other Limitations:** Priests of the god of Healing must wear a symbol indicating their calling whenever they appear in public. They may not ever deliberately take sentient life. (If they do, it constitutes a "betrayal of goals" from the "Priests and Punishment" section of the "Role-Playing" chapter.)

**Spheres of Influence:** Major Access to All, Creation, Divination, Healing, Necromantic, Protection, Summoning. Minor Access to Animal, Charm, Guardian, Plant, Sun, Weather.

**Powers:** *Immunity* (as per the Designing Faiths chapter) to all poisons and diseases, but the priest only gets a +2 to his saving throw. *Laying On of Hands* (same as the Paladin ability). Soothing Word (Designing Faiths chapter). *Turn Undead* (same as the Cleric ability). *At 3rd Level: Analysis, Identification* (as per the Designing Faiths chapter) of diseases and poisons; on a Intelligence check (which the DM may modify according to the commonness or rarity of the ailment), the priest will know what sort of disease or poison afflicts his patient.

**Followers and Strongholds:** The followers are received at 7th level, and consist of three third-level priests and six first-level priests of the same priesthood, plus thirty Normal Men and Women, all of whom must have the Healing nonweapon proficiency, who act as chirurgeons (doctors) and nurses. The priest may take the following on adventures: Two priests (only one of whom may be third-level) and two Normal Men and Women. The priesthood will pay for half of the cost of stronghold construction at 7th level. The stronghold must act as a hospital for the nearest community, and may turn away no patient who has suffered a life-threatening injury or disease.

**Possible Symbols:** Snakes, Staff.

**Notes:** Priests of this order are supposed to use nondamaging weapons. However, since the staff is their symbol, many of them end up learning how to use one as a weapon, and the god gives his assent to this knowledge by not punishing them for using the staff in a damaging way.

## Hunting

This god is a patron of the hunter, and is a provider of foods and furs; thus he is a god much loved of woodsmen. Though he hunts animals and encourages his flock to do likewise, he is usually a wise hunter; like the god of Animals, he is often a patron of animals and their protector from needless destruction at the hands of too-greedy hunters and poachers.

The god's priests, too, are hunters, and their mission is to teach the flock sound principles of hunting: Not killing mothers with young, not depopulating the wilderness of whole species, etc.

An alternate aspect of the god would be a god of Fishing.

The god of hunting is as likely to be male as female.

The priests of this god are on good terms with the priests of Animals, Darkness/Night, Light, Moon, and Sun.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10, Dexterity 12. Wisdom or Dexterity 16 means +5% experience; Wisdom *and* Dexterity 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Hunting. Non-weapon Proficiencies Recommended: Direction Sense, Fishing, Reading/Writing, Religion, Animal Lore, Mountaineering, Running, Set Snares, Survival, Tracking. Weapon Proficiencies Required: Bow. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Blowgun, bows (all), crossbow, harpoon, javelin, lasso, net, sling, spear, trident. Armor Permitted: All non-metal armor; no shields. Oriental Campaigns: Also daikyu. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Divination, Guardian, Protection, Summoning. Minor Access to Animal, Healing, Plant, Weather.

**Powers:** Permanent +2 to hit with bows, above and beyond all other bonuses.

**Followers and Strongholds:** The followers are received at 9th level, and consist of one third-level priest and two first-level priests of the same priesthood, plus one fifth-level ranger, three third-level rangers, and six first-level rangers to act as "forest rangers," and ten Normal Men and Women, all of whom have the Veterinarian nonweapon proficiency. (This proficiency doesn't appear in the *Player's Handbook*. It is identical to the Healing proficiency, except it can only be used to heal animals and monsters.) The priest may take the following on adventures: One priest and two rangers of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level. The stronghold can be built in a city or in the wilderness, but must work principally to protect the animal-life of the surrounding wilderness. (This does not mean to stop hunters if the hunting is carried out at a level that does not threaten the animal population. But any factor which does endanger animal species -- such as drought, excess hunting, deforestation, etc. -- will bring on the wrath of the priesthood.)

**Possible Symbols:** Bow and arrow crossed.

**Notes:** The harpoon and trident may only be used by priests whose god includes

attributes of the sea or fishing. If the god is devoted to land-hunting, the priests cannot use the harpoon or trident.

### Justice, Revenge

This god brings revenge on those who deserve it, rights wrongs, punishes the wicked, and avenges those who cannot avenge themselves.

Normally, the god acts through his priests. Priests of this god are approached by those who have been wronged, and must learn what they can of the situation, decide who's right and who's wrong, and take steps to punish the guilty party. They must make the punishment fit the crime (a theft does not warrant the killing of the thief in most cases, for instance).

Since these priests are often approached to punish those whom ordinary laws can't touch (for instance, to punish a rich man who can bribe his way out of any charge or punishment), they frequently have to perform their missions secretly, so that the local authorities cannot learn of them. These vigilante priests are not appreciated by local governments.

Lesser gods of this attribute could be devoted to only one kind of crime or revenge. One might be the god of the Revenge of Spurned Lovers. One might be a god of Lawful Trials, and must always go through the legal system. One might be the god who punishes those who forswear themselves, and another a god who punishes those who kill their own kin.

The deity of revenge is more likely to be female than male.

The priests of this god are on good terms with the priests of Competition, Death, Fire, and War. (Individual DMs might consider this priesthood to belong to Good or Evil camps. But Good sects consider this one to be too "tainted" to be truly good, while Evil sects don't like the fact that this sect punishes the wicked.) The priests of this god dislike the priests of Peace.

**Alignment:** The deity is lawful neutral. His priests may be of any alignment but lawful good. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12, Strength 12. Wisdom or Strength 16 means +5% experience; Wisdom *and* Strength 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Tracking. Nonweapon Proficiencies Recommended: Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Missions to achieve justice when justice has been thwarted. Vigilance: The priests must keep their ears open and keep track of those who try to avoid the consequences of their actions.

**Weapon and Armor Restrictions:** Weapons Permitted: Dagger/dirk, knife, lasso, scythe, sickle, spear, stiletto, sword/bastard, sword/khopesh, sword/long, sword/rapier, sword/sabre, sword/short. Armor Permitted: All armor and shields. Oriental Campaigns: Also katana, sai, wakizashi. All together, these constitute Good combat abilities.

**Other Limitations:** Priests of this god may not refuse to investigate when the story of an injustice is brought to them (unless they've already investigated this same complaint). To do so is to constitute a "betrayal of goals" from the "Priests and Punishment" section

of the "Role-Playing" chapter. To investigate, find that there has been an injustice, and then to refuse to act on it is a similar betrayal. However, it is not a betrayal to discover an injustice and then take the time to make sure the priest has enough influence and force to effect revenge; he does not have to effect revenge *immediately*.

**Spheres of Influence:** Major Access to All, Divination, Necromantic. Minor Access to Elemental, Guardian.

**Powers:** The priest, even at first level, can cast the *detect lies* spell three times per day in addition to all other spells. *At 3rd Level: Inspire Fear* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 9th level, and consist of three third-level priests and six first-level priests of the same order, plus one third-level fighter, one third-level mage, one third-level illusionist, one third-level thief, and one third-level bard who act as consultants. The priest may take the following on adventures: Three priests (only one of whom may be third-level), the fighter, the mage, the illusionist, the thief, and the bard. The priesthood will pay for half of the cost of stronghold construction at 9th level. In the construction of the stronghold, its builders must include a courtroom and an execution chamber or field (the method of execution is up to the priests).

**Possible Symbols:** Scales (of Justice); Headsman's Axe.

### Life-Death-Rebirth Cycle (Force)

This cycle is most likely to exist in campaigns which *don't* have gods of birth, death, fertility and rebirth. In campaigns which do feature such gods, the forces of fertility and death are opposed, while in campaigns where this cycle is the primary force, fertility and death are part of the overall cycle. Therefore, if the DM has gods of death and fertility in his campaign, he may not have this cycle; if he has this cycle, he may not have those gods.

Followers of this force believe that living things are born, live, and die, and then reincarnate in a continuing cycle. Perhaps the cycle is endless; perhaps its purpose is to give the soul of the living thing enough experience that he can achieve a greater level of being.

In campaigns where this cycle does exist, it provides enough magical energy for its priests to cast spells. The priests' duties include education of the flock in the beliefs of the cycle, comforting the flock with the knowledge that death is merely a point in the cycle and not the end, and protection of the world from forces which might disrupt the cycle. Because undead beings have been removed or removed themselves from this natural cycle, the priests are their sworn enemies.

The priests of this force are on good terms with Druids and the priests of Agriculture, Animals, Death, Earth, Fertility, Nature, Seasons, Sky/Weather, and Vegetation.

**Alignment:** This force is true neutral in alignment; its priests must also be true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Religion. Nonweapon Proficiencies Recommended: Herbalism, Reading/Writing, Animal Handling. Weapon Proficiencies Required: None. Nonweapon Proficiency Group

Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. These priests conduct ceremonies at summer and winter solstice, spring and autumn equinox, in celebration of the cycle. Vigilance against any beings who wish to tamper with this cycle (i.e., priests of the philosophy of evil, or, if appropriate, against mad gods of death who won't rest until everything is dead forever); vigilance against despoilers of nature.

**Weapon and Armor Restrictions:** Weapons Permitted: Dagger/dirk, knife, scythe, sickle. Armor Permitted: All non-metal armor; no shields. Oriental Campaigns: Also nunchaku. All together, these constitute Poor combat abilities.

**Other Limitations:** Priests of this sect may not eat animal flesh; they are vegetarian. To violate this limitation is a minor offense from the "Priests and Punishment" section of the "Role-Playing" chapter.

**Spheres of Influence:** Major Access to All, Divination, Healing, Necromantic (Special Note: These priests cannot use resurrection spell; they use reincarnate instead), Plant, Summoning, Weather. Minor Access to Animal, Charm, Creation, Elemental, Protection, Sun.

**Powers:** *Incite Berserker Rage* (as per the Designing Faiths chapter). *Turn Undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and sixteen first-level priests of the same order. The priest may take the following on adventures: Three priests of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Unbroken circle; snake swallowing its tail.

### Light

This is the god of all forms of light: Sunlight, moonlight, firelight, etc. The god is a friend of life, a patron of magic, a proponent of logical thought, and an enemy of the undead.

The priesthood of the god is devoted to celebrating these aspects of the god and to promoting positive forces such as healing.

Lesser gods of this attribute would be gods of one aspect of light. One god might be the god of Reason, another the god of Inspiration, etc.

This deity is as likely to be male as female.

The priests of this god are on good terms with the priests of Arts, Crafts, Darkness/Night, Dawn, Elemental Forces, Fire, Healing, Hunting, Literature/Poetry, Magic, Metalwork, Moon, Music/Dance, Oracles/Prophecy, and Sun.

**Alignment:** The deity is neutral good. His priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 12, Intelligence 12. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies**: Nonweapon Proficiencies Required: Direction Sense. Nonweapon Proficiencies Recommended: Healing, Navigation, Reading/Writing, Religion, Spellcraft. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Wizard.

**Duties of the Priest:** Guidance, Marriage. Vigilance against dark, evil forces such as

undead.

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), crossbow, dagger/dirk, dart, javelin, knife, sling, spear. Armor Permitted: All non-metal armor; no shields. Oriental Campaigns: Also daikyu, shuriken. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Divination, Healing, Sun. Minor Access to Animal, Creation, Necromantic, Plant.

**Powers:** *Infravision* (same as the elf ability; an elven or half-elven priest of this faith has Infravision of doubled range, to 120'). *Turn Undead* (same as the Cleric ability). *At 3rd Level: Laying On of Hands* (same as the Paladin ability). *At 5th level: Charm/Fascination* (as per the Designing Faiths chapter). *At 9th level: Prophecy* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same order, plus one third-level mage and two first-level mages to act as consultants and one third-level fighter and two first-level fighters to act as guards. The priest may take the following on adventures: Three priests (only one of whom can be third-level), one mage, and one fighter of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Light-rays.

**Notes:** The weapons chosen for the sun-god's priest are all weapons which can be used at range, representing the god's ability to strike from afar with inspiration... or stroke.

### Lightning

This is a bold, powerful, primitive god whose aspect is the thunderbolt. He represents the destructive power of the sky and is a favorite god of warriors. Because lightning sometimes hits trees and sets them ablaze, he has some minor associations with fire and trees (especially oaks). He is also a god of storms.

However, the god himself is little concerned with the doings of mortals; he has no objection to them worshipping him, and does grant some of his power to his priests, but otherwise does not meddle much in mortal affairs.

His priests promote worship of the lightning-god for his power and his indomitability. They encourage worshippers to emulate the god and his strength.

The lightning-god is male.

The priests of this god are on good terms with the priests of Elemental Forces, Fire, Nature, Race (Dwarf), Sky/Weather, Strength, and (especially) Thunder.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10, Strength 12. Wisdom or Strength 16 means +5% experience; Wisdom *and* Strength 16 means +10% experience.

**Races Allowed:** Dwarves, half-elves, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Weather Sense. Nonweapon Proficiencies Recommended: Reading/Writing, Religion. Weapon Proficiencies Required: Warhammer *or* Hand/Throwing Axe (player choice).

Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Battle axe, dagger/dirk, dart, hand/throwing axe, javelin, knife, spear, warhammer. Armor Permitted: All armor and shields. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Elemental (the priest may only use the spells whose names include the words Air, Wind, Fire, Flame, Heat, Pyrotechnics, and the spell *chariot of Sustarre* ), Weather. Minor Access to Divination, Plant.

**Powers:** The priest can cast a *call lightning* spell once per day, in addition to all other spells, even at 1st level (of course, at 1st level, the spell lasts only 1 turn and does 2d8 damage). *Inspire Fear* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same priesthood, and one fifth-level warrior, two third-level warriors, and four first-level warriors. The priest may take the following on adventures: Three priests (only one of whom may be third-level) and two warriors of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Bolt of Lightning; Double-Bitted (Battle) Axe.

### Literature, Poetry

This god is very much like the deity of arts (see Arts, above), but concerns himself with reading, writing, recitation, the chronicling of history, and the teaching of youth. Lesser gods of this attribute would involve themselves with only one of the above aspects.

The god's priesthood is primarily interested in the education of the young in reading and writing, and the promotion and support of writers and poets in their culture.

The god of literature and poetry is as likely to be male as female.

The priests of this god are on good terms with the priests of Arts, Community, Crafts, Culture, Divinity of Mankind, Light, Metalwork, Music/Dance, Sun, and Wisdom.

**Alignment:** The deity is neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 10, Charisma 12. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Reading/Writing. Nonweapon Proficiencies Recommended: Artistic Ability (Composition), Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Education: These priests must encourage and support members of their flock (or of the general population) who show signs of talent with prose or poetry. Vigilance: Literature and Poetry often offend those who do not understand them or those who disagree with the attitudes expressed in those works of art, and so these priests must be vigilant against the very human forces of censorship and repression.

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), dart. Armor

Permitted: None; no shields. Oriental Campaigns: Also daikyu. All together, this constitutes Poor combat abilities.

**Other Limitations:** These priests receive six-sided dice for hit points, not eight-sided.

**Spheres of Influence:** Major Access to All, Charm, Creation, Divination, Protection, Summoning, Sun. Minor Access to Animal, Elemental, Guardian, Healing, Necromantic, Plant.

**Powers:** *Charm/Fascination* (as per the Designing Faiths chapter). *Language/Communication* (as per the Designing Faiths chapter): Every level from 1st to 8th, the priest receives one extra language which he may choose (if you prefer, he receives an extra nonweapon proficiency slot which may only be used for languages); the languages chosen may only be those of sentient humanoid races. *Soothing Word* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same order, plus one third-level fighter and two first-level fighters to act as guards, and twenty Normal Men and Women, each of whom has either Reading/Writing or an appropriate Artistic Ability nonweapon proficiency. The priest may take the following on adventures: Three priests (only one of whom may be third-level), one fighter, and four Normal Men and Women of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must act as a meeting-place for writers and poets to exchange ideas; therefore it must be built with meeting rooms or even lecture halls dedicated to these, instead of priestly, doings.

**Possible Symbols:** Books, Scrolls, Pens.

## Love

This god is the patron of love in all its aspects: Romantic love, desire, affection, lust, infatuation, the love between husband and wife, the love shared between close friends, and so on.

Priests of the god of love are charged with promoting love whenever possible -- especially by removing obstacles to it. When star-crossed youths wish to marry, priests of this sect interfere to convince their families of the rightness of it. When a marriage collapses under the weight of distrust or disinterest, the priests try to counsel the spouses into a reconciliation. When one of the faithful falls in love with someone who doesn't reciprocate that love, the priests use every means at their disposal (from trickery to *charm* spells) to make the disinterested party fall in love with the more devout character.

Lesser gods of this attribute will be gods of only one of the above aspects. One god might be the god of Desire, another the god of Romance, a third the god of Infatuations.

A god of all the aspects of love is likely to be female. A god of just one of the aspects is as likely to be male as female.

The priests of this god are on good terms with the priests of Birth/Children, Divinity of Mankind, Elemental Forces, Healing, Marriage, and Peace. The priests of this god dislike the priests of Evil.

**Alignment:** The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but tends to be chaotic good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 10, Charisma 13. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Non weapon Pro fi ciencies Required: Herbalism. Non weapon Proficiencies Recommended: Reading/Writing, Religion, Dancing. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Vigilance: Priests of this sect believe in marriages of love, not of convenience or politics, and so conspire to keep young lovers together when those lovers might be parted by their families' wishes or by the prejudices and responsibilities of their social classes.

**Weapon and Armor Restrictions:** Weapons Permitted: Bow (short), club, lasso, mancatcher, net. Armor Permitted: None; no shields. Oriental Campaigns: Also daikyu. All together, these constitute Poor combat abilities.

**Other Limitations:** Priests of this sect receive four-sided dice for hit points, not eight-sided. Also, unless (at DM's discretion) this god is a deity of pure and platonic relationships, a priest of this sect may be unmarried when he enters the priesthood (1st level) but must have been wed by the time he reaches 8th experience level # to do otherwise is to deny the god his due, and constitutes a betrayal of goals from the "Priests and Punishment" section of the "Role-Playing" chapter.

**Spheres of Influence:** Major Access to All, Animal, Charm, Healing, Necromantic, Protection, Summoning. Minor Access to Creation, Divination, Guardian, Plant, Sun, and Weather.

**Powers:** *Charm/Fascination* (as per the Designing Faiths chapter). *Incite Berserker Rage* (as per the Designing Faiths chapter). *Inspire Fear* (as per the Designing Faiths chapter). *Soothing Word* (as per the Designing Faiths chapter). *Turn Undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 7th level, and consist of three third-level priests and six first-level priests of the same order, plus one third-level mage and two first-level mages who act as consultants, one third-level fighter and two first-level fighters who act as guards, and ten Normal Men and Women, each with a Nonweapon Proficiency which is of use to the temple's functions (Etiquette, Local History, and Reading/Writing especially). The priest may take the following on adventures: Three priests (only one of whom may be third-level), one mage, one fighter, and four Normal Men and Women of his choice. The priesthood will pay for half of the cost of stronghold construction at 7th level. The stronghold *must* act as a sanctuary for young lovers who come here fleeing the retribution of angry families. For this reason, these strongholds are often built with secret chambers and quarters for those who take sanctuary.

**Possible Symbols:** Girdle (the woman's belt of the ancient world, not the modern accoutrement).

**Notes:** The weapons chosen for this order were chosen based on the appearance of these weapons in stories about mythological love-gods, or because of their usefulness in capturing mates.

## Magic

This god is the patron of magic in all its forms. At the DM's discretion, he could be the source of all magical energies used by the world's mages; or, he could just be the god responsible for teaching the most important spells and rituals to mortal mages. Either way, he is as beloved of mages as of any other class of characters.

Priests of this god, in addition to encouraging worship of the god, act as scholars of magic. They help preserve libraries of magical information and encourage correspondence and the exchange of ideas (and spells) between mages.

Every school of magic or priest sphere of influence could have its own, lesser god: There could be a god of Necromancy, a god of Enchantment, etc.

Gods of magic are as likely to be male as female.

The priests of this god are on good terms with the priests of Darkness/Night, Dawn, Elemental Forces, Fire, Healing, Light, Moon, Oracles/Prophecy, and Sun.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12, Intelligence 13. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Elves, half-elves, humans.

**Nonweapon and Weapon Proficiencies**: Nonweapon Proficiencies Required: Spellcraft. Nonweapon Proficiencies Recommended: Reading/Writing, Religion, Ancient Languages. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Wizard.

**Duties of the Priest:** Guidance, Marriage. Education: These priests cooperate with magicians to educate in the ways of magic.

**Weapon and Armor Restrictions**: Weapons Permitted: Belaying pin, dagger/dirk, dart, knife, quarterstaff, sling. Armor Permitted: None; no shields. Oriental Campaigns: Also shuriken. All together, these constitute Poor combat abilities.

**Other Limitations:** Priests of this sect receive four-sided dice for hit points, not eight-sided.

**Spheres of Influence:** Major Access to All, Astral, Charm, Divination, Elemental, Healing, Protection, Summoning. Minor Access to Animal, Guardian, Necromantic, Plant, Sun, Weather. This priesthood has an extra major access, which helps make up for its reduced hit points.

**Powers:** *Inspire Fear* (as per the Designing Faiths chapter). *Language/Communication* (as per the Designing Faiths chapter); from 1st level to 8th, the priest receives one extra language per level (or one extra nonweapon proficiency slot which may only be used for languages); the priest may choose the language of any sentient race known to him, or may choose to communicate with any animal species, with each of these choices. *Turn Undead* (same as the Cleric ability; if evil, Control Undead instead). *At 3rd level: Infravision* (same as the elf ability; an elven or half-elven priest of this faith has Infravision of doubled range, to 120'). *At 8th level: Shapechanging* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 9th level, and consist of three third-level priests and six first-level priests of the same order, plus one fifth-level mage who acts as consultant, and one third-level fighter and seven first-level fighters to act as guards. The priest may take the following on adventures: Three priests (only one of

whom may be third-level), one mage, and two fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Brazier, Book.

**Notes:** This priest is close in aspect to mages, so the weapons permitted him are similar to those permitted to mages.

### Marriage

This god is a deity of the bond of matrimony. Whether marriage is considered to be a holy alliance or merely an important contract, this god represents marriage in all its aspects: Affection, love, jealousy, argument, home, children, development, and compromise.

The priesthood of this god promotes marriage as a way of life. They approve of lovers, but not lovers *staying* lovers without ever being wed. They act as "marriage counselors" for any couple who asks their help in working out marital problems.

The god of marriage is as likely to be male as female.

The priests of this god are on good terms with the priests of Birth/Children, Community, Culture, Love, and Race.

**Alignment:** The deity is neutral good. The priests may be any sort of good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 9. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies**: Nonweapon Proficiencies Required: Religion. Nonweapon Proficiencies Recommended: Local History, Reading/Writing. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, lasso, mace, net, quarterstaff, warhammer. Armor Permitted: All non-magical armor, all non-magical shields. Oriental Campaigns: Also bo stick. All together, these constitute Medium combat abilities.

**Other Limitations:** Priests of this sect must be married by the time they are fourth level; otherwise they are guilty of betrayal of the god's goals, as described in the "Priests and Punishment" section of the "Role-Playing" chapter.

**Spheres of Influence:** Major Access to All, Charm, Divination, Healing, Protection. Minor Access to Combat, Elemental, Guardian, Sun.

**Powers:** *Laying On of Hands* (same as the Paladin ability). *Soothing Word* (Designing Faiths chapter). *Turn Undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and sixteen first-level priests of the same order. The priest may take the following on adventures: Three priests (only one of whom may be third-level) of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must be built with a large hall or chapel where very large weddings may take place.

**Possible Symbols:** Finger-Ring, Short Length of Cord.

**Notes:** The weapons chosen for this order represent capturing, as in capturing one's mate, and weapons often used in the sudden defense of one's home.

## Messengers

This god is the messenger of the gods. When the rulers of the gods want an order conveyed to lesser gods, it is given to this deity.

And so this god's priests are also messengers. They are trained in diplomacy and are often charged with the duty of conveying important messages (whether letters, verbal messages, codes, or threats) from one person to another... usually from one ruler or nobleman to another. The priests take great pride in their role as neutral conveyers of information, and for the reputation for accuracy and honesty they enjoy.

This god is also a favorite god of heralds, spies, and bards, all of whom have to perform messenger-duties at one time or another.

Messenger-gods are as likely to be male as female.

The priests of this god are on good terms with the priests of Community, Mischief/Trickery, Peace, Rulership, Trade, and War.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12, Charisma 10. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Reading/Writing. Nonweapon Proficiencies Recommended: Etiquette, Heraldry, Modern Languages, Navigation, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Missions: These priests are often asked by rulers and required by their temples to go on missions of communication, where they are supposed to convey important letters or verbal messages to others. Often, they are asked to act as negotiators between two warring groups or nations.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, javelin, mace, maul, polearm, quarterstaff, spear, trident. Armor Permitted: All non-metal armor and all shields. Oriental Campaigns: Also bo stick, sai. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Divination, Protection, Sun. Minor Access to Elemental, Guardian, Necromantic, Plant.

**Powers:** *Language/Communication* (as per the Designing Faiths chapter): From 1st level to 8th, each level the priest receives one additional language (or a nonweapon proficiency slot which may only be used for languages); the language chosen must be of a sentient humanoid race. *Soothing Word* (as per the Designing Faiths chapter). At 8th level: *Charm/Fascination* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of five third-level priests and five first-level priests of the same order (most act as messengers, too), one third-level bard and one third-level thief (who act as fact-finders and agents), and eight Normal Men and Women, all of whom have the Reading/Writing nonweapon proficiency. The priest may take the following on adventures: Two priests, the bard, the thief, and two Normal Men and Women of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must be

built with a large library, where the accumulated correspondence and diplomatic writing of the order accumulates.

**Possible Symbols:** Winged Creatures, Wings.

**Notes:** When on duty, priests of this order must always carry sceptres, staves, poles, or banners/flags on poles indicating their status. When carrying messages in their official capacity, these priests carry no obvious weapons at all. However, they can use a sceptre as a club and a staff or pole as a quarterstaff if they are attacked.

## Metalwork

This god is the forger of weapons and armor, and also the craftsman of gold and silver treasures. He is worshipped by metal-craftsmen across the world, and sometimes visits inspirations for beautiful metal goods upon lucky craftsmen.

The priests of the god try to advance the art of metalwork at the mortal level. They do this by acquiring as much information as they can about smithcrafting and other metalwork, collecting it in libraries, and distributing it to students and metalworking apprentices.

Lesser gods of this attribute will be gods of specific types of metalworking. One might be the god of armoring, another the god of swordmaking.

The god of metalworking is male.

The priests of this god are on good terms with the priests of Arts, Crafts, Divinity of Mankind, Fire, Literature/Poetry, Music/Dance, Race (Dwarf), Strength, and War.

**Alignment:** The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but tends to be neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 10, Constitution 12. Wisdom or Constitution 16 means +5% experience; Wisdom *and* Constitution 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Any one from the following list -- Artistic Ability (Jewelwright, Goldsmith, Silversmith), Blacksmithing, Armorer, Weaponsmithing. Nonweapon Proficiencies Recommended: Any of the others from the above list, plus Fire-building, Reading/Writing, Religion. Weapon Proficiencies Required: Warhammer. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Education: Teaching of metalworking to the flock; promotion of weaponmaking, armor-making, goldsmithing, jewelry-making, and all other sorts of metalwork in the community and society. Must participate in semiannual events where metal goods of all sorts are displayed and promoted (before the throne or in market). Investigation: These priests seek to re-discover lost metalwork techniques; this often leads them into ancient sites on expeditions of discovery. These priests also encourage competitive thinking between guilds, or between the metalworkers of different cities.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, mace, maul, morning star, warhammer, whip. Armor Permitted: All metal armor; all shields. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Elemental (the priest may only use the spells whose names include the words Fire, Flame, Heat, Pyrotechnics, and the spell *chariot of Sustarre* ), Sun. Minor Access to Combat, Divination.

**Powers:** *Analysis* (as per the Designing Faiths chapter) of workmanship quality in metal goods. The priest will be able to tell whether a metal craft-good is of poor, average or superior quality. This gives him a +2 to his Appraising proficiency check if he has that nonweapon proficiency, but does not give him the ability to rate crafted goods as to their gold piece value of he does not have that nonweapon proficiency. *Defiance of Restriction/Obstacle* (as per the Designing Faiths chapter): The priest can pass unharmed through the *wall of fire* spell. *Inspire Fear* (as per the Designing Faiths chapter). Permanent +2 to hit and damage with Warhammer, above and beyond all other bonuses.

**Followers and Strongholds:** The followers are received at 7th level, and consist of two third-level priest and four first-level priests of the same order, one third-level fighter and seven first-level fighters to act as temple guards, and twenty Normal Men and Women, each of whom has an appropriate and helpful nonweapon proficiency (especially Blacksmithing, Fire-building, Mining, and Reading/Writing). The priest may take the following on adventures: One priest, one fighter, and four Normal Men and Women of his choice. The priesthood will pay for half of the cost of stronghold construction at 7th level. The stronghold must be built with numerous smithies and workshops, enough at least for the priests who do metalwork, as well as the temple's Normal Men and Women.

**Possible Symbols:** Anvil, Hammer.

### Mischief, Trickery

This god delights in trickery for trickery's sake. He loves fooling people, animals, other gods # to show them how much more clever he is, just to see the looks on their faces, for just about any reason.

Naturally, this god is the favorite of rogues, especially thieves. But don't think that he's a god of cowards: To pull off the best tricks and plots, his followers must be brave indeed. However, many cowardly rogues do worship this god anyway, in admiration of his ability to get out of rough spots without resorting to combat.

His priests, in addition to extolling this god's virtues, also love demonstrating cleverness. Some perform harmless pranks for comic relief. Others become polished military tacticians for armies. Others learn nonweapon proficiencies that let them become proficient trapsters or stage magicians.

To be a priest of this god, a character does not have to be nasty or mean to others. The priest might demonstrate his cleverness through sleight of hand or by executing clever plots that straighten out problems rather than cause them. On the other hand, some priests of this god are just sly troublemakers who create problems for everyone. That's a choice left to the player of this type of priest.

The god of mischief is male.

The priests of this god are on good terms with the priests of Fortune/Luck, Messengers, Race (Gnome), Race (Halfling), Trade, War, and Wisdom. Priests of this god are sometimes allies of the priests of the philosophy of Evil; this decision is up to the DM, based on how he perceives his campaign world. The priests of this god dislike the priests of Strength.

**Alignment:** The deity is chaotic neutral. The priests may be chaotic evil, chaotic

neutral, chaotic good, neutral evil, neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12, Intelligence 12. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Disguise. Nonweapon Proficiencies Recommended: Dancing, Etiquette, Modern Languages, Reading/Writing, Religion, Forgery, Reading Lips, Set Snares, Ventriloquism. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Rogue.

**Duties of the Priest:** Guidance, Marriage, Missions: Priests often choose to go on adventures where they will have the opportunity to participate in some great plot or caper; it can be a deadly serious mission, so long as the priest gets to be involved in intricate planning and clever tactics. Vigilance against forces (mostly of society) that make people too responsible too young, that mature them too quickly.

**Weapon and Armor Restrictions:** Weapons Permitted: Blowgun, bows (all), crossbow, dagger/dirk, javelin, knife, lasso, net, quarterstaff, spear, stiletto, sword/bastard, sword/long, sword/rapier, sword/sabre, sword/short. Armor Permitted: All non-magical non-metal armor; no shields. Oriental Campaigns: Also bo stick, chain, daikyu, sai, shuriken, wakizashi. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to Charm, Divination, Protection, Summoning. Minor Access to Animal, Elemental, Guardian, Plant.

**Powers:** *Charm/Fascination* (as per the Designing Faiths chapter). *Detect Secret Doors* (same as Elf ability: Success on roll of 1 on 1d6 when passing within 10', 1-2 on 1d6 to find secret doors and 1-3 on 1d6 to find concealed portals when actively searching; elven priests of this order have success on a roll of 1-2 when passing within 10', 1-3 to find secret doors and 1-4 to find concealed portals when actively searching). *At 8th level: Shapechanging* (as per the Designing Faiths chapter; DM chooses the three animal forms, or can allow the player to make the choice).

**Followers and Strongholds:** The followers are received at 9th level, and consist of one third-level priest and seven first-level priests of the same order, one fifth-level thief and one fifth-level bard (who act as assistant mischief-makers and accompany the priest everywhere), and one third-level fighter and seven first-level fighters who act as guards. The priest may take the following on adventures: One priest, the thief, the bard, and one fighter of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Fox.

### Moon

This deity is a god of inspiration, magic, and mystery, and is closely related to the god of Darkness (see above).

His priests celebrate the magics and light granted by the moon.

In a fantasy setting, there could be numerous gods of the moon... one for each of several moons the planet possesses.

Most moon-gods are female.

The priests of this god are on good terms with the priests of Darkness/Night, Dawn, Hunting, Light, Magic, Oracles/Prophecy, and Sun.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10. Wisdom 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Navigation. Nonweapon Proficiencies Recommended: Astrology, Reading/Writing, Religion, Spellcraft. Weapon Proficiencies Required: Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Education: These priests help in the promotion and teaching of magic. These priests must participate in celebrations of the god, which take place once each moon (different temples may celebrate on the full moon or the new moon, at the DM's option).

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), dagger/dirk, dart, javelin, knife, sling, spear. Armor Permitted: All non-metal armor; any shield that is circular or crescent-shaped. Oriental Campaigns: Also daikyu, katana, shuriken. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Divination, Summoning, Sun. Minor Access to Animal, Elemental, Healing, Necromantic.

**Powers:** *Charm/Fascination* (as per the Designing Faiths chapter). *Infravision* (same as the elf ability; an elven or half-elven priest of this faith has Infravision of doubled range, to 120'). At 5th level: *Inspire Fear* (as per the Designing Faiths chapter). *At 10th level, chariot of Sustarre*; the priest can use this spell once per day in addition to his other spells.

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same order, one third-level mage and two first-level mages who act as consultants, and one third-level fighter and two first-level fighters who act as guards. The priest may take the following on adventures: Two priests, one mage, and one fighter of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Chariot, Moon (in any phase but new).

**Notes:** The bow, chosen as the weapon for this order, represents the inspiration of light-shafts.

### Music, Dance

This god represents the performing arts -- vocal and instrumental music, traditional and interpretive dance, even stage tragedy and comedy. He is closely related to the gods of arts and of literature/poetry, and is the favorite god of bards.

His priests are devoted to the advancement of music and dance in the population. They organize events where music is played, dances are performed, and plays are enacted. Sometimes they tour as part of theatrical companies, among bards and other performers. Their quest is to bring light to others through the performing arts.

Lesser gods of this attribute concentrate on only one of his aspects. One god might be

the deity of vocal music, another the deity of wild, frantic dances, another the god of ballet.

A god who encompasses all the aspects of music and dance is probably going to be male. Gods of individual aspects are more likely to be female.

The priests of this god are on good terms with the priests of Arts, Community, Crafts, Culture, Divinity of Mankind, Light, Literature/Poetry, Metalwork, and Sun.

**Alignment:** The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but tends to be neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 12 and *either* Charisma or Dexterity 14. If Wisdom or second ability is 16, character gets +5% experience. If Wisdom *and* second ability are both 16, character gets +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Any one from the following list # Dancing, Singing, Musical Instrument. Nonweapon Proficiencies Recommended: Any of the others from the list above, plus Artistic Ability/Composition, Ancient History, Local History, Reading/Writing, Religion, Juggling, Jumping, Tumbling. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Rogue.

**Duties of the Priest:** Guidance, Marriage. Education: These priests must encourage and support members of their flock (or the general population) who show signs of talent with dance or music.

**Weapon and Armor Restrictions:** Weapons Permitted: Dagger/dirk, javelin, knife, lasso, quarterstaff, spear, stiletto, sword/long, sword/rapier, sword/sabre. Armor Permitted: None; no shields. Oriental Campaigns: Also bo stick, chain, katana. All together, these constitute Medium combat abilities.

**Other Limitations:** Priests of this sect receive six-sided dice for hit points, not eight-sided.

**Spheres of Influence:** Major Access to All, Animal, Charm, Summoning, Sun. Minor Access to Divination, Elemental, Healing, Plant.

**Powers:** *Charm/Fascination* (as per the Designing Faiths chapter). *Soothing Word* (as per the Designing Faiths chapter, but at 5th level can use the power six times per day instead of three). *Turn Undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 7th level, and consist of three third-level priests and six first-level priests of the same order, plus five first-level fighters to act as temple guards and twenty Normal Men and Women, each of whom has a Nonweapon Proficiency appropriate to the temple (Artistic Ability, Dancing, Singing, Musical Instrument). The priest may take the following on adventures: Three priests (only one of whom may be third-level), two fighters, four Normal Men and Women. The priesthood will pay for half of the cost of stronghold construction at 7th level. One of the elements of the stronghold must be a hall, including a stage, where musicians and dancers from the surrounding area may congregate to practice their arts.

**Possible Symbols:** Any musical instrument.

**Notes:** The weapons permitted to this priesthood are the weapons best suited to inclusion in dances.

## Nature

This deity is related to the gods of agriculture and fertility. He's most similar to the gods of the Earth, but is less concerned with earthly powers (like volcanoes) and more with weather and its effects on all living things.

The priesthood teaches the population to worship the deity of nature, and to fear him. It stresses the fact that man is a small, insignificant thing next to the grandeur of nature and must recognize that the sentient species are just elements, ingredients, of nature. This philosophy doesn't sit well with most of the sentient species, except the elves, who are in accord with it.

Nature-gods may be male or female.

The priests of this god are on good terms with Druids and the priests of Agriculture, Animals, Death, Earth, Fertility, Life-Death-Rebirth Cycle, Lightning, Race (Elf), Seasons, Sky/Weather, Thunder, and Vegetation.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 9. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Agriculture. Nonweapon Proficiencies Recommended: Animal Handling, Fire-building, Fishing, Weather Sense, Healing, Herbalism, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Vigilance against any forces, gods, or mortals that threaten nature: If a god of fire has gotten too happy and is burning up great tracts of plain or forest during an overlong summer, if a mortal civilization is destroying wilderness by exploiting it or expanding into it, priests of the god of nature are commanded (by their temple or by their god) to go forth and do something about it.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, scythe, sickle. Armor Permitted: All armor and shields. Oriental Campaigns: Also nunchaku. All together, these constitute Medium combat abilities.

**Other Limitations:** Temples operated by these priests must be built outside city walls. Such priests can sleep within city walls (especially when travelling, when the city is under siege, etc.), but his permanent residence must be outside the city limits. To have permanent residence elsewhere is a minor offense, as described in the "Role-Playing" chapter under "Priests and Punishment."

**Spheres of Influence:** Major Access to All, Animal, Elemental, Plant, Protection. Minor Access to Divination, Healing, Sun, Weather.

**Powers:** *Analysis, Identification* (as per the Designing Faiths chapter): The priest has no special detection powers, but when he sees a plant or animal he can identify its species and whether or not it is normal for this area. He can only identify non-magical animals and plants; those with any magical powers, including breath weapons, are beyond his power. *Turn Undead* (same as the Cleric ability). *At 5th level: Inspire Fear* (as per the Designing Faiths chapter). *At 8th level: Shapechanging* (as per the Designing Faiths chapter); the DM can decide whether the priest can turn into one animal or three, and what species he may turn into. He may opt to let the player make that choice.

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same order, plus two third-level rangers and four first-level rangers to act as guards. The priest may take the following on adventures: Two priests and two rangers of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Mistletoe.

### Oceans, Rivers

This god is a god of large bodies of water. He doesn't concern himself much with mortal doings; sailors pray to him for mercy, and he shows them mercy when he feels like it, and shows them death when he prefers. He is also a storm-god, the deity of storms upon the sea, and sailors fear him.

His priests pray to him for good winds and good harvests of the sea, and make sacrifices to him to keep him happy and calm. They also use their powers to save the creatures of the sea, especially creatures such as mermen and dolphins, from needless death at the hands of overzealous fishermen. They are also great explorers of the sea, and when a priest of the ocean-god decides to hide from other men, only another priest of the same order or an experienced mage can find him in his underwater haven.

Lesser gods will be gods of individual rivers, lakes, and seas. In some lands, each of the continent's thousands of rivers will be the domain of a lesser god or goddess.

Sea-gods are just as likely to be male as female.

The priests of this god are on good terms with the priests of Animals (aquatic animals only) and Sky/Weather.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 9. Wisdom 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Swimming. Nonweapon Proficiencies Recommended: Fishing, Rope Use, Seamanship, Weather Sense, Navigation, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Belaying pin, bill, harpoon, javelin, net, scourge, spear, sword/cutlass, trident. Armor Permitted: None; all shields permitted. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Animal, Divination, Elemental, Weather. Minor Access to Charm, Combat, Plant, Protection. Special Notes: Within his Animal sphere, the priest can only cast spells dealing with sea animals; he can only make friends with, become invisible to, charm, speak with, hold, or summon sea-life, and cannot use the insect-related spells at all. Within his Elemental sphere, the priest can only use spells with the word "water" in the name; he can also use the *earthquake* and *transmute rock to mud* spells; additionally, he can take a spell identical to the 6th-level *conjure fire elemental* spell which conjures water elementals instead.

**Powers**: The priest can cast the *water breathing* spell on himself only, once per day, in addition to all other spells; at eighth level, the duration of the spell when cast on himself

becomes 24 hours, and he is then able to cast an extra *water breathing* on others (as per the normal rules for the spell) in addition to all other spells; the *water breathing* spell he casts on himself may not be dispelled , and at 8th level automatically renews itself at the end of the 24-hour period if the priest is still underwater and asleep, unconscious, etc. *Determine approximate depth underwater* on 1-4 on 1d6 (similar to the Dwarf ability concerning depth underground). *Infravision* (same as the elf ability, but only works underwater; an elven or half-elven priest of this faith has Infravision of doubled range, to 120', only underwater). *At 5th level: Language/Communication* (as per the Designing Faiths chapter); from 5th to 8th levels, the priest receives one extra language or communication (or nonweapon pro ficiency slot usable only for languages) which can only be taken for aquatic beings (aquatic elves, porpoises, mermen, etc.). *At 8th level: Shapechanging* (as per the Designing Faiths chapter); the DM may choose for this to be one animal or three, and which animals it is (or can give those choices to the player), but they must be marine animals.

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests from the same order, plus five mermen and mermaids (total). (The DM may substitute any other intelligent aquatic race, as appropriate, anywhere from 5 to 10 total HD of them: aquatic elves, water-nymphs, etc.) The priest may take the following on adventures: Two priests of his choice. On waterborne adventures, he can take three of the mermen and mermaids (or up to 6 HD of the substituted aquatic races). The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Dolphin, Fish, Octopus, Trident, Ship, Wave.

**Notes:** The weapons usable by this priesthood are the weapons of sailors and sea-gods.

### Oracles, Prophecy

This is a god who delivers broad statements about the future to his followers. He's distinct from the god of Fate/Destiny in that he doesn't preach a doctrine of acceptance; he just passes on the visions he has of the future, and lets his followers and those who beg his visions act on them accordingly.

Priests of this god act as intermediaries between the oracular god and visitors who come to receive his prophecies. See the paragraph below on Followers and Strongholds for more on this.

The oracular god is as likely to be male as female.

The priests of this god are on good terms with the priests of Darkness/Night, Dawn, Fate/Destiny, Light, Magic, Moon, Sun, and Wisdom.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 9, Charisma 11. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Astrology. Nonweapon Proficiencies Recommended: Ancient History, Ancient Languages, Local History, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage, Omen-Reading. Missions: Having passed

on a prophecy, the priest may choose to accompany those who received the prophecy. The priest may just want to see how reality matches the vision he received; however, if the prophecy included options, visions of different ways the situation could resolve itself, the priest may be tagging along to help the preferred outcome take place.

**Weapon and Armor Restrictions:** Weapons Permitted: Choose two from the following list (DM chooses based on other attributes or characteristics of the oracular god): Bows (all), crossbow, dagger/dirk, dart, hand/throwing axe, harpoon, javelin, knife, lasso, net, sling, spear, staff sling, stiletto, whip. Armor Permitted: None; no shields. Oriental Campaigns: Also included among choices are daikyu, shuriken. All together, these constitute Poor combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Divination, Elemental, Healing, Summoning. Minor Access to Charm, Creation, Necromantic, Sun.

**Powers:** *Language/Communication* (as per the Designing Faiths chapter); from 1st level to 8th, the priest receives one extra language per level (or one extra nonweapon proficiency slot which may only be used for taking languages); these languages may only be those of sentient humanoids. *Prophecy* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same order, plus five second-level fighters who act as guards. The priest may take the following on adventures: Three priests (not including the fifth-level priest, and may only include one third-level priest) and two fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level. Part of the stronghold must be an oracular chamber or area where visitors may meet with the priests and receive oracles; the temple may charge a fee of money or goods for this service, so the stronghold must also have large, commodious storerooms for these goods.

**Possible Symbols:** Bow, Brazier.

### Peace

This god is devoted to the cause of peace. He prefers for all conflicts to be settled non-violently.

His priests, in turn, work to keep things peaceful. They intercede between nations which are on the brink of war. They suggest compromises and nonviolent ways of settling important issues. They do their best to keep things calm and civil.

Remember, though, when role-playing such priests, that they don't have to be played as stupid. Nor do they have to presume that every fight can be avoided; when it's obvious that a situation will descend into violence regardless of their best efforts, they don't have to continually badger other players into not fighting. They *do* have to try to preserve peace when it *can* be preserved, and to prevent unnecessary violence when possible. A player who takes a peace-priest character would do well to become party spokesman; this will allow him to do all the party's negotiations and thus head off combat situations on a more frequent voice.

A god of peace is as likely to be male as female.

The priests of this god are on good terms with the priests of Community, Competition, Good, Healing, Love, Messengers, Prosperity, Race (Halfling), and Rulership/Kingship. The priests of this god dislike the priests of Justice/Revenge and War.

**Alignment:** The deity is lawful good. The priests may only be lawful good. The flock may not be chaotic or evil, but may be of any alignment not including those elements.

**Minimum Ability Scores:** Wisdom 10, Charisma 12. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

Nonweapon and Weapon Proficiencies: Nonweapon Proficiencies Required: Etiquette. Non-weapon Proficiencies Recommended: Modern Languages, Singing, Local History, Musical Instrument, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Missions: The priest often accompanies parties of war or groups of adventurers to try to bring about peaceful solutions to as many situations as possible. (Note to the DM: You don't want this priest as a player-character in your campaign unless most of the other players, too, prefer peaceful resolutions to various situations. If they prefer fighting things out, they'll resent the priest of peace and it will result in major annoyances in your campaign.) Vigilance against forces or individuals who seem to stir up trouble continually and needlessly.

**Weapon and Armor Restrictions:** Weapons Permitted: Lasso, net. Armor Permitted: All non-magical armor and shields. All together, these constitute Medium combat abilities.

**Other Limitations:** Priests of this sect receive six-sided dice for hit points, not eight-sided. Whenever they appear in public they must wear clothing or badges which display their status as priests of the god of peace.

**Spheres of Influence:** Major Access to All, Charm, Creation, Divination, Protection. Minor Access to Animal, Guardian, Healing, Necromantic.

**Powers:** *Charm/Fascination* (as per the Designing Faiths chapter). *Language/Communication* (as per the Designing Faiths chapter); from 1st level to 4th, the priest receives one extra language per level (or one extra nonweapon proficiency slot which may only be used for languages); the language chosen must be that of a sentient humanoid race. *Soothing Word* (Designing Faiths chapter). *At 5th level: Laying On of Hands* (same as the Paladin ability).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and sixteen first-level priests of the same order. The priest may take the following on adventures: Two priests of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Dove, Olive Branch.

## Prosperity

This is a god of riches and wealth. He may be a god of rich treasures from under the ground, or of riches of herds, or of any sort of prosperity.

The god's priests spend a lot of time dabbling in trade and teaching the children of noble families how to manage their money wisely, to build businesses from the ground up, to improve their communities through the careful, studied application of money. They are not priests of greed and avarice, though the occasional priest will end up being a greedy man.

The god of prosperity is male.

The priests of this god are on good terms with the priests of Community, Peace, Race

(Halfling), and Trade.

**Alignment:** The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but tends to be neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 11. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Appraising. Non-weapon Proficiencies Recommended: Mining, Modern Languages, Reading/Writing, Religion, Gaming, Gem Cutting. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Rogue.

**Duties of the Priest:** Guidance, Marriage. (Note: The priests of this sect do not encourage members of their flock to marry for love if it means alienating the families and living in poverty.)

**Weapon and Armor Restrictions:** Weapons Permitted: Bill, harpoon, javelin, lasso, mancatcher, net, picks (all), spear, trident. Armor Permitted: All non-magical armor and non-magical shields. Oriental Campaigns: Also chain. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Animal, Creation, Plant, Summoning. Minor Access to Guardian, Healing, Necromantic, Protection.

**Powers:** *Detection* (as per the Designing Faiths chapter) of treasure and objects of value; the priest can detect treasure when he is within 10' of it, even when it is concealed (5' if it is behind a thin wall, or 2' if it is behind a heavy wall or buried); however, he cannot divine its direction through this power, and must move around to get a fix on the treasure. The power does not tell him what sort of treasure it is, and even if it's of a type he does not desire (such as a small bag of coins) it will alert him to the treasure's presence. The power is next to useless when the character is among allies (their coin-pouches will set it off), so he must walk alone to be able to use it. *Determine approximate depth underground* on 1-3 on 1d6 (same as Dwarf ability; dwarf-priests and gnome-priests of this faith succeed on a 1-5 on 1d6).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, two third-level priests, and four first-level priests of the same order, plus one fifth-level fighter (bodyguard), one fifth-level bard (the priest's personal bard), and ten Normal Men and Women (good-looking, high-charisma men and women with no perceivable skills or source of income who are attracted to the priests of fortune and luck). The priest may take the following on adventures: Two priests, the fighter, the bard, and all the Normal Men and Women. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Bull, Chest.

**Notes:** The weapons chosen for this priesthood were chosen based on association with the earth, as the source of precious metals, and those which can grab, capture, harvest the bounty of the seas, etc.

## Race

This god is the mentor of a specific sentient race (dwarf, elf, gnome, halfling, and

human, and even half-elf if there enough half-elves that they are recognized as being an actual species). Usually, the god is the one who, in the legends, created the race in question -- or at least nurtured and educated the race in difficult years.

Naturally, there is a separate race-god for each race.

The gods' priesthoods are dedicated to staving off threats against the race, persuading members of the race to achieve their maximum potential and destiny, and to preventing members of the race from betraying the race (or, for that matter, the world, or all life on the world).

A race-god is as likely to be male as female.

The priests of this god are on good terms with the priests of Ancestors, Birth/Children, Community, Culture, Good, and Marriage. Also: (Dwarves) Crafts, Fire, Lightning, Metalwork, Thunder. (Elves) Animals, Crafts, Nature, Race/Half-Elven. (Gnomes) Mischief/Trickery. (Half-Elves) Race/Elven, Race/Human. (Halflings) Mischief/Trickery, Peace, Prosperity. (Humans) Divinity of Mankind, Race/Half-Elven.

**Alignment:** The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but tends to be neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 12. Wisdom 16 means +10% experience.

**Races Allowed:** Only dwarves can be priests of the god of the dwarven race, only elves can be priests of the god of the elven race, etc. The only exception to this pattern is the half-elf. A half-elf can be a priest of the god of the elven race, of the god of the human race, or of the god of the half-elven race (assuming that the DM even *has* a god of the half-elven race). If a half-elf is the priest of the god of the elven race, he follows all the guidelines (in this priest description) for those priests instead of half-elven priests; if he is the priest of the god of the human race, he follows all the guidelines for those priests instead of half-elven priests.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Ancient History. Nonweapon Proficiencies Recommended: Local History, Reading/Writing, Religion, (Dwarves) Blacksmithing, Armorer, Mountaineering, Weaponsmithing, (Elves) Animal Handling, Animal Lore, Bowyer/Fletcher, Dancing, Running, Tracking, (Humans) Riding Land-Based, Navigation, Heraldry. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Vigilance against enemies of the race and their plots.

**Weapon and Armor Restrictions:** Naturally, Weapon and Armor Restrictions vary from race to race. Broken down by race, they include:

*Dwarves:* Weapons Permitted: Battle axe, club, crossbow, flails (both), hand/throwing axe, mace, maul, morning star, picks (all), warhammer. Armor Permitted: All armor and all shields. All together, these constitute Good combat abilities.

*Elves:* Weapons Permitted: Bows (all), dagger/dirk, javelin, knife, lance, quarterstaff, spear, sword/short, sword/long. Armor Permitted: All non-metal armor; *any metal armor made by elven craftsmen*; all shields. Oriental Campaigns: Also bo stick, daikyu. All together, these constitute Good combat abilities.

*Gnomes:* Weapons Permitted: Bows (all)/short, crossbow/light, hand/throwing axe, javelin, sling. Armor Permitted: All armor and shields. All together, these constitute

Good combat abilities.

*Half-Elves:* Weapons Permitted: Bows (all), dagger/dirk, knife, lance, lasso, swords (all). Armor Permitted: All armor and shields. All together, these constitute Good combat abilities.

*Halflings:* Weapons Permitted: Club, dagger/dirk, dart, hand/throwing axe, javelin, knife, sling, staff sling. Armor Permitted: All armor; no shields. All together, these constitute Medium combat abilities.

*Humans:* Weapons Permitted: Bows (all), dagger/dirk, knife, lance, spear, sword/long. Armor Permitted: All non-magical armor and shields. All together, these constitute Good combat abilities.

**Other Limitations:** Whenever they appear in public, these priests must wear clothing or badges which indicate their status as priests of the race. Important Note: There is no limitation on whom these racial priests can heal. A dwarf-race priest can heal anyone he chooses -- humans, half-elves, gnomes, halflings, even elves. Of course, racial prejudice might prompt the priest to deny healing to those of another race... but that's his individual choice, not a requirement of his faith.

**Spheres of Influence:**

*Dwarves:* Major Access to All, Combat, Protection. Minor Access to Divination, Healing.

*Elves:* Major Access to All, Plant, Summoning. Minor Access to Healing, Sun. The DM may, at his sole discretion, substitute Major Access to Animal sphere for the Major Access to Summoning sphere; alternatively, he may give the player the option of choosing Animal or Summoning.

*Gnomes:* Major Access to All, Plant, Protection. Minor Access to Divination, Healing.

*Half-Elves:* Major Access to All, Healing, and player's choice of one from the following list: Animal, Plant, Protection, or Summoning. Minor Access to Divination, Necromantic.

*Halflings:* Major Access to All, Creation, Divination, Guardian, Pro tection. Minor Access to Charm, Healing, Necromantic, Sun.

*Humans:* Major Access to All, Divination, Healing. Minor Access to Necromantic, Sun.

**Powers:** *Incite Berserker Rage* (as per the Designing Faiths chapter). *Inspire Fear* (as per the Designing Faiths chapter). *Soothing Word* (as per the Designing Faiths chapter). *At 5th level: Laying On of Hands* (same as the Paladin ability). *At 8th level: Turn Undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 8th level. The priesthood will pay for half of the cost of stronghold construction at 8th level.

For *Dwarf* priests, the followers consist of: One fifth-level priest, one third-level priest, and two first-level priests of the same order; two fifth-level dwarf-fighters who act as bodyguards; and twenty first-level dwarf-fighters, each with a Nonweapon Proficiency appropriate to the temple (blacksmithing and mining especially). The priest may take the following on adventures: Two priests and two first-level fighters of his choice, and his fifth-level bodyguards.

For *Elf* priests, the followers consist of: One fifth-level priest, one third-level priest, and two first-level priests of the same order; two fifth-level elf-fighters who act as bodyguards; and ten first-level elf-fighters, each with a Nonweapon Proficiency

appropriate to the temple (animal lore, bowyer/fletcher, hunting, set snares, and tracking especially). The priest may take the following on adventures: Two priests and two first-level fighters of his choice, and his fifth-level bodyguards.

For *Gnome* priests, the followers consist of: One fifth-level priest, one third-level priest, and two first-level priests of the same order; two fifth-level gnome-fighters who act as bodyguards; and ten first-level gnome-fighters, each with a Nonweapon Proficiency appropriate to the temple (mining, set snares, and tracking especially). The priest may take the following on adventures: Two priests and two first-level fighters of his choice, and his fifth-level bodyguards.

For *Half-Elf* priests, the followers consist of: One fifth-level priest, one third-level priest, and two first-level priests of the same order; two fifth-level half-elf-fighters who act as bodyguards; and ten first-level half-elf-fighters, each with a Nonweapon Proficiency appropriate to the temple (reading/writing especially). The priest may take the following on adventures: Two priests and two first-level fighters of his choice, and his fifth-level bodyguards.

For *Halfling* priests, the followers consist of: One fifth-level priest, one third-level priest, and two first-level priests of the same order; two fifth-level halfling-fighters who act as bodyguards; and ten first-level halfling-fighters, each with a Nonweapon Proficiency appropriate to the temple (agriculture and reading/writing especially). The priest may take the following on adventures: Two priests and two first-level fighters of his choice, and his fifth-level bodyguards.

For *Human* priests, the followers consist of: One fifth-level priest, one third-level priest, and two first-level priests of the same order; two fifth-level human fighters who act as bodyguards; and ten first-level human fighters, each with a Nonweapon Proficiency appropriate to the temple (ancient history, local history, and reading/writing especially). The priest may take the following on adventures: Two priests and two first-level fighters of his choice, and his fifth-level bodyguards.

**Possible Symbols:** (Dwarf) Axe, Warhammer, Anvil; (Elf) Tree, Bow; (Gnome) Throwing Axe; (Half-Elf) Crossed Bow & Sword; (Halfling) Low Hill With Windows; (Human) Crossed Sword & Shield or Spear & Shield.

**Notes:** The DM can create many more racial priesthoods based on the above examples, to reflect variations within races. He could have a racial priesthood for the Aquatic Elf, similar to that of the Elf but using the weapons which the priests of oceans and rivers can use. He could have another for the desert-dwelling human where sabres, horse-back riding, desert survival and no armor are the order of the day.

The DM should be careful when letting race-oriented priests in his campaign. It's not difficult for new or inexperienced players to misinterpret this class as a priesthood of prejudice, which is not the intent at all. These priests are supposed to support and celebrate the virtues of their own race, but not to be nasty to other races, contribute to stereotypes about them, exalt in jokes about them, etc. There may be priests like that in any order, but they should be NPCs who are not liked or appreciated by their fellows.

### Redemption

This god takes the stand that all opponents to a specific cause are evil and must be converted, redeemed... or destroyed. There could be more than one god of redemption, one for each different cause sufficiently important to warrant one. In this respect, they are

much like the gods of Culture (and their priests much like priests of the gods of Culture), but are primarily soldiers for their cause.

The god of redemption is male.

The priests of this god are on good terms with the priests of Good. The priests of this god dislike the priests of Evil.

**Alignment:** The deity is neutral good. The priests may be any sort of good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 9. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies**: Nonweapon Proficiencies Required: Religion. Non-weapon Proficiencies Recommended: Reading/Writing. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Missions: These priests are often dispatched on missions to persuade sinners and evildoers to repent their misdeeds. Therefore, on adventures, these priests prefer to capture the chief evil-doers alive and give them the opportunity to recant and make reparations. When the evildoers are unwilling to do so, the priests are perfectly willing to let normal or even vigilante justice take its course.

**Weapon and Armor Restrictions:** Weapons Permitted: Lasso, mancatcher, naul, net, polearms, scourge, whip. Armor Permitted: All armor; no shields. All together, these constitute Good combat abilities.

**Other Limitations:** Priests of this sect must always wear clothes or badges indicating their priesthood when appearing in public.

**Spheres of Influence:** Major Access to All, Charm, Combat. Minor Access to Divination, Healing.

**Powers:** *Inspire Fear* (as per the Designing Faiths chapter). *At 5th level: Turn Undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 9th level, and consist of three 3rd-level priests and six 1st-level priests of the same order, plus five 3rd-level fighters who act as guards. The priest may take the following on adventures: Three priests (only one of which may be third-level) and two fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Silhouette of kneeling supplicant.

### Rulership, Kingship

This god is a god of authentication: He bestows his blessings on the kings of various cities or countries so that all will know the god supports that king and his family. Usually, the god provides the king with some artifact indicating his approval... and magically takes back the artifact when he withdraws his approval. (The artifact is usually a crown or a sceptre; these are two near-universal symbols of kingship.)

The god's priests are advisors to kings. They analyze politics and make recommendations. They intensively research the genealogy and history of the king's families, the better to authenticate his hold on the throne. At their god's behest, they may participate in the overthrow of a king. Many of these priests do travel, in order to acquire more information about the king or to head off plots against him.

In a male-dominated society, this deity will be male. In a female-dominated society,

this deity will be female. In a more equal society, the god may be of either sex.

The priests of this god are on good terms with the priests of Community, Culture, Messengers, Peace, and War.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10, Charisma 11. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Etiquette. Non-weapon Proficiencies Recommended: Heraldry, Ancient History, Ancient Languages, Local History, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Missions: When a ruler sees opportunities to strengthen his throne or eliminate problems that might endanger his throne, he often asks for priests of this sect to accompany the adventurers he dispatches; the local temples usually cooperate and provide adventurer priests to accompany those parties. Vigilance: These priests are required to stay alert against forces which threaten the local thrones. This includes foreign intrigue and even internal problems; if a local king has become corrupt and tyrannical, and the local population is edging toward rebellion, these priests may put pressure on the king to shape up... or may even oppose or depose him, so that the throne will remain strong under a new, better ruler.

**Weapon and Armor Restrictions:** Weapons Permitted: One type of bludgeoning weapon (the DM chooses one from the following list, choosing the preferred bludgeoning weapon of the culture: Club, flails (both), mace, morning star, warhammer), and one type of sword (DM chooses one type from following list, choosing the preferred sword of the culture: Bastard, cutlass, khopesh, long, rapier, sabre, short, or two-handed). Armor Permitted: All metal armor, all shields. Oriental Campaigns: Also katana and wakizashi added to the list of sword choices. All together, these constitute Good combat abilities.

**Other Limitations:** None.
